科目コード /Code	科目名(和文) ／ Course Title	
工学研究科共通型授業科目 / Common Subjects of Graduate School of Engineering		
i010	工学研究科国際インターンシップ1	International Internship in Engineering 1
i011	工学研究科国際インターンシップ2	International Internship in Engineering 2
i034	実践的科学英語演習Ⅰ	Exercise in Practical Scientific English I
i041	科学技術者のためのプレゼンテーション演習	Professional Scientific Presentation Exercises
i042	工学と経済(上級)	Advanced Engineering and Economy
i046	実践的科学英語演習Ⅱ	Exercise in Practical Scientific English II
i049	エンジニアリングプロジェクトマネジメント	Project Management in Engineering
i051	現代科学技術の巨人セミナー｢知のひらめき｣(6Hコース)	Frontiers in Modern Scinece and Technology
i052	現代科学技術の巨人セミナー｢知のひらめき｣(12Hコース)	Frontiers in Modern Scinece and Technology
i055	現代科学技術特論(4回コース)	Advanced Modern Science and Technology
i056	現代科学技術特論(8回コース)	Advanced Modern Science and Technology
i059	エンジニアリングプロジェクトマネジメント演習	Exercise on Project Management in Engineering
i060	現代科学技術特論(12回コース)	Advanced Modern Science and Technology
i061	先端マテリアルサイエンス通論(4回コース)	Introduction to Advanced Material Science and Technology
i062	先端マテリアルサイエンス通論(8回コース)	Introduction to Advanced Material Science and Technology
i063	先端マテリアルサイエンス通論(12回コース)	Introduction to Advanced Material Science and Technology
社会基盤工学専攻 / Civil and Earth Resources Engineering 都市社会工学専攻 / Urban Management 都市環境工学専攻 / Enviromental Engineering		
i064	労働衛生工学概論	Introduction to Occupational Health Engineering
A019	コンクリート構造工学	Concrete Structural Engineering
A040	流砂水理学	Sediment Hydraulics
A055	環境地盤工学	Environmental Geotechnics
A222	水資源システム論	Water Resources Systems Analysis
A402	資源開発システム工学	Resources Development Systems
A405	地殻環境工学	Environmental Geosphere Engineering
A805	リモートセンシングと地理情報システム	Remote Sensing and Geographic Information Systems
A808	景観デザイン論	Civic and Landscape Design
C034	核エネルギー変換工学	Nuclear Energy Conversion and Reactor Engineering
F003	連続体力学	Continuum Mechanics
F009	構造デザイン	Structural Design
F010	橋梁工学	Bridge Engineering
F011	数値流体力学	Computational Fluid Dynamics
F025	地盤力学	Geomechanics
F065	水域社会基盤学	Hydraulic Engineering for Infrastructure
F067	構造安定論	Structural Stability
F068	材料･構造マネジメント論	Material and Structural System & Management
F071	応用弾性学	Applied Elasticity for Rock Mechanics
F077	流域治水砂防学	River basin management of flood and sediment
F078	岩盤応力と地殻物性	Rock stress and physical properties
F085	地殻環境計測	Measurement in the earth's crust environment
F088	地球資源学	Earth Resources Engineering
F089	社会基盤安全工学	Infrastructure Safety Engineering
F100	応用水文学	Applied Hydrology
F103	環境防災生存科学	Case Studies Harmonizing Disaster Management
F106	流域管理工学	Integrated Disasters and Resources Management in Watersheds
F109	地盤防災工学	Disaster Prevention through Geotechnics
F113	グローバル生存学	Global Survivability Studies
F201	都市社会情報論	Information Technology for Urban Society
F203	公共財政論	Public Finance
F207	都市社会環境論	Urban Environmental Policy
F215	交通情報工学	Intelligent Transportation Systems
F219	人間行動学	Quantitative Methods for Behavioral Analysis
F223	リスクマネジメント論	Risk Management
F227	構造ダイナミクス	Structural Dynamics
F241	ジオコンストラクション	Construction of Geotechnical Infrastructures
F251	自主企画プロジェクト	Exercise on Project Planning
F261	地震･ライフライン工学	Earthquake Engineering/Lifeline Engineering
F263	サイスミックシミュレーション	Seismic Engineering Exercise
F267	水文気象防災学	Hydro-meteorologically based Disaster Prevention
F270	粘性流体力学	Viscous Fluid Dynamics
F271	混相流体力学	Multiphase Flow Dynamics
F272	自由表面流れの力学	Free Surface Flow Dynamics
F405	ジオフロント工学原論	Fundamental Geofront Engineering
F415	環境材料設計学	Ecomaterial Design
F464	水工計画学	Hydrologic Design and Management
F500	資源工学の基礎数理	Applied Mathematics in Earth Resources Engineering
K016	計算地盤工学	Computational Geotechnics
W001	社会基盤構造工学	Structural Engineering for Civil Infrastructure
X311	都市基盤マネジメント論	Urban Infrastructure Management
X333	災害リスク管理論	Disaster Risk Management
社会基盤工学専攻 / Civil and Earth Resources Engineering		
F063	社会基盤工学実習	Practice in Infrastructure Engineering

U051	社会基盤工学総合セミナーA	Integrated Seminar on Infrastracture Engineering A
U052	社会基盤工学総合セミナーB	Integrated Seminar on Infrastracture Engineering B
U055	社会基盤工学セミナーA	Seminar on Infrastructure Engineering A
U056	社会基盤工学セミナーB	Seminar on Infrastructure Engineering B
U059	社会基盤工学インターンシップ	Internship on Infrastructure Engineering
U060	社会基盤工学ORT	ORT on Infrastructure Engineering
U064	社会基盤工学総合実習A	Practice in Advanced Infrastructure Engineering A
U065	社会基盤工学総合実習B	Practice in Advanced Infrastructure Engineering B
	都市社会工学専攻 / Urban Management	
F150	長期インターンシップ	Long-Term Internship
F253	キャップストーンプロジェクト	Capstone Project
F257	都市社会工学セミナーA	Seminar on Urban Management A
F259	都市社会工学セミナーB	Seminar on Urban Management B
U201	都市社会工学総合セミナーA	Integrated Seminar on Urban Management A
U203	都市社会工学総合セミナーB	Integrated Seminar on Urban Management B
U210	都市社会工学実習	Practice in Urban Management
U216	都市社会工学ORT	ORT on Urban Management
U224	都市社会工学総合実習A	Practice in Advanced Urban Management A
U225	都市社会工学総合実習B	Practice in Advanced Urban Management B
	都市環境工学専攻 / Enviromental Engineering	
A622	地圏環境工学特論	Geohydro Environment Engineering, Adv.
A626	環境衛生学特論	Environmental Health, Adv.
A632	都市代謝工学	Urban Metabolism Engineering
A643	環境微生物学特論	Environmental Microbiology, Adv.
F234	水質衛生工学	Water Sanitary Engineering
F400	都市環境工学セミナーA	Seminar on Urban and Environmental Engineering A
F402	都市環境工学セミナーB	Seminar on Urban and Environmental Engineering B
F439	環境リスク学	Environmental Risk
F441	水環境工学	Water Quality Control Engineering
F446	大気・地球環境工学特論	Atmospheric and Global Environmental Engineering, Adv.
F449	都市環境工学演習A	Laboratory and Seminar on Urban
F450	都市環境工学演習B	Laboratory and Seminar on Urban
F454	循環型社会システム論	Systems Approach on Sound Material Cycles Society
F456	新環境工学特論I	New Environmental Engineering I, Adv.
F458	新環境工学特論II	New Environmental Engineering II, Adv.
F461	原子力環境工学	Nuclear Environmental Engineering, Adv.
F470	環境工学先端実験演習	Advanced Enivironmental Engineering Lab.
F472	環境工学実践セミナー	Seminer on Practical Issues in Urban
F475	都市環境工学ORT	ORT on Urban and Environmental Engineering
H424	環境資源循環技術	Environmental-friendly Technology for Sound Material Cycle
U401	都市環境工学特別セミナーA	Seminar on Urban and Environmental Engineering A, Adv.
U403	都市環境工学特別セミナーB	Seminar on Urban and Environmental Engineering B, Adv.
X321	環境リスク管理リーダー論	Lecture on Environmental Risk Management Leader
	建築学専攻 / Architecture and Architectural Engineering	
A832	構造材料特論	Theory of Structural Materials, Adv.
A856	居住空間計画学	Dwelling Planning
B013	建築設計特論	Theory of Architectural Design, Adv.
B014	建築環境計画論 Ⅰ	Theory of Architectural and Environmental Planning I
B015	建築環境計画論 Ⅱ	Theory of Architectural and Environmental Planning II
B016	建築論特論	Theory of Architecture, Adv.
B017	建築都市文化史学特論	History of Architecture and Environmental Design
B019	建築プロジェクトマネジメント論	Project Management
B030	応用固体力学	Applied Solid Mechanics
B035	人間生活環境デザイン論	Design Theory of Architecture and Human Environment
B036	建築史学特論	History of Japanese Architecture
B037	建築設計力学	Design Mechanics for Building Structures
B038	人間生活環境認知論	Theory of Cognition in Architecture and Human Environment
B040	構造解析学特論	Analysis of Structures, Adv.
B043	コンクリート系構造特論	Concrete Structures, Adv.
B044	耐震構造特論	Earthquake Resistant Structures, Adv.
B046	建築振動論	Dynamic Response of Building Structures
B052	構造安全制御	Control for Structural Safety
B053	建築環境物理学特論	Physics in Architectural Environmental Engineering,Adv.
B055	建築設備システム特論	Building Equipment Systems
B062	建築学特別演習I	Seminar on Architecture and Architectural Engineering, I
B063	建築学特別演習II	Seminar on Architecture and Architectural Engineering, II
B069	建築技術者倫理	Architectural Engineer Ethics
B071	インターンシップ Ⅰ（建築）	Internship I, Architectural Design Practice
B073	インターンシップ Ⅱ（建築）	Internship II, Architectural Design Practice
B075	建築設計実習	Architectural Design Practice
B077	建築設計演習 Ⅰ	Architecture Design Studio I
B079	建築設計演習 Ⅱ	Architecture Design Studio II
B088	建築学総合演習	Exercises in Architecture and Architectural Engineering
B090	建築学特別演習IA	Seminar on Architecture and Architectural Engineering IA
B091	建築学特別演習IB	Seminar on Architecture and Architectural Engineering, IB
B092	建築学特別演習IIA	Seminar on Architecture and Architectural Engineering, IIA

B093	建築学特別演習IIB	Seminar on Architecture and Architectural Engineering, IIB
B222	環境制御工学特論	Environmental Control Engineering, Adv.
B226	建築地盤工学	Building Geoenvironment Engineering
B231	高性能構造工学	High Performance Structural Systems Engineering
B234	鋼構造特論	Steel Structures, Adv.
B238	建築風工学	Architectural Wind Engineering
B241	都市災害管理学	Urban Disaster Management
B243	建築火災安全工学	Fire Safety Engineering of Building
B259	音響空間設計論	Theory of Acoustic Space Design in Architecture
i017	建築学コミュニケーション(専門英語)	Architecture Communication
Q005	建築設計・計画学セミナーI	Seminar on Architectural Design and Planning I
Q006	建築設計・計画学セミナーII	Seminar on Architectural Design and Planning II
Q008	建築構造学セミナーI	Seminar on Structural Engineering of Buildings I
Q009	建築構造学セミナーII	Seminar on Structural Engineering of Buildings II
Q011	建築環境工学セミナーI	Seminar on Environmental Engineering I
Q012	建築環境工学セミナーII	Seminar on Environmental Engineering II
Q013	建築環境工学セミナーIII	Seminar on Environmental Engineering III
Q014	建築環境工学セミナーIV	Seminar on Environmental Engineering IV
Q015	建築構造学セミナーIII	Seminar on Structural Engineering of Buildings III
Q016	建築構造学セミナーIV	Seminar on Structural Engineering of Buildings IV
Q017	建築設計・計画学セミナーIII	Seminar on Architectural Design and Planning III
Q018	建築設計・計画学セミナーIV	Seminar on Architectural Design and Planning IV
Q021	先端建築学特論I	Advanced Theory of Architecture
Q022	先端建築学特論II	Advanced Theory of Architecture
X401	デザイン方法論	Design Methodology

機械理工学専攻 / Mechanical Engineering and Science

マイクロエンジニアリング専攻 / Micro Engineering

航空宇宙工学専攻 / Aeronautics and Astronautics

B418	先進材料強度論	Strength of Advanced Materials
G001	応用数値計算法	Applied Numerical Methods
G003	固体力学特論	Solid Mechanics, Adv.
G005	熱物理工学	Thermal Science and Engineering
G007	基盤流体力学	Introduction to Advanced Fluid Dynamics
G009	量子物性物理学	Quantum Condensed Matter Physics
G011	設計生産論	Design and Manufacturing Engineering
G013	動的システム制御論	Dynamic Systems Control Theory
G041	有限要素法特論	Advanced Finite Element Method
G049	インターンシップM(機械工学群)	Engineering Internship M
G056	English Technical Writing	English Technical Writing
G057	技術者倫理と技術経営	Engineering Ethics and Management of Technology
G058	複雑系機械工学基礎セミナー1	Basic Seminar of Complex Mechanical Engineering,1
G059	複雑系機械工学基礎セミナー2	Basic Seminar of Complex Mechanical Engineering,2
G061	応用数理科学	Applied mathematical sciences
V003	バイオメカニクス	Biomechanics
V019	インターンシップDS(機械工学群)	Engineering Internship DS
V020	インターンシップDL(機械工学群)	Engineering Internship DL
V025	複雑系機械工学セミナーA	Seminar of Complex Mechanical Engineering
V027	複雑系機械工学セミナーB	Seminar of Complex Mechanical Engineering
V029	複雑系機械工学セミナーC	Seminar of Complex Mechanical Engineering
V031	複雑系機械工学セミナーD	Seminar of Complex Mechanical Engineering
V033	複雑系機械工学セミナーE	Seminar of Complex Mechanical Engineering
V035	複雑系機械工学セミナーF	Seminar of Complex Mechanical Engineering
X402	アーティファクトデザイン論	Theory for Designing Artifacts
X411	複雑系機械システムのデザイン	Design of Complex Mechanical Systems

機械理工学専攻 / Mechanical Engineering and Science

B407	ロボティクス	Robotics
B622	熱物性論	Thermophysics for Thermal Engineering
B631	高エネルギー材料工学	High Energy Radiation Effects in Solid
B635	量子ビーム応用工学	Quantum Beam Application Engineering
G017	破壊力学	Fracture Mechanics
G021	光物理工学	Engineering Optics and Spectroscopy
G025	メカ機能デバイス工学	Mechanical Functional Device Engineering
G031	機械理工学セミナーA	Seminar on Mechanical Engineering and
G032	機械理工学セミナーB	Seminar on Mechanical Engineering and
G036	機械理工学基礎セミナーA	Basic Seminar on Mechanical Engineering and Science A
G037	機械理工学基礎セミナーB	Basic Seminar on Mechanical Engineering and Science B
G039	熱物質移動論	Transport Phenomena
G051	機械理工学特別実験及び演習第一	Experiments on Mechanical Engineering and Science,Adv. I
G053	機械理工学特別実験及び演習第二	Experiments on Mechanical Engineering and Science,Adv. II
G403	最適システム設計論	Optimum System Design Engineering
Q402	乱流力学	Turbulence Dynamics
Q610	原子系の動力学セミナー	Seminar: Dynamics of Atomic Systems
V012	機械理工学特別演習A	Advanced Exercise in Mechanical Engineering and ScienceA
V013	機械理工学特別演習B	Advanced Exercise in Mechanical Engineering and ScienceB
V014	機械理工学特別演習C	Advanced Exercise in Mechanical Engineering and ScienceC
V015	機械理工学特別演習D	Advanced Exercise in Mechanical Engineering and ScienceD
V016	機械理工学特別演習E	Advanced Exercise in Mechanical Engineering and ScienceE

V017	機械理工学特別演習F	Advanced Exercise in Mechanical Engineering and ScienceF

マイクロエンジニアリング専攻 / Micro Engineering

B617	量子分子物理学特論	Quantum Theory of Molecular Physics
G204	マイクロファブリケーション	Microfabrication
G206	マイクロ・バイオシステム	Micro/bio system
G211	物性物理学1	Solid State Physics 1
G214	精密計測加工学	Precision Measurement and Machining
G216	ﾏｲｸﾛｴﾝｼﾞﾆｱﾘﾝｸﾞセミナーA	Seminar on Micro Engineering A
G217	ﾏｲｸﾛｴﾝｼﾞﾆｱﾘﾝｸﾞセミナーB	Seminar on Micro Engineering B
G223	ﾏｲｸﾛｴﾝｼﾞﾆｱﾘﾝｸﾞ基礎セミナーA	Basic Seminar on Micro Engineering A
G224	ﾏｲｸﾛｴﾝｼﾞﾆｱﾘﾝｸﾞ基礎セミナーB	Basic Seminar on Micro Engineering B
G226	ﾏｲｸﾛｴﾝｼﾞﾆｱﾘﾝｸﾞ特別実験及び演習第一	Experiments on Micro Engineering, Adv. I
G228	ﾏｲｸﾛｴﾝｼﾞﾆｱﾘﾝｸﾞ特別実験及び演習第二	Experiments on Micro Engineering, Adv. II
V201	微小電気機械システム創製学	Micro Electro Mechanical System Creation
V205	物性物理学2	Solid State Physics 2
V210	ﾏｲｸﾛｴﾝｼﾞﾆｱﾘﾝｸﾞ特別演習A	Advanced Exercise in Micro Engineering A
V211	ﾏｲｸﾛｴﾝｼﾞﾆｱﾘﾝｸﾞ特別演習B	Advanced Exercise in Micro Engineering B
V212	ﾏｲｸﾛｴﾝｼﾞﾆｱﾘﾝｸﾞ特別演習C	Advanced Exercise in Micro Engineering C
V213	ﾏｲｸﾛｴﾝｼﾞﾆｱﾘﾝｸﾞ特別演習D	Advanced Exercise in Micro Engineering D
V214	ﾏｲｸﾛｴﾝｼﾞﾆｱﾘﾝｸﾞ特別演習E	Advanced Exercise in Micro Engineering E
V215	ﾏｲｸﾛｴﾝｼﾞﾆｱﾘﾝｸﾞ特別演習F	Advanced Exercise in Micro Engineering F

航空宇宙工学専攻 / Aeronautics and Astronautics

C430	航空宇宙機力学特論	Advanced Flight Dynamics of Aerospace Vehicle
G230	動的固体力学	Dynamics of Solids and Structures
G405	推進工学特論	Propulsion Engineering, Adv.
G406	気体力学特論	Gas Dynamics, Adv.
G409	航空宇宙システム制御工学	Aerospace Systems and Control
G411	航空宇宙流体力学	Fluid Dynamics for Aeronautics and Astronautics
G418	航空宇宙工学特別実験及び演習第一	Experiments and Exercises in Aeronautics and Astronautics I
G420	航空宇宙工学特別実験及び演習第二	Experiments and Exercises in Aeronautics and Astronautics II
M226	気象学Ⅰ	Meteorology I
M227	気象学Ⅱ	Meteorology II
R410	航空宇宙機システムセミナー	Seminar on Aerospace systems
R419	システム制御工学セミナー	Seminar on Systems and Control
V401	電離気体工学セミナー	Seminar on Engineering Science of Ionized Gases
V405	航空宇宙流体力学セミナー	Seminar on Fluid Dynamics for Aeronautics and Astronutics
V412	気体力学セミナー	Seminar on Gas Dynamics
V413	機能構造力学セミナー	Seminar on Mechanics of Functional Solids and Structures

原子核工学専攻 / Nuclear Engineering

C037	混相流工学	Multiphase Flow Engineering and Its Application
C038	核融合プラズマ工学	Physics of Fusion Plasmas
C047	放射線医学物理学	Medical Physics
C050	インターンシップM(原子核)	Engineering Internship M
C063	原子核工学特別実験及演習第一	Experiments and Exercises on Nuclear Engineering, Adv.I
C064	原子核工学特別実験及演習第二	Experiments and Exercises on Nuclear Engineering, Adv.II
C068	原子力工学応用実験	Nuclear Engineering Application Experiments
C070	基礎量子科学	Introduction to Quantum Science
C072	基礎量子エネルギー工学	Introduction to Advanced Nuclear Engineering
C076	基礎電磁流体力学	Fundamentals of Magnetohydrodynamics
C078	複合加速器工学	Advanced Accelerator Technology
C080	原子炉安全工学	Nuclear Reactor Safety Engineering
C082	応用中性子工学	Applied Neutron Engineering
C084	原子核工学最前線	Nuclear Engineering, Adv.
C086	原子核工学序論1	Introduction to Nuclear Engineering 1
C087	原子核工学序論2	Introduction to Nuclear Engineering 2
C089	原子核工学セミナーA	Seminar on Nuclear Engineering A, B
C090	原子核工学セミナーB	Seminar on Nuclear Engineering A, B
R001	量子ビーム科学特論	Quantum Beam Science, Adv.
R013	非線形プラズマ工学	Nonlinear Physics of Fusion Plasma
R017	インターンシップD(原子核)	Engineering Internship D
R019	原子核工学特別セミナーA	Seminar on Nuclear Engineering, Adv. A
R021	原子核工学特別セミナーB	Seminar on Nuclear Engineering, Adv. B
R023	原子核工学特別セミナーC	Seminar on Nuclear Engineering, Adv. C
R025	原子核工学特別セミナーD	Seminar on Nuclear Engineering, Adv. D
R027	原子核工学特別セミナーE	Seminar on Nuclear Engineering, Adv. E
R029	原子核工学特別セミナーF	Seminar on Nuclear Engineering, Adv. F
W620	医学放射線計測学	Radiation Measurement for Medicine

材料工学専攻 / Materials Science and Engineering

C013	核材料工学	Nuclear Materials
C209	非鉄製錬学特論	Non-ferrous extractive metallurgy, Adv.
C214	凝固・結晶成長学	Microstructure,solidification and crystal growth
C240	材料工学特別実験及演習第一	Laboratory & Seminar in Materials Science
C241	材料工学特別実験及演習第二	Laboratory & Seminar in Materials Science
C251	材料工学セミナーA	Seminar on Materials Science and Engineering A

C253	材料工学セミナーB	Seminar on Materials Science and Engineering B
C263	結晶物性学特論	Physical Properies of Crystals Adv.
C271	磁性物理	Magnetism and Magnetic Materials
C273	社会基盤材料特論Ⅰ	Advanced Materials Science & Engineering in industries I
C275	社会基盤材料特論Ⅱ	Advanced Materials Science & Engineering in industries II
C277	インターンシップM(材料工学)	Internship in Materials Science & Engineering
C286	原子分子工学特論	Atomic-molecular scale engineering
C290	材料電気化学特論	Electrochemistry for Materials Processing, Adv.
C855	計算材料学特論	Computational Materials Science, Adv.
R241	材料工学特別セミナーA	Seminar on Materials Science and Engineering, Adv.A
R242	材料工学特別セミナーB	Seminar on Materials Science and Engineering, Adv.B
R243	材料工学特別セミナーC	Seminar on Materials Science and Engineering, Adv.C
R244	材料工学特別セミナーD	Seminar on Materials Science and Engineering, Adv.D
R245	材料工学特別セミナーE	Seminar on Materials Science and Engineering, Adv. E
R247	材料工学特別セミナーF	Seminar on Materials Science and Engineering, Adv.F

電気工学専攻 / Electrical Engineering

C601	電気数学特論	Applied Mathematics for Electrical Engineering, Adv.
C604	応用システム理論	Applied Systems Theory
C610	電磁気学特論	Electromagnetic Theory, Adv.
C611	電磁界シミュレーション	Computer Simulation of Electrodynamics
C612	宇宙電波工学	Space Radio Engineering
C613	超伝導工学	Superconductivity Engineering
C617	マイクロ波応用工学	Applied Microwave Engineering
C625	電気回路特論	Theory of Electric Circuits, Adv.
C627	研究インターンシップM(電気)	Research Internship(M)
C628	状態方程式論	State Space Theory of Dynamical Systems
C631	制御系設計理論	Design of Control Systems
C643	電気工学特別実験及演習1	Advanced Experiments and Exercises
C646	電気工学特別実験及演習2	Advanced Experiments and Exercises
C718	電気工学特別研修1(インターン)	Advanced Seminar in Electrical EngineeringI
C720	電気工学特別研修2(インターン)	Advanced Seminar in Electrical EngineeringII
C800	半導体ナノスピントロニクス	Semiconductor Nanospintronics
K010	先端電気電子工学通論	Recent Advances in Electrical and Electronic Engineering
R610	電気工学特別セミナー	Advanced Electrical Engineering Seminar
R630	研究インターンシップD(電気)	Research Internship (D)
R632	電気工学特別演習1	Advanced Exercises on Electrical Engineering I
R633	電気工学特別演習2	Advanced Exercises on Electrical Engineering II

電子工学専攻 / Electronic Science and Engineering

C710	電子工学特別実験及演習1	Advanced Experiments and Exercises
C713	電子工学特別実験及演習2	Advanced Experiments and Exercises
C801	電子装置特論	Charged Particle Beam Apparatus
C803	量子情報科学	Quantum Information Science
C810	半導体工学特論	Semiconductor Engineering, Adv.
C813	電子材料学特論	Electronic Materials, Adv.
C816	分子エレクトロニクス	Molecular Electronics
C819	表面電子物性工学	Surface Electronic Properties
C821	研究インターンシップM(電子)	Research Internship(M)
C822	光物性工学	Optical Properties and Engineering
C825	量子論電子工学	Quantum Theory for Electronics
C828	光量子デバイス工学	Quantum Optoelectronics Devices
C830	量子計測工学	Quantum measurement
C846	電子工学特別研修1(インターン)	Advanced Seminar in Electronic Science and Engineering I
C848	電子工学特別研修2(インターン)	Advanced Seminar in Electronic Science and Engineering II
C851	電気伝導	Electrical Conduction in Condensed Matter
R701	電子工学特別セミナー	Advanced Seminar on Electronic Science and Engineering
R823	研究インターンシップD(電子)	Research Internship (D)
R825	電子工学特別演習1	Advanced Exercises on Electronic Science and Engineering I
R827	電子工学特別演習2	Advanced Exercises on Electronic Science and Engineering II

材料化学専攻 / Material Chemistry
物質エネルギー化学専攻 / Energy and Hydrocarbon Chemistry
分子工学専攻 / Molecular Engineering
高分子化学専攻 / Polymer Chemistry
合成・生物化学専攻 / Synthetic Chemistry and Biological Chemistry
化学工学専攻 / Chemical Engineering

D837	Supramolecular Chemistry	Supramolecular Chemistry
H042	有機金属化学2	Organotransition Metal Chemistry 2
H818	先端有機化学	Advanced Organic Chemistry

材料化学専攻 / Material Chemistry

D037	材料化学特別実験及演習	Laboratory and Exercise in Material Chemistry
H001	無機材料化学	Chemistry of Inorganic Materials
H004	有機材料化学	Chemistry of Organic Materials
H007	高分子材料化学	Chemistry of Polymer Materials
H010	機能材料化学	Chemistry of Functional Materials
H013	無機構造化学	Chemistry and Structure of Inorganic Compounds

H022	有機天然物化学	Chemistry of Organic Natural Products
H031	生体材料化学	Chemistry of Biomaterials
H034	材料解析化学II	Analysis and Characterization of Materials II
H036	バイオ･高分子マテリアルDX論	Material digital transformation of bio/
P057	材料化学特論第三	Material Chemistry Adv. III
P058	材料化学特論第四	Material Chemistry Adv. IV
P110	材料化学総論	General Material Chemistry
P111	化学産業特論	Chemical Industry, Advanced
S001	機能材料設計学	Design of Functional Materials
S002	機能材料設計学特論	Design of Functional Materials, Advanced
S003	無機構造化学特論	Inorganic Structural Chemistry, Advanced
S006	応用固体化学特論	Industrial Solid-State Chemistry, Advanced
S010	有機反応化学特論	Organic Reaction Chemistry, Advanced
S013	天然物有機化学特論	Organic Chemistry of Natural Products, Advanced
S016	材料解析化学特論	Analytical Chemistry of Materials, Advanced
S019	高分子材料物性特論	Physical Properties of Polymer Materials, Advanced
S022	高分子材料合成特論	Synthesis of Polymer Materials, Advanced

物質エネルギー化学専攻 / Energy and Hydrocarbon Chemistry

D220	物質エネルギー化学特論1	Energy and Hydrocarbon Chemistry, Adv.1
D234	物質エネルギー化学特別実験及演習	Experiments & Exercises in Energy
D235	物質エネルギー化学特論第七	Energy and Hydrocarbon Chemistry, Adv.VII
D236	物質エネルギー化学特論第八	Energy and Hydrocarbon Chemistry, Adv.VIII
H200	電気化学特論	Electrochemistry, Adv.
H202	物質環境化学	Green and Sustainable Chemistry
H205	無機固体化学	Inorganic Solid-State Chemistry
H208	物質エネルギー化学特別セミナーA	Seminar on Energy & Hydrocarbon Chemistry (A)
H213	有機触媒化学	Catalysis in Organic Reactions
H215	機能性界面化学	Chemistry of Functional Interfaces
H218	固体触媒設計学	Material Design of Solid Catalysts
H219	構造有機化学	Structural Organic Chemistry
H222	物質変換化学	Chemical Transformations
H232	物質エネルギー化学特論第五	Energy and Hydrocarbon Chemistry, Adv.V
S204	物質エネルギー化学特別セミナー1	Energy and Hydrocarbon Chemistry Special Seminar 1
S205	物質エネルギー化学特別セミナー2	Energy and Hydrocarbon Chemistry Special Seminar 2
S206	物質エネルギー化学特別セミナー3	Energy and Hydrocarbon Chemistry Special Seminar 3

分子工学専攻 / Molecular Engineering

D432	分子工学特別実験及演習Ｉ	Laboratory and Exercises in Molecular Engineering I
D433	分子工学特別実験及演習Ⅱ	Laboratory and Exercises in Molecular Engineering II
D439	分子工学特論第一A	Molecular Engineering, Adv. IA
D445	分子工学特論第一B	Molecular Engineering, Adv. IB
H401	統計熱力学	Statistical Thermodynamics
H405	量子化学I	Quantum Chemistry I
H408	分子分光学	Molecular Spectroscopy
H416	分子触媒学	Catalysis Science at Molecular Level
H422	分子材料科学	Molecular Materials Science
H427	量子物質科学	Quantum Materials Science
H428	分子レオロジー	Molecular Rheology

Course number	G-ENG90 8i010 PE20				
Course title (and course title in English)	工学研究科国際インターンシップ１ International Internship in Engineering 1	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,HONDA MITSURU Graduate School of Engineering Senior Lecturer,KOWHAKUL, Wasana		
Target year	Master's/Doctoral students	Number of credits	1	Year/semesters	2025/Intensive, year-round
Days and periods	Intensive	Class style	Practical training (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

The internships and related training programs (lasting less than three months) offered through the Graduate School of Engineering at Kyoto University, whether conducted overseas or domestically but expected to have a similar educational effect as internships abroad, are targeted. The aim is to cultivate independence, proactivity, internationality, and language skills by placing students in diverse environments, thereby contributing to their career development after graduation.

[Course objectives]

The purpose is to enhance the expansion of international perspectives, the acquisition of international sensibilities, the improvement of foreign language proficiency (communication skills), and the enhancement of cultural receptiveness (cross-cultural adaptability) by experiencing internships in diverse environments such as overseas universities and companies.

[Course schedule and contents]

[Submission of the internship plan (1 time)]
Complete and submit the form ‘International Internship Plan’ at least one month before the internship takes place and undergo a preliminary review.

[Overseas internship (1 time)]
Participate in an internship abroad.

[Results debriefing (1 time)]
Internship participants report on the results of their internship and discuss their findings.

[Course requirements]

Have sufficient language skills in the language(s) spoken at the internship site.
* Must have purchased the prescribed overseas travel insurance before traveling to the internship site.
* Have submitted an overseas travel registration form in advance.

[Evaluation methods and policy]

After registering for the course, one month prior to participating in the internship, students must fill out the “International Internship Plan” on the designated form and submit it to the Graduate Student Section of Educational Affairs Division for prior review by the faculty members of the ER center.
After completion of the internship, students will be awarded credits (100%) based on the submission of an

Continue to 工学研究科国際インターンシップ１(2)↓↓↓

internship report and the content of the presentation at the debriefing session.
It is also advisable to submit a certificate of completion from the institution hosting the internship.
The decision to grant credits for graduation will be made by each department and or Interdisciplinary Engineering Course. If the credits are not approved as credits required for graduation, the ER center will make the decision. In this case, the credits will be treated as excess credits.
Whether the internship is approved as credit for “1” (1 credit) or “2” (2 credits) of the International Internship Program of the Graduate School of Engineering is determined based on the duration of the internship and the content of the practical training during the internship period, but in the case of “2,” overseas travel is required.

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Thu.2	Class style	Seminar (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

In order to obtain and expand skills, students will learn from the lecture and through practice. Professors will provide feedback as students navigate the manuscript creaton steps. Students will take a practical approach to developing skills in three key areas:.
- Strategy: Understanding what editors and referees want to publish, and why;
- Content: Understanding what makes a compelling research article in a particular discipline area;
- Language: Developeing techniques to enhance clear and effective communication with readers in English

Course number	G-ENG95 8i041 SE20

Course title (and course title in English)	科学技術者のためのプレゼンテーション演習 Professional Scientific Presentation Exercises	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Senior Lecturer,KOJIMA HIROYUKI Graduate School of Engineering Professor,HONDA MITSURU Graduate School of Engineering Senior Lecturer,KOWHAKUL, Wasana

Target year	Master's/Doctoral students	Number of credits	1	Year/semesters	2025/Intensive, year-round

Days and periods	Intensive	Class style	Seminar (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

The aim of this exercise is to provide master's and doctoral students with presentation and discussion skills in presenting science and technology to non-specialist science and technology professionals and the general public as required by science and technology professionals.

[Course objectives]

Students develop more advanced presentation skills in order to explain complex and technical matters more simply and to answer questions.

[Course schedule and contents]

Guidance, special lectures by external lecturers, exercises (6 sessions)
Oral presentation and discussion I (3 sessions)
Oral presentation and discussion II (3 sessions)
Oral presentation and discussion III (3 sessions)

[Course requirements]

Basic presentation skills in English, English conversation skills, publishable research achievements, conference presentation manuscripts, class reports and seminar materials

[Evaluation methods and policy]

The presentation and discussion will be assessed comprehensively.

[Textbooks]

Materials will be distributed as appropriate.

[Study outside of class (preparation and review)]

Students are required to bring their own research results, conference papers, class reports and seminar materials for presentation.

（Other information (office hours, etc.)）

The course is open to Master's and Doctoral students. Due to the nature of the lecture, the course will only be offered if there are at least four students enrolled. If there are too many applicants, the number of students may be limited (maximum 30).
Applicants must pre-register in advance for this course by following the instructions notified on the ER center's website (https://www.erc.t.kyoto-u.ac.jp/grad).

The course will be held over five days from Tuesday 27th August to Friday 30th August, and Tuesday 3rd September. Details of the course will be announced on the ER Center website　(https://www.erc.t.kyoto-u.ac.jp/grad).

*Please visit KULASIS to find out about office hours.

Course number	G-ENG90 8i042 SE20		
Course title (and course title in English)	工学と経済（上級） Advanced Engineering and Economy	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Associate Professor,Juha Lintuluoto

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Tue.5	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

Engineering economics plays central role in any industrial engineering project. For an engineer, it is important to apply the engineering know-how with the economic analysis skills to obtain the best available materials, methods, devices, etc. in the most economical way. This course is aimed to teach engineering students the basic economic methods to manage economically an engineering project. In addition, the report writing on various engineering economic issues prepares to write reports in a professional form. The lab sessions are meant for the verbal skills improvement as well as improvement of analytical thinking. The topics are of current relevant topics Small-group brain-storming method is used. The exercise sessions cover the use of Ms-Excel for various quantitative economic analyses.

[Course objectives]

This course is aimed to strengthen engineering studentsrsquo skills in economics. The course concept is to teach students selectively those subjects which serve as major tools to solve economic tasks in engineering environment. The reports and lab sessions provide students stimulating and analytical thinking requiring tasks, and presentation skills training is an important part of this course.

[Course schedule and contents]

Student orientation and Introduction to engineering economy,1time,Course contents, goals
Cost concepts and design economics,1time,Cost terminology and classification
Cost estimation techniques,1time,WBS for cost estimation, estimation techniques (indexes, unit, factor, power-sizing, learning curve, CER, top down, bottom up), target costing
The time value of money,1time,Simple interest, compound interest, economic equivalence concept, cash-flow diagrams, PW, FW, AW
Evaluating a single project,1time,MARR, present wort method, bond value, capitalized worth, internal rate of return, external rate of return, payback method
Comparison and selection among alternatives,1time,Investment and cost alternatives, study period, equal and unequal useful lives, rate-of-return method, imputed market value
Depreciation and income taxes,1time,SL and DB depreciation methods, book value, after-tax MARR, marginal income tax rate, gain(loss) on asset disposal, after-tax economic analysis general procedure, EVA,
Price changes and exchange rates,1time,Actual dollars, real dollars, inflation, fixed and responsive annuities, exchange rates, purchasing power
Replacement analysis,1time,Determining economic life of challenger, determining economic life of defender, abandonment, after-tax replacement study
Evaluating projects with the benefit-cost ratio method,1time,Benefits, costs, dis-benefits, self-liquidating projects, multi-purpose projects, interest rate vs. public project, conventional B-C ratio PW and AW method,

工学と経済（上級）(2)

modified B-C ratio PW and AW method
Breakeven and sensitivity analysis,1time,Breakeven analysis, sensitivity analysis, spider plot
Probabilistic risk analysis,1time,Sources of uncertainty, discrete and continuous variables, probability trees, Monte Carlo simulation example, decision trees, real options analysis
The capital budgeting process,1time,Capital financing and allocation, equity capital and CAPM, WACC, WACC relation to MARR, opportunity cost
Decision making considering multiattributes,1time,Non-compensatory models (dominance, satisficing, disjunctive resolution, lexicography), compensatory models (non-dimensional scaling, additive weight)
Final test,1time,90 minutes, concept questions, calculation task (option of choice)
,times,Additionally, students will submit three reports during the course on given engineering economy subjects. Also, required are the five lab participations (ca.60 min/each) for each student. Additionally, three exercise sessions (ca.60 min/each), where use of Ms-Excel will be practiced for solving various engineering economy tasks, should be completed

Course number	G-ENG90 8i046 SE20		
Course title (and course title in English)	実践的科学英語演習II Exercise in Practical Scientific English II	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Senior Lecturer,KOWHAKUL, Wasana Graduate School of Engineering Professor,HONDA MITSURU Graduate School of Engineering Senior Lecturer,hirai yoshikazu Graduate School of Engineering Senior Lecturer,ISHITSUKA KAZUYA Graduate School of Engineering Senior Lecturer,Kanako Shojiki Graduate School of Engineering Senior Lecturer,KOJIMA HIROYUKI Graduate School of Engineering Senior Lecturer,HAYASHI KAZUKI

Target year	Master's/Doctoral students	Number of credits	1	Year/semesters	2025/Second semester
Days and periods	Mon.2	Class style	Seminar (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

修士・博士課程の大学院生が、論理的で説得力のある英語ポスター・プレゼンテーションの方法を学び、国際会議・ワークショップなどで主体的に発表する力をつける演習コースである。専門分野外の聴衆者に自分の研究内容（背景・目的・実験／解析・考察・結論）をより分かり易く広められるような、説得力のある英語ポスター・ビデオプレゼンテーション能力の習得を目指す。合わせて研究内容に興味を持ってもらうために、質疑応答の機会にもしっかり対応できるコミュニケーション能力を育成する。本講義では、工学研究科の外国人講師が、受講生のプレゼン発表をレビューして質疑・コメントすると共に、発表内容や発表スタイルについてもフィードバックを適宜、日本語を交えて行う。

This is course will help the master's and doctoral students to about:
1. How to make an Effective Scientific Poster
Design strategies for effectively communicating your scientific results
2. How to prepare Cover Letter and CV for an academic position
Ideas for maximizing visibility of your skills and achievements to a selection committee
3. Learn more about Science Communication Videos
This lecture will cover types of presentations, delivery methods, content types, and timing.
4. How to create Video Recording & Editing When creating video, it ’ s important to think about the tools available and the best tools for the job at hand.
In this lecture, we will discuss the role of various tools, including how to capture input, different types of input, and various approaches to editing video.

In this lecture, foreign professors will review the students' presentations, ask questions, and make comments, as well as provide feedback on the content and style of the presentations, in Japanese as appropriate

[Course objectives]

科学技術の英語プレゼンテーションの方法を、理論・分析・実践の３つのアプローチにより習得する。具体的には、身につけるべき科学技術英語ポスター・プレゼンテーションを「英語プレゼンテーションの原則」「目的に応じた発表準備」「英語プレゼンテーション・ポスター発表の実践」の

3つの角度から外国人講師と共に練習し、それぞれグループワークによるアクティブラーニングを織り交ぜながら、理論から実践までを連結する。

In order to obtain and expand skills. Students will learn from the lecture and practice with the specialty professors as step by step on

1. How to make an Effective Scientific Poster
2. How to prepare Cover Letter and CV for an academic position
3. Learn more about Science Communication Videos
4. How to create Video Recording & Editing

[Course schedule and contents]

このクラスは今学期15 週にわたって実施します。クラスの学習活動とトピックは以下のとおりです。

The course is constituted of Four main parts:
Part 1. Introduction to Effective Presentation and Organizational Tools (2 classes)
A lecture is given on how to prepare an effective presentation and introduce tools for organizing such as Tree #8211 Mind map, Logic tree etc., Matrix- Mandala art, SWOT etc., and Image.

Part 2. Poster presentation (5 classes)
Each student will learn acquire persuasive and effective presentation techniques then make their own research poster and present. The foreign instructor will focus on the following points Comments and feedback will be provided. In this way, students will.
1. Clear presentation method?
2. Logical flow and content structure that is easy to understand, even if the content is new to the audience?
3. Useful scientific and technical expressions are used?
4. Use of techniques to attract the attention of the audience?

Part 3. Create Video presentation (6 classes)
Students will learn how to tell a story and the tips for giving the best research Video and the foreign instructors will feedback any commend to each student VDO.

Part 4. Writing CV and Covering letter (2 classes)
Special for this class, students will learn how to write very effective and learn more about the Curriculum Vitae VS Cover Letter and, having a chance to discuss with a leading company office worker.

Course title (and course title in English)	エンジニアリングプロジェクトマネジメント Project Management in Engineering	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Senior Lecturer,ISHITSUKA KAZUYA Graduate School of Engineering Professor,HONDA MITSURU Graduate School of Engineering Senior Lecturer,hirai yoshikazu Graduate School of Engineering Associate Professor,Juha Lintuluoto Graduate School of Engineering Senior Lecturer,KOWHAKUL, Wasana Graduate School of Engineering Senior Lecturer,KOJIMA HIROYUKI Graduate School of Engineering Senior Lecturer,Kanako Shojiki Graduate School of Engineering Senior Lecturer,HAYASHI KAZUKI

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Fri.4	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

This course provides a basic knowledge required for the project management in various engineering fields such as process design, plant design, construction, and R&D project. Some lectures are provided by visiting lecturers from industry and public works who have many experiences on actual engineering projects.

[Course objectives]

This course will help students gain a fundamental knowledge of what project management in engineering is. Throughout the course, students will learn various tools applied in project management. Students will also understand the importance of costs and money, risks, leadership, and environmental assessment in managing engineering projects. This course is followed with the course Exercise on Project Management in Engineering in the second semester.

[Course schedule and contents]

Week 1, Course guidance
Week 2, Introduction of project management
Week 3, Project management in the case of Japanese ODA
Week 4-5, Team organization and administration
Week 6-8, Tools for project management, cost, and cash flows
Week 9, Negotiation skills/tactics/examples in business marketing
Week 10, Environmental impact assessment
Week 11, The work stages of architectural design projects in UK
Week 12, Scheduling
Week 13, Project management for engineering projects
Week 14, Project management for engineering business
Week 15, Feedback
The schedule is subject to change.

Days and periods	Intensive	Class style	Seminar (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

This course provides lectures and panel discussions by lecturers inside and outside the campus who have a remarkable achievement in engineering and are active as international leaders.

[Course objectives]

This course cultivates the ability to develop familiar problem consciousness into a big concept through utilizing the materials of advanced fields in each field. This course also shows how leaders have improved their response to problems. Through this course, students learn fundamental culture, and the importance of human growth.

[Course schedule and contents]

Topic 1,2times,Detail will be announced later
Topic 2,2times,Detail will be announced later
[Note] Lectures will be given in Japanese.

[Course requirements]

None

[Evaluation methods and policy]

Separate four classes will be provided. One class has three hours. Each class will assign a report. Evaluation bases on the assignment and class contribution. The classes will be opened on Saturdays. In 6H course, students have to select two classes and will earn 0.5 credits.

[Textbooks]

Course title (and course title in English)	現代科学技術特論（4回コース） Advanced Modern Science and Technology (4 times course)	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Senior Lecturer,KOJIMA HIROYUKI Graduate School of Engineering Senior Lecturer,hirai yoshikazu Graduate School of Engineering Senior Lecturer,KOWHAKUL, Wasana Graduate School of Engineering Associate Professor,Yi Wei Graduate School of Engineering Associate Professor,IWAI HIROMASA Graduate School of Engineering Senior Lecturer,BANERJEE, Amit Graduate School of Engineering Senior Lecturer,Nguyen Thanh Phuc Graduate School of Engineering Senior Lecturer,ISHITSUKA KAZUYA Graduate School of Engineering Assistant Professor,MOLINA LOPEZ, John Jairo Graduate School of Global Environmental Studies Assistant Professor,GON MASAYUKI Graduate School of Engineering Assistant Professor,WATANABE YUICHO

Target year	Master's/Doctoral students	Number of credits	0.5	Year/semesters	2025/Second semester
Days and periods	Thu.5	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

Engineering/Engineers have been expected to fulfill key roles among social issues and others, such as energy, environment and resource. This class introduces cutting edge science and technologies from their backgrounds, research and development, to problems for the practical applications. Assignment will be done for further understanding of the topics of the course.

Advanced Modern Science and Technology provides 4 times course, 8 times course, and 12 times course, and requests students to choose one of the courses. In the 4 times course, students take 4 lectures, in the 8 times course, 8 lectures, and in the 12 times course, 12 lectures. The lectures are categorized into three topics (A, B, and C). In the 4 times course, the students choose one topic from A, B, and C, and attend the 4 lectures of the chosen topic. It is prohibited to change the registered course and the chosen topic after registration. It is not allowed to attend the lectures of the topics other than the chosen one.

[Course objectives]

The students understand of each technology towards social issues to be solved by engineers. In addition, the students learn the importance for engineers to have multidisciplinary mind and understand the significance of engineering to realize sustainable development.

Course number	G-ENG90 8i059 LE77		
Course title (and course title in English)	エンジニアリングプロジェクトマネジメント演習 Exercise on Project Management in Engineering	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Senior Lecturer,ISHITSUKA KAZUYA Graduate School of Engineering Professor,HONDA MITSURU Graduate School of Engineering Senior Lecturer,hirai yoshikazu Graduate School of Engineering Associate Professor,Juha Lintuluoto Graduate School of Engineering Senior Lecturer,KOWHAKUL, Wasana Graduate School of Engineering Senior Lecturer,KOJIMA HIROYUKI Graduate School of Engineering Senior Lecturer,Kanako Shojiki Graduate School of Engineering Senior Lecturer,HAYASHI KAZUKI

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/Intensive, Second semester
Days and periods	Intensive	Class style	Seminar (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

Students will apply the engineering know-how and the skills of management, and group leadership which they learned in the course of Project Management in Engineering to build and carry out a virtual inter-engineering project. This course provides a forum where students' team-plan based on ideas and theories, decision making, and leadership should produce realistic engineering project outcomes. The course consists of intensive group work, presentations, and a few intermediate discussions. A written report will be required.

[Course objectives]

This course prepares engineering students to work with other engineers within a large international engineering project. In particular this course will focus on leadership and management of projects along with applied engineering skills where the students learn various compromises, co-operation, responsibility, and ethics.

[Course schedule and contents]

The first class will start on 4th October in 4th slot(15:00-).
Week 1, Introduction to Exercise on Project Management in Engineering, Lecture on tools for the Project management in engineering, Practice and Project proposal.
Week 2, Group finalizations & Project selections.
Week 3-7, Group work, Project preliminary structures, Task list, WBS, Cost, Gant chart.
Week 8, Mid-term presentation.
Week 9-11, Group work, Leadership structuring, Risk Management, Environmental Impact Assessment.
Week 12, Presentation.
Each project group may freely schedule the group works within given time frame. The course instructors are available if any need is required.
Some lectures will be provided such as Task list, WBS, Cost, Gant chart, Leadership structuring, Risk Management, Environmental Impact Assessment, and more.

Continue to エンジニアリングプロジェクトマネジメント演習(2)↓↓↓

エンジニアリングプロジェクトマネジメント演習(2)

[Course requirements]

Fundamental skills about group leading and communication, scientific presentation.
We may restrict the class size to enhance students' learning. The class may NOT open if the participants is 6 or below.
Students who intend to join the course are required to attend the first class which will start on 4th October in 4th slot(15:00-).
It is recommended that students have taken " Project Management in Engineering " (offered in the spring semester). For those who have not taken the course, the instructor will provide materials and explanations to support in learning.

[Evaluation methods and policy]

Report, presentations, class activity (at least 10 times attendance including mid-term and final presentations).

[Textbooks]

Not used
If necessary, course materials will be provided.

[References, etc.]

Course title (and course title in English)	先端マテリアルサイエンス通論（4回コース） Introduction to Advanced Material Science and Technology (4 times course)	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Senior Lecturer,KOJIMA HIROYUKI Graduate School of Global Environmental Studies Associate Professor,HIDAKA TAIRA Graduate School of Engineering Associate Professor,TAISHI KOBAYASHI Graduate School of Engineering Associate Professor,HIGASHINO TOMOHIRO Graduate School of Engineering Associate Professor,MIKI KOJI Graduate School of Engineering Associate Professor,ＮＡＭＵＲＡ　ＫＹＯＫＯ Graduate School of Engineering Associate Professor,GAO，Si Graduate School of Engineering Senior Lecturer,Arseniy Aleksandrovich，Kuzmin Graduate School of Engineering Senior Lecturer,Kanako Shojiki Graduate School of Engineering Senior Lecturer,HAYASHI KAZUKI Graduate School of Engineering Assistant Professor,WATANABE YUICHO Graduate School of Engineering Assistant Professor,ISHI RYOTA

Target year	Master's/Doctoral students	Number of credits	0.5	Year/semesters	2025/First semester
Days and periods	Fri.5	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

The various technologies used in the field of material science serve as bases for so-called high technologies and in turn the high technologies develop material science. These relate to each other very closely and contribute to the development of modern industries. In this class, recent progresses in material science are briefly introduced, along with selected current topics on new biomaterials, nuclear engineering materials, new metal materials and natural raw materials. The methods of material analysis and future developments in material science are also discussed.

Introduction to Advanced Material Science and Technology provides 4 times course, 8 times course, and 12 times course, and requests students to choose one of the courses. In the 4 times course, students take 4 lectures, in the 8 times course, 8 lectures, and in the 12 times course, 12 lectures. The lectures are categorized into three topics (A, B, and C). In the 4 times course, the students choose one topic from A, B, and C, and attend the 4 lectures of the chosen topic. It is prohibited to change the registered course and the chosen topic after registration. It is not allowed to attend the lectures of the topics other than the chosen one.

[Course objectives]

To expand your field of vision for material science and to acquire accomplishments to identify the importance of technologies through the classes for developments in material science.

先端マテリアルサイエンス通論（4回コース）(2)

[Course schedule and contents]

The following lectures will be given.

Topic A
Material and Environment
A-1 Introduction and Course Guidance
A-2 Geological disposal of radioactive waste
A-3 Energy and Resource Recovery from Wastewater
A-4 Discussion/Material and Environment（tentative）

Topic B
Material Development
B-1 Tumor Imaging and Therapy Through Photoirradiation
B-2 Photothermal Heating for Microfluidic Control
B-3 Synthesis of Novel π-Conjugated Molecules with Main Group Elements
B-4 Organic Electronic Material

Topic C
Material and Control
C-1 Processing and Mechanical Properties of Structural Metallic Materials Having Ultra-Fine Microstructures
C-2 Introduction to Thermonuclear Fusion and Material Challenges
C-3 Plasma-Material Interactions in Fusion Devices
C-4 Crystal Growth of Nitride Semiconductors and Their Light-Emitting Device Applications

The schedule is subject to change.
See website (https://www.erc.t.kyoto-u.ac.jp/grad) for further information.

[Course requirements]

None

[Evaluation methods and policy]

The average score of the best two assignments for each topics is employed.
For each topic, the students must attend minimum three lectures and submit minimum two assignments evaluated as "passed".

[Textbooks]

Course materials will be provided.

[References, etc.]

（Reference books）

Will be informed if necessary.

Course number			
Course title (and course title in English)	労働衛生工学概論 Introduction to Occupational Health Engineering	Instructor's name, job title, and department of affiliation	Agency for Health, Safety and Environment Professor,MATSUI YASUTO Agency for Health, Safety and Environment Assistant Professor,NAGAYA TAIKI Agency for Health, Safety and Environment Program-Specific Senior Lecturer,EMI FUKUDA

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Tue.4	Class style	Lecture (Media-based course)	Language of instruction	Japanese

[Overview and purpose of the course]

1950年にILO（国際労働機関）及びWHO（世界保健機関）は、「あらゆる職業に従事する人々の肉体的、精神的及び社会的福祉を最高度に増進し、かつこれを維持せること」が労働衛生の目的であるとし、これを達成させるためには、1）作業条件に基づく疾病を防止すること[作業管理]、2）健康に不利な諸条件から雇用労働者を保護すること[健康管理]、3）作業者の生理的、心理的特性に適応する作業環境にその作業者を配置すること[作業環境管理]、を謳っている。本科目では衛生工学分野の中でも、これらを軸とした労働衛生工学の概要を、15回に分けて論じる。わが国では、高度経済成長期に労働災害が多発した背景から、1972年に労働安全衛生法が制定された。本法は施行令、規則のように細部の事項が数字等で示されており、判例・裁判例を基にした運用を一般とする他法律とは大きく異なる。これら細則が定められた学術的根拠を、職場における化学的、物理的、生物的要因から講義する。これにより、「第一種衛生管理者」、「衛生工学衛生管理者」資格の取得を想定した、衛生管理に必要な事項について講述する。これらは、在学の安全で快適な研究環境の形成に貢献するのみならず、卒業後の労働現場において、労働災害や業務上疾病の発生を未然に防ぐための労働衛生管理を行う上でも必要な知識と言える。

[Course objectives]

労働衛生工学に関する知識を身に着け、職業現場及び研究環境における労働衛生管理に従事できる能力を獲得する。同時に、「第一種衛生管理者」、「衛生工学衛生管理者」の資格取得のために必要な知識を習得する。

[Course schedule and contents]

全回を［メディア授業：同時双方向型］として実施する。

第1回「労働衛生管理体制と職業性疾病」
労働安全衛生法に定められている業種とその職務並びに、統括管理する体制に加え、過去に発生した代表的な職業疾病ついて講述する。
第2回「人体の構造及び機能①」
臓器や体液の構成やその働き及び、循環器・呼吸器のしくみとその働きを、労働環境に関連して講述する。
第3回「人体の構造及び機能②」
消化器のしくみとその働き、代謝と排せつ、神経系・内分泌系・免疫系について、労働環境に関連する事項を講述する。
第4回「環境条件による人体の機能変化、救急処置」
恒常性の維持、疲労、睡眠を労働環境に関連させて解説し、加えて救急蘇生法及び応急手当について講述する。

Continue to 労働衛生工学概論(2)↓↓↓

労働衛生工学概論(2)

第5回「健康管理」
医学的検査項目の解説、健康診断と事後措置並びに、職業現場における適正配置について講述する。

第6回「作業環境要素」
一般作業環境及び有害作業環境について解説し、化学物質管理とリスクアセスメント、リスク低減策について講述する。
第7回「作業管理」
労働態様と産業疲労、作業条件の計測及び評価、VDT作業、労働衛生保護具の選定と適正な使用、管理方法について講述する。
第8回「メンタルヘルスと安全衛生教育」
職場におけるメンタルヘルス対策及び、トータルヘルスプロモーションに加え、労働衛生教育の目的と意義について講述する。
第9回「作業環境管理①」
作業環境管理の意義と目的、管理の進め方、作業環境測定のデザイン、サンプリング、評価、改善手法について講述する。
第10回「作業環境管理②」
局所排気装置の基本的な構造、圧力損失、風量の確保とその評価、プッシュプル換気装置などの施設及び設備の管理について講述する。
第11回「作業環境管理③」
騒音・振動・放射線等の物理的因子に係る作業環境管理、事務所等の一般作業環境の改善、快適職場環境の形成について講述する。
第12回「労働衛生管理統計」
統計の基礎的知識、疫学、労働衛生管理に用いる統計の特徴、疾病休業統計について講述する。
第13回「関係法令①」
一般的な法令の体系と、有害業務に係るもの以外の関係法令を、過去の第一種衛生管理者試験問題を用いて講述する。
第14回「関係法令②」
有害業務に係る関係法令を、過去の第一種衛生管理者試験問題を用いて講述する。
第15回「フィードバック」
授業の中で得た新しい知識がどのくらい定着しているかを、過去の小テストや教員への質問を通じて自ら振り返る。

[Course requirements]

None

[Evaluation methods and policy]

平常点評価（講義への出席状況、小テストなど）が6割、
期末のレポート課題を4割として、総合評価する。

Course title (and course title in English)	コンクリート構造工学 Concrete Structural Engineering	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,TAKAHASHI YOSHIKAZU Graduate School of Management Professor,YAMAMOTO TAKASHI Graduate School of Engineering Associate Professor,TAKAYA SATOSHI Part-time Lecturer,中村　健一

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Tue.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

The most common concrete is introduced as a material to be used for infrastructures in various forms. In particular, various structural forms are mentioned, including prestressed concrete. Design, construction, diagnosis, repair, strengthening, and their management in relation to performance based design will be studied.

[Course objectives]

Understanding the mechanical properties of concrete and the interaction between concrete and steel material, as well as learning the basic theories of reinforced concrete (RC) structure and prestressed concrete (PC) structure, and also design, construction and maintenance methods.

[Course schedule and contents]

Outline (1 time)
Outlining the purpose and composition of lectures that focus on the relationship between various concretes and infrastructure structures, as well as the grading method, and so forth

Reinforced concrete structure (6 times)
The mechanical properties of concrete structural materials constituting reinforced concrete structures and the interaction between concrete and steel material are explained, and at the same time, the analysis of the mechanical behavior of reinforced concrete structural parts that are subjected to bending, axial forces, or shearing forces is studied.

Prestressed concrete structure (6 times)
The basic theory of prestressed concrete (PC) structures, PC bridge types, PC bridge installation methods, new structures/new construction methods, bridge type selection methods, PC part design, PC bridge change and repair, recent developments of PC technology, and so forth are explained. In addition, the criteria used in Japan are introduced, and the basics of PC construction and various construction methods/structure forms using prestressing are studied.

The latest concrete technology (topics) (1 time)
The latest topics related to concrete structural engineering are covered and explained.

Confirmation of learning achievements (1 time)

Continue to コンクリート構造工学(2)↓↓↓

コンクリート構造工学(2)

The degree of achievement regarding the contents of this lecture is confirmed.

[Course requirements]

Basic knowledge on civil engineering materials science and concrete engineering

[Evaluation methods and policy]

Reports and presentations will be assigned, and the overall performance for the full term will be judged.

[Textbooks]

Instructed during class
Others; not specified. Research papers, and so forth will be distributed as necessary.

[References, etc.]

（Reference books）

Introduced during class
Others; books will be introduced from time to time during the lectures.

[Study outside of class (preparation and review)]

The contents of civil engineering materials science and concrete engineering should be reviewed.

（Other information (office hours, etc.)）

*Please visit KULASIS to find out about office hours.

Course title (and course title in English)	流砂水理学 Sediment Hydraulics	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,GOTOH HITOSHI Graduate School of Engineering Professor,HARADA EIJI

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Mon.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Natural flows in river and coast are movable bed phenomena with the interaction of flow and sediment. At a river and a coast, a current and a wave activate a sediment transport and bring the topographical change of a bed such as sedimentation or erosion. This lecture provides an outline about the basics of sediment (or movable bed) hydraulics, and detail of the computational mechanics of sediment transport, which has been developed on the basis of dynamics of flow and sediment by introducing a multiphase flow model and a granular material model. Furthermore, about sediment and water-environment relationship, some of frontier technologies, such as an artificial flood, removal works of dam sedimentation, coastal protection works, and sand upwelling work for covering contaminated sludge on flow bottom etc., are mentioned.

[Course objectives]

Students understand the basics of sediment hydraulics and outline of advanced models for computational sediment hydraulics, such as multiphase flow model and granular material model. Students understand the present conditions of sediment control works.

[Course schedule and contents]

Introduction,1time,
The purpose and constitution of the lecture, the method of the scholastic evaluation are explained.

Basics of sediment hydraulics,5times,
Physical characteristic of a movable bed and a non-equilibrium sediment transport process and its description are explained. Furthermore, the prediction technique of topographical change due to current and waves is outlined.

Computational mechanics of sediment transport: The state of the art,8times,
Essential parts of numerical models of the movable bed phenomena, which has been developed by introducing dynamic models such as a granular material model to describe a collision of sediment particles and a multiphase flow model to describe a fluid-sediment interaction, are described. In comparison with the conventional movable bed computation, the points on which has been improved to enhance the applicability of the models are concretely mentioned. Some frontier studies of sediment transport mechanics are also introduced.

Achievement cofirmation,1time,
Comprehension check of course contents.

Course number	G-ENG01 5A055 LB73　G-ENG02 5A055 LB73		
Course title (and course title in English)	環境地盤工学 Environmental Geotechnics	Instructor's name, job title, and department of affiliation	Graduate School of Global Environmental Studies Professor,KATSUMI TAKESHI Graduate School of Global Environmental Studies Associate Professor,TAKAI ATSUSHI

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Mon.1	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Several issues on environmental geotechnics including geoenvironmental contamination and countermeasure, waste containment and reuse are introduced to understand the contribution of geotechnical engineering to global and local environmental issues. Geoenvironmental issues due to the 2011 East Japan Earthquake and Tsunami are also introduced.

[Course objectives]

Students should understand the geotechnics to solve the following geoenvironmental issues; soil amp groundwater contamination, waste disposal and waste utilization, and extend this knowledge to the development of concepts and technologies for creating and preserving the geo-environment.

[Course schedule and contents]

Introduction,1time,Introduction to Environmental Geotechnics, including goals, outline and grading policy of the course
Waste geotechnics,3-4times,Functions and structures of waste containment facilities Geotechnics on the liner system (Geosynthetics, clay liner, Leachate collection layer) Post-closure utilization of waste landfill
Remediation geotechnics,3-4times,Behaviors of contaminants in subsurface Mechanisms of soil and groundwater contamination Remediation of soil and groundwater contamination Case histories
Geo-environmental issues related to construction works, global environmental issues, and natural disasters,2-3times,Mechanisms and remediation of geoenvironmental problems and geo-disasters caused by construction works Geoenvironmental issues caused by the 2011 East Japan Earthquake and Tsunami
Reuse of wastes in geotechnical applications,3-4times,Engineering properties of recycled materials in geotechnical applications (Incineration ashes, coal ash, surplus soils, dredged soils) Geoenvironmental impact assessment and control of waste utilization Case histories
Presentation and discussion,2-3times,Student presentation, discussion, and summary on above topics

[Course requirements]

Having knowledge on soil mechanics and geotechnical engineering at bachelor level is preferable, but not requirement.

Course number	G-ENG02 5A222 LJ73　G-ENG01 5A222 LJ73		
Course title (and course title in English)	水資源システム論 Water Resources Systems Analysis	Instructor's name, job title, and department of affiliation	Disaster Prevention Research Institute Professor,HORI TOMOHARU Disaster Prevention Research Institute Professor,TANAKA KENJI Disaster Prevention Research Institute Associate Professor,YOROZU KAZUAKI

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Tue.1	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

A method to model the mechanisms of natural and social phenomena related to water resources as a system will be introduced, and lectures will be given on planning theory and management theory for the sustainable use of water resources. Specifically, first, after explaining the idea of systematically thinking about water resource-related problems, lectures will be given on the theory and methodology of the mathematical planning approach to water resource planning/management, as well as the water resource dynamics modeling relationship between water supply-demand balance and production/economic activity. Next, the evaluation method, simulation model, the comprehensive basin management method, and so forth that incorporate environmental elements such as water volume, water quality, ecology, and landscape, aiming to form a proper water circulation system throughout the basin, will be explained.

[Course objectives]

Understanding the fundamental techniques for modeling natural and social phenomena related to water resources as a system, and acquiring the ability to collect, analyze, and design data for the sustainable use of water resources.

[Course schedule and contents]

Optimal design theory of water management system (1 time)
Regarding the planning and design of a water management system consisting of facilities for water supply and water disaster prevention, lectures will be given about the method of finding the optimum configuration based on the performance index and the cost index, while paying attention to the setting and formulation of problems, the search method of a solution, and its efficiency.

Management of water resources system and decision support (2 times)
Discussions will be conducted about the management of the water resources system consisting of reservoirs and weirs for both flood defense and water use. Specifically, methods for optimizing operations of facility groups and coping with uncertainty will be explained, and the technology that supports management decision making based on recent technical trends, such as a knowledge base approach, fuzzy theory, and neural network, will also be explained.

Recent topics about water management (1 time)
Deepening understanding about recent topics related to water management and water disaster prevention with a focus on discussions among students. The problems to be covered will vary depending on the year.

Water management in the world (2 times)

Continue to 水資源システム論 (2)↓↓↓

The actual situation and problems of water resources management in various watersheds around the world with different climatic conditions, geographical conditions, and socioeconomic development stages, as well as examples of past efforts will be introduced.

River planning in Japan (3 times)
This lecture will introduce river planning in Japan from the perspective of water resource management and project management, with particular emphasis on cases in which water resources have been a point of contention.

Terrestrial water cycle model and its application to water management (3 times)
This lecture outlines the terrestrial process models that describe the water cycle in a watershed and how to develop input parameters for operating the models, and introduces how effective model output elements such as soil moisture content, evapotranspiration, irrigation water requirements, snowpack, and runoff are as supporting information for water resource management. An example of how to evaluate the impact of climate change on water resources using land surface process model outputs will also be presented.

Modeling for Climate and Water Resource Assessment (2 sessions)
Modeling of the climate system considering human activities involving water use will be discussed. The modeling of water resource assessment by coupling land surface process models, crop growth models, reservoir operation models, etc. will also be discussed. The necessity and effectiveness of ensemble calculations in climate prediction and water resource assessment will be discussed, including model ensemble experiments and examples of water resource assessments based on initial and boundary value ensemble outputs.

Confirmation of learning achievement (1 time)
The achievement degree will be evaluated according to assignments, and feedback will be provided.

[Course requirements]

It is desirable that students have basic knowledge on hydrology and water resource engineering.

[Evaluation methods and policy]

The results will be evaluated by combining regular tests and points given for participation.

[Textbooks]

not specified. Research papers and so forth will be distributed as necessary.

[References, etc.]

（Reference books）
Introduced during class

Course title (and course title in English)	資源開発システム工学 Resources Development Systems	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,MURATA SUMIHIKO Graduate School of Engineering Associate Professor,KASHIWAYA KOKI

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Fri.1	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Development of mineral resources and energy resources is essential to the sustainable development of our society. In this class, the exploration and development process of natural resources are reviewed including the environmental conservation and harmony. First, fundamentals of reservoir engineering for oil and natural gas are lectured. Second, methods and techniques used to reduce environmental loads in modern resources development are reviewed and their theoretical backgrounds are lectured. Fundamentals of geochemical modeling, that is applicable to simulate hydrogeochemical processes in mine drainage treatment, is also introduced.

[Course objectives]

The goal of this class is to understand the natural resources development concerning environment and master the reservoir engineering needed for the exploration and development of oil and natural gas resources.
In addition, followings are also a goal of this class.
Students understand flow of resources development, and methods and techniques that are used to reduce environmental loads therein.
Students understand and come to be able to explain theoretical backgrounds of the techniques that are utilized to reduce environmental loads in resources development.
Students can conduct basic geochemical modeling.

[Course schedule and contents]

1st: From exploration to development & production for mineral and energy resources
　The engineering flow from exploration to development & production of mineral and energy resources indispensable for the sustainable development of human society is lectured. Environmental conservation and environment-friendly resource development are also included.

2nd: Basic concept of reservoir engineering
　The basic concepts of reservoir engineering, such as the basic properties of reservoir rock and reservoir fluids, reservoir pressure, and oil and gas recovery, are explained.

3rd: Basic equation of radial flow (Part 1)
　The basic equation of the radial flow of a reservoir fluid to a well is derived, and Inflow equations for the semi-steady state and steady-state conditions are described.

Continue to 資源開発システム工学(2)↓↓↓

資源開発システム工学(2)

4th: Basic equations of radial flow (Part 2)
Constant Terminal Rate Solution, which is the solution of the basic equation of radial flow of oil to a well when the oil is produced at a constant production rate and gives the change of bottom hole pressure with time, is derived.

5th: Oil well testing (Part 1)
The basic concept of oil well testing and analysis methods for the pressure drawdown and buildup tests are explained. In addition, the theory of Matthew, Brons, and Hazebroke is explained, and then the evaluation methods of average reservoir pressure (MBH method and Dietz method) are explained.

6th: Oil well testing (Part 2)
The analysis method for the multi-rate pressure drawdown test is explained. The effects of partial completion and after-flow are also explained.

7th: Gas well testing
The basic concept of gas well testing and the equations used for the analysis are explained. The analysis methods are also explained.

8th: Basic theory of immiscible displacement in the reservoir (Part 1)
Fractional flow theory and Buckley-Leverett equation for the one-dimensional displacement of oil by water are explained, and Welge's method for evaluating oil recovery is explained.

9th: Basic theory of immiscible displacement in the reservoir (Part 2)
The oil displacement by water under the conditions of segregated flow and allowance for the effect of a finite capillary transition zone is explained. The method to evaluate oil recovery under these conditions is also explained based on the fractional flow theory.

10th: Basic theory of immiscible displacement in the reservoir (Part 3)
The oil displacement by water under the stratified reservoir condition is explained. The method to evaluate oil recovery under this condition is also explained based on the fractional flow theory.

11th: Enhanced oil recovery
Various enhanced oil recovery methods such as chemical, miscible gas, and thermal flooding are explained.

12th: Resources development and environmental loads
Flow of resources development and their impacts on surrounding environments are reviewed, referring to actual examples of mine pollution. Methods and techniques that are used to reduce environmental loads are introduced.

13th: Theoretical backgrounds of the techniques to reduce environmental loads
Fundamental theories and principles relevant to the treatment of hazardous substances (e.g., mine drainage) generated through resources development are lectured.

14th: Fundamentals of geochemical modeling
Basics of geochemical modeling are lectured. Practical training, in which treatment of mine drainage is assumed, is conducted using representative geochemical modeling code, phreeqc.

15th: Reviewing the contents of this class by solving several quizzes.

Course number	G-ENG01 6A405 LJ77		
Course title (and course title in English)	地殻環境工学 Environmental Geosphere Engineering	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,KOIKE KATSUAKI Graduate School of Engineering Associate Professor,KASHIWAYA KOKI

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Wed.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Earth's crust environment engineering is an academic field closely related to our lives, and it covers many problems related to Earth science and engineering, such as the underground development and use of infrastructure facilities, the geological disposal of radioactive waste, underground storage of gas and liquid, natural disasters including landslides and earthquakes, as well as the exploration, development, and resource quantity evaluation of groundwater resources, metal/non-metal mineral resources, and geothermal and energy resources. This lecture covers topics that are important in Earth's crust environment engineering and their basic concepts, engineering applications, and the spatial information approach to clarify the geological, physical, and chemical properties of the Earth ’ s crust, while introducing research examples.

[Course objectives]

Thoroughly understand the positioning of the Earth ’ s crust as an element of the Earth, the physical and chemical properties, its importance as a resource germination place that benefits humanity, and the source of natural disaster threats that is contradictory to this. Along with that, finding out one's own direction in the relationship with the Earth ’ s crust, which can contribute to the welfare of humanity and a sustainable society; in other words, development and use methods of the Earth ’ s crust and environmental conservation laws.

[Course schedule and contents]

1. Introduction and fundamentals of water cycles (1 time)
In addition to explaining the program of this class, global environmental issues will be summarized as the starting point of this class. As examples of material circulation on a global scale, especially taking water environment issues into account that have recently attracted attention, the mechanism of the water cycle, the physical and geological factors that govern water flow, and so forth will be explained, and understanding of the importance of the Earth ’ s crust will be gained. [Koike]

2. Chemistry of the Earth System (2 times)
Since Earth ’ s crust environment engineering is an academic field targeting the Earth, it is first necessary to understand the structure, physics, and chemistry of the Earth. For that purpose, there will be a review on general geology and minerals, and the chemical properties of the rock minerals forming the Earth ’ s crust, mantle, core, the chemical composition of the crustal fluid, and the chemical reaction of rocks and fluids and so forth will be discussed. Additionally, the function of microorganisms on the Earth ’ s crust chemistry will be explained. [Koike]

3. Physics of the Earth system (1 time)

Continue to 地殻環境工学(2)↓↓↓

地殻環境工学(2)

The materials and pressure and thermal structures of the Earth will be reviewed, and the dynamics of the Earth including crustal deformation and geothermal resource system will also be explained. [Koike]

4. Foundations of Geoinformatics (1) (Geological modeling method) (2 times)
The spatial informatics approach to clarify in detail the physical and chemical properties of the Earth’s crust and its distribution over time-space will be explained in series. First, as a method for modeling geological structure and physical properties from discretely distributed geological information, an overview will be given on mathematical geology, the general analytical method of geological data, and spatial correlation structure analysis by variogram. Next, a lecture will be given on spatial data estimation by kriging, geostatistical simulation, and the application of a neural network, which is a form of deep learning, will be provided along with a study example. [Koike]

5. Foundations of Geoinformatics (2) (Scaling of geological structure) (1 time)
Although what is underground cannot be seen directly, information on geology, geometric structure, crustal deformation, crustal chemistry, and so forth may appear in the topography. As a method for estimating the deep environment of the Earth’s crust surface, a lecture will be given on the utilization of topographical and geological information, as well as estimating the local structure from limited information to wide scale, or the scaling of geological structure (what connects micro and macro, etc.). [Koike]

6. Fundamentals of Geoinformatics (3) (Remote sensing) (2 times)
An outline of remote sensing which is effective as a survey method concerning the physics/chemistry of geological crust, geological structure, variation, resource exploration, and environmental monitoring will be given. First, a lecture will be given on the interaction of materials and electromagnetic waves, and remote sensing by optical sensors, with research and survey examples. Next, the basics of remote sensing by microwave sensor, the identification of surface material by polarimetric SAR, topographic analysis by interference SAR, and crustal deformation analysis will be explained. [Koike]

7. Geochemical exploration (1 time)
The geochemical exploration method for extracting and analyzing chemical anomalies in the shallow part of the surface will be outlined. [Kashiwaya]

8. Underground space utilization (1 time)
The geological disposal of high-level nuclear waste and carbon capture, utilization and storage (CCUS) are lectured as representative examples of how the earth's crust is used for long-term storage. [Kashiwaya]

9. Crustal fluids and environmental tracers (3 times)
The relationship between the distributions, formation processes, and circulation regimes of fluids over a wide range from deep to shallow crust and their use as a resource and relevant engineering problems are reviewed. The utilization of environmental tracers is lectured, which enables the estimation of spatial and temporal circulation regimes of water, a representative crustal fluid. [Kashiwaya]

Feedback (1 time)
There will be a supplementary explanation, through classes, individual consultations, and so forth about the parts where students may have insufficient understanding of the lecture contents described above, based on the evaluation of reports.

Continue to 地殻環境工学(3)↓↓↓

地殻環境工学(3)

[Course requirements]

It is desirable that students have basic knowledge of geology, physics, and chemistry.

[Evaluation methods and policy]

The grades will be evaluated by combining the report and points given for participation in class. The points given for participation in class will be evaluated based on attendance status, confirmation of comprehension level by quizzes, and so forth during class. The ratio between report and participation points is about 9:1.

[Textbooks]

Handouts will be uploaded on PandA before each class.

[References, etc.]

（Reference books）

References will be introduced in the handouts.

[Study outside of class (preparation and review)]

Reports will be assigned about three or four times in order to review the contents of the class. The aim is to deepen understanding by solving problems.

（Other information (office hours, etc.)）

Office hours are not particularly set, but questions are accepted from time to time.

*Please visit KULASIS to find out about office hours.

Days and periods	Tue.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Geoinformatics is the science and technologies dealing with spatially distributed data acquired with remote sensing, digital photogrammetry, global positioning system, etc, to address the problems in natural phenomena or human activities. This course particularly focuses on remote sensing by using LiDAR and geographic information system (GIS) and explains the theory and applications. Unlike traditional surveying, LiDAR technique can sequentially obtain the data in a wide area within a short time, and thus it is now widely used in construction and management of civil infrastructure. GIS is a technique to handle digital maps and related information, and it is popular in the fields of urban planning, environmental management and infrastructure management. This course provides an understanding of remote sensing and GIS via applications presented by the exercises of remote sensing and lectures of GIS.

[Course objectives]

Students understand the basic theory and acquire the basic techniques of remote sensing for observation and analysis of environmental changes, disaster effects and human activities in urban areas.　And, they understand the basic theory and applications of GIS.

[Course schedule and contents]

(1) Introduction & Coordinate system and map projection, 1 slot, Introduction to remote sensing and GIS is given. Principal coordinate systems and map projection methods used for satellite image and GIS data are explained.

(2) Radiation and reflection of electromagnetic waves, and optical sensor, 1 slot, Basic terms on electromagnetic radiation including radiation and reflection are introduced, and calculation of suface reflectance and temperature is explained. In addition, principles and applications of visible and infrared sensors are introduced.

(3) Property of SAR, 1 slot, Concept of synthetic aperture radar (SAR) is first introduced, and the image processing, statistical property, speckle filtering and polarimetric SAR are explained.

(4) Measurement of topography using SAR data, 1 slot, Theory of Interferometric SAR (InSAR) and differential InSAR (DInSAR) is introduced. Then, long-term monitoring of land deformation by using multi-temporal SAR imagges is explained.

(5&6) Measurement of topography using photogrammetry, 2 slot, Generation of DSM by using photogrammetry is explained.

リモートセンシングと地理情報システム(2)

(7) Introduction to GIS, 1 slot, Structure of GIS (Geographic Information System) and its utilization for spatial analysis are outlined.

(8) GIS and Network Analysis, 1 slot, Basic idea of network structure, evaluation indices and methods of network analysis are explained.

(9) GIS and Spatial Correlation Analysis, 1 slot, Focusing on spatial correlation analysis useful for developing spatial model, regression analysis and spatial auto correlation analysis are explained.

(10) Classification Method of Spatial Attribute, 1 slot, Classification method of spatial attribute is explained in order to classify the target area using attribute information in GIS.

(11) Transportation Big Data Collected by Mobile Objects Observation and Its Utilization, 1 slot, The changes in transportation observation led by progress of location identification technologies is stated. In addition, utilizations and issues of big data in transportation are explained.

(12) Realization of Smart City and Big Data Utilization, 1 slot, The concept of Smart City and corresponding projects are introduced, and utilizations and issues of big data for smart city are explained.

(13&14) Open Data and GIS, 2 slot, The concept of open data and the domestic and oversee activities about it are explained. The GIS software that can use the open data is introduced and the analysis using the open data is explained.

(15) Assessment of understanding, 1 slot, Assess students' understanding levels

[Course requirements]

None

[Evaluation methods and policy]

Grading is based on the achievements in exercise and assignments. Mid-term exam related to the topics from No.1 to 6 may be assigned.

[Overview and purpose of the course]

Continuum mechanics is a unified basis for solid mechanics and fluid mechanics. The aims of this course are to introduce the continuum mechanics from their basics to the some forms of constitutive law and also to provide students with mathematical way of understanding the continuum mechanics. This course contains the fundamentals of vector and tensor calculus, the basic equations of continuum mechanics, the tensor expressions of elastic problems and further applications.

[Course objectives]

Fundamental theorems on structural mechanics and design will be learned, and ability to judge the proprieties of each computational structural analysis will be acquired.

[Course schedule and contents]

Tensors (2 sessions)
 - Tensor notation, operations, bases, and integral theorems

Kinematics (2 sessions)
 - Motion, differentiation, deformation gradient, and strain

Stress (2 sessions)

Conservation Laws (2 sessions)
 - Conservation of mass, momentum, and mechanical energy

Objectivity (1 session)
 - Objective stresses and the principle of objectivity

Hyperelasticity (1 session)
 - Strain energy functions and elastic coefficients

Boundary Value Problems and Finite Element Methods (2 sessions)

Fundamentals of Plasticity (2 sessions)

Feedback (1 session)
 - Providing feedback on evaluations, such as regular exams.

[Overview and purpose of the course]

This course provides the knowledge of the structural planning and design for civil infrastructures. Fundamentals of the reliability of structures based on the probability and statistics are given. Emphasis is placed on the reliability index and the calibration of partial safety factors in the LRFD design format. Furthermore, the relationship between structure and form is discussed with various examples.

[Course objectives]

To understand the structural planning and design for civil infrastructures.
To understand the reliability-based design of structures.
To deepen the understanding of the relationship between structure and form.

[Course schedule and contents]

Structural Planning,2times,Structural Planning of civil infrastructures is introduced. The concept, significance of planning, characteristics of civil infrastructures are discussed. Practical planning process of a bridge is explained.
Structure and Form,3times,The bridge types such as girder, truss, arch and suspension bridge that have been regarded individually are explained as an integrated concept from the viewpoint of acting forces to understand the structural systems which have continuous or symmetrical relationships. Furthermore, various examples are discussed based on the understanding of the structural systems.
Structural Design and Performance-based Design,3times,Design theory of civil infrastructures is introduced. The allowable stress design method and the limit state design method are explained. The basic of earthquake resistant design is discussed based on the dynamic response of structures. Performance-based design is also introduced.
Random Variables and Functions of Random Variables,1time,Fundamentals of random variables, functions of random variables, probability of failure and reliability index in their simplest forms are lectured.
Structural Safety Analysis,3times,Limit states, probability of failure, FOSM reliability index, Hasofer-Lind reliability index, Monte Carlo method are lectured.
Design Codes,2times,Code format as Load and Resistance Factors Design (LRFD) method, calibration of partial safety factors based on the reliability method are given.
Assessment of the Level of Attainment,1time,Assess the level of attainment.

[Overview and purpose of the course]

The subject matter of bridge engineering can be divided into two main parts, which are steel structure and wind loading/wind resistant structure. The aim of this course is to provide details of mechanical behaviors, maintenance and design of bridge structures. The former part of this course contains the static instability of steel structures and the problems of corrosion、fatigue、brittleness、weldability on steel bridges. In the latter part, the basics of wind engineering, bridge aerodynamics and wind-resistant design　including current problems to be solved are provided are provided.

[Course objectives]

Also, the basic knowledge for wind engineering and aerodynamic instabilities, which are necessary for the wind resistant design of bridges, will be acquired.

[Course schedule and contents]

Introduction(1, Kitane)
- Fundamental knowledge on steel structures
- Types of steel structures
- Future trend of steel structures
- Stress-strain relationship
- High performance steels

Failures of Steel Structures(1, Kitane)

Fabrication and Erection of Steel Structures(1, Kitane)
- Initial imperfections
- Construction of steel structures
- Residual stresses and initial deformations
- Joints(welded and bolted)

Fatigue fracture, fatigue life and fatigue design(1, Matsumoto)
- S-N design curve
- Fatigue crack growth, stress intensity factor

Corrosion and anti-corrosion of steel structures(1, Matsumoto)
- Mechanism of corrosion
- Micro- and Macro- cells
- Anti-corrsion
- Life-cycle costs

Wind resistant design of structures(2, Yagi,Matsumiya)
- Natural winds due to Typhoon, Tornado and so on
- Evaluation and estimation of strong winds
- Wind resistant design methods
- Various kinds of design codes

Aerodynamic instabilities of structures(4, Yagi)
- Introduction of aerodynamic instabilities (ex. vortex-induced vibration, galloping, flutter, buffeting, cable vibrations)
- Mechanisms of aerodynamic instabilities
- Evaluation methods and Countermeasures

Computational Fuid Dynamics(1, Noughi)
- Fundamentals of CFD
- Aplication to bridge aerodynamics

Topics(1, Kitane)
- Introduction of current topics on bridge engineering by a visiting lecturer

Confirmation of the attainment level of learning(1, All)
Confirm the attainment level of learning

[Course requirements]

Basic knowledge for construction materials, structural mechanics and fluid mechanics are required.

Course number	G-ENG01 6F011 LE73　G-ENG02 6F011 LE73				
Course title (and course title in English)	数値流体力学 Computational Fluid Dynamics	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,GOTOH HITOSHI Graduate School of Engineering Associate Professor,KHAYYER ABBAS Graduate School of Engineering Associate Professor,IKARI HIROYUKI Graduate School of Engineering Assistant Professor,Yuma Shimizu		
Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Mon.4	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

Computational Fluid Dynamics (CFD) is largely developed with the progress of computer technology in recent years. CFD is powerful and effective to predict various fluid phenomena, which shows the complicated behaviors due to the non-linearity and multi-physics interactions. In this course, particle methods, which have attracted much attention in recent years due to their high applicability to violent flows with free surfaces, are introduced, and the basic theory of discretisation methods and typical accurate schemes are explained in detail.

[Course objectives]

Course goal is to understand the basic theory of particle methods and their numerical solution.

[Course schedule and contents]

(1) The basic equations of incompressible fluids [1 time]: The basic equations of incompressible fluids as the target equations of the particle method are described.
(2) Discretisations by particle methods [4 times]: This section deals with the basics of the discretisations by particle methods, including integral interpolants and vector differential operators for SPH and MPS methods, explicit and semi-implicit schemes, neighboring particle searches, description of boundary conditions, etc.
(3) Accurate particle methods [5 times]: The main issues of accurate schemes are discussed, including momentum- and angular-momentum-conserving schemes, improved accuracy of the source terms of the Poisson equation for pressure, accurate Laplacian models, improved methods for convergence to solenoidal fields, and derivation of Taylor series-consistent gradient models. Further developments, such as methods for improving computational stability and for accurately describing boundary conditions, are also discussed.
(4) Elastic body analysis and fluid-structure interaction analysis [2 times]: This course also covers the particle method for elastic bodies and its application to fluid-structure interaction analysis, which deals with the interaction between elastic bodies and fluids.
(5) Solid-liquid multiphase flow analysis [2 times]: The distinct element method (DEM) as a solid-phase model is described, and the DEM-MPS method for solid-liquid multiphase flow analysis is explained.
(6) Checking the level of learning achievements. [1 time]: The details will be introduced in the course.

Days and periods	Mon.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Mechanical behavior of soils and problems of its deformation and failure will be covered based on the multiphase mixture theory and the mechanics of granular materials.

[Course objectives]

The objectives of this course are to understand the basics of geomechanics, and the advanced theories.

[Course schedule and contents]

Deformation of geomaterils (1time), Mechanical property of geomaterials, critical state soil mechanics, Failure criteria, modelling of geomaterials (by Prof.Mimura)

Field equations and constitutive model (2times), Framework and field equations for contiuum, stress-strain ralations for soils, elastic model, elasto-plastic model, plasticity theory (by Prof.Mimura)

Elasto-plastic constitutive model (3times), Constitutive model for geomaterials, elasto-plastic model, Cam clay model (by Prof. Mimura)

Theory of viscosity and viscoplasticity (3times), Viscoelasticity, viscoplasticity, Elasto-viscoplastic mode, Adachi-Oka model, Microstructure of soils, Temperature dependent behavior, Applications of constitutive models (by Prof. Mimura)

Consolidation analysis (3times), Biot's consolidation theory and its application, Consolidation of embankment (by Assoc.Prof. Kimoto)

Liquefaction of soils (2times), Liquefaction of sandy soil, Damage and failure due to liquefaction, Remedial measures for liquefaction (by Assoc.Prof. Kimoto)

[Confirmation of achievement]

Course title (and course title in English)	水域社会基盤学 Hydraulic Engineering for Infrastructure Development and Management	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,GOTOH HITOSHI Graduate School of Engineering Professor,TACHIKAWA YASUTO Graduate School of Management Professor,ICHIKAWA YUTAKA Graduate School of Engineering Professor,HARADA EIJI Graduate School of Engineering Associate Professor,KHAYYER ABBAS Graduate School of Engineering Associate Professor,KIM SUNMIN Graduate School of Engineering Associate Professor,ONDA SHINICHIROU Graduate School of Engineering Associate Professor,IKARI HIROYUKI

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Tue.3	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

This course covers the fundamentals of hydraulics as the mechanism of various problems related to the development, maintenance and management of social infrastructures, water disaster prevention and environment, as well as the solutions to these problems, with examples of cutting-edge approaches in the real world. Specific themes will be discussed from the viewpoints of turbulent flows, numerical fluid dynamics, physical mechanisms of water and sediment transport from mountains to coasts, design theory of hydraulic engineering structures, hydraulic engineering planning methods, etc., and the viewpoint of considering water areas as public environmental social infrastructures will be presented.

[Course objectives]

Students learn about case-based practical solutions against various problems related to both fundamentals of hydraulics and hydraulic engineering, and students acquire academic preparation of how to approach to public environmental infrastructure on water area.

[Course schedule and contents]

Introduction [1 time]
Guidance will be given on how to proceed with the lecture and grading.

Fundamentals of hydraulics [6 times]
To organize and discuss the fundamentals of hydraulic engineering, including fundamentals of fluid dynamics (continuity equation, equation of motion), viscous fluids, and turbulence models.

Mid-term examination and summary of the half of the course [1 time]
To confirm understanding of the fundamentals of hydraulics.

Rainfall-runoff prediction and hydrologic design [3 times]

Continue to 水域社会基盤学(2)↓↓↓

水域社会基盤学(2)

Water resources issues related to rainfall-runoff prediction and hydrologic design are discussed with advanced practical examples.

Issues related to erosion mechanisms in water area [3 times]
Issues and solutions related to the physical mechanisms of water and sediment transport in open channel flows, rivers and coasts will be discussed, including the state-of-the-art simulation methods, and examples of cutting-edge approaches in the real world.

feedback class [1 time]
Answer questions from the students.

[Course requirements]

hydraulics, fluid dynamics, river engineering, coastal engineering, hydrology, etc.

[Evaluation methods and policy]

Grades will be based on the mid-term examination for fundamental hydraulics (50 %) and two reports (50 %).

[Textbooks]

No designation

Course title (and course title in English)	構造安定論 Structural Stability	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,YAGI TOMOMI Graduate School of Engineering Professor,KITANE YASUO		
Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Wed.1	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

Fundamental concept of static and dynamic stability of large-scale structures such as bridges is to be introduced in addition to the way to keep/improve their safety and to evaluate their performance. Basic concept of structural stability and its application and technical subjects to improve safety will be lectured systematically. Furthermore, the practical solutions to the subjects are to be introduced to assure the safety of structures.

[Course objectives]

The class aims to cultivate the understanding of static and dynamic stability problems for structural system and make understand the methodology to clarify the limit state. To get knowledge on countermeasures to assure the stability which is applicable to practical design and manufacturing will be also required.

[Course schedule and contents]

Elastic Stability under Static Loading(8)
Stability of Structures and Failures
Basis of Structural Stability
Elastic Buckling of Columns
Elastic Buckling of Beams & Frames
Elastic Torsional Buckling of Beams
Elastic Buckling of Plates
Elasto-plastic Buckling
Buckling Analysis

Basic Theory of Dynamic Stability(3)
Dynamic Response Characteristics of Structural System
State Equation of Motion with Nonlinearities in External, Damping and Restoring Force,
Stability around Equilibrium Points

Examples of Structural Instability under Dynamic Loadings(3)
Instability under Nonconservative Force
Instability under Periodical Force
Instability under Impact Force

Days and periods	Wed.2	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

Regarding the maintenance of concrete structures, the deterioration prediction procedures in material and structural properties will be described based on durability and deterioration processes of concrete structures. Repairing materials and methods are also introduced. Note: strengthening materials and methods will be described in Concrete Structural Engineering, provided in the second semester. In the later half of this lecture, structures are focused as groups rather than an individual structure to understand the difference between asset management and maintenance. By taking into consideration the economic aspect and human resources aspect as well as the physical aspect, the work flow of the asset management for structures with view points of the life cycle cost and the budget will be described.

[Course objectives]

Understanding the maintenance targeting individual structure and asset management for targeting structures.

[Course schedule and contents]

1. Outline of maintenance for concrete structures, 1
Outline of the durability and deterioration of concrete structures
Outline of the maintenance management of concrete structures

2. Deterioration mechanisms of concrete structures and deterioration prediction, 4
Infiltration and shift of degradation factors, reaction mechanisms, deterioration of materials and adhesion characteristics, deterioration of mechanical performance

3. Repair materials and methods for concrete structures, 1
Repair materials and methods for concrete structures

4. Maintenance and asset management, 3
Overview and work flow of asset management
Performance of structure

5. Maintenance for structures, 3
Inspection and its sophistication and simplification
Deterioration prediction, uncertainty, and safety factors

6. Management for structures, 2
Remedial measures, LCC calculation, and levelization

Course number	G-ENG01 6F071 LJ77				
Course title (and course title in English)	応用弾性学 Applied Elasticity for Rock Mechanics		**Instructor's name, job title, and department of affiliation**	Graduate School of Engineering Professor,FUKUYAMA EIICHI Graduate School of Engineering Professor,MURATA SUMIHIKO	
Target year	Master's/Doctoral students	**Number of credits**	2	**Year/semesters**	2025/Second semester
Days and periods	Fri.3	**Class style**	Lecture (Face-to-face course)	**Language of instruction**	Japanese

[Overview and purpose of the course]

Theory of elasticity relating to the deformation and failure of rock and rock mass and design of rock structures is explained. Specifically, two-dimensional analyses of elasticity using the basic equations, the constitutive equations, and the complex stress function are explained. Several applications to rock mechanics, rock engineering, and fracture mechanics are also explained. Then, strain and stress field ahead of the propagating crack is theoretically investigated. And the stress change due to the crack propagation is explained.

[Course objectives]

The goal of this class is to master the theory of elasticity so as to solve the elastic problem in rock mechanics, rock engineering, and fracture mechanics.

[Course schedule and contents]

1.-2. Airy's stress function and complex stress function (2 times)
Airy's stress function used to solve a two-dimensional elastic problem is first explained, and then the complex stress functions that are the representation of Airy's stress function by the complex variables are explained.

3.-6. Two-dimensional elastic analysis using the complex stress function (4 times)
Analytical solutions of two-dimensional elastic problems in fracture mechanics and rock engineering are derived by using the complex stress functions. The mechanical behavior of rock material is also explained based on the derived solutions.

7. Application of two-dimensional elastic analysis (1 time)
The theory of rock support, ground characteristic curve, theoretical equations used for the evaluation of rock stress, which are derived from the solution of two-dimensional elastic problem, are explained.

8.-10. Propagating two-dimensional mode 1 crack (3 times)
Suddenly appeared two-dimensional mode 1 stationary crack is investigated to theoretically obtain a stress and displacement field around the crack. The solution is extended to a mode 1 crack propagating at a constant velocity. Then the solution is further extended for the cases with non-uniform propagation velocity. Finally, the same procedure is applied to obtain the solutions for mode 2 and mode 3 cracks.

11.-12. Stress field at a crack tip and path-independent integrals (2 times)
Using the two-dimensional solution for cracks propagating with non-uniform velocity, how to evaluate the stress field at the crack tip is explained. And path independent integrals around the crack tip is introduced.

Continue to 応用弾性学(2)↓↓↓

応用弾性学(2)

13.-14. Effects of viscoelasticity and high strain rate on the crack propagation (2 times)
When the crack surfaces behaves viscoelastically or high strain rate is applied at the crack tip, the effects to the crack propagation are investigated in comparisons to the cases with perfect linear elasticity.

Examination (1 time)

15. Feedback (1 time)
The contents of this class are summarized. In addition, the achievement of course goals is checked.

[Course requirements]

The knowledge and calculation skill of calculus, vector analysis and complex analysis are required.

[Evaluation methods and policy]

Evaluation is made by the score of two report problems or homeworks (25% each) and semester final examination (50%).

[Textbooks]

Handouts are delivered.

Days and periods	Tue.3	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

In this course, we will give lectures on i) in-situ rock stress and its measurement methods, ii) physical properties and mechanical properties of rocks under large depths determined by laboratory experiments, borehole logs and geophysical survey. We will introduce new research results related to the above items in geoengineering and geoscience research areas.

[Course objectives]

Understand the representative physical properties of rocks under high-temperature and high-pressure conditions, in-situ stress and its measurement methods and their applications in earth resource development field and in deep scientific drilling projects.

[Course schedule and contents]

Guidance: 1 class by Weiren LIN
Introduce the contents of the course.

Rock stress and its measurements: 5 classes by Weiren LIN
Measurement methods of in-situ stress such as borehole compressive and tensile failure analyses, hydraulic fracturing, core-based methods; introduction of the new research achievements.

Physical properties and strength of rocks: 4 classes by Weiren LIN
Physical properties (elastic wave velocity, resistivity, fluid flow and thermal properties) and mechanical properties (strength and deformation).

Logs and physical property analyses using log data: 2 classes by Saneatsu Saito,
Principles, operation procedures, data processing and interpretation of results in deep drilling wells.

Crustal deformation and physical property, 2 classes by Kazuya Ishitsuka
Estimation of geological and physical property distribution in wide areas by explorational and remote sensing data.

Feedback: 1 class by the all.

Course number	G-ENG02 7F085 LE77　G-ENG01 7F085 LE77		
Course title (and course title in English)	地殻環境計測 Measurement in the earth's crust environment	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,FUKUYAMA EIICHI Graduate School of Engineering Associate Professor,NARA YOSHITAKA Part-time Lecturer,YAMAMOTO KOJI

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Wed.3	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

The theories and measurement methodologies required for various engineering projects in the Earth's crust are explained. In this course, we explain them related to the geological disposal of radioactive wastes, the carbon capture and storage, and the extractions of oil and gas. Especially, we explain the characteristics and measurement methods of mechanical properties of rock and their applications to the engineering projects. Then we give lectures on the measurement methodology and novel information related to the various engineering projects in the Earth's crust.

[Course objectives]

The goal of this course is to understand various measurement methods conducted for rock materials in the Earth ’ s crust environment. Specifically, we hope that students understand the methods to obtain the rock mechanical properties (strength, fracturing, permeability, etc.) and their importance. In addition, the understanding of the monitoring methods of mechanical behaviors for fluids, heat, and rock mass related to various engineering projects in the Earth's crust.

[Course schedule and contents]

・Topic 1: Measurement of mechanical properties of rock under various environment
(Class number of times: 5)
Description: At first, various engineering projects in the Earth's crust are introduced. Then, the measurement methodologies of mechanical properties (strength, fracturing, permeability, etc.) of rock under different environmental conditions and their importance are described. In addition, the relationships between mechanical properties of rock and engineering projects in the Earth's crust, especially the radioactive waste disposal and the carbon capture and storage, are described.

・Topic 2: Rock Friction and Induced Seismicity: Generation and Monitoring
(Class number of times: 5)
Description: Induced seismicity is one of the unstable factors during the development of natural resources in the earth's crust. Induced seismicity is controlled by the preexisting crack geometry, effective stress field including pore pressure, and static and dynamic friction of rocks. In this course, the measurement techniques of these physical quantities will be overviewed. Then, we discuss how to mitigate the damages from induced seismicity by monitoring these quantities.

・Topic 3: Effect of rock stress on oil and gas exploration
(Class number of times: 4)
Description: Estimation of rock stress condition by hydraulic fracturing and logging, which is conducted at

Continue to 地殻環境計測(2)↓↓↓

地殻環境計測(2)

various steps for oil and gas exploration, will be explained. Importance of rock stress affecting on borehole stability will be explained as well.

・Topic 5: Confirmation of understanding
(Class number of times: 1)
Description: The confirmation of understanding will be done by the feedback through tests.

[Course requirements]

It will be better to complete “Engineering Geology” and “Rock Engineering” in the undergraduate course.

[Evaluation methods and policy]

Grading will be made by the scores of reports and achievement tests (70%), and the class activity (30%).

[Textbooks]

None. Handouts will be given in classes when needed.

[References, etc.]

Course title (and course title in English)	地球資源学 Earth Resources Engineering	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,KOIKE KATSUAKI Graduate School of Engineering Associate Professor,KASHIWAYA KOKI

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Wed.2	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

Securance and development harmonious with natural environments of the mineral and fossil energy resources, and utilization of storage function of geologic strata have become important issues for constructing sustainable society. This subject introduces comprehensively the present situation of uses of mineral and energy resources, crust structure and dynamics, economic geology for the genesis and geologic environments of deposits, physical and chemical exploration methods of marine deposits, mathematical geology for reserve assessment, engineering geology for resource development and geological repository, and problems and promise of natural energy such as geothermal, solar, wind, and tide.

[Course objectives]

To find out directionality about the technologies required for constructing sustainable society by yourself with full understandings of genetic mechanism, biased distribution, and the present situation of demand and supply of the mineral and energy resources.

[Course schedule and contents]

Introduction of this course and resources(1)
Definition of renewable and non-renewable resources. Interaction among Earth environment, human society, and natural resources. Existence pattern of natural resources in the crust.

1. Internal structure of Earth and geodynamics(2)
Inner structure of the Earth, geodynamics, geologic composition, temperature structure, rock physics, and chemical composition of crust.

2. Present and future of energy resources(1)
Classification of energy sources, recent trend on social demand of energy, physical characteristics of each energy resources, and sustainability.

3. Present and future of mineral resources(1)
Classification of minerals used for resources, recent trend on social demand of mineral resources, industrial uses of each mineral, and sustainability.

4. Economic geology (1)(1)
Classification of ore deposits, distribution of each type of ore deposit, generation mechanism of deposit.

4. Economic geology (2)(1)

Continue to 地球資源学 (2)↓↓↓

地球資源学 (2)

General structure and distribution of fuel deposits (coal, petroleum, and natural gas), generation mechanism of deposits, and geological process of formation.

5. Resource exploration (1): Terrestrial area(1)
Physical and chemical exploration technologies for natural resources in terrestrial area. Representative methods are remote sensing, electric sounding, electromagnetic survey, and seismic prospecting.

6. Resource exploration (2): Sea area(1)
Introduction of marine natural resources such as methane hydrate, cobalt-rich crust, and manganese nodule, and exploration technologies for the deposits in sea area.

7. Assessment of ore reserves and deposit characterization(2)
Fundamentals of geostatistics, variography for spatial correlation structure, spatial modeling by kriging, geostatistical simulation, integration of hard and soft data, and feasibility study.

8. Resource development(1)
Development and management technologies of energy resources related to coal, petroleum, and natural gas.

9. Engineering geology(1)
Fundamentals of deep geological repository for high-level nuclear waste, CCS (carbon dioxide capture and storage), and underground storage of petroleum and gas.

10. Sustainability(1)
Characteristics of natural energy related to geothermal, solar, wind, and tide, aand ssessment of natural energy resources. Co-existence of natural resource development with environment, low-carbon society, and problems for human sustainability.

Feedback(1)
Based on evaluation of the reports, contents that are not well understood will be explained additionally using KLUSIS or by personal interview.

[Course requirements]

Elementary knowledge of engineering, mathematics, physics, and geology are required.

[Evaluation methods and policy]

The grades will be evaluated by combining the report and points given for participation in class. The points given for participation in class will be evaluated based on attendance status, confirmation of comprehension level by quizzes, and so forth during class. The ratio between report and participation points is about 9:1.

[Textbooks]

Prints will be distributed during each class.

Course number	G-ENG01 5F089 LJ73 G-ENG02 5F089 LJ73		
Course title (and course title in English)	社会基盤安全工学 Infrastructure Safety Engineering	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Program-Specific Professor,OHTA NAOYUKI Graduate School of Engineering Assistant Professor,YASUDA NAOTOSHI

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Thu.3	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

The issues concerning the safety and reliability of infrastructures such as tunnels and bridges and also the issues on natural disaster are reviewed in the lecture.

[Course objectives]

To understand the basic technologies to enhance the safety of structures and also the fundamentals on disaster prevention.

[Course schedule and contents]

1. Lecture schedule and content explanation
Give an overall explanation of this lecture and show the goals and goals to be understood

2. Introduction to Railway Disaster Prevention System
Main contents of natural disasters suffered by infrastructure equipment and measures taken to ensure safety

3. practice of safety measures against natural disasters (1)
・ Necessity of traffic regulation during heavy rain, various methods and issues

4. Practice of Safety Measures Against Natural Disasters (2)
・ Algorithm of early detection method of earthquake motion and Shinkansen and Earthquake Early Warning

5. Practice of safety measures against natural disasters (3)
・ Specific measures for train safety during strong winds and heavy snowfall

6. Search for problems from the measures actually taken by the railway when the typhoon passed

7. Disaster prevention weather information and weather statistics
Disaster prevention weather information and extreme value statistics important for the safety of social infrastructure facilities

8. Introduction to maintenance of linear structures
Maintenance method for linear structures such as roads and railways

9. Current status and issues of maintenance methods for each structure (1)
・ Maintenance of ground structures such as embankments and cuts

Continue to 社会基盤安全工学(2)↓↓↓

社会基盤安全工学(2)

10. Current status and issues of maintenance methods for each structure (2)
・ Tunnel maintenance technology

11. latest technology in structural inspection

The twelfth method of decision-making of measures by risk evaluation
Disaster risk evaluation and disaster prevention investment decision-making method using probabilistic methods

13. site tour (1)
By observing the railway facilities, you can get a first-hand feel of what specific measures are being taken as safety and disaster prevention measures for infrastructure equipment.

14. site tour (2)
Consider issues related to safety measures from the information obtained from the site tour

15. issue review feedback
Based on the knowledge gained in the class, think about questions about safety measures for social infrastructure structures and future prospects, and give explanations based on the results.

[Course requirements]

Basic knowledge on statistics is required. Students should have taken the course of geo-mechanics, structural mechanics and concrete engineering.

[Evaluation methods and policy]

Evaluation method]
Exam results (60%)
Normal score evaluation (40%)
Normal score evaluation includes evaluation of small reports imposed during class

[Evaluation policy]
Pass 60 points or more

[Textbooks]

Distribute prints every time

[References, etc.]

Course title (and course title in English)	応用水文学 Applied Hydrology	Instructor's name, job title, and department of affiliation	Disaster Prevention Research Institute Professor,TANAKA KENJI Disaster Prevention Research Institute Professor,HORI TOMOHARU Disaster Prevention Research Institute Professor,Sameh Kantoush Disaster Prevention Research Institute Associate Professor,YOROZU KAZUAKI Disaster Prevention Research Institute Associate Professor,KOBAYASHI SOHEI

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Wed.4	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

Applied and integrated approach to the problems closely related to the water circulation system, such as floods, droughts, water contamination, ecological change, and social change is introduced mainly from the hydrological viewpoint with reference to water quantity, quality, ecological and socio-economic aspects. In the course, several actual water problems are taken up and solving process of each problem which comprises of problem-identification and formulation, impact assessment, countermeasures design and performance evaluation is learned through the lecturesrsquo description and also investigation and discussion among the students.

[Course objectives]

To obtain fundamental knowledge and skills to perform problem definition, survey and countermeasure design on problems about water use, water hazard mitigation and water environment.

[Course schedule and contents]

The 1st Class: Water disasters and risk management
Risk assessment of water disasters, countermeasures and adaptation design, water disasters and human security

The 2nd - 4th Classes: Land Surface Processes
Observation and modelling of land surface processes, Application of land surface model

The 5th - 6th Classes: Reservoir Systems and Sustainability
Reservoir system and its environmental impacts, Sustainable management of reservoir system

The 7th - 8th Classes: Hydrological Measurements of Large River Basins
Design and management of hydrological measurement system in large river basins

The 9th - 11th Classes: Hydrological process and river ecosystem
The relation among various hydrological phenomena in river basins and river ecosystems

The 12th - 14th Classes: Parameter estimation and bias correction

Continue to 応用水文学(2)↓↓↓

応用水文学(2)

Parameter estimation in real-time hydrological forecasting, Bias correction of climate projection information

The 15th Class: confirmation of learning achievement (1 time)
The achievement degree will be evaluated according to assignments, and feedback will be provided.

[Course requirements]

Elementary knowledge of hydrology and water resources engineering.

[Evaluation methods and policy]

Grading is based on student activities in lectures, presentation (about 20%) and reports (about 80%).

[Textbooks]

Printed materials on the contents of this class are distributed in class.

Days and periods	Mon.4	Class style	Lecture (Media-based course)	Language of instruction	English

[Overview and purpose of the course]

Environmental impacts by infrastructure for disaster prevention and mitigation are discussed. Introducing various examples of natural disasters, degradation of the environment, and harmonizing disaster management and environmental conservation in the world, this classroom carries on a dialogue about effective measures for reducing negative environmental impacts and serious disasters.

[Course objectives]

Conservation of the environment and prevention/mitigation of natural disasters, which are very important for human's survivability, often conflict with each other. This course introduces various examples. Students will learn many examples harmonizing these two issues, and shall consider technical and social countermeasures fitting to the regional characteristics.

[Course schedule and contents]

Course title (and course title in English)	流域管理工学 Integrated Disasters and Resources Management in Watersheds	Instructor's name, job title, and department of affiliation	Disaster Prevention Research Institute Associate Professor,YONEYAMA NOZOMU Disaster Prevention Research Institute Professor,KAWAIKE KENJI Graduate School of Engineering Professor,SANJIYOU MICHIO Disaster Prevention Research Institute Professor,NAKATANI KANA Disaster Prevention Research Institute Associate Professor,TAKEBAYASHI HIROSHI Disaster Prevention Research Institute Associate Professor,BABA YASUYUKI Disaster Prevention Research Institute Associate Professor,Yamanoi Kazuki

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Mon.1	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

Mechanism and countermeasures of sediment disasters, flood disasters, urban flood disasters and coastal disasters are explained. An integrated watershed management of these disasters and water/sediment resources is also introduced. This lecture will be open at Katsura Campus and Ujigawa Open Laboratory.

[Course objectives]

Learn an integrated basin management system for natural disasters (sediment disasters, food disasters, coastal disasters, urban flood disasters) mitigation and water/sediment resources utilization considering environmental conservation.

[Course schedule and contents]

Introduction,1time,Contents of this lecture are explaned.
Urban flood disaster managemnet,2times,We review urban floods from the viewpoint of river basins, flood causes, and features, together with the results of recent studies. Based on these studies, we propose comprehensive measures against urban floods, including underground inundations. In addition, we discuss on prediction methods of the tsunami disaster in urban area.
Flood disaster management,2times,Prevention / mitigation measures against flood disasters and flood prediction methods are explained as well as examples of recent flood disasters in Japan.
Sediment disaster management,2times,Showing the problems on sediment disasters and sediment resources, I explain an integrated sedimnet management system both for sediment disasters and sediment resources.
Coastal disaster management,2times,Coastal erosion and tsunami hazard become remarkable in these days in Japanese coast. In a lecture, we discuss on characteristics of such coastal disasters.
Exercise on flood disaster at Ujigawa Open Laboratory, 5 times,Experiment and analysis on debris flows, riverbed variation and flooding at Ujigawa Open Laboratory, Fushimi-ku, Kyoto city.
Evaluation of proficiency level, 1 times,Students confirm the proficiency level in this lecture.

Days and periods	Mon.2	**Class style**	Lecture (Face-to-face course)	**Language of instruction**	English

[Overview and purpose of the course]

The lecture covers soil dynamics and unsaturated soil mechanics, stress-strain models under cyclic loading, design approach to liquefaction, dynamic three-phase analysis for geo-hazards. The lecture ranges from fundamental soil mechanics to numerical analysis for geo-hazards.

[Course objectives]

Successful students will have the ability to initiate their own research work on geo-hazards based on the solid understanding of soil mechanics and numerical analysis.

[Course schedule and contents]

Week 1: Introduction
- Introduction to the course (objectives, contents, and grading procedure)
- Geo-hazards induced by heavy rain and earthquake
- Application of numerical analysis to predict the geo-hazards

Week 2-5: Soil dynamics and unsaturated soil mechanics
- In-situ survey, laboratory tests
- Cyclic deformation and strength properties of saturated soil
- Deformation and strength properties of unsaturated soil

Week 6-8: Stress-strain models under cyclic loading
- Linear viscoelastic model
- Nonlinear cycle-independent model
- Dilatancy under cyclic loading

Week 9-12: Design approach to liquefaction
- Assessment of liquefaction potential
- Measures to prevent/allow liquefaction and their design methods
- Methods for predicting lateral spreading

Week 13-14: Fundamentals of dynamic three-phase analysis for geo-hazards
- Porous media theory
- Balance laws and constitutive equations
- Numerical method

Course title (and course title in English)	グローバル生存学 Global Survivability Studies	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,TACHIKAWA YASUTO Graduate School of Engineering Professor,FUJII SATOSHI Disaster Prevention Research Institute Professor,SAYAMA TAKAHIRO Disaster Prevention Research Institute Associate Professor,Yoko MATSUDA Graduate School of Advanced Integrated Studies in Human Survivability Professor,YAMASHIKI YOSUKE Graduate School of Energy Science Professor,MCLELLAN，Benjamin Graduate School of Agriculture Professor,KATSURA KEISUKE		
Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Thu.5	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

Modern global society is facing risks or social unrest that are caused by huge natural hazards and disasters, man-made disasters and accidents, regional environmental change/degradation including infectious diseases, and food security. Introducing such examples at global and regional scales, this course provides lectures on how to cope with them at national, local and community levels for making the society sustainable/survivable. Future countermeasures are also discussed under uncertain circumstances such as climate change, population growth, energy and socio-economic issues.

The issues listed above are taking place in many parts of the world and difficult to be solved by a single discipline. Interdisciplinary approaches are necessary. This subject gives opportunities to learn and discuss with professors and students who have various academic backgrounds.

[Course objectives]

The objectives of this class are to have basic knowledge about global issues threatening safety and security of the global society such as catastrophic natural disasters, man-made disasters and accidents, regional environmental and climate changes, and to enhance student ’ s ability to express their own ideas and discuss with professors and students from other study areas.

[Course schedule and contents]

Introduction of Global Survivability Studies (1)
Discuss on global agendas for sustainable development and resilient societies and why we need Global Survivability Studies (GSS).

Water-related disaster risk management (1)
Discuss on water-related disaster risk management: concept and recent experiences.

Climate change and water-related disasters (1)
Discuss on impact assessment and adaptations for water-related disaster risk under climate change.

Continue to グローバル生存学(2)↓↓↓

グローバル生存学(2)

Living safely in an industrialized world: When natural and technological hazards collide (1)
Discuss conjoint natural and technological disasters so called “Natech”.

Moving from risk management to risk governance for Natech risk reduction (1)
Discuss risk governance concept to reduce Natech.

Building national resilience in Japan (1)
Discuss on building national resilience based on Japanese experiences.

Globalism as totalitarianism (1)
Discuss on globalism as totalitarianism.

Disaster risk management and governance for global changes (1)
Lecture and group work on disaster risk management and governance for global changes.

Energy systems and just zero carbon energy transitions under uncertainty (1)
Lecture and discussions on energy systems and energy transitions to meet social, environmental and economic goals.

Crop production for food security (1)
Overview constraints to food crop production and discuss counter measures for future food security.

Presentation by students; discussions (5)
Presentation by students related to the lectures and discussions on the presented topics.

[Course requirements]

Nothing special.

[Evaluation methods and policy]

Reports (30 %) and Presentation and discussion (70 %).

[Textbooks]

Nothing special.

[References, etc.]

（Reference books）

Nothing special.

[Study outside of class (preparation and review)]

If handouts (teaching materials) are distributed (or downloaded from the website), students should read them prior to the class. They may be distributed at the classroom (or put on the website). Students can make use of them after the class for reviewing lectures and preparing presentation materials and discussion sessions which

Continue to グローバル生存学(3)↓↓↓

will be organized in the latter half of the semester.

（Other information (office hours, etc.)）

This subject is compulsory for students enrolled in the Inter-Graduate School Program for "Sustainable Development and Survivable Societies" (GSS) and the Division of Graduate Studies Education Course "Global Survivability Studies Course"
Students other than ones in Graduate School of Engineering should take the same course titles in Interdisciplinary Graduate Courses.

[Overview and purpose of the course]

The objective of this course is to provide students with a basic understanding of the financial resources and financing methods necessary for the development and operation of infrastructure, as well as the associated legal and contractual systems, and to understand the relationship between what is learned and practical issues. Specifically, the course aims to deepen students' understanding of basic knowledge of finance, Public Private Partnership (PPP), privatization, and other public-private relations issues for infrastructure development and operation, including actual case studies.

[Course objectives]

To learn the basic issues related to the financial resources and financing methods necessary for infrastructure development and operation, as well as the associated legal and contractual systems, and to understand the relationship between what has been learned and practice.

[Course schedule and contents]

Overview (1 session)
Domestic and international issues surrounding infrastructure development

Infrastructure supply mechanisms (2 sessions)
Infrastructure and industrial organization, financial resources, role of government, PPP, privatization

Project finance (2 sessions)
Basic knowledge of finance, structure and significance of project finance

Issues related to contracts (2 sessions)
Adverse selection, moral hazard, hold-up problem

Public Private Partnership (PPP) (3 sessions)
Significance of PPPs, institutions supporting PPPs, issues related to the operation of PPPs

Case studies (2 sessions)
Critical review of various domestic and international policies on PPPs and infrastructure provision

Macro Perspectives on Infrastructure Financing (1 session)

[Overview and purpose of the course]

This class provides you with the outlines of engineering methodology with information and communication technology as its core element for improving the safety, efficiency and reliability of traffic and transportation systems and reducing the environmental burden. Concretely, we discuss the applicability of countermeasures, such as Travel Demand Management, modal-mix in transportation systems, traffic safety improvement schemes for relieving contemporary problems in traffic and transportation systems, in addition to brief introduction of innovative approaches to collect high-quality of real-time traffic data. Moreover, the methodology for policy evaluation and the related basic theory are explained.

[Course objectives]

Goal of this class is to cultivate basic and critical abilities of students for implementing effective traffic and transportation management using ITS (Intelligent Transportation System).

[Course schedule and contents]

Basics for Transportation Network Analysis,1 time,
Analytical Approaches Based on Transportation Network Equilibrium,4 times,
Outlines of ITS ,1 time,
Traffic Management for Enhancing Efficiency,1 times,
Innovative Approaches for Data Collection Using ICT,1 time,
Application of ITS for Enhancing Traffic safety,1 time,

[Overview and purpose of the course]

The aim of the class is to provide the basic knowledge of risk management methods for various types of risks such as natural disaster, environment and natural resources in urban and rural areas. Students will learn the decision making principle under risks in Economics and asset pricing methods in Financial Engineering as well as have exercises of application on public project problems.

[Course objectives]

It is targeted to understand 1) representative concepts of risk and risk management process, 2) expected utility theory and 3) foundation of Financial Engineering, and examine 4) public project problems by applying the above knowledge.

[Course schedule and contents]

Basic framework of risk management,2times,1-1 Representative concept of risk1-2 Risk management technologies
Decision making theory under risks,3times,2-1 The Bayes#039 theorem2-2 The Expected utility theory
Financial engineering,6times,3-1 The Capital Asset Pricing Model3-2 Option pricing theory3-3 The arbitrage theorem3-4 The Black-Scholes formula

Course number	G-ENG02 5F227 LJ73　G-ENG01 5F227 LJ73		
Course title (and course title in English)	構造ダイナミクス Structural Dynamics	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,TAKAHASHI YOSHIKAZU Disaster Prevention Research Institute Professor,IGARASHI AKIRA

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Tue.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

This course deals with dynamics of structural systems and related topics, to provide the theoretical basis to deal with the problems of vibration, safety under dynamic loads and health monitoring associated with infrastructures. The students will study the dynamic response, properties of natural modes and methods of eigenvalue analysis for multi-DOF systems. The topics on the numerical time integration schemes, probabilistic evaluation of structural response to random excitation, and dynamic response control techniques for structures are also studied.

[Course objectives]

(1) To aquire the knowledge on theories and principles of analysis of MDOF systems (2) Systematic understanding of frequency-domain structural response analysis (3) Concept of analysis of numerical time integration schemes (4) Understanding of fundamentals of the random vibration theory

[Course schedule and contents]

Introduction (1 week)
The fundamental concepts of structural dynamics and the scope of the problem to be treated are described, and the outline of the theoretical framework of methodologies for analysis is overviewed.

Dynamics of Multi-Degree-Of-Freedom Systems (2 weeks)
Basic concepts, including the formulation of vibration model of multi-degree of freedom systems, eigenvalue analysis, normal modes and modal analysis of linear systems and modeling of system damping, are described.

Frequency-Domain Analysis of System Response (1 week)
Methodology of response analysis of linear systems based on the concept of the frequency response function, and the relationship between the frequency-domain analysis and time-domain response via Fourier integral, mathematical operation and numerical procedure are described.

Numerical Time Integration (2 weeks)
Overview of the step-by-step time integration method used for numerical response analysis in the time domain is followed by the implication and mathematical analysis of the characteristics of the integration method, including stability and accuracy.

Random Vibration (6 weeks)
The methodology for stochastic modeling of inputs when the dynamic load on the structure can not be deterministically specified is shown, and the concept, theory and method for probabilistic evaluation of the

Continue to 構造ダイナミクス(2)↓↓↓

dynamic response of the structures are described.

Structural Response Control (2 weeks)
The concept of dynamic response control of structures, in particular the active control and semi-active control, is described, and the standard theories for analysis and design are introduced.

Achievement Evaluation (1 week)
Students' achievements in understanding of the course material are evaluated.

[Course requirements]

Mechanical vibration (undergraduate level), Complex calculus (integration of analytic functions, Fourier transform, etc.), Probability theory, Linear algebra

[Evaluation methods and policy]

Based on the results of a final examination (90%), plus homework assignments (10%)

[Textbooks]

Not used; Class hand-outs are distributed when necessary.

[References, etc.]

（Reference books）

[Study outside of class (preparation and review)]

There will be homework assignments at the end of most of the lectures.

（Other information (office hours, etc.)）

Course number	G-ENG02 7F241 LJ73　G-ENG01 7F241 LJ73		
Course title (and course title in English)	ジオコンストラクション Construction of Geotechnical Infrastructures	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,KISHIDA KIYOSHI Graduate School of Management Professor,HIGO YOUSUKE

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Fri.1	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Advanced construction technology of geo infrastructures, such as tunnel, large underground cavern, foundation, culvert, retaining wall, is introduced and explained. And, the practical projects applied by the advanced construction technology are also introduced.

[Course objectives]

To learn to the advanced construction technology and to propose the project and design through the advanced construction technology.

[Course schedule and contents]

（1） Introduction to Advanced Geotechnical Investigation Techniques. The inversion method is explained, along with the measurement methods used in slope management and traffic control during heavy rainfall. Additionally, analysis methods utilizing machine learning are also presented.
（2） Explanation of mountain tunneling, tunnel mechanics, auxiliary tunneling, shield tunneling, and loosening earth pressure is given. Also, the actual construction of mountain tunnels and various problems is also explained.
（3） The design criteria for dam foundations as specified in the Government Law on River Structures and their evolution are explained. The design of a simple gravity dam is also presented.
（4） Special lectures by national and international engineers and researchers will be given to introduce projects related to actual geotechnical structures.
（5） With roads as the main focus, this section covers the design, construction and maintenance of earthwork projects such as embankments and cuttings, as well as river embankments, which are a type of embankment that also have flood control functions. It also provides explanations of cases of damage caused by heavy rain and earthquakes.
（6） The typical structures and mechanisms that support the superstructure, focusing on the foundation structures that form the lower part of bridges are explained.
（7） The typical construction method of open-cut construction, which is one of the typical construction methods for tunnels, is explained. The typical earth retaining and supporting structures are also explained and lessons learned from construction accidents are discussed.
（8） Construction work carried out in the ocean, such as land reclamation, dredging and port construction is explained. The construction of offshore wind power facilities, which has attracted attention in recent years, is also introduced.
（9）　Feedback.

Course title (and course title in English)	自主企画プロジェクト Exercise on Project Planning		Instructor's name, job title, and department of affiliation	Graduate School of Engineering Associate Professor,HASHIMOTO RYOTA	
Target year	1st year master's students	Number of credits	2	Year/semesters	2025/Intensive, year-round
Days and periods	Intensive	Class style	Practical training (Face-to-face course)	Language of instruction	Japanese and English

[Overview and purpose of the course]

The purpose of this seminar is to bring out the self-initiative, the planning ability, the creativity of students. From project and to practice, the students set up the goals of projects, go ahead with the projects by themselves, and finally make the presentations of project results. Specifically, about the internship activities in enterprises, the training activities in enterprises or universities at home and abroad, the planning and operation of collaborative projects with citizen, the student makes the perfect plannings including the purposes, the ways, the results and so on. For a final, the students do practice, they write the reports and make the presentations about the project results.

[Course objectives]

Goals are cultivating ability for self-initiative, planning and creativity.

[Course schedule and contents]

Course introduction: 1 time
Proposal of project: 6 times (by June)
Implementation of project: 12 times (from June to December)
Progress report: 1 time (by October)
Final report: 8 times (deadline for submission: early January)
Presentation: 2 times (early January)

[Course requirements]

There is no specific requirement for taking this course.

[Evaluation methods and policy]

Planning, implementation of project and reports are comprehensively evaluated.

Days and periods	Tue.4	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

This course deals with the mechanism and propagation characteristics of the seismic ground motion that often greatly affects the urban society, in particular the wave generation in the earthquake fault and the ground vibration analysis, and the elastic and elastoplastic response of the structures to the seismic ground motions. The topics include the dynamic response characteristics of RC/steel structures, current seismic response control technology, basic theory and technical development of lifeline earthquake engineering, thoretical aspect of lifeline management and safety assessment learned from past damage experience.

[Course objectives]

This course aims to provide students with the knowledge to comprehensively understand the flow from the mechanism of earthquake occurrence and wave generation to ground motions and seismic characteristics of structures including lifelines, as well as to acquire advanced earthquake-resistant technologies and risk management methods for lifeline systems.

[Course schedule and contents]

Fundamental theory on seismology and earthquakes, 2 times

Fundamental theory on ground response analysis, 1 time

Probabilistic seismic hazard analysis, 1 time

Prediction of strong ground motions from scenario earthquakes, 1 time

Fundamental theories on dynamic response of nonlinear elastoplastic structural systems and representative seismic design principles, 2 times

Seismic performance and seismic design of concrete structures,1 time,

Seismic isolation and seismic response control techniques for enhancement of seismic performance of structures, 1 time,

Seismic retrofit and rehabilitation of existing structures,1 time,

Earthquake resistance of foundations and structures,1 time,

Course title (and course title in English)	サイスミックシミュレーション Seismic Engineering Exercise	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,TAKAHASHI YOSHIKAZU Disaster Prevention Research Institute Professor,GOTOU HIROYUKI

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Mon.4	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

This course provides the knowledge of simulation methods for earthquake engineering. Small groups of students are exercised in the prediction of ground motion generated by a specified seismic fault and the response analysis of structure selected by themselves considering soil-structure interaction.

[Course objectives]

At the end of this course, students will be required to have a good understanding of: - Prediction of ground motion generated by a specified seismic fault - Dynamic response analysis of structures and foundation (linear/nonlinear)

[Course schedule and contents]

1. Frequency domain analysis
 Basics of Fourier transformation is introduced.

2. Modeling of structure - soil system and time domain analysis
 Equation of motion of SR model is introduced and the integration method of the equation in time domain is explained.

3-4. Exercise of linear seismic response analysis
 Small groups of students are exercised in elastic modeling of structures and linear response analysis in time domain and frequency domain.

5-7. Prediction of ground motion by empirical Green's function method
 Empirical Green's function method is introduced to predict large earthquakes based on observed small earthquakes.

8-9. Seismic analysis method of soil
 Seismic analysis method of layered half-space based on equivalent linearization method is introduced.

10-11. Nonlinear seismic analysis method of structures
 Nonlinear modeling of structures and the integration and iterative methods of the nonlinear equation of motion in time domain are introduced.

12-14. Exercise of nonlinear seismic response analysis
 Small groups of students are exercised in the prediction of ground motion generated by a specified seismic

Course number	G-ENG02 6F267 LJ73　G-ENG01 6F267 LJ73

Course title (and course title in English)	水文気象防災学 Hydro-meteorologically based Disaster Prevention	Instructor's name, job title, and department of affiliation	Disaster Prevention Research Institute Professor,SAYAMA TAKAHIRO Disaster Prevention Research Institute Associate Professor,YAMAGUCHI KOSEI Disaster Prevention Research Institute Associate Professor,TANAKA TOMOHIRO

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/First semester

Days and periods	Mon.3	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Technical theories of designing and real-time predictions, which combine hydrology and meteorology, as well as water planning and management theory will be covered based on climate change, as well as changes in water circulation and water environments associated with urbanization, and the impact of these on people and society, as well as disasters. Not only the physical factors but also the probability statistics approach will be covered, while using weather radars and satellite remote sensing information, on a scale from the global to the city level.

[Course objectives]

Learning about the technical theories of planning prediction and real-time prediction, which combine hydrology and meteorology, as well as basin water planning and management theory will be covered based on climate change as well as changes in water circulation and water environments associated with urbanization and the impact of these on people and society and disasters.

[Course schedule and contents]

"Observation and prediction of rainfall by radar (2 times)
Up-to-date information on rainfall observations with advanced weather radars and satellite-mounted radars will be provided, as well as rainfall estimation and rainfall prediction.
World heavy rain disasters, people/society and global warming (2 times)
Consideration of the impact of heavy rain disasters on people and society, taking as examples the flood disasters that have occurred abroad. In addition, consideration will be given to how it is thought that global warming affects how rain falls, how to confirm this scientifically, how to carry out flood control planning, and what countermeasures to take.

Hydrometeorological disasters and prevention (1 time)
Recent cases of hydrometeorological disasters that have occurred both in Japan and abroad are introduced, and their characteristics are clarified. Additionally, a lecture will be given on techniques, policies, and legal systems for the prevention of disasters.

Hydrologic frequency analysis (2 times)
A method to calculate the frequency of extreme events by the probabilistic statistical analysis of data on hydrological extreme values, such as the greatest torrential rainfall and flood of the year, will be presented. Using the actual data series on extreme values, various probability distributions will be applied, their fitness will be evaluated, and the T annual probable hydrological value and its estimation accuracy will be obtained.

Continue to 水文気象防災学 (2)↓↓↓

Hydrological and water quality analysis of urban rivers (2 times)
The explanation, analysis, and evaluation method of the rainfall outflow system in urban river basins (natural) and water and substance outflow phenomena in water supply/sewerage systems (artificial) will be discussed. In particular, the outflow phenomenon from the non-point pollution source and the impact on the river environment will be described.

Flood control in urban areas and water environmental management (2 times)
Sewerage for urban flood control and the suppression effect of various facilities for the suppression of the accompanying overflow as well as the actual situation of rainwater use will be introduced. In particular, the necessity of real-time control of sewage pumping stations and storage facilities, and their effects and limitations, will be described.

Operation of flood control dams and their effect (1 time)
Dams are a powerful method for controlling floods. Practical examples of the operation method of flood control dams and the operation of dams at the time of floods in recent years will be introduced, and improvements in the degree of safety by flood control dams will also be considered. Additionally, the possibility of further improving the effect by using a flexible operation method combined with weather forecasting will be covered.

Transmission of hydrometeorological information and flood hazard map (1 time)
Hydrometeorological information is transmitted using various media. The information route and communication method from observation to actual evacuation/flood control activities will be introduced. Thorough consideration will be given to the ideal state of an effective disaster prevention information system.

Test (1 time)

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Fri.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

The basic equations, interface tracking model, and description of surface tension are presented for gas-liquid multiphase flows. The formation of the equations of motion for individual particles in turbulent flow is discussed in detail. Solid/liquid coupling methods for solid-liquid multiphase flows are explained. The non-Newtonian fluid model is presented as the simplest multiphase flow model, followed by details for the continuous (liquid) and dispersed (solid) phases, respectively. The coupled fluid-structure equations are also presented.

[Course objectives]

To study the equations of multiphase flow in hydraulic engineering, including the equations used in recent multiphase flow simulations.

[Course schedule and contents]

* Introduction (1 time) Outline of the lecture contents and explanation of the class procedure.

* Equations of gas-liquid multiphase flow (3 times) Two-fluid model describing the interaction between two fluid phases will be explained, and how to capture the interface between the two phases and how to describe the surface tension acting on the two-phase interface will be explained.

* Equation of motion of a solid sphere (3 times) The physical meaning of each term in the equation of motion of a solid sphere in turbulent flow is explained. For equations of motion of solid spheres to include the interaction between solids, the distinct element method (DEM) is explained.

* Equations of solid-liquid multiphase flow (7 times) Coupling between solid and liquid phases will be explained in terms of the appropriate treatment for the size of solid particles constituting the solid phase.

* Confirmation of student achievement (1 time) Confirmation of student achievement will be made.

Days and periods	Fri.1	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

The hydraulics of various free-surface flows in rivers and coastal areas will be systematically explained. For river basin areas, water surface profile analysis of open channel steady flow and the application of singular point theory, as well as the basic characteristics of unsteady open channel flow and the application of the method of characteristic will be presented. For coastal areas, perturbation solutions of the surface wave equation are explained in detail using Stokes waves as an example, and numerical solutions of violent flow associated with breaking waves are discussed based on the particle method.

[Course objectives]

Understand the relationship between the equations and the physics of water surfaces in open channels.
Understand the perturbation method to solve for Stokes waves and explain the properties of real waves.

[Course schedule and contents]

* Introduction (1 time) Outline of lecture content and explanation of class procedures.

* Water surface profile around a singular point (3 times) The behavior of solutions of the water surface profile equation around a singular point and the classification of solutions will be explained.

* Stokes waves (2 times) The basic equation of Stokes waves will be presented and the solution of Stokes waves will be shown by the perturbation method. The difference between small amplitude waves and Stokes waves with nonlinearity is also explained.

* Numerical Analysis of Violent Flow in Wave Breaking (1 time) Numerical simulation based on the particle method is explained.

* Open channel flows in rivers (7 times) Depth integrated flow model used in river flood flow analysis, derivation of Boussinesq equation, and its application examples will be explained.

* Confirmation of student achievement (1 time) Confirmation of student achievement will be made.

Course title (and course title in English)	ジオフロント工学原論 Fundamental Geofront Engineering		Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,YASUHARA HIDEAKI Graduate School of Engineering Associate Professor,IWAI HIROMASA	
Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Tue.1	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

This course covers a wide range of basic and applied aspects of geotechnical and rock engineering. In particular, the course focuses on understanding groundwater flow and geohazards in rock mass, analysis of complex problems in high-level radioactive waste disposal sites, and geotechnical engineering issues in submarine environments. This course aims to deepen students' understanding of complex geotechnical problems and to develop their ability to propose practical solutions through lectures, group work, and field trips.

[Course objectives]

The main objectives of this course are as follows:
- Basic understanding of groundwater flow in rock and permeability testing methods.
- Understanding of numerical models in THMC coupled fields for high-level radioactive waste geological disposal sites.
- Obtain up-to-date knowledge of geotechnical engineering and geohazards in the offshore environment.
- Deepening of understanding based on geotechnical hazard prediction methods and case analyses.
- Develop problem-solving and presentation skills through group work.
- To acquire practical knowledge through field trips.

[Course schedule and contents]

1. Lecture: groundwater flow in rock mass and coupled problems (3 times)
- Governing equations of groundwater flow in a rock mass, groundwater investigation and permeability test methods will be explained.
- A numerical model describing hydraulic behavior of discontinuous rock mass in THMC coupled field will be explained, with an example of a high-level radioactive waste disposal site.

2. Lecture: Geotechnical Engineering and Geo-Hazards in Marine Environments (3 times)
- Geotechnical engineering problems in marine environment will be explained in comparison with geotechnical engineering in terrestrial environment.
- In particular, the industrial utilization of marine environment will be discussed from the viewpoints of energy resources, environment, and seafloor geologic hazards, taking deep-sea floor methane hydrate-bearing ground, CO2 submarine ground storage, and seafloor landslide tsunami as examples.

3. Group work (6 times, including 3 times presentation)

Continue to ジオフロント工学原論(2)↓↓↓

ジオフロント工学原論(2)

Presentation of the assignment setting and planning, progress report, and final report, one time each.

4. Construction site visit (Equivalent to 3 lectures)
Learning practical knowledge through construction site visits and related facilities

Evaluation and feedback, 1 time, Evaluation of achievement by examination, and its feedback.

[Course requirements]

Undergraduate courses in geotechnical engineering, soil mechanics, and rock engineering are desired.

[Evaluation methods and policy]

Presentation of the group work (50%), Report (50%; Lecture, Group work, Site visit)

[Textbooks]

Handouts will be distributed.

[References, etc.]

（Reference books）

References are indicated in the handout.

[Study outside of class (preparation and review)]

Construction site visit are being planned.

（Other information (office hours, etc.)）

Questions, etc. will generally be accepted after class, and will also be accepted by e-mail.

Lecture on outline of impact of construntion materials to environment and influence on materials and structures from environment. Discuss how to use materials sustainably. Keywords are concrete, steel, composite materials, CO2, durability, recycle and reuse, life-cycle assessment.

[Course objectives]

To understand the limit of resources and effect of material use to environment. and to understand the basic theory to make environmental-friendly infrastructures from the view point of materials use.

[Course schedule and contents]

Guidance,1time,Object of the Course, Grading and Goals
product of materials and impact to environment,1time,Product of cement, steel, concrete CO2 product and its influence
recycle and reuse of materials,3times,Recycle and reuse of steel, metals, concrete, asphalt, plastics
Technology development of construction materials
deterioration of concrete structures,1time,Mechanism of deterioration of concrete structures: carbonation, salt attack, alkali-aggregate reaction Maintenance and retrofit methods
deterioration of steel structures,1time,Mechanism of deterioration of steel structures: corrosion, fatigue
Maintenance and retrofit methods
deterioration of composite structures,1time,Mechanism of deterioration of composite structures: Maintenance and retrofit methods
life-cycle assessment of structures,1time,Life-cycle assessment of structures considering initial cost as well as maintenance cost
topics and discussion,2times,Recent topics on construction materials and discussion
presentation by students and discussion / feedback,4times,Presentation by students on the individual topics
Discussion on the topics. Feedback at the last class

[Course requirements]

Basic knowledge of construction materials, concrete engineering

Course number	G-ENG02 7F464 LJ73　G-ENG01 7F464 LJ73		
Course title (and course title in English)	水工計画学 Hydrologic Design and Management	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,TACHIKAWA YASUTO Graduate School of Management Professor,ICHIKAWA YUTAKA Disaster Prevention Research Institute Associate Professor,TANAKA TOMOHIRO

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Fri.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Hydrologic design and real-time rainfall-runoff prediction methods are described. The frequency analysis of hydrologic extreme values and the time series analysis of hydrologic variables are described, and then a procedure to determone an external force for the hydrologic design are explained. Next, a physically based hydrologic model which includes various processes of human activities for the hydrologic cycle is described. A flood control planning and water resources management with the use of innovative hydrologic simulation tools is described. Then, A real-time rainfall runoff prediction method with the use of Kalman filter theory is described.

[Course objectives]

The class aims to understand the probabilistic and statistical analysis of hydrologic variables to determine the external force of hydrologic designs, applications of hydrologic simulations for hydrologic designs, and real-time rainfall and runoff prediction methods for water resources management.

[Course schedule and contents]

Introduction,1time,A flood control planning and water resources planning are introduced.
Frequency analysis and hydrologic design,3times,The frequency analysis of hydrologic extreme values is described. The methods to set the external force for the hydrologic design are explained.
Time series analysis and hydrologic design,2times,The time series analysis of hydrologic variables is described. The methods to develop time series models, time serried data generation methods, spatiotemporal variation of hydrologic variables and a random field model, disaggregation methods are explained.
Hydrologic modeling and predictive uncertainty ,2times,Hydrologic models which include the process of human activities for the hydrologic cycle is described. Then, hydrologic predictive uncertainty is explained, which is inevitable coming from model structure uncertainty, parameter identification uncertainty and model input uncertainty. Especially, the relation between spatiotemporal scales of hydrologic modeling and model parameter values is described.
Hydrologic modeling system,2times,A hydrologic modeling system which helps to develop complicated hydrologic simulation models and its importance for a flood control planning is also described.
Watershed management for flood disaster,2times,Watershed management to mitigate flood disasters is described. A cost-benefit analysis of flood control measures is discussed.
Real-time rainfall runoff prediction,2times,A real-time rainfall runoff prediction method with the use of Kalman filter theory and a new filter theory is described.
Feedback of study achievement,1time,Feedback of study achievement is conducted.

Course title (and course title in English)	資源工学の基礎数理 Applied Mathematics in Earth Resources Engineering	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,FUKUYAMA EIICHI Graduate School of Engineering Associate Professor,TAKEKAWA JUNICHI

Target year	1st year students or above	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Fri.3	Class style	(Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

To solve various problems related to earth resource engineering, linear and non-linear inverse problems will be introduced. Then, the mathematical problems in applied geophysics such as wave propagation and material migration in the crust will be explained. Finally, application examples of hte analysis methods in energy developments and geoscience area will be introduced.

[Course objectives]

To obtain basic knowledge used in data analysis as well as basic undetrstanding of various signal processing method used in exploration geophysics, seismology and electromagnetics.

[Course schedule and contents]

1-4: Linear inverse problem and generalized inverse matrics
To learn about what is inverse problem, linear inverse problem and its solution, generalized inverse matrix, and singular value decompasition method.

5-7: Maximum likelihood method and nonlinear inverse problems, inverse problems for continuous function
To learn the method to solve the inverse problems using maximum likelihood method, nonlinear inverse problems, inverse problems for continuous function.

8: General guidance for mathematics in exploration geophysics
To learn about the general guidance for mathematics in exploration geophysics

9-11: Seismic wave propagation in elastic medium and signal processing
To learn the characteristic feature of seismic waves in the elastic medium, basic and advance application of the seismic signal processing method used in geophysical prospecting.

12-14: Geoelectromagnetics and its application ot geophysical prospecting
To learn about the survey technique using electromagnetic signals such as MT, IP, SP, and specific registance methods.

15: Feedback
Review the classes and check the understanding of the students.

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Mon.1	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

The course provides students with the numerical modeling of geomaterials to predict the mechanical behavior of geomaterials. The course will cover the nonlinear continuum mechanics and the governing equations for multiphase geomaterials based on the theory of porous media. The fundamental constitutive models of geomaterials including the elastic model, the elastoplastic models will also be presented. In addition, numerical methods including FEM and FDM will be explained with some applications, such as, consolidation, soil-structure interaction problems. Finally, students are required to do excises of numerical calculations.

[Course objectives]

Understanding the numerical modeling of multiphase geomaterials

[Course schedule and contents]

【Nonlinear continuum mechanics】（5times）
Nonlinear continuum mechanics 1: Vector and tensor algebra, Kinematics (motion and strain tensors), Concept of stress tensors
Nonlinear continuum mechanics 2: Balance principles, Objectivity and stress/strain rates, Constitutive laws

【Governing equations】 (5 times)
Governing equations for fluid-solid two-phase materials: Conservation of mass, balance of linear momentum.
Constitutive models for soils, including elastic model, elastoplastic model (Cam-clay model).

【Numerical methods and applications】 (3 times)
Numerical methods (FEM, FDM etc.)
Applications of finite element method

【Exercises】 (2 times)
FEM analysis for two-phase mixture
Exercises and interpretations of the results
Presentation

Course number	G-ENG01 5W001 LE73　G-ENG02 5W001 LE73		
Course title (and course title in English)	社会基盤構造工学 Structural Engineering for Civil Infrastructure	Instructor's name, job title, and department of affiliation	Graduate School of Engineering KANKEI KYOIN Graduate School of Engineering Associate Professor,TAKAYA SATOSHI

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Thu.2	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

Structural engineering problems related to planning, design, construction and maintenance of the infrastructures are discussed. Topics concerning structural engineering and management are widelly taken up including latest advanced knowledge and technology, future view and/or international topics. Special lectures by extramural lecturers are carried out if necessary.

[Course objectives]

To grasp problems related to structural engineering and their specific solutions.
To understand applicability of advanced technologies and development prospects.

[Course schedule and contents]

Structural Materials, Structural Mechanics,4times,Steel materials, Concrete materials, mechanical behavior of structures, Problems related to design, construction and maintenance
Applied Mechanics,1time,Numerical analysis for structure performance evaluation
Earthquake and Wind Resistance of Structures,7times,Infrastructure and natural disaster, Trends of disaster prevention technology, Problems related to Earthquake and wind resistant design
Maintenance of structure,3times,International technology, Scenario design, International technological education and collaboration

[Course requirements]

Structural Mechanics, Wind Resistant Design, Construction Materials, Dynamics of Structures, etc.

[Evaluation methods and policy]

The method of grading will involve assigning reports or quizzes during lectures for each field of study, aimed at assessing understanding of issues and technical knowledge within that field. The final grade will be determined by the average score of all reports and quizzes.

[Textbooks]

The textbook is not required. Materials will be supplied by instructors.

[References, etc.]

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Tue.3	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

To build resilient and sustainable social infrastructures against natural disasters, urban infrastructure management, which is related to all fields of civil engineering, is the subject of this course. Through lectures and group discussions, students will deepen their understanding of the impact assessment of natural disasters on urban infrastructure, risk assessment, technical response, and social response in particular. Group work and student presentations will be emphasized. In addition, to learn about disaster prevention and mitigation activities not only in the public sector but also in the private sector, hands-on company activities will be incorporated into the lectures.

[Course objectives]

Through lectures, group discussions, and company experiences, students will learn about impact assessment, risk assessment, technical response, and social response to urban infrastructure, and deepen their understanding of civil engineering as a comprehensive engineering discipline.

[Course schedule and contents]

1) Guidance / Introduction to Urban Infrastructure Management.

2) Hazard prediction and impact assessment 1: Impact and risk assessment of earthquakes on structures and urban infrastructure, and technical and social responses to them.

3) Hazard prediction and impact assessment 2: Impact and risk assessment of floods and inundation on urban infrastructure and technical and social responses to them.

4) Hazard Prediction and Impact Assessment 3: Impact and risk assessment of earthquakes and heavy rainfall on geotechnical structures and urban infrastructure, and technical and social responses to them.

5) Improve disaster resilience through advance planning (BCP, disaster insurance, legal system), response at the time of disaster (disaster prevention information, disaster medical information), and post-disaster response (recovery plan).

6) Description of group assignments. Group assignments will be made for comprehensive content common to

Days and periods	Wed.4	Class style	Lecture (Media-based course)	Language of instruction	English

[Overview and purpose of the course]

Natural disasters have low frequencies but high impacts. It is very important to make an integrated risk management plan that consists of various countermeasures such as prevention, mitigation, transfer, and preparedness. This class will present economic approaches to natural disaster risk management and designing appropriate countermeasures.

[Course objectives]

Students are expected to understand fundamental ways of economic analyses of disaster prevention such as economic valuation of disaster losses, decision making principle under risks, derivation of benefits of risk management.

[Course schedule and contents]

Introduction to disaster risk management,1time,Introduction and Explanation of Course Outline, The Global Trends of Natural Disasters
1. Decision making theory under uncertainty,1time,Bayes#039 theorem, Expected utility function
Methods of disaster risk management,1time,Risk control and risk finance
Economic valuation of catastrophic risk mitigation,1time,Cost-Benefit analysis, conventional valuation method, catastrophic risks and economic valuation of disaster mitigation
Risk perception bias, land-use and risk communication,2times,Risk perception bias, land-use model, risk communication
Disaster risk finance,2times,Recent issues of risk finance market, reinsurance, CAT bond, roles of government, derivatives
Risk curve and risk assessment,1time,Fragility curve and risk assessment
General equilibrium analysis under disaster risk,1time,General equilibrium model under disaster risk
Macrodynamics under disaster risk,1time,GDP, economic growth
Disaster accounting,1time,Accounting systems
Exercise and presentation,2times,Students#039 exercise and presentation
Confirmation of the learning achievement degree,1time,Confirmation of the learning achievement degree

Course title (and course title in English)	長期インターンシップ Long-Term Internship	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Associate Professor,HASHIMOTO RYOTA

Target year	Master's/Doctoral students	Number of credits	4	Year/semesters	2025/Intensive, year-round
Days and periods	Intensive	Class style	Practical training (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Through the long-term internship outside the university, the students can get the practical techniques, the way of finding and solving the problems, the way of integrating the techniques, the way of summarizing the results and making the presentation in each field of urban management.

[Course objectives]

The students can understand research trend, society's needs, and their aptitude, through long-term job experiences.

[Course schedule and contents]

Course introduction: 1 time
Preparation for internship: 5 times
Implementation of internship: 14 times (longer than 3 months between August and December)
Preparation of final report: 8 times
Presentation: 2 times

[Course requirements]

None

[Evaluation methods and policy]

Writing plans, completing internship, final report and presentation are comprehensively evaluated.

Days and periods	Intensive	Class style	Practical training (Face-to-face course)	Language of instruction	Japanese and English

[Overview and purpose of the course]

The students plan and implement projects on various problems in the urban society by widely making use of the basic knowledge which you have gotten in Undergraduate or Master Course. Actually, the students simulate the actual problems for which you collect and analyze the data, and then evaluate the practice and effect of projects. At the end, the students write the reports about a series of project results and make the presentations about them.

[Course objectives]

Goals are to cultivate students' ability for planning, creativity and communication.

[Course schedule and contents]

Guidance,1time,
Plan projects,4times,
Implement projects,6times,
Analyze and evaluate projects,12times,
Discuss results,6times,

Course title (and course title in English)	都市社会工学セミナーA Seminar on Urban Management A	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Associate Professor,HASHIMOTO RYOTA

Target year	Master's students	Number of credits	4	Year/semesters	2025/Intensive, year-round
Days and periods	Intensive	Class style	Seminar (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

This seminar has the lectures about the movement and content of the most advanced research at home and abroad on Urban Management Engineering.. Also, the teachers in this seminar instruct the students individually about the planning of study schedule, the way of collecting datas, doing the research and summarizing the results of research on the concrete and specific themes.

[Course objectives]

[Course schedule and contents]

,2times,
,6times,
,8times,
,6times,

[Course requirements]

None

[Evaluation methods and policy]

Points are allocated for research activities such as a presentation at laboratory seminars, domestic conferences, international conferences, research paper presentation etc. Students are required to obtain the points in total which are more than predefined points.

Students are required to get no less than 10 points in total for two years from M1 to M2, no less than 3 points in each year.

1 point: Presentation at laboratory seminar (only if supervisor agrees), oral presentation in the annual meeting in the Society of Civil Engineers.

1〜5 point: Attending the lecture held by Academic Society (Certification is required), number of points is determined by your supervisor in accordance to the level of difficulty for approval.

3 point : Presentation in English in international conference. If the papers are peer-reviewed, the points are determined as journal papers (see below).

5〜10 point: Fist author or coauthor of published and/or accepted journal papers (e.g., for Journal of Society of Civil Engineers, ASCE Journal, etc.) (Number of points is determined by your supervisor depending on

Days and periods	Intensive	Class style	Practical training (Face-to-face course)	Language of instruction	Japanese and English

[Overview and purpose of the course]

By practicing the research themes on Urban Management and making the presentations of research results at the conferences, the students can develop the advanced specialities, the ability of finding out the new fields of research. Also, the students can get the practical ability which is necessary for researchers and engineers . The students can participate in the conferences at home and abroad, the presentations of research at laboratory, some kinds of seminars and symposiums, lecture classes and internship to the enterprises or research organizations at home and abroad.　The director of the department and the supervisor totally evaluate the reports made about these activities by the students.

Course title (and course title in English)	地圏環境工学特論 Geohydro Environment Engineering, Adv.	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,YOKO SHIMADA

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Thu.1	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Lectures will cover basic knowledge of the geo-environment, domestic and international soil and groundwater contamination issues and conservation, and sustainable groundwater use. In addition, geostatistics, a field of spatial statistics used as a method to investigate contamination of soil and other materials, will be explained from its theoretical basis to its applications, and programming exercises will be conducted to analyze spatial data. Numerical simulation of groundwater contamination will also be explained and practiced.

[Course objectives]

・To acquire basic knowledge of the geo-environment and understand the current status and conservation of soil and groundwater contamination.
・To understand the basics of geostatistics for estimating the spatial distribution of soil and groundwater contamination and how to perform numerical simulations of groundwater contamination.

[Course schedule and contents]

1. Introduction to Geosphere Environment and course guidance

2. Current situation concerning groundwater
Lecture on the status of groundwater use and its importance in Japan and abroad

3. Sustainable grounewater use
Lecture on sutainable groundwater use with examples of groundwater quality degradation in the Kyoto Basin

4. Soil contamination and risk
Lecture on mechanisms of soil contamination, standard values, current status, and risk assessment

5. Geo-environment and global environmental issues
Lecture on various global environmental problems related to the geosphere environment and their countermeasures

6. Introduction to Geostatistics 1
Lecture on Excel VBA basics and Geostatistical procedures for analyzing spatial data

7. Introduction to Geostatistics 2

Continue to 地圏環境工学特論(2)↓↓↓

地圏環境工学特論(2)

Lecture on how to obtain a variogram as a statistical structure of a field

8. Introduction to Geostatistics 3
Lecture on Kriging methods for estimating spatial distributions and their uncertainties

9. Introduction to Geostatistics 4
Lecture on verification of assumptions made in determining the statistical structure of the field

10. Introduction to Geostatistics 5
Lecture on statistical processing methods for cases with a large amount of data below the detection limit or over-range data

11. Introduction to Geostatistics 6
Lecture on Cogriging and its simplified method for estimating spatial distribution using several types of data

12. Introduction to Geostatistics 7
Lecture on Conditional simulation methods and their use as simulation methods that account for spatial uncertainty

13, 14 Introduction to groundwater simulation
Lecture on fundamentals of Numerical Simulation of Groundwater Contamination

15. Feedback

[Course requirements]

Basics of linear algebra and probability statistics

[Evaluation methods and policy]

Evaluation will be based on assignments (80%) and class performance (20%).
Evaluation for class performance includes attendance and evaluation of quizzes assigned per class.
【Evaluation standard】
For “course goals”, evaluation will be made in accordance with the grading policy of the Graduate School of Engineering.

[Textbooks]

Days and periods	Tue.3	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

Much energy and resources are consumed to maintain various activities in urban city. As the result, various environmental loads such as exhaust gas, wastewater and waste generate and should be reduced to levels natural environment can accept .To establish sustainable urban metabolism, concept, elements, control, optimization and management of urban metabolism are explained.

[Course objectives]

To understand technological measures by learning about current trend and issue of urban metabolism and related engineering principles.

[Course schedule and contents]

Class 1:Introduction (Takaoka)
Concept of urban metabolism and its system are explained.

Class 2-10: Elements of urban metabolic system (Takaoka: 6, Oshita: 1, Harada:1, Oleszek:1)
Planning and selection of urban metabolic system, Transportation & collection, Engineering principles on Recycling, Thermal recovery, Engineering principles on flue gas treatment and Landfill management are explained.

Class 11-12: Hazardous Waste Management(Takaoka)
Treatment, disposal and management of hazardous waste are explained.

Class 13-14: Design of sewage treatment system in urban area (Oshita)
Properties and chemical compositions of sewage and sludge. Introduction and developing trend of sewage treatment system. Elemental and heat balance analysis of sedimentation, aeration tank, anaerobic fermentation and incineration.

Class 15:Feedback(Takaoka, Oshita, Harada)
We will answer/discuss about questions for the results of small tests and reports or the contents of lectures via E-mail etc.

Days and periods	Mon.1	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

The roles of microorganisms in the environment and the utilization methods of them for environmental purification are explained with state-of-the-art research findings. Besides, literature review and presentation of the reviewing results are certainly required in order to understand latest research findings and application to environmental engineering. The concrete contents are as follows; 1) Fundamental science: classification, cultivation, function, gene and genetic analysis of microorganisms, growth rate and biological reaction kinetics. 2) Application of environmental engineering: analyses with mathematical model and simulation, bio assay and bio sensor, relationship between waterborne disease and microorganisms, relationship between phytoplankton growth and hazardous substances production. Presentation and discussion about literature review by the students are prepared.

[Course objectives]

To understand fundamental knowledge of microbiology, which can support environmental engineering.

To discuss current situation and challenges about application of microorganisms for solution of environmental problem, and study with practice.

[Course schedule and contents]

(1) Basic of Environmental Microbiology: [1 time]
Introduction of this course: Objectives, composition, and basic of the environmental microbiology. How to review the latest research results from literature, and presentation.

(2) Classification, Nomenclature, Cultivation, and Function of Microorganisms: [1 time]

(3) Microbial ecosystem structure and Microorganism community analysis by gene information: [2 times]

(4) Metabolism of microorganisms, and material transformation: [2 times]

(5) Mathematical model of microbial activity and numerical analysis by computer: [1 time]

(6) Environmental measurement and evaluation using microorganisms: [1 time]

(7) Waterborne diseases and microorganisms: [1 time]

Course number	G-ENG03 5F234 LB15

Course title (and course title in English)	水質衛生工学 Water Sanitary Engineering	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,ITOH SADAHIKO Graduate School of Global Environmental Studies Professor,ECHIGO SHINYA Graduate School of Engineering Senior Lecturer,NAKANISHI TOMOHIRO Graduate School of Engineering Associate Professor,ASADA YASUHIRO

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Tue.2	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

The ultimate goal of this course is to understand Sanitary Engineering quantitatively. Students will learn methods to quantify chemical and microbial risk in drinking water and realize concept and methods of risk management and control.

[Course objectives]

To quantify chemical and microbial risk in drinking water and to realize methodologies of risk management and control.

[Course schedule and contents]

Environmental risk and quantification (1 time; Itoh)
Introduction and goal of the class. Concept of Sanitation. Environmental risk and quantification. Safety of drinking water and acceptable risk level.

Quantitative microbial risk assessment and management (5 times; Itoh)
Coexistence and competition between human and microbes. Quantitative microbial risk assessment (QMRA). Comparison of the risk assessment and management methods between chemicals and microbes. Disability adjusted life years (DALYs).

Risk assessment and control of hazardous chemicals (3 times; Itoh)
Risk assessment of hazardous chemicals. Drinking water quality standards. Derivation of drinking water quality standards. The benchmark dose method.

Global burden of disease and its index (2 times; Nakanishi)
Disability-adjusted life years and its significance.

Perspectives of water treatment technology (3 times; Echigo)
Development of advanced water treatment processes. Water supply technology and its prospects. Water reuse and health risk. Access to safe drinking water in developing countries and global burden of disease.

Feedback and summary (1 time; All the professors)
Feedback of assignments and summary.

Course number	G-ENG03 7F400 PJ16		
Course title (and course title in English)	都市環境工学セミナーA Seminar on Urban and Environmental Engineering A	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Associate Professor,MATSUDA SHUN

Target year	Master's students	Number of credits	4	Year/semesters	2025/Intensive, year-round
Days and periods	Intensive	Class style	Practical training (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Provide seminar assignments related to a wide range of problems in each educational field of environmental engineering such as advanced research related to urban environmental engineering, actual problems requiring solutions, examples of advanced activities in real society, and the specialization of each student deepen discovery and understanding of problems from a field perspective. Acquire individual guidance from the supervisor on the method of research investigation on issues, the method of collecting related information and the method of writing paper. Students need to give reports and presentations, and discuss with supervisors. Finally students must summarize their master's research in original research paper.

[Course objectives]

To understand the overall picture of the issues related to urban environmental engineering and to summarize the master's research in original research paper.

[Course schedule and contents]

Issue 1 setting (1 time)
Set issue 1 on urban environmental engineering that each student studies.

Survey and progress report (1 time)
Each student conducts survey and research on selected task 1.

1st presentation (1 time)
Each student presents the contents of survey and research on task 1 to the teachers in charge and receives questions and evaluations.

Task 2 setting (1 time)
Set issue 2 on urban environmental engineering that each student studies.

Survey and progress report (1 time)
Each student conducts survey and research on selected task 2.

2nd presentation (1 time)
Each student presents the contents of research and research on problem 2 to the teachers in charge and receives questions and evaluations.

Issue 3 setting (1 time)

Continue to 都市環境工学セミナーA(2)↓↓↓

都市環境工学セミナーA(2)

Set issue 3 on urban environmental engineering to be studied by each student.

Survey and progress report (1 time)
Each student conducts survey and research on selected task 3.

The 3rd presentation (1 time)
Each student presents the contents of research and research on problem 3 to the teachers in charge, and receives questions and evaluations.

Task 4 Setting (1 time)
Set issue 4 on urban environmental engineering that each student studies.

Survey and progress report (1 time)
Each student conducts survey and research on selected task 4.

The 4th presentation (1 time)
Each student presents the contents of survey and research on task 4 to the teachers in charge and receives questions and evaluations.

Writing paper (3 times)
According to supervisor's guidance, each student summarizes the master's thesis in original research paper.

[Course requirements]

None

[Evaluation methods and policy]

Students must submit original paper-style documents by the specified date (end of September), and the supervisor comprehensively evaluates the activities at the seminar along with the evaluation of the documents. If the student has already published an original paper, he/she can submit it. This original paper must be peer-reviewed, but it may be a peer-reviewed paper in conference proceedings. However, peer-reviewed abstracts can not be accepted.

Students should submit this document as PDF file via PandA. The file name should include student's name (in the order of first and last name, connect the first and last names with an underscore). For example, "Kankyo_Taro.pdf".

[Textbooks]

Handout will be given accordingly.

[References, etc.]

（Reference books）

Handout will be given accordingly.

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Wed.4	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

In order to understand the concept of environmental risk, the necessity of environmental risk assessment, evaluation examples, issues related to risk assessment, and methods for solving them, we focus on environmentar risks to children. Participants study and present about the background, actual situation, and quantitative risk assessment of environmental risks to children.

[Course objectives]

・Understand the general concept of the necessity of environmental risk assessment, assessment examples, issues related to risk assessment, and methods of solving them.
・Develop the ability to read materials provided by international organizations regarding environmental risks to children and present their contents.

[Course schedule and contents]

1. Guidance, Method of Risk Analysis(1)
The way of conducting the class
Introduction of the method of risk analysis

2. Method of Risk Analysis(2)
Health risk by environmental pollution, Learning from Japanese experiences, Chemicals to be considered and their exposure pathway

3. Method of Risk Analysis(3)
Movement of a chemical in a body, Toxicity to be considered, Dose-response relation

4. Method of Risk Analysis(4)
Risk assessment, Risk management, Risk communication

5. Method of Risk Analysis(5)
Practical use of risk analysis, Example of setting criteria,
Environmental modeling for risk analysis

6.〜15. Presentation and discussion
Using WHO training package for the health sector:

Course number	G-ENG03 5F441 LJ16		
Course title (and course title in English)	水環境工学 Water Quality Control Engineering	Instructor's name, job title, and department of affiliation	Graduate School of Global Environmental Studies Professor,Fujiwara Taku Graduate School of Engineering Professor,NISHIMURA FUMITAKE Graduate School of Global Environmental Studies Associate Professor,HIDAKA TAIRA Graduate School of Engineering Associate Professor,ASADA YASUHIRO Graduate School of Engineering Assistant Professor,TAKEUCHI HARUKA Graduate School of Global Environmental Studies Assistant Professor,NOMURA YOUHEI

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Fri.2	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

Water resource management from the points of both water quantity and water quality is described, for example, mechanism of water pollution and history, and current conditions of water quality standard, Water quality indexes and their analytical technologies including biological methods and instrumental analytical technique are explained as well. Water and wastewater treatment technologies of physical, chemical and biological process including energy and resource recovery are expound.

[Course objectives]

To understand management methods of water environment and evaluation of water environment condition.

To acquire technologies of water and wastewater treatment enough to apply them from the point of creation of recycling-oriented society.

[Course schedule and contents]

・Water pollution its history and Water quality standard(1 time):
Introduction of this class. Basic and major water pollution and their generation mechanism are explained, and the history of water pollution and solution are introduced.

・Water quality indexes and analysis(2 times)
Basic knowledge for Water quality indexes and their analysis including instrumental analysis are explained.

・Water pollution and evaluation(5 times)
Water pollution characteristics in rivers, lakes and sea, and countermeasures are explained. Behaviors of recalcitrant organic compounds and emerging contaminants such as PPCPs(Pharmaceuticals and Personal Care Products) and EDCs(Endocrine-Disrupting Chemicals) are explained, and their impacts on water environment are expounded. Based on the understanding, watershed management is explained.

・Water and wastewater treatment(5 times)
Basic countermeasure against water pollution is to remove the pollutants from the wastewater. Fundamental

Continue to 水環境工学(2)↓↓↓

technologies are introduced categorizing into physical, chemical, and biological processes, and each process is explained in detail. Disinfection and water reuse are also introduced from the points of chemicals management.

・Resource recovery and system(1 time):
Resource recovery is important from the points of both creation of recycling-oriented society and prevention of global warming. Technologies and systems accomplishing energy and resource recovery from wastewater is introduced and explained

・Final examination/ Learning achievement evaluation(1 time):

・Feedback(1 time):

Course number	G-ENG03 5F454 LB24		
Course title (and course title in English)	循環型社会システム論 Systems Approach on Sound Material Cycles Society	Instructor's name, job title, and department of affiliation	Agency for Health, Safety and Environment Professor,HIRAI YASUHIRO Agency for Health, Safety and Environment Associate Professor,YANO JUNYA

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Mon.3	Class style	Lecture (Media-based course)	Language of instruction	English

[Overview and purpose of the course]

Establishing a Sound Material-Cycle Society to conserve resources and protect the environment has become a major political and social issue. This course primarily covers the following topics:

1) History, Current Status, and Future Prospects
An overview of waste-related issues and the development of a Sound Material-Cycle Society, including historical context, present conditions, and anticipated challenges.

2) Basic Concepts and Current Challenges of Key Legislation
A review of the Basic Law for Establishing a Sound Material-Cycle Society and the corresponding Basic Plan for its implementation.
This topic involves examining specific laws, such as the Containers and Packaging Recycling Law, the Home Appliance Recycling Law, the End-of-Life Vehicle Recycling Law, and other relevant legislation.

3) Material Flow Analysis (MFA) and Life Cycle Assessment (LCA)
The fundamental principles and practical applications of MFA and LCA are tools for understanding the entire cycle of resource usage, product consumption, recycling processes, and waste disposal.

Additionally, the course will address the sources, behavior, and decomposition of persistent organic pollutants (POPs), which are inherently linked to realizing a Sound Material-Cycle Society.

[Course objectives]

The goals of this class are as follows:

- To understand the systems and technologies that support the formation of a Sound Material-Cycle Society.
- To grasp the fundamentals and current status of recycling systems and issues related to food loss and waste, packaging and containers, plastic resource recycling, end-of-life vehicles, and waste electrical and electronic equipment.
- To understand the concept of material flow analysis (MFA).
- To acquire the ability to conduct life cycle assessments (LCA).
- To understand the basic concept of multi-media environmental fate models (Fugacity models) for chemical substances.
- To understand the sources, pathways, and management of persistent organic pollutants (POPs).

[Overview and purpose of the course]

This course provides various kinds of engineering issues related to the water environment in English, which cover fundamental knowledge, the latest technologies and regional application examples. These lectures, English presentations by students, and discussions enhance English capability and internationality of students. The course is conducted in simultaneous distance-learning from Kyoto University, or from remote lecture stations in University of Malaya, and Tsinghua University of China. For the distance-learning, a hybrid system is used, which consists of prerecorded lecture VIDEO, VCS (Video conference system) and SS (slide sharing system).

[Course objectives]

Each student is requested to give a short presentation in English in the end of the course. The students will understand the present circumstance of environments in the world, and the students may improve their English skill and international senses through these lectures, presentations, and discussions.

[Course schedule and contents]

Guidance & Self Introduction of Students + Lecture: From Ecotoilets to Ecotowns（Shimizu)

Anaerobic Technologies for Wastewater Treatment(Prof. Shaliza, University of Malaya)

Wastewater Treatment Plant: Case Study in China, Biological Nutrient Removal (BNR) (Prof. Wen, Tsinghua University)

Development of Wastewater Treatment Technologies: History and Recent Trends in Japan (Nishimura)

Water Supply in Malaysia: Challenngeis and Oppurtunities(Prof. Faridah, University of Malaya)

Treatment Technologies (Practical & Advanced Technology I): Membrane Technology (MT) (Prof. Huang, Tsinghua University)

Advanced Oxidation Processes (Prof. Zhang, Tsinghua University)

Current Issues in Drinking Water Treatment in Japan (Echigo)

Student Presentations /Discussions I (all)

Course number	G-ENG03 5F461 LJ77		
Course title (and course title in English)	原子力環境工学 Nuclear Environmental Engineering, Adv.	Instructor's name, job title, and department of affiliation	Institute for Integrated Radiation and Nuclear Science Associate Professor,FUKUTANI SATOSHI Institute for Integrated Radiation and Nuclear Science Assistant Professor,IKEGAMI MAIKO Institute for Integrated Radiation and Nuclear Science Assistant Professor,SHIBAHARA YUJI Institute for Integrated Radiation and Nuclear Science Professor,TAKAMIYA KOUICHI

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Thu.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Various wastes are generated from the use of nuclear energy, one of the key technologies to overcome the global warming, and the associated industrial activity. This course is inended to understand the type and origin of radioactive wastes, as well as the management, treatment, and final disposal of these wastes, from the viewpoint of environmental engineering.

[Course objectives]

By providing the students with the knowledge on various radioactive wastes generated by the use on neclear energy as well as the radiological risk of such wastes, the course will enable the students to consider the future of nuclear industries based on their own judgement.

[Course schedule and contents]

Course Introduction ,1time,Course Introduction
Nuclear disaster action program,1time,uclear disaster action program
Nuclear reactors,1time,Nuclear reactors
Treatment of liquid radioactive waste,1time,Treatment of liquid radioactive waste
Treatment of gaseous and solid radioactive waste,1time,Treatment of gaseous and solid radioactive waste
Legislation of radioactive wastes,1time,Legislation of radioactive wastes
Decomissining and clearance,1time,ecomissining and clearance
Radiological risk,1time,The risk of radiation exposure, history of radiation dose limit set by international organizations, and dose limit under different situations are discussed
Fukushima Daiichi Nuclear Power Plant (F1) accident and nuclear disaster prevention,1time,Discuss the relation between the events in F1 and the radiation dose in the environment as well as pollution of environment. The evacuation activity conducted in Fukushima and the related lessons are summarized.
Problems of designated waste,1time,In the aftermath of the F1 accident, municipal solid waste contaminated with radioactive cesium has been produced in 12 Prefectures, some of these wastes were classified as designated wastes (DSW). The concept of DSW is compared with that of conventional radioactive wastes.
Geological disposal of high level radioactive wastes (HLW) and the safety assessment ,1time,Inventory, the method of disposal (critical path and nuclides), philosophy of radiological protection, etc. are discussed.
Behavior of radionuclides in the environment and mathematical modeling of nuclide migration,1time,
Behavior of radionuclides in the geosphere has governing effect on the safety of geological disposal of HLW. The behavior based on the chemical characteristics of each nuclides and mathematical modeling of their behavior are discussed.

Continue to 原子力環境工学(2)↓↓↓

原子力環境工学(2)

Behavior and qualitative/ quantitative analysis of radionuclides in the environment,1time,Behavior and qualitative/ quantitative analysis of radioactive Cs, Co, Sr, I, Se, U, Pu and Ra in the environment, and events of radioactive pollution of the environment in the past, are introduced.
The risk of radiation and the society,1time,After the F1 accident, the risk of radiation has drawn intense attention from citizens. The risk communication methodology to facilitate the understanding of radiation is discussed.
Discussion with /between students,1time,Discussion on issues such as lifestyle in the contaminated environment (under existing exposure situation), whether residents should return to the contaminated areas, and how to deal with siting problems of final disposal of HLW, etc..

[Course requirements]

Basic knowledge on health physics, chemistry and earth science.

[Evaluation methods and policy]

Attendance to the lecture plus report

[Textbooks]

Related papers etc. will be distributed in each lecture.

[References, etc.]

（Reference books）

Related literature will be notified in each lecture.

Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,ITOH SADAHIKO Graduate School of Engineering Professor,TAKAOKA MASAKI Graduate School of Global Environmental Studies Professor,ECHIGO SHINYA Graduate School of Engineering Senior Lecturer,NAKANISHI TOMOHIRO Part-time Lecturer,YASOJIMA MAKOTO Graduate School of Engineering Associate Professor,MATSUDA SHUN

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Mon.3,4	Class style	Seminar (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

Analytical methods to characterize environmental samples are learned through practical training including site visits to other research institutes or analytical companies.

[Course objectives]

To promote your own research by learning each analytical method with a wide vision

[Course schedule and contents]

1. Guidance and Safety Education: Ito
The content of subject and safety education for the following experiment are explained.

2-3. Gas and Liquid Chromatography: Shimadzu Corporation.
The principle of Gas and Liquid Chromatography is explained.

4-5. Liquid Chromatography- mass spectrometry: Yasojima
Qualitative and quantitative analysis of organic compounds by LC-MS is explained, and practical training is conducted.

6. Various mass spectrometry: Matsuda Shun
Qualitative and quantitative analysis of organic compounds, such as various mass spectrometry, is explained.

7. Qualitative analysis of elements: Takaoka
The principle of X-ray-based methods is explained, and practical training of one or two X-ray-based machines is conducted.

8. X-ray diffraction: Rigaku (by Zoom)
The principle of X-ray diffraction measurement and the application is explained. The lecture and exercise are provided from the company using Zoom.

Continue to 環境工学先端実験演習(2)↓↓↓

環境工学先端実験演習(2)

9. Mercury analysis: Nippon Instruments Corporation (by Zoom）
The principle of atomic absorption method is explained and various analytical methods for mercury are introduced. The lecture and exercise are provided from the company using Zoom.

10. Quantitative analysis of elements: Nakanishi
The principle of multielement analysis is explained, and practical training in the ICP-AES or ICP-MS machine is conducted.

11. Bioassay: Hiyoshi Corporation
Qualitative and quantitative analysis of toxic compounds by bioassay is explained.

12. Making reports
This time is for making reports.

13-14.Site visit(Shimadzu Corporation. Shimadzu techno-research Inc., Horiba Ltd.)
Site visit to a research institute or analytical company

15. Feedback
Questions about reports from students in each class will be answered by e-mail, etc.

[Course requirements]

None

[Evaluation methods and policy]

Attendance at the class(50%) and report subjects(50%) are evaluated.

Course title (and course title in English)	環境資源循環技術 Environmental-friendly Technology for Sound Material Cycle	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,TAKAOKA MASAKI Graduate School of Global Environmental Studies Professor,Fujiwara Taku Graduate School of Engineering Associate Professor,NAKAGAWA HIROYUKI Graduate School of Engineering Associate Professor,MAKI TAISUKE Graduate School of Engineering Associate Professor,OOSHITA KAZUYUKI Graduate School of Global Environmental Studies Associate Professor,HIDAKA TAIRA

Target year	Master's/Doctoral students	Number of credits	1.5	Year/semesters	2025/First semester
Days and periods	Fri.3	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

We face global warming, resource depletion and ecological destruction etc. It is necessary to establish the environmental-friendly and sustainable society with low carbon emission and sound material cycles. This lecture is aimed at learning principle and fundamental knowledge on environmental sound technologies for biomass and related valuable resource in urban area.

[Course objectives]

Learn the environmental-friendly technology to realize the environmental-friendly and sustainable society with low carbon emission and sound material cycles.

[Course schedule and contents]

1st -5th Thermodynamic consideration of the technologies for resource cycle (Maki:2, Nakagawa:3)
Exergy, which is based on the combination of the first and the second law of thermodynamics, and the methodology to convert resources and to evaluate resource cycles utilizing exergy analysis is introduced with respect to the concept for resource cycles from the viewpoint of the second law of thermodynamics. “Global warming and carbon cycle”, “renewable resources and energy”, and “processes for the utilization of biomass” are also introduced.

6th-8th Technologies for resource cycle of solid waste(Fujiwara:2, Hidaka:1)
General knowledge, legal structures, applied technologies and analytical methods of solid waste (metal or inorganic resources) are introduced. The technologies of resource recovery in urban metabolic facilities are also introduced.

9th-11th Environmental-friendly Technology related to wastewater treatment(Takaoka:2, Oshita:1)
Technologies about material recycle and recovery related to water and wastewater treatment are introduced. Recovery of organic resource from sewage sludge, phosphorus recovery from sewage, and sewage systems which can enhance resources & energy recovery are explained together with their current conditions and challenges.

Days and periods	Thu.5	Class style	Lecture (Media-based course)	Language of instruction	English

[Overview and purpose of the course]

In this lecture, we ’ ll give lectures on theory of risk analysis, risk identification, risk assessment, risk evaluation, and risk reduction and avoidance in the field of urban human security including human health risk and ecological risk. In addition, we provide lectures on international environmental projects and special lectures by inviting lecturers to discuss the future of environmental engineering, as well as presentations and discussions by participants to learn how to act and think as an environmental leader in order to put them into practice. All of the lectures and presentations are given in English.

[Course objectives]

The goal of this lecture is to learn about environmental risks related to urban human security and to develop a way of thinking as an environmental leader who can practical problem solving.

Course number	G-ENG04 5A832 LJ74		
Course title (and course title in English)	構造材料特論 Theory of Structural Materials, Adv.	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Associate Professor,TERAMOTO ATSUSHI

Target year	Master's students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Tue.3	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Compositions, constitutive laws and applications of major structural materials including concrete and steel are lectured. Demanded performances of structural materials are explained from the view point of mutual dependencies between materials and structural systems. Furthermore, newly developed high performance materials (HPM), structural systems using HPM, and environmental control technique using structural materials are discussed.

[Course objectives]

1) To understand Compositions, constitutive laws and applications of major structural materials including concrete and steel as well as continual process of research, development and design from the material level up to the structural level. 2) To understand engineering meanings of structural materials in development of new structural systems and research trend of new structural materials. 3) To understand how to apply the varied structural materials into new structural systems and development of environmental control systems.

[Course schedule and contents]

,1time,
,4times,
Guidance and Structural Material (1) Basic Theory,4times,Basic properties, plastic theory, fracture theory, and softening characteristics of cementitious composites and steel are lectured. Fundamental principle of material constitutive laws and mathematical model of materials are explained.
Structural Material (2) New material,5times,Research trend and application of new materials are lectured. Fiber reinforced cementitious composites, intelligent-smart material, application of structural materials into new structural systems are explained.
Structural Material (3) Environmental Control,1time, Environmental controls of concrete and metallic materials are lectured. Health monitoring of concrete, environmental control systems using steel, production and environment of metallic materials are explained.

[Course requirements]

Basic knowledge on concrete, steel and structures.

Course number	G-ENG04 5A856 LJ74				
Course title (and course title in English)	居住空間計画学 Dwelling Planning		Instructor's name, job title, and department of affiliation	Graduate School of Engineering Associate Professor,YANAGISAWA KIWAMU	
Target year	Master's students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Wed.3	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

We will discuss the principles of composition and reorganization of living spaces based on a multifaceted study of human settlements. Specifically, we look at research based on descriptive analysis of personal residential experiences in detail, which appear to significantly influence the composition of residential spaces. In addition, we will conduct exercises using the "residential experience interview" method and discuss the impact of residential experience on the formation of living environment and residential life.

[Course objectives]

・Students will learn the basic method of "residential experience interview" to understand the various forms of residence corresponding to differences in society and lifestyles.
・They will be able to examine, through concrete cases, how the formation of living spaces is regulated by residential views based on personal and social residential experiences.
・They will develop diverse perspectives and proposals on living spaces that will contribute to the diversification and improvement of housing quality in the real world.

[Course schedule and contents]

Overview (1 Class)
・Lecture Overview/Course Guidance/Themes for Report Assignments ① and ②

Basic Theory of Living Space Planning (2 Classes)
・Modern Dwellings Based on Experience Descriptions of Residential Spaces
・Learning from Residential Experience Interviews

Exercise 1: Residential Space Experience Description (4 Classes)
・Presentation of Report Assignment ①
・Group work on Experience Descriptions of Residential Spaces based on the above

Exercise 2: Changes in Modern Dwellings and Diversity of Living Styles (7 Classes)
・Interim Presentation of Report Assignment ②
・Exercise on the Transition of Modern Residence and the Diversity of Living Styles from the Perspective of Other People's Experience Descriptions of Residential Spaces

Summary and Discussion (1 Class)
・Summary and Discussion of Lectures and Presentations

Continue to 居住空間計画学(2)↓↓↓

居住空間計画学(2)

Late August: Submission of Report Assignment ②

[Course requirements]

Students must have the basic ability to draw and decipher residence ground plans.
A basic background in architectural and residential planning is preferred, but graduate students in different disciplines are welcome to take the course.

[Evaluation methods and policy]

Continuous assessment (40%) and Assignment Report ② Score (60%)
Continuous assessment is based on the presentation and feedback of Report ①.
・Failing to submit, present, or provide feedback for either of the Reports in class will be considered a failure.
・Reports that fail to meet the theme questions will be considered a failure.
・Reports with original ideas and a detailed discussion will be given a higher grade.

[Textbooks]

Days and periods	Tue.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

We will discuss the various possibilities of modern architecture with reference to related discourses and examples. In particular, we will discuss the implications of the transition from mechanistic architecture in the 20th century to life-theoretic architecture in the 21st century.

[Course objectives]

Understand the possibilities of theory linked to the reality of architectural design, and acquire the ability to think architecturally in a new era.

[Course schedule and contents]

Biological architecture (3 times)
Discuss the possibility of supple and inclusive architectural principles as an alternative to mechanistic architectural principles.

Architectural geometry (twice)
Discusses the modern significance of geometry and its practical potential in architectural design.

Architectural nature (twice)
Discuss the possibilities and techniques of rethinking architecture as a fusion rather than a conflict with nature.

Meaning of architecture (twice)
Discuss how we can recapture the problem of meaning in modern architecture.

Modern wisdom and architecture (5 times)
We will discuss the possibility of new architectural thinking with reference to modern wisdom that re-questions the state of modern architecture.

Learning achievement evaluation (1 time)
Evaluate learning achievement.

Course number	G-ENG04 5B014 LJ74		
Course title (and course title in English)	建築環境計画論 I Theory of Architectural and Environmental Planning I	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,MIURA KEN

Target year	Master's students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Thu.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Japan will have a very super aging society. In order to maintain the vitality of society, a plan for building and environment that extends healthy life expectancy is required. This class explain the cases of international medical welfare architecture and human environment design focusing on physiological psychological indicators to gain an advanced understanding relation between human well-being and architectural planning and design.

[Course objectives]

In this class students acquire subjective thinking abilities and advanced planning skills to discover and solve problems themselves through discussions and exercises.

[Course schedule and contents]

Guidance (1 time)
Explanation of the positioning of the lecture, points to keep in mind, etc.

Environmental design (2 lectures)
Using plans for specific building types as subjects, learn about the historical background and planning considerations for incorporating human-environmental design from the viewpoints of designers and planners.

Analysis of architectural plans (11 classes)
Students will learn about new architectural planning cases and practices, planning methods, and concepts, from building types and architects' works to competition-winning proposals, and learn about the planning theory of architecture suitable for the next era, as well as its considerations and issues.

[Course requirements]

None

[Evaluation methods and policy]

Based on written reports and presentation

Course title (and course title in English)	建築環境計画論II Theory of Architectural and Environmental Planning II	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Associate Professor,SAKATANI SUISHO

Target year	Master's students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Tue.4	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

How privacy is dealt changes much firstly in the field of information and then architectural planning and urban planning and so on. Those topics are widely explained. Especially, in explanatory theory of human psychology and behavior in built-environment, formation of privacy feeling between family menbers and that feeling based on territorial behavior or owing to others sight line is explained. And to understand privacy of residents living in detached houses and apartment houses in built-up area designed and built by successive rebuilding way is mainly discussed. Furthermore, through field survey and presentation, understanding about subject matter will be enriched.

[Course objectives]

Enriching understanding about privacy dealt in architectural and urban planning field

[Course schedule and contents]

Privacy in post modern society,2times,
Explain outline how privacy is dealt in post-modern society in relation to advancement of informatization, and change of family conception.

Data privacy,2times,
Explain outline how privacy is dealt mainly in informatization field, such as change led after using SNS, handheld terminal and so on.

Privacy between members in family,2times,
Privacy between members in family in one house which began to be considered after the modern Enlightenment in Europe in general and Japan especially in architecture and urban field is explained

Privacy dealt in houses rebuilt by successively in built-up area,1time,
Develpment in built-up area designed and built by successive rebuilding way is explained. And get a better grasp that understanding of privacy feeling of residents in such area is important

Privacy after possession of territory,2times,
Formation of privacy feeling after possession of territory explained by proxemics theory is explained

Privacy dealt after comparing windows of houses and buildings to eyes,3times,
Formation of privacy feeling after comparing windows of houses and buildings to ones eyes is explained

Continue to 建築環境計画論II(2)↓↓↓

建築環境計画論 II (2)

Presentation by students,3times,
In addition to knowledge got from lecture, based on field survey and so on, presentation by students

Confirmation of level of attainment
Confirmation of level of attainment

[Course requirements]

General knowledge about proxemics (territorial) theory

[Evaluation methods and policy]

Presentation in class - 50%, Report at the end of period - 50%

[Textbooks]

Distribute original documents every time and help to understand using projector projection slide.

[References, etc.]

（Reference books）

Introduce reference book at every lesson.

[Study outside of class (preparation and review)]

Please carefully read the materials distributed in the lesson and review the content of the lesson.
It would be good enough, if you could get an understanding that "privacy" thought to be general can change at pre-modern, modern, post-modern throughout the lesson.
To this end, it is recommended obtaining information on how privacy should be treat and the relation to place in architecture and city from newspapers, television, and the internet.

（Other information (office hours, etc.)）

[Grading evaluation] 1time presentation in lesson, and 1report after all lessons. [Office Hour] (reception of questions, etc.) Thursday 12: 00-13: 00. For more information about office hours, please check KULASIS.

*Please visit KULASIS to find out about office hours.

Days and periods	Thu.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Overview of Project Management and Construction Management in Japan.
Lecture and discussion.

[Course objectives]

To acquire the knowledge and the ability of project management.

[Course schedule and contents]

1-2. PM/CM
Basic knowledge of project management and construction management.
3-8. PM/CM Projects
Real projects and success in project management and construction management. Professional applications.
9-10. Method of PM/CM
Methods and tools in project management and construction management.
11-12. Topics of PM/CM
Topics of project management and construction management in Japan and overseas.
13-15. Discussion on PM/CM
Discussion and feedback on project management and construction management.

[Course requirements]

Construction Engineering and Management I and II (undergraduate program) should be mastered.

[Evaluation methods and policy]

Report. Attendance of lectures and site visit are also evaluated.

Absolute evaluation (raw score)
Attendance and individual reports will be assessed on the basis of achievement level for course goals.
- Those who are absent more than four times will not be credited.
- Students will submit all reports.
The reports with originality will be given a high score.

[Overview and purpose of the course]

The basic concepts of stress tensor, strain tensor, and constitutive law are discussed for continuum. Boundary value problems are formulated based on the virtual work principle. Approximated formulation methods for structural elements such as beams and plates based on the displacement method are discussed. Finite deformation and elastoplastic constitutive laws are also discussed.

[Course objectives]

Acquisition of basic theory of continuum mechanics

[Course schedule and contents]

Stress tensor and strain tensor (3 times)
The basics of tensor analysis and the fundamentals of stress tensor, strain tensor, and constitutive law will be explained.

Conservation laws and boundary value problems (2 times)
Boundary value problems based on conservation laws and displacement methods will be discussed.

Geometrical nonlinearity (2 times)
Stress tensor and strain tensor based on finite deformation theory will be explained.

Plate Theory (2 times)
Induce formulations of plate theory (thick and thin plates) based on the displacement method using the basic continuum equation.

Shell theory (2 times)
The treatment of arches and cables and the formulation of shells based on membrane theory are presented.

Nonlinear theory for materials (3 times)
Basic concepts of constitutive laws for nonlinear elasticity and elasto-plasticity are explained.

Final examination/ Learning achievement evaluation (1 time)

Days and periods	Mon.3	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Basic mechanics and inverse problem for design of building structures are explained. Structural optimization methods are also presented. Rational structural design approaches are introduced in place of conventional try-and-error approaches.

[Course objectives]

Obtain the knowledge on basic mechanics for design of building structures. Also obtain advanced knowledges on new theories and methodologies of structural optimization and inverse-problem formulations.

[Course schedule and contents]

Concept of inverse problem, 1 class,
Examples of inverse problem in terms of shear building models

Hybrid inverse problem of structural systems, 1 class,
Examples of hybrid inverse problem in vibration and classification of hybrid inverse problems. The solution procedure of hybrid inverse mode problems is discussed.

Strain-controlled design method for moment-resisting frames, 1 class,
Simple examples are used for understanding fundamental concepts of strain-controlled design.

Inverse problem via design sensitivity analysis, 1 class,
An inverse problem formulation via design sensitivity analysis (direct method) is explained.

Earthquake-response constrained design, 1 class,
A method of earthquake-response constrained design for shear building models is explained. Design loads in terms of the design response spectrum are used in the design method.

Performance-based Design, 1 class,
A design methodology based on the concept of performance-based design is explained.

Exercise 1, 1 class,
Exercise on inverse problems.

Fundamentals of mathematical programming, 2 classes,
Fundamentals of mathematical programming methods are explained. Linear and nonlinear programming

Continue to 建築設計力学(2)↓↓↓

methods are introduced and some examples are presented.

Design sensitivity analysis, 1 class,
Basic methods of sensitivity analysis for computing derivatives (sensitivity coefficients) of static responses and frequencies of free vibration with respect to variations of design parameters are explained.

Application to optimization of framed structures, 1 class,
Application of mathematical programming methods to optimization of framed structures is presented.

Optimal design for base isolation and structural control , 2 classes,
Several methods for optimal design of structures using base isolation and structural control are explained.

Exercise 2, 1 class,
Exercise on structural optimization

Confirmation of the Learning Degree, 1 class,

[Course requirements]

Mechanics of Building Structures, Basic Linear Algebra, Basic Calculus

[Evaluation methods and policy]

Grading is based on the examination at the end of semester.

[Overview and purpose of the course]

Based on human visual perception in the living environment, lectures are given on fundamental concepts of visual environment design. Additionally, the basic matters and latest trends of related illuminating and color engineering will be explained. Students ’ presentations and class discussions will be adopted in order to obtain proficiency in understanding.

[Course objectives]

Understanding the human visual perception in the living environment, and being able to consider the problem of the visual environment from the basics by applying knowledge, such as visual perception, illuminating engineering, color engineering. Additionally, acquiring the knowledge and the fundamental concept for designing a visual environment that is suitable for human beings.

[Course schedule and contents]

1. Introduction (1 time)
Visual environment and human beings
Light and color of living environment

2. Description of light and color (2 times)
Photometry and colorimetry system
Development of color system
Perception of light and color in the environment

3. Visual perception and its theory (1 time)
Perception of brightness and color of a surface
Spatial perception
Theory of visual perception

4. Design of clear vision (1 time)
Visibility
Light source and its characteristics
Color rendering

5. Design of lighting environment (2 times)
Psychological evaluation of lighting environment
Sense of brightness and activity of an illuminating space

Days and periods	Tue.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Fundamentals of numerical methods, including finite element method (FEM), for continuum are presented based on variational and energy principles. Formulations are derived for 1D and 2D problems. Basic theories and algorithms for nonlinear structural analysis are also presented.

[Course objectives]

Understanding of fundamentals of numerical analysis methods for building structures

[Course schedule and contents]

1-3. Analysis methods for tension structures:
Equilibrium analysis methods of 2D cable structures are first presented. Equilibrium equations and stiffness matrices are derived for general 3D pin-jointed structures. Self-equilibrium analysis as well as stability of tension structures are then presented.

4-5. Fundamentals of FEM:
Fundamental theories and concepts are presented. As a concrete example, formulations for 2D triangle element are derived.

6-7. Isoparametric and structural elements:
Isoparametric and structural elements are presented.

8-9. Boundary element method:
Boundary element method is presented.

10-11. Fundamentals of nonlinear analysis:
Fundamentals of nonlinear analysis are presented. Based on Newton's method, basic theories and algorithms are presented for solving quasi-static and dynamic problems.

12-13. Elastoplastic and geometrically nonlinear analysis:
Basic theories and algorithms for elastoplastic and geometrically nonlinear analysis are presented.

14. Stability theory and buckling analysis:
Basic theories and algorithms for elastoplastic analysis and buckling analysis are presented.

15. Final examination/ Learning achievement evaluation

Course title (and course title in English)	コンクリート系構造特論 Concrete Structures, Adv.	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,TANI MASANORI

Target year	1st year master's students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Wed.3	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

This course will cover the structural design theory of concrete building structures (reinforced concrete buildings, steel-reinforced concrete buildings, prestressed concrete buildings, etc.), based on material theory and structural mechanics theory relating to concrete and steel. It will explain the methods for evaluating the structural performance of various structural members at the ultimate limit state and the material constitutive laws behind the theory, as well as their application to structural analysis, such as the finite element method. Exercises will be given where appropriate.

[Course objectives]

To understand and use the structural design theory of concrete building structures (reinforced concrete buildings, steel-reinforced concrete buildings, prestressed concrete buildings, etc.), based on material theory and structural mechanics theory relating to concrete and steel. To understand the methods for evaluating the structural performance of various structural members at the ultimate limit state and the material constitutive laws behind the theory, and be able to apply it in methods of structural analysis such as the finite element method.

[Course schedule and contents]

Ultimate Limit State of Concrete Structural Members (5 classes)
These classes will explain the basic knowledge and design methods relating to material ductility capacity that are considered to be necessary for high earthquake-resistance in concrete structures. Specifically, these classes will describe basic theory relating to the effect of confined concrete on mechanisms resisting bending in plastic hinge regions of beams and columns, and basic mechanisms resisting shear forces. Additionally, these classes will introduce methods of calculating deformability of members based on ultimate flexural strength, ultimate shear strength, and the ratio of these strengths used in performance evaluation design method.

Long-term Properties of Concrete Structural Members (3 classes)
These lectures will explain cracks and deformation, which can cause problems for concrete members under long-term loads. Methods for assessing creep and dry-shrinkage of concrete and the influence exerted by such factors on individual member and a whole structure will be described.

Earthquake-resistance Evaluation and Strengthening for Existing Reinforced Concrete Buildings (3 classes)
These classes will explain seismic strengthening design and the construction methods used, based on the methods and results of evaluating earthquake-resistance capacity of existing reinforced concrete buildings. Evaluating buildings' strength will be described in detail, based on determination of the aging deterioration of

Continue to コンクリート系構造特論(2)↓↓↓

a building based on concrete carbonation; irregularity in elevation and in plan of a building; and the deformability and ultimate strength of members. New upgrading construction methods will also be introduced.

Prestressed Concrete Structures: Design and Theory (4 classes)
These lectures will explain the behavior of prestressed concrete (PC) structures under service load and in earthquakes. PC structural member analyses, and structural design theory that uses such analysis, will be described. These lectures will describe analyses of the response of PC building structures to seismic excitations based on PC structure's deformation and stress redistribution based on concrete creep; mechanisms that resist bending and shear; and the hysteretic restoring force characteristics of members. They will also explain the structural design of PC buildings.

[Course requirements]

Basic knowledge of concrete materials and architectural structures is assumed.

[Evaluation methods and policy]

【Evaluation method】
Evaluation will be based on submitted reports (70%) and active participation (30%).
【Evaluation standard】
Evaluation will be based on the grading standard of Graduate School of Engineering.

[Textbooks]

No other materials are specified. Material will be distributed as appropriate.
Lecture materials, exercises, etc., will be distributed through PandA.

[References, etc.]

[Study outside of class (preparation and review)]

Extra-curricular study will be instructed as appropriate.

（Other information (office hours, etc.)）

Active participation in lectures, with questions, is expected.

*Please visit KULASIS to find out about office hours.

Course number	G-ENG04 5B044 LJ74		
Course title (and course title in English)	耐震構造特論 Earthquake Resistant Structures, Adv.	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,TANI MASANORI

Target year	1st year master's students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Tue.1	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

These lectures will discuss the basic theory, applied theory, and practical design methods associated with earthquake-resistant design of building structures. Lectures will cover the basic elements of earthquake-resistant design: benchmarks and strength rankings for each structural element (columns, beams, walls, etc.) and their meaning in earthquake-resistant design; the relationship between irregularities in horizontal and elevational planes in the frame and earthquake-response; mechanisms for consuming seismic energy, and desirable structural collapse behavior. The lectures will also explain how to use the strength, rigidity, hysteretic restoring force characteristics, and equivalent viscous damping coefficient of materials and frame elements (obtained from structural testing) in earthquake-resistant design. The lectures will also describe methods of approximation such as the equivalent linearizing method, with which one can easily deal with elastic-plastic response. Appropriate exercises will be given.

[Course objectives]

To understand the basic theory, applied theory, and practical design methods associated with earthquake-resistant design of building structures, and how to evaluate earthquake-resistant design. To understand current earthquake-resistant design techniques in Japan and overseas (and the differences between those methods) and gain the ability to conduct earthquake-resistant design for simple real structures and evaluate earthquake-resistance.

[Course schedule and contents]

Lessons from the Previous Earthquakes and Post-Earthquake Diagnosis of Damaged Buildings (4 classes)
These lectures will describe typical damage and its causes in recent earthquakes by presenting the results of field damage investigation. These lectures will describe methods for determining the degree of emergency risk and of classifying the level of damage as methods for diagnosing a damaged building after an earthquake. The objectives, positioning, specific procedures, and theoretical background of the assessment methods will be explained with examples of buildings damaged by past earthquakes.

Basics of Seismic Design (4 classes)
These lectures will describe the basic issues of earthquake-resistant design, including the seismic performance of structural members such as columns, beams, and walls in earthquake-resistant structures, the relationship between the horizontal and elevational irregularity of the frame and its seismic response, the mechanism for consuming seismic energy, and the desirable collapse mechanism. These lectures will describe the method of applying the strength, stiffness, hysteretic restoring force characteristics, and equivalent viscous damping coefficient of members and frame elements obtained from structural tests to earthquake-resistant design.

Continue to 耐震構造特論(2)↓↓↓

耐震構造特論(2)

Seismic Design Using the Capacity Design Concept (4 classes)
These lectures will describe seismic design using the capacity design concept . Benchmarks and strength rankings for each structural element (columns, beams, walls, etc.) and their meaning in earthquake-resistant design, required seismic performance for earthquake-resistant structure, external force for design, structural capacities of member and building will be explained.

Basic Concept of Structural Design Method and Its Transition (3 classes)
These lectures will describe the basic concept and transition of standards for structural design of reinforced concrete structures. The standards and guidelines including the AIJ (Architectural Institute of Japan) Standard for Structural Calculation of Reinforced Concrete Structures will be explained.

[Course requirements]

Knowledge of vibration theory and knowledge concerning reinforced concrete structures is assumed.

[Evaluation methods and policy]

【Evaluation method】
Evaluation will be based on submitted reports (70%) and active participation (30%).
【Evaluation standard】
Evaluation will be based on the grading standard of Graduate School of Engineering.

[Textbooks]

No other materials are specified. Material will be distributed as appropriate.
Lecture materials, exercises, etc., will be distributed through PandA.

[References, etc.]

Course number	G-ENG04 5B046 LJ74		
Course title (and course title in English)	建築振動論 Dynamic Response of Building Structures	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Associate Professor, SUGINO MINA Disaster Prevention Research Institute Professor,NISHIJIMA KAZUYOSHI

Target year	Master's students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Wed.1	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

In designing earthquake-proof structures, it is important to consider the nonlinearity and coupled behavior of the construction site ground as well as the structure, and there is a need for more practical design plans. In this course, we will first study major theories related to structure earthquake response evaluation, followed by analytical methods and earthquake-proof design methods involving dynamic interactive factors related to the ground and the coupling of the structure.

[Course objectives]

To enable accurate evaluation of the behavior of buildings in earthquakes, as well as accurate evaluation of earthquake resistance.

[Course schedule and contents]

Basics of frequency analysis and time-history analysis (3 classes)
Based on the example of earthquake resistance evaluation in single degree of freedom systems, we will explain frequency analysis and time-history analysis in an integrated fashion, explaining the characteristics of both as well as points to bear in mind in analysis from a practical point of view.

Structure response analysis and damping evaluation (2 classes)
We will explain an evaluation method involving the damping ratio of the structure based on experiments and observations. Also, the damping evaluation method will be explained as a means of creating an earthquake response analysis model of the structure.

Dynamic interaction between the structure and the ground (4 classes)
We will discuss the relationship between the characteristics of soil springs and foundation-input-motion as expressions of dynamic interaction on the one hand, and building response on the other. Next, we will discuss the influence of differences in the ground and the foundation type upon interactive characteristics. Finally, we will explain practical analysis methods, bearing in mind dynamic interaction.

Random vibration theory (5 classes)
We will discuss the basics of random vibration theory, which evaluates the response of the structure as a stochastic quantity. In particular, we will explain linear stationary random response, non-stationary random response, and first passage theory.

Feedback (1 class)
Students can ask questions. Those questions are answered by email etc..

Continue to 建築振動論(2)↓↓↓

建築振動論(2)

[Course requirements]

Basic knowledge of vibration theory (linear response in single degree of freedom systems and multiple degree of freedom systems) is required.

[Evaluation methods and policy]

【Evaluation method】
Evaluation will be based on reports.

【Evaluation policy】
Achievement of goals is evaluated according to the grade evaluation policy of the graduate school of Engineering.

Course number	G-ENG04 5B052 LJ74		
Course title (and course title in English)	構造安全制御 Control for Structural Safety	Instructor's name, job title, and department of affiliation	Disaster Prevention Research Institute Professor,IKEDA YOSHIKI Disaster Prevention Research Institute Associate Professor,KURATA MASAHIRO

Target year	Master's students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Tue.4	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Structural safety of building structures can be improved by controlling their responses to dynamic excitation induced by earthquakes and winds. The course explains the analytical and experimental background of the advanced analysis and simulation methods such as limit-state analysis and inelastic analysis, and methodologies for actively control the responses, i.e. base isolation and structural control.

[Course objectives]

The course help students to understand the fundamental theory behind anti-seismic design and the tips for their practical application.

[Course schedule and contents]

Earthquake resistant structure, base isolation, protective systems (1)
Tuned mass damper (1)
Active control (1)
Structures with tuned mass dampers (1)
Displacement-dependent dampers (1)
Velocity-dependent dampers (1)
Base isolation of lateral motions (1)
Dynamic characteristic evaluation of building using vibration monitoring (1)
Fundamentals of seismic design (1)
Simple structural performance evaluation (1)
Probabilistic assessment of seismic performance (2)
Actual Effect of Seismic Retrofit (2)

[Course requirements]

None

[Evaluation methods and policy]

The performance of students are evaluated by the exercises provided during the lectures and the final test.

[Textbooks]

Course title (and course title in English)	建築環境物理学特論 Physics in Architectural Environmental Engineering,Adv.	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,OGURA DAISUKE Graduate School of Engineering Associate Professor,IBA CHIEMI

Target year	Master's students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Mon.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

From the physics of the built environment, this section discusses the theory and applications that form the basis for forecasting and control methods, and the understanding of the physical correspondence between performance requirements based on indicators of the physical environment of the building and other factors, and the composition of performance such as heat, moisture and air required when planning and designing the building thermal and air environment, building equipment, wall composition, and so on.

[Course objectives]

To deepen understanding of the physical environment elements used for performance assessment in the building environment, equipment and wall construction, to understand the mechanisms of heat, substance and other transfer phenomena that affect the formation of the physical environment and their quantitative evaluation methods, and to understand the concept of reference values for the physical environment used for performance assessment, and to learn the basics of design methods for these elements.

[Course schedule and contents]

Introduction (1 session)
Provides an overview of the lecture content and an explanation of how to proceed with the class.

Performance standards for the physical environment (1 session)
Performance standards for the physical environment, including heat, air, sound and light

Performance requirements and evaluation methods for various physical environment elements throughout the building (12 lectures)
Heat, sound, visual and odour comfort, thermal comfort, physiological basis, autonomous control systems, thermal comfort in steady state conditions, adaptive models, thermal comfort under non-uniform and unsteady state conditions, sound environmental comfort, unacceptable noise effects, light environmental comfort, olfactory comfort, health and indoor environmental quality, outdoor and indoor pollution relationship, energy consumption in buildings and how to predict and calculate it, energy saving methods, etc.

Confirmation of learning attainment (1 session)
Confirmation of the level of learning attainment.

Course number			
Course title (and course title in English)	建築設備システム特論 Building Equipment Systems	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Associate Professor,IBA CHIEMI Graduate School of Engineering Professor,OGURA DAISUKE

Target year	1st year students or above	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Mon.2	Class style	(Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Lectures will be given on how to determine the capacity of various equipment used for air conditioning and how to design the system consistent with architectural planning. From the viewpoint of optimal design, evaluation criteria and constraints such as economy and thermal environment, physical and mathematical modeling of them, search for feasible solutions, and various optimization techniques are also described. As the basis of the above, the concept of heat and moisture balance, heat transfer around heat exchanger, transfer systems such as pipes, ducts and pumps, and theory of mass transfer with phase change such as absorption refrigerators will be explained.

[Course objectives]

Understanding the concept of thermal/mass balance and optimal design in building equipment systems.

[Course schedule and contents]

Introduction, 1 class
Provides an overview of the lecture content and procedure.

Design problem, 2 classes
The definition of the building equipment system, the concept of equipment planning, the concept of evaluation including economy, and the necessity of the optimal planning method are explained.

Components of building thermal system, 3 classes
Basic information of thermal systems such as heat exchanger, fan, pump, refrigerating equipment and cooling tower is provided.

Equation fitting, 2 classes
A method of equation fitting from data such as temperature, pressure, and flow rate in the components of the thermal equipment system will be described.

Optimization problem, 2 classes
Formulation as an optimization problem for equipment systems.

Optimization techniques, 2 classes
Various optimization methods including the calculus method will be described.

Exercises and calculation, 2 classes

Continue to 建築設備システム特論(2)↓↓↓

建築設備システム特論(2)

Exercises will be provided to promote better understanding of the content of the lecture.

Evaluation of achievement, 1 class
Achievement on above items will be evaluated.

[Course requirements]

The participants are required to study Environmental engineering in Architecture I (40090) , Building equipment system (40180) etc., prior to join this course.

[Evaluation methods and policy]

【Evaluation method】
Evaluation will be based on the report (40%) and class performance (60%).
Evaluation for class performance includes presentations and submission of assignments in the lecture.
【Evaluation policy】
Reports and presentations are evaluated based on the achievement of the target.

[Textbooks]

Course number	G-ENG04 8B069 LJ74		
Course title (and course title in English)	建築技術者倫理 Architectural Engineer Ethics	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,MIURA KEN Graduate School of Engineering Professor,KOETAKA YUUJI Graduate School of Engineering Professor,OOTANI MAKOTO Graduate School of Engineering Associate Professor,YANAGISAWA KIWAMU Graduate School of Engineering Associate Professor,NII DAISAKU Graduate School of Engineering Associate Professor,KOHEI FUJITA

Target year	1st year master's students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Thu.3	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Rapid developments in science and technology in this century have made our lives surprisingly convenient and rich. On the other hand, it should be noted that misuse of science and technology results in the destruction of human life as well as the environment. This risk is held by architectural engineers.
In this course, we will consider ethical responsibility of designers and engineers working on architectural and urban design, with the help of science, technology and engineering. We will deal with specific ethical issues during architectural, structural, environmental and utility design, as well as building production, operation, and maintenance. By discussing how we can deal with these issues, students will nurture robust senses of ethical responsibility. This course will also be meaningful for students who intend to undertake an internship because it will allow them to be aware of the responsibility for the designers and engineers (which is necessary in actual practice) in advance.

[Course objectives]

Goals of this course is to promote capability of making appropriate and fair decision, by understanding the ethics and norms required for designers and engineers working on architectural and urban design.

[Course schedule and contents]

Architectural Design and Ethics (5 classes)
1. Expansion of NIMBY facility types
(Appearance and regional acceptance of new "public" facilities, principle of location site selection, public legitimacy and selection rules, etc.)
2. Risk communication when accepting NIMBY facilities locally-Focusing on waste disposal facilities and industrial waste disposal facilities
(Process of location site selection, regional acceptance, ideal way of risk management and risk communication, etc.)
3. Environmental and energy issues and architectural ethics (architecture and reuse, environmental and ethical issues and ethics, environmental consciousness and architectural technology, etc.)
4. Ideas and technology concerning nature and architecture (forest resources and architecture, consideration and control of nature, architectural reuse technology and concepts, etc.)

Continue to 建築技術者倫理(2)↓↓↓

建築技術者倫理(2)

Structural Design and Ethics (6 classes)
The fraudulent earthquake-resistance issue brought about real ethical problems, and the safety and security of a building as secured by its architectural structure is extremely important. It is imperative that structural designers have a sense of engineering ethics. Through consideration of examples, roleplaying, and debates, we will think about what kinds of norms structural engineers should adhere to.
1. Adding water to pre-mix concrete (AIJ Ethics Committee e-learning), the value of human life, etc.
2. The Building Standards Act as a minimum standard? (AIJ WG Report on Minimum Standards)
3. As expected seismic motion increases, how should engineers design earthquake ground motion? The case of Uemachi fault zone earthquakes.
4. Problems concerning setting strength standards and earthquake reinforcement (determination based on earthquake-resistance grades and seismic index).

Environment & Equipment Design and Ethics (3 classes)
Environmental cosideration of architecture including utility design plays an important roll in reducing environmental impact during the lifecyle of buildings. Accordingly, ethical responsibility of engineers involved in architectural environment and utility design have been increased. We will consider the ethical issues through the following examples.
1. Understanding community noise and utility noise issues, and discuss their ethical issues and mitigation
2. Introduction of recent development on energy-saving techniques for buidings and consider measures against global warming.

Student Assessment - 1 class: Assessment of the level of learning achieved.

Days and periods	Mon.4,5,Tue.4,5,Wed.4,5,Thu.1,4,5	Class style	Practical training (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

By assisting the practical work of design and supervision with the actual project carried out by the teacher who is a practitioner of architectural design as an issue, we will acquire practical knowledge and skills from planning to realization in architectural design. Our faculty members who have abundant practical experience and are qualified as first-class architects will be in charge of guidance.

[Course objectives]

Prepare for an internship with the goal of developing practical skills related to building design and integrating practical knowledge. Comprehensively develop various abilities (drawing ability, presentation ability, communication ability, etc.) to realize the concept by utilizing various knowledge and knowledge while cultivating thinking ability at the important concept stage in the architectural production process.

[Course schedule and contents]

Arrangement of given conditions (once)
Organize given conditions by organizing design conditions and contents, investigating the site environment, and grasping related laws and regulations.

Analysis of similar cases (once)
Verify and analyze cases similar to the task and organize the necessary knowledge.

Basic plan (twice)
Based on the grasped conditions and the knowledge obtained from similar examples, the design outline (including scale, number of floors, required rooms, zoning, structural plan, equipment plan, etc.) for basic design will be summarized.

Basic design (twice)
Based on the basic plan, a basic design plan will be created based on specific discussions with structural designers, equipment designers, acoustic designers, landscape designers, and other specialists.

Presentation (twice)
Create basic design documents (including design plans, structural plans, equipment plans, etc.), models, CG, animation, etc., and assist the presentation to the owner using these.

Implementation design (3 times)
Create design documents (including special specifications, plan outlines, finishing tables, design design

Continue to 建築設計実習(2)↓↓↓

drawings, exterior composition, structural design drawings, equipment design drawings, etc.) for estimation and construction.

Accumulation and assessment (1 time)
Assess whether the accumulated contents by the builder are appropriate.

Various license application procedures (once)
In accordance with various laws and regulations such as the Building Standards Act, we will prepare the documents necessary for confirmation application, etc., and assist in prior consultation and various procedures.

Architectural supervision (1 time)
Assist the work of supervising on-site whether the construction is properly carried out according to the implementation design document.

Confirmation of learning achievement (once)
Confirm the learning achievement through the exhibition.

[Course requirements]

None

[Evaluation methods and policy]

Evaluate according to the implementation status of design training.

[Overview and purpose of the course]

This is a design exercise in which students work on three small assignments given by three guest architects under the guidance of teachers who are involved in architectural design practice. Based on the basic knowledge of architectural design acquired through undergraduate education, students learn more advanced academic and theoretical methods of architectural design through practical involvement in specific projects. You will be taught how to compile architectural plans into practical design drawings, how to relate these to structural design drawings and M&E design drawings, and how to produce detailed design drawings. In particular, students will be taught how to communicate and present their work in English, as the subject matter of the course will be international in scope.

[Course objectives]

The aim of this course is to develop practical skills in architectural design and to synthesise practical knowledge. Organise and systematise the experience gained through the internship and aim to acquire more advanced architectural design methods. To develop the ability to express a message to society through architecture in a practical way.

Days and periods	Intensive	Class style	Seminar (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Students will be assigned individual research topics and will be instructed on related analysis, fieldwork, exercises, surveys or experiments. Issues such as literature surveys and research trend surveys in related fields, and seeks students' awareness of problem discovery, while preparing and submitting report materials summarizing research content and research progress with the intention of writing a master's thesis. Is imposed.
Gives advice on the contents of the research and discusses with presenters, faculty members, and attendees.

[Course objectives]

To be able to discover and organize the problems and difficulties to be solved through analysis, fieldwork, experiments, etc., for the research theme set by them, and to plan what steps should be taken to solve them. In addition, appropriate presentations on the progress of the research should be made, and the skills obtained to use the results of the discussion in conducting the research should be acquired.

[Course schedule and contents]

Research guidance and practice (30 times)
Research meetings and guidance for individual students with laboratory seminars more than 30 times in total.

[Course requirements]

In principle, two years of study are required.

[Evaluation methods and policy]

Comprehensively judge report materials, understanding of research contents, research management skills, and presentation skills.

[Textbooks]

To be instructed during the exercise.

[References, etc.]

Course title (and course title in English)	建築学特別演習IA Seminar on Architecture and Architectural Engineering, IA	Instructor's name, job title, and department of affiliation	Graduate School of Engineering KANKEI KYOIN Graduate School of Engineering Professor,ARAKI YOSHIKAZU

Target year	Master's students	Number of credits	2	Year/semesters	2025/Intensive, First semester
Days and periods	Intensive	Class style	Seminar (Face-to-face course)	Language of instruction	Japanese and English

[Overview and purpose of the course]

Students are given individual research themes related to various fields of architecture, and instructed through related analysis, fieldwork, and seminars. Students read the latest and classical papers that play important roles in the related fields, and are guided to obtain proficiency in research methods and results through discussion. In addition to making students understand conventional research methods, we provide guidance that encourages innovative ideas that are not restricted by conventional research methods. Through discussions with other students and faculty members, we provide guidance to develop the ability to identify and solve problems in their research fields.

[Course objectives]

Ability to understand previous issues and how they have been solved in areas related to the student's research theme, and in addition, ability to discover the problems and understand the difficulties in solving them through analysis, field work, and experiment.

[Course schedule and contents]

15 times of seminars and discussions.

[Course requirements]

M1 students.

[Evaluation methods and policy]

Score is evaluated by contents and materials of presentation at the seminars, and by overall progress of study.

Days and periods	Intensive	Class style	Seminar (Face-to-face course)	Language of instruction	Japanese and English

[Overview and purpose of the course]

Guidance is provided to students on analysis, fieldwork, exercises, surveys, and experiments for the related research themes in various fields of architecture. Students will familiarize themselves with the methods and results of the latest papers in their research themes and related fields, and are provided with guidance on setting research goals and finding methodologies for achieving their goals. In addition, students are required to prepare and submit reports summarizing their research results for preparation of writing a master's thesis, and are instructed to obtain basic thesis writing techniques for presenting their research results to external organizations such as academic conferences. Students will join discussions for explaining impact and significance of their own research in the recent developments of relevant fields, and future developments. They are instructed to obtain the ability to independently conduct research and report the results to the academic and other societies.

[Course objectives]

To set goals for how the students solve problems they find in the field related to the research theme. In addition, students should be able to present the problem appropriately and acquire skills that can improve the efficiency of problem solving through discussion.

[Course schedule and contents]

23 times of seminars and discussions.

[Course requirements]

M2 students.

[Evaluation methods and policy]

Score is evaluated by contents and materials of presentation at the seminars, and by overall progress of study.

Days and periods	Tue.3	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Lecture will be given on the elements of environmental formation in normal and fire conditions. The prediction methods of air flow, radiation and air quality is given. Discussion will be made on how to apply them to building design.

[Course objectives]

The participants are to acquire basic concept of environmental control and to be ready for conducting research on heat and air quality studies.

[Course schedule and contents]

Introduction (1 week)
The history of numerical analysis in environmental control is presented.

Numerical methods in heat conduction in solids (5 weeks)
A numerical method for heat conduction equation is introduced. At the end of this term, practice will be made on calculation methods in order to understand the basic concepts.

Numerical methods in fluid flow (5 weeks)
Control volume method is lectured as a basic method of calculation of fluid flow. At the end of the term, practice on SIMPLE algorithm is carried out.

Combined analysis and turbulence (3 weeks)
The concept of combined analysis of heat and fluid flow is introduced. It is understood that the turbulence models are also implemented in similar ways.

End-term examination and evaluation of achievements (1 week)
Checking degree of understanding.

[Overview and purpose of the course]

Wave propagation theories are explained first for 1D, 2D and 3D models. 1D multi-reflection problems of waves are also formulated and explained. Based on these theories, methods for construction of design earthquake ground motions are presented. Soil-structure interaction problems are stated finally for the purpose of developing more rational design methods for building structures.

[Course objectives]

Obtain the knowledge on wave propagation theories and 1D multi-reflection theory of waves. Furthermore obtain the knowledge on construction of design earthquake ground motions and soil-structure interaction.

[Course schedule and contents]

Introduction and in-situ (field) tests, 1 class,
Introduction of course is conducted and in-situ (field) tests are explained.

Construction of design earthquake ground motions, 1 class,
Construction of design earthquake ground motions is discussed. Response spectrum, Fourier spectrum and power spectrum are also discussed from the viewpoint of construction of design earthquake ground motions.

Soil-structure interaction, 2 classes,
The problem of soil-structure interaction is explained and various models for this problem are introduced.

Exercise on structural design considering soil-structure interaction, 1 class,
Exercise on structural design considering soil-structure interaction is conducted.

Seismic damage to soil, pile and foundation, 1 class,
Seismic damage to soil, pile and foundation is explained.

Seismic upgrading (structures), 1 class,
Seismic upgrading (structures) is discussed.

Seismic upgrading (soil, pile and foundation), 1 class,
Seismic upgrading (soil, pile and foundation) is discussed.

Wave propagation (No.1), 1 class,
1D wave propagation problems are formulated and explained from its fundamentals.

Continue to 建築地盤工学(2)↓↓↓

建築地盤工学(2)

Wave propagation (No.2),1 class,
1D multi-reflection problems of waves are formulated and explained. The introduction of the program of SHAKE is also made.

Wave propagation (No.3),1 class,
3D wave propagation problems are formulated and explained.

Wave propagation (No.4), 1 class,
2D wave propagation problems are formulated and explained as the simplification of 3D problems.

Wave propagation (No.5), 1 class,
Surface waves (Rayleigh and Love waves) are explained from its fundamentals.

Exercise on wave propagation, 1 class,
Exercise of wave propagation is conducted. 1D, 2D wave propagations are treated.

Confirmation of the Learning Degree, 1 class,

[Course requirements]

Basics of mechanics. Fundamentals of vibration and wave propagation. Preliminary of linear algebra and calculus.

[Evaluation methods and policy]

Evaluated by the term examination at the end of the semester.

[Textbooks]

Course title (and course title in English)	高性能構造工学 High Performance Structural Systems Engineering	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,KOETAKA YUUJI

Target year	Master's students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Wed.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

This course discusses ultimate behavior of structural members and seismic devices used in steel structures, fundamental theories and engineering methodologies to achieve mechanical properties which they should possess; and explains basic and applied theories of seismic design of steel frame structures.

[Course objectives]

To understand the ultimate behaviors and mechanical properties of steel members, and learn the precautions in design and the concept of design equations.
To understand the differences between plastic design and plastic analysis, and learn basic and applied seismic design that does not rely too much on computer numerical calculations.

[Course schedule and contents]

Elasto-plastic behavior and design of steel frame structures
The 1st class: Elasto-plastic behavior of steel members
The 2nd class: Plastic analysis of one-story frames
The 3rd class: Plastic collapse load of multi-story frames
The 4th class: Plastic design of multi-story frames
The 5th class: Plastic collapse load of beam-hinging type 3D frames with eccentricity
The 6th class: Plastic design of steel frames with buckling-restrained braces
The 7th class: Plastic design of steel frames with ordinary braces

Ultimate behavior and design of steel members
The 8th class: Flexural buckling of compression members
The 9th class: Inelastic flexural buckling and behavior after flexural buckling
The 10th class: Buckling restraint and design of buckling-restained brace
The 11th class: Lateral-torsional buckling
The 12th class: Ultimate behavior of flexural members
The 13th class: Ultimate behavior of members under bending moments and axial force
The 14th class: Local buckling of steel plates

Feedback of course
The 15th class: Summaries and conclusions

Days and periods	Wed.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Steel building structures are built up by connecting various members and parts at fabrication factory or construction site. This course discusses types of destruction of each connection using high-strength bolts or welds based on past disaster, and explains connection design and construction condition for achieving high ductile performance in accordance with basic and applied theories of limit state design.

[Course objectives]

To understand mechanical properties of steel material and mechanical behaviors of connections using welds or high-strength bolts, and learn design method of beam-to-column connections, brace connections and column base connections.
To learn plastic analysis based on yield line theory, and further understand fatigue fracture and design methodology to prevent it.

[Course schedule and contents]

The 1st-2nd class: Design methodology of connections

The 3rd class: Design of brace connections

The 4th-6th class: Plastic analysis of flat plate under out-of-plane load

The 7th-10th class: Design of beam-to-column connections

The 11th-12th class: Design of column base connections

The 13th-14th class: Fatigue fracture and design against fatigue

The 15th class: Feedback of course

[Course requirements]

Would be preferable to have completed Mechanics of Building Structures and Steel Construction.

Course title (and course title in English)	都市災害管理学 Urban Disaster Management	Instructor's name, job title, and department of affiliation	Disaster Prevention Research Institute Professor,MATSUSHIMA SHINICHI Disaster Prevention Research Institute Professor,Yuki Sakai Disaster Prevention Research Institute Associate Professor,NISHINO TOMOAKI Disaster Prevention Research Institute Associate Professor,NAGASHIMA FUMIAKI

Target year	Master's students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Tue.3	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

In recent years, as the urban society becomes more dense and high-functioning, the factor of disasters become more complex and the risk of disasters have risen. Therefore, the necessity of the integrated disaster mitigation measures before the disaster, immediately after the disaster, and long after the disaster is pointed out. In this lecture, the actual damage by past earthquakes and its generation process, methods to predict strong motions and methods to predict building damages based on predicted ground motions, technique to evaluate the earthquake-resistant performance of actual buildings, and methods to assess regional damage and risks from post-earthquake fires, including shaking-induced and tsunami-induced fires, are explained.

[Course objectives]

Understand the seismic risk evaluation, fire risk evaluation and evaluation of impact of disasters for structures and urban systems, and the disaster prevention countermeasures and learn about prediction methods for disaster management and the basics to think by oneself about its policy.

[Course schedule and contents]

Mechanism of disasters by earthquakes, 3 times, What is urban disaster management? Mechanism of disasters by earthquakes, source mechanisms for disastrous earthquakes in and around Japan, ground motion generation process, seismic intensity and magnitude, characteristics of observed ground motion will be explained from previous earthquake disasters.
Basics of wave propagation and strong ground motion, 4 times, Wave propagation analysis and strong motion simulation
Structural response estimation, 4 times, Modeling of structures and prediction of their responses
Mechanism of post-earthquake fires, including shaking-induced and tsunami-induced fires, and consequence assessment, 3 times, Actual fire damage in past earthquakes, modeling of ignition and fire spread, consequence assessment, regional risk assessment considering uncertainties
Student Assessment, 1 time, Assessment of the how much students have achieved the learning objectives.

[Course requirements]

Basic knowledge of anti-seismic engineering and environmental engineering

[Evaluation methods and policy]

[Evaluation method]
Grading will be based on final report (60%) and daily attendance (40%).

Target year	Master's students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Wed.3	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

This course covers the fundamental theories and prediction methods related to flame and smoke movement during building fires, as well as the evacuation behavior characteristics of occupants. It also explains how these concepts can be applied to building evacuation safety design and risk assessment. Additionally, understanding is reinforced through exercises and presentations.

[Course objectives]

To acquire scientific knowledge about building fires and understand the principles of evacuation safety design.

[Course schedule and contents]

1. Overview (1)
An introduction to the course content and explanation of the course structure.

2. Fundamental Theories (4)
Lecture on the fundamental theories related to evacuation safety in building fires, including phenomena such as thermal fluid dynamics in non-isothermal fields, combustion, fire plumes, and smoke diffusion, as well as the evacuation behavior characteristics of occupants.

3. Prediction and Design Methods (4)
Lecture on practical fire behavior prediction methods, including fire detection, smoke movement within buildings, smoke control techniques such as smoke extraction, and evacuation behavior prediction. Additionally, methods for designing fire safety-related technical elements using these prediction techniques will be covered.

4. Application to Performance-Based Design (5)
Lecture on evaluation methods for evacuation safety and risk assessment in building fires. Case studies on performance-based design will be conducted through exercises, presentations, and discussions to deepen understanding.

5. Assessment of Learning Achievement (1)
Confirmation of students' understanding and proficiency in the course content.

Continue to 建築火災安全工学 (2)↓↓↓

建築火災安全工学 (2)

Course number	G-ENG04 5B259 LJ74		
Course title (and course title in English)	音響空間設計論 Theory of Acoustic Space Design in Architecture	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,OOTANI MAKOTO

Target year	Master's students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Mon.3	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

For the realization of optimal acoustic space design in architecture, it is essential to understand
- Prediction of physical parameters of sound field in architecture
- Measurement and analysis of sound field
- Perception and cognition of acoustic space

with in-depth understanding of acoustics, psychology of hearing, and acoustic signal processing. This lecture introduces these theories and methods from physical and psychological viewpoints and recent research trend. In addition, presentation and discussion by students are conducted for better understandings.

[Course objectives]

In-depth understandings of
- Prediction of acoustic space - Measurement and analysis of acoustic space
- Theory and method of perceptual evaluation for optimal acoustic space design in architecture.

[Course schedule and contents]

Introduction,1time, Overview
Acoustics,1time, Acoustics for understanding behavior of sound field and sound wave
Acoustic signal processing,1 time, Acoustic signal processing for measurement, analysis, and control of sound field
Auditory perception, 2 times, Mechanism of spatial and temporal perception of sound field, based on psychology of hearing. Multi-modal perception between hearing and other modalities.
Physical parameters of sound field and its prediction, 2 times, Physical parameters for measuring sound field quality. Theories and methods for predicting physical parameters by computational simulations.
Measurement and analysis of sound field, 2 times, Basic measurement and analysis method of physical information in sound field. Measurement and analysis of spatial information of sound field.
Auralization of sound field, 2 times, Auralization of acoustic space in architecture in its design stage. Theories and methods of acoustic space.
Presentation,4times,Participants#039 presentation and discussion on research survey in the field of acoustic environment.

Course number	G-ENG04 5i017 LE74		
Course title (and course title in English)	建築学コミュニケーション（専門英語） Architecture Communication	Instructor's name, job title, and department of affiliation	Part-time Lecturer,TSOI, Esther Graduate School of Engineering Professor,DANIELL，Thomas Charles

Target year	1st year master's students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Thu.3	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

English is the global working language of arts and science, as well as in international project collaborations. Japanese architectural design sensibilities are well sought after overseas. On the other hand, prominent clients likes to employ international talents to provide a view outside the box. Being able to lead a discussion in English with people from all backgrounds, as well as honing and communicating one ’ s unique sensibilities, would be an important skill to survive in a global changing environment.

In this class we will go through the different studies of architecture in English, writing and presenting short essays on our way. The final project will be a group proposal and presentation on “ a Memorial ” .

[Course objectives]

Able to use fluent English for communicating and presenting architectural ideas.

A1 Communication ability
A2 Understanding architecture from different perspectives
B2 Understanding architectural design and spatial planning
C2 Understanding how architecture affects society
C3 Acting with correct judgement based on historical and social understanding
D2 Having one ’ s unique viewpoint
E2 Understanding global and local values

[Course schedule and contents]

Wk 1: A brief overview on famous Western architects and introduction to some previous projects that I had worked on. Review about Renzo Piano ’ s workshop versus Gund Hall at GSD. An introduction to Carpenter Center, Le Corbusier ’ s only architecture in America. (Self introduction.)
Introduction to first assignment on an essay about your favourite architecture.

Wk 2*: Glass and Steel 1: review on historical development and modern details.
Submission and presentation about first essay.

Wk 3: Glass and Steel 2: review on historical development and modern details.
Continue presentation about first essay.

Wk 4: The Technology Effect/ Crystal Palace 1
Introduction to second assignment “ Architecture and Technology ” : list 3 architectural effects related to

Continue to 建築学コミュニケーション（専門英語）(2)↓↓↓

technology, and describe how materials and technology produced them.

Wk 5: The Technology Effect/ Crystal Palace 2, and shopping malls development.

Wk 6*: Pompidou Center 1: technology and city
Submission and presentation of second essay “ Architecture and Technology ” .
Fill-in-the-blank test (open book).

Wk 7*: Pompidou Center 2: technology and political movement. Comparison to Hong Kong Bank.
Continue presentation about second essay. Schematization test (concept check).

Wk 8: Utopia/ Ledoux 1: ideal and architectural representation

Wk 9*: Utopia/ Ledoux 2. Revision on terms. Fill-in-the-blank test for Hong Kong Bank.

Wk 10: A review on Rem Koolhaas ’ thoughts and works.

Wk 11: Cities in the world. Introduction to Kevin Lynch ’ s “ The Image of the City ” .
Introduction to final group project: proposal and presentation of “ A Memorial ” in the city.

Wk 12: Critical Memory 1: Peter Eisenman ’ s design in Berlin
Presentation about your group and topic.

Wk 13*: Critical Memory 2
Presentation about your group ’ s Memorial proposal.

Wk 14*: Group presentation.

Wk 15: Feedback class.   Follow-up

No final examination.
The schedule may be subject to change.

[Course requirements]

None

[Evaluation methods and policy]

Students will need to listen and read different texts, and solve the related problems. Students are expected to be able to write, discuss and present architecture in English at the end of the class. There will be no final examination. Attendance, class participation and exercise completion is important. No plagiarism. Students who have less than 60% in attendance will fail. Late arrival for more than 10 minutes or leaving early without satisfactory explanation will be considered non-attendance.

Homework - 40% Presentations - 40%. Attendance - 20%.

Course number	G-ENG34 6Q005 SJ74		
Course title (and course title in English)	建築設計・計画学セミナーＩ Seminar on Architectural Design and Planning I	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,MIURA KEN Graduate School of Engineering Professor,TAJI TAKAHIRO Graduate School of Engineering Professor,TOMISHIMA YOSHIAKI Graduate School of Engineering Professor,KANKI KIYOKO Graduate School of Engineering Professor,DANIELL，Thomas Charles Disaster Prevention Research Institute Professor,MAKI NORIO Graduate School of Engineering Professor,KANETA TAKASHI Graduate School of Engineering Professor,HIRATA AKIHISA

Target year	Doctoral students	Number of credits	2	Year/semesters	2025/Intensive, First semester
Days and periods	Intensive	Class style	Seminar (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

This seminar is designed to address topics related to various research fields such as architectural design, architectural planning, architectural history, architectural theory, urban planning, regional planning, construction management, and architectural information systems. Using case studies of architectural projects or prior research as subjects, students will identify issues from the perspective of their specialized fields.
Students are required to prepare and submit reports summarizing their research progress and content with the aim of drafting their theses. Presentations will be given, and feedback will be provided on research content.
Discussions will be conducted among presenters, faculty, and attendees.

[Course objectives]

To refine individual research into a thesis suitable for degree submission.
To develop the ability to communicate research findings effectively to researchers from different specialized fields.
To acquire the skills necessary to engage in and respond to multifaceted discussions.

[Course schedule and contents]

Research Reports and Discussions (15 sessions):
Students will report and discuss the content of their degree theses on architectural design and planning.
For this academic year, the first session is planned for May, the second for June, and the third for July.
Each session will account for the equivalent of five classes, with the morning (two classes' worth) conducted in a hybrid format combining in-person and online (synchronous) instruction.

[Course requirements]

Enrollment in a planning-oriented research lab is required.
Students cannot take this course concurrently with Architectural Design and Planning Seminar III in the same

Continue to 建築設計・計画学セミナーＩ(2)↓↓↓

建築設計・計画学セミナーⅠ(2)

academic year.

[Evaluation methods and policy]

Doctoral students belonging to the planning field are required to take this seminar.
Presenting students must prepare a summary of their ongoing research and submit it to the office one week prior to their presentation. Each presentation is allotted 35 minutes, followed by a 10-minute Q&A session.
Non-presenting students are required to select three presentations from both the spring and fall sessions, summarize the main points of each research presentation, and submit a report that includes critiques and proposed solutions.

[Textbooks]

Textbooks: None specified.
References: Will be provided separately.

[References, etc.]

Course title (and course title in English)	建築構造学セミナーＩ Seminar on Structural Engineering of Buildings I	Instructor's name, job title, and department of affiliation	Graduate School of Engineering KANKEI KYOIN Graduate School of Engineering Professor,KOETAKA YUUJI

Target year	Doctoral students	Number of credits	2	Year/semesters	2025/Intensive, First semester
Days and periods	Intensive	Class style	Seminar (Media-based course)	Language of instruction	Japanese

[Overview and purpose of the course]

Research presentation related to building structure is made. Then, questions and answers by the faculty or the other students are performed. The advice about the research is given being conscious of writing a doctoral thesis.

[Course objectives]

Research contents are made to be substantial as a doctoral dissertation.
The capability to present the research content to the researcher of an outside domain is learned. The ability to respond to questions or comments from various view points exactly is learned.

[Course schedule and contents]

A research presentation (15 times):
Students make research presentation, and has a question-and-answer session.

[Course requirements]

Students should be belong to the laboratories specialize in structure.
Students cannot study both of the Building Structure Seminar I and III in the same fiscal year.

[Evaluation methods and policy]

Grade by two faculty, based on the presentation and the reports which describe the comments over other students' presentations.

Course number	G-ENG34 6Q011 SJ74		
Course title (and course title in English)	建築環境工学セミナーⅠ Seminar on Environmental Engineering I	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,OGURA DAISUKE Graduate School of Engineering Professor,HARADA KAZUNORI Graduate School of Engineering Professor,ISHIDA TAIICHIROU Graduate School of Engineering Professor,OOTANI MAKOTO

Target year	Doctoral students	Number of credits	2	Year/semesters	2025/Intensive, First semester
Days and periods	Intensive	Class style	Seminar (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Seminar topics are selected among heat transfer, human comfort on thermal, lighting, sound sensation, building systems such as HVAC, water supply, sanitation and electricity. Through discussions, the participants are encouraged to understand deeply the subject and to develop ability to think themselves. To increase the progress of doctoral study, presentation and report are obligatory in order to receive instructions by professors and to join discussion among participants.

[Course objectives]

The course intends to summarize the development of his/her own research, to develope skills to convey his/her ideas to the researchers in other areas and to join discussions in multiple viewpoints properly.

[Course schedule and contents]

Research presentations and discussion,15times,Participants shall make presentations on the research of his/her own and make discussions among other participants and instructors.

[Course requirements]

As a general rule, students belonging to laboratories on the architectural environmental engineering are permitted to attend.

[Evaluation methods and policy]

Presentation of research contents of his/her own and discussions among other participants and professors are necessary. The degree of understanding, the ability of conducting research by his/her own intension, the skills of presentation will be evaluated. In addition, the interest to broader range of research area, the ability of finding and solving problems are judged.

Target year	Doctoral students	Number of credits	2	Year/semesters	2025/Intensive, Second semester
Days and periods	Intensive	Class style	Seminar (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

This seminar addresses topics related to various research fields such as architectural design, architectural planning, architectural history, architectural theory, urban planning, regional planning, construction management, and architectural information systems. Using case studies of architectural projects or prior research as subjects, students will identify issues from the perspective of their specialized fields. Students are required to prepare and submit reports summarizing their research progress and content to draft their theses. Presentations will be given, and feedback will be provided on research content. Discussions will be conducted among presenters, faculty, and attendees.

[Course objectives]

To refine individual research into a thesis suitable for degree submission.
To develop the ability to communicate research findings effectively to researchers from different specialized fields.
To acquire the skills necessary to engage in and respond to multifaceted discussions.

[Course schedule and contents]

Research Reports and Discussions (15 sessions):
Students will report and discuss the content of their degree theses on architectural design and planning.
For this academic year, the first session is planned for November, the second for December, and the third for January.
Each session will account for the equivalent of five classes, with the morning (two classes' worth) conducted in a hybrid format combining in-person and online (synchronous) instruction.

建築設計・計画学セミナーIV(2)

[Course requirements]

None

[Evaluation methods and policy]

Doctoral students belonging to the planning field are required to take this seminar.
Presenting students must prepare a summary of their ongoing research and submit it to the office one week before their presentation. Each presentation is allotted 35 minutes, followed by a 10-minute Q&A session.
Non-presenting students are required to select three presentations from both the fall and winter sessions, summarize the main points of each research presentation, and submit a report that includes critiques and proposed solutions.

[Textbooks]

Textbooks: None specified.
References: These will be provided separately.

[References, etc.]

（Reference books）

[Study outside of class (preparation and review)]

Students will be given appropriate instructions.

（Other information (office hours, etc.)）

For details regarding office hours, please check KULASIS & Panda.

*Please visit KULASIS to find out about office hours.

Course number	G-ENG34 5Q021 LJ74				
Course title (and course title in English)	先端建築学特論 I Advanced Theory of Architecture and Architectural Engineering I	Instructor's name, job title, and department of affiliation	Graduate School of Engineering KANKEI KYOIN Graduate School of Engineering Professor,HARADA KAZUNORI Graduate School of Engineering Professor,MIURA KEN		
Target year	Doctoral students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Mon.3	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Students will learn concrete methodologies for planning and designing excellent buildings and environment, through the historical and cultural backgrounds of architecture and cities, which are necessary for architectural planning and environmental engineering, This will give you the ability to perform excellent research.

[Course objectives]

Ability to write original dissertations on cutting-edge issues in architectural planning and environmental engineering.

[Course schedule and contents]

(15 weeks)The instructors and students gives presentations on advanced research in architectural planning and environmental engineering, and discuss what it means for architecture and related disciplines, rather than sticking solely to their research, with a wide-ranging awareness of the surroundings the contents.

[Course requirements]

Students must belong to the laboratories on architectural planning or environment engineering.

[Evaluation methods and policy]

A report summarizing the contents of the discussion will be submitted and evaluated by three faculty members.

Days and periods	Mon.3	Class style	Seminar (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Study the latest research trends, engineering development trends, and advanced structural experiment methods and trends regarding determining various external forces, structural design methods, mechanical analysis methods, and material design methods for buildings with sufficient structural safety and structural performance against the external forces, which are necessary for building structural engineering. Acquire the ability to carry out excellent academic research according to these studies.

[Course objectives]

Acquire the ability to write original articles on advanced theme on structural engineering

[Course schedule and contents]

15, 15 classes,
Presentation and discussion on advanced theme on structural engineering

[Course requirements]

None

[Evaluation methods and policy]

Grade by two faculty, based on reports summarizing the content of discussions between faculty and students as well as efforts and results for the research theme.

Days and periods	Intensive	Class style	Lecture (Media-based course)	Language of instruction	Japanese

[Overview and purpose of the course]

Design is being reexamined as we enter the 21st century. The days of simply making artifacts are over; design today has expanded to include the process and act of creating rich experiences and connections. This lecture will provide an overview of design methods, then explain design methodologies from the perspective of disaster prevention design, conception design, architectural and urban design, and regional design. Disaster prevention design considers various designs for the safety of society, such as hazard maps showing inundation areas for tsunamis and river floods, pictograms for evacuation, color levels for warning, and urban designs that are resistant to disasters. This course will lead to an understanding of the ideal disaster prevention design based on affordance and risk communication. Under conception design, students will learn practical methods of creative conception and brush-up by teams. Under architectural and urban design, we will take up examples of designs that have been created with unique advanced approaches of exemplary architecture and cities. Guest lecturers knowledgeable about the contents will be invited. If possible, field investigation will be undertaken to learn about past and current theories and practices to understand the relationship, sustainability, and truth of various phenomena related to design practice. Under regional and residential design, we discuss the support design for areas challenging to sustain dwellings. Settlements is an extremely comprehensive and universal subject and most deeply related to the dignity of each individual. We will consider ideal designs beyond partial solutions for people living with pride, local communities, and local environments. Throughout the lectures, students will acquire a basic understanding of various design methodologies related to architecture, community, and urban environments, as well as the basic skills to put them into practice.

[Course objectives]

To acquire a basic background in understanding and practicing human, architectural, regional, and urban design methods.

[Course schedule and contents]

① Proceeding with design methodology (1 Class) Scheduling of lectures, overview, and introduction of basic theories related to design methodology (Prof.Kumiyo Nakakoji, @ Future University Hakodate, member of the Kyoto Univ. Design School founders, will have the special lecture.)
② Disaster prevention design (3 Classes) How to design to protect lives ? Methods and limitations of risks assessment ? Risk communication ? Hazard maps, color codes for warning signals
③ Conception Design (3 Classes) After prior study on conception of ideas, students will learn how to practically fine-tune ideas by teaming up with people from different fields. They will work on specific

Continue to デザイン方法論(2)↓↓↓

stationery or product competitions.
④ Architectural and Urban Design (3 Classes) We will take up actual design examples with an excellent, cutting-edge approach to architecture and urbanism. Guest lecturers appropriate to the content will be invited, and if possible, a field trip will be conducted.
⑤ Regional and Residential Design (3 Classes) Dialogue-Based Approach to local society, Participation, Individual and children's participation (R. Hart), Dynamic Authenticity, which deals with the value inherent in a region by identifying unclear point structures.
⑥ Discussion (2 Classes) We will discuss the integration of each design discipline and consider the construction of new arguments for design methodologies. All teachers will take charge. Reports and feedback on each discussion will be included.

[Course requirements]

Not specified. In principle, lectures ① and ⑥ will be conducted at the Katsura Campus, while ② through ⑤ may be conducted on-site in the field. The specific schedule will be announced separately.

[Evaluation methods and policy]

As a Report Assignment, discuss "Design Methodology" ② through ⑤ and ⑥ under the guidance of four instructors. As a general rule, the Report Assignment will be administered four times.

[Textbooks]

In addition, the course will be conducted using handouts and projector slides. (Shared on PandA)

[References, etc.]

（Reference books）

In addition, reference books will be introduced during each lesson, and a list of references will be distributed later.

[Study outside of class (preparation and review)]

Instructions will be provided during lectures as required.

（Other information (office hours, etc.)）

The class schedule will be adjusted at the beginning of the second semester, and you will be notified of the same. Please see the contact coordination on PandA.

*Please visit KULASIS to find out about office hours.

Course number	G-ENG05 6B418 LB71　G-ENG06 6B418 LB71						
Course title (and course title in English)	先進材料強度論 Strength of Advanced Materials			Instructor's name, job title, and department of affiliation	Graduate School of Engineering Associate Professor,NISHIKAWA MASAAKI		
Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/Second semester		
Days and periods	Thu.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese		

[Overview and purpose of the course]

The mechanism underlying mechanical and functional properties are lectured for advanced materials used and developed in advanced fields of current engineering. In particular, advanced composite materials, used for aircraft structure etc., are introduced, with a detailed description of the relationship between microscopic constituent materials and macroscopic properties from the perspective of multiscale mechanics; also the anisotropy of their properties, their fatigue and fracture properties are described in the basic discipline for strength of materials. The latest applications are introduced in the field of various transportation systems including airplanes.

[Course objectives]

The course goal is to understand basic concepts of composite materials and the underlying mechanism of their mechanical properties from multiscale viewpoints, while the phsyical understanding of composites is developed based on multiple disciplines.

[Course schedule and contents]

1-2. Concept of composite materials
 The concept and definition of composite materials, their constituent materials and manufacturing methods are illustrated. Their application to aircraft structures etc. are also introduced.

3-4. Mechanical properties of microscopic constituent materials
 Resin for matrix and various fiber types are explained including their structure and mechanical properties. The weakest link model and Weibull distribution are described as a basis of the statistic nature of strength.

5-8. Basic mechanical properties
 The specific strength, the specific stiffness, and the rule of mixture for elastic modulus and strength are lectured. In particular, the detailed explanation is made to the anisotropy of elastic modulus, independent elastic constants in the generalized Hookean law, the anisotropic failure criteria, and laminate theory. The relationship between the mechanical properties of microscopic constituent materials and macroscopic properties of composite materials is also illustrated.

9-10. Micromechanics
 The mechanism of transverse fracture is illustrated. The mechanical models are described for short fiber reinforced composites and particle dispersed composites. The micromechanical analyses based on finite element method is also illustrated for the physical understanding of the strength of composite materials.

Continue to 先進材料強度論(2)↓↓↓

先進材料強度論(2)

11-12． Numerical simulation

Composite materials have a unique feature in that the mechanical properties of the materials are determined during the manufacturing process, unlike conventional materials. From the viewpoint of both manufacturing process and design, various strength and process simulations have been used to study the formation of microstructures and the mechanism of strength enhancement in composite materials. The latest numerical analysis techniques and their application examples are explained.

13. Fracture mechanics properties

Fracture mechanics of anisotropic materials are described. The interlaminar fracture toughness and interlaminar fatigue crack propagation, the critical issues in the application of composite structures, are explained including their underlying mechanism.

14. Process and mechanical properties of composite materials

The molding and machining process of composite materials is explained to relate it to their mechanical properties. Fiber preform, the selection of resin, intermediate materials, machining and assembly and inspection methods are overviewed from the academic viewpoints.

15. Feedback

*Academic achievement assessment (Reports)

[Course requirements]

Mechanics of Materials, Continuum Mechanics, Fundamentals of Materials, Solid Mechanics, Adv., Fracture Mechanics

[Evaluation methods and policy]

Grading is based on the reports. The assignments will be given around three times.

[Textbooks]

Supplementary handouts will be distributed in the class.

[Overview and purpose of the course]

Numerical techniques, such as the finite element method and numerical control method, are indispensable in mechanical engineering. In this lecture, basics of numerical techniques which are required to study advanced methods for graduated students will be explained. The lecture will cover the linear system solution (Ax=b), eigenvalue analysis, interpolation approximation method, solutions of ordinary differential equation and partial differential equation. The programing exercise is included in this lecture.

[Course objectives]

Understandings of mathematical theories and programing implementations of the numerical methods.

[Course schedule and contents]

1. Introduction Introduction of this class
 - Numerical representations and errorsMacro programing using spread sheet applications
2. Linear system
 - MatrixNormsSingular value decomposition
3. Linear simultaneous equation(1)
 - Solution of simultaneous linear equationsdirect method
4. Linear simultaneous equation(2)
 - iteration method
5. Eigenvalue analysis(1)
 - Properties of eigenvalue, Eigenvalue calculation for symmetrical matrix
6. Eigenvalue analysis(2)
 - Eigenvalue calculation for asymmetrical matrix
7. Interpolation(1)
 - Polynomial, Hermite interpolation
8. Interpolation(2)
 - Spline interpolation, interpolation errors
9. Numerical integral(1)
 - Trapezoidal rule, midpoint rule, Simpson's rule, Newton-Coats rule
10.Numerical integral(2)
 - Complex integration rule, Romberg integral
11.Ordinary differential equation
- Solutions (explicit and implicit), initial value problems and boundary values problem
12.Partial differential equation(1)
- Partial differential notation, convergence conditions, von Neumann stability analysis

Days and periods	Thu.1	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

This course provides fundamental concepts of solid mechanics such as stress, strain, and constitutive laws, and methods for analyzing stress/strain fields and deformation of solids and structures on the basis of the concepts. In particular, the course lectures theories of nonlinear problems such as plasticity and creep, and their numerical solutions, or finite element methods, which are important for design and development of mechanical structures.

[Course objectives]

Students will be able to:
 understand solid mechanics deeply and acquire basic knowledge to design mechanical structures.
 analyze problems of plasticity and creep by finite element methods.

[Course schedule and contents]

Introduction,1time,Overview of solid mechanics
Stress,1time,Cauchy stress tensor, Equilibrium equation, Invariants
Deformation,2times,Material description and spatial description, Displacement, Deformation gradient, Lagrange-Green strain and Euler-Almansi strain, Infinitesimal strain, Material time derivative
Constitutive equation: linear elasticity,1time,Linear elastic stress-strain response, Hookersquos law
Principle of virtual work and principle of minimum potential energy,1time,Principle of virtual work, Principle of minimum potential energy
Finite element method for linear elasticity,3times,Basis of finite element method, Finite element equilibrium equations, Elements, Numerical integration
Plasticity problems,3times,Plasticity theory (uniaxial and multiaxial problems, yield criteria, flow rule, hardening rule, constitutive equations), Finite element method for elasto-plastic problems
Creep problems,2times,Creep theory (uniaxial and multiaxial constitutive equations), Finite element method for creep problems
Summary and feedback,1time,Discussions and reports

[Course requirements]

This course requires basic knowledge of mechanics of materials and solid mechanics.

[Overview and purpose of the course]

In mechanical engineering, a deep understanding and development of material properties based on condensed matter physics are crucial. This lecture explores the fundamentals of quantum mechanics, which serve as the foundation of condensed matter physics. Key topics include the fundamental concepts of quantum mechanics and methods for describing quantum states, the Schrodinger equation along with its related matters, and angular momentum, which determines the electronic states of materials.

[Course objectives]

To understand the fundamental concepts essential for applying quantum mechanics to various problems in condensed matter physics, students will learn the description of quantum states and the calculations of quantum dynamics and angular momentum.

[Course schedule and contents]

1. Fundamental concepts of quantum mechanics, 4 times
Stern-Gerlach experiment, description of states and operators in quantum mechanics, measurements and observables, uncertainty relations, wave functions in position and momentum spaces

2. Quantum dynamics, 5 times
Time evolution operator, Schrodinger and Heisenberg pictures, harmonic oscillator, Schrodinger's wave equation and elementary solutions, WKB approximation, Feynman path integral

3. Theory of angular momentum, 5 times
Rotation operator, finite rotations of of spin-1/2 systems, density operators, eigenvalues and eigenstates of angular momentum, addition of angular momenta

4. Feedback, 1 time
Assessing the understanding to meet the objective of the lecture.

[Course requirements]

Understanding of elementary quantum mechanics at the level of the undergraduate course "Quantum Physics I".

[Overview and purpose of the course]

This course presents the basic concept and mathematical theory of the Finite Element Method (FEM), and explains how the FEM is applied in engineering problems. We also address important topics such as the physical meaning of geometrical non-linearity, material non-linearity, and non-linearity of boundary conditions, and we explore numerical methods to deal with these nonlinearities. Also, we guide students in class in the use of software to solve several numerical problems, to develop practical skill in applying the FEM to engineering problems.

[Course objectives]

The course goals are for students to understand the mathematical theory of the FEM and the numerical methods for analyzing non-linear problems based on the FEM.

[Course schedule and contents]

Basic knowledge of the FEM,3times,What is the FEM? The history of the FEM, classifications of partial differential equations, linear problems and non-linear problems, mathematical descriptions of structural problems (stress and strain, strong form and weak form, the principle of energy).
Mathematical background of the FEM,2times,Variational calculus and the norm space, the convergence of the solutions.
FEM formulations,3times,FEM approximations for linear problems, formulations of iso-parametric elements, numerical instability problems such as shear locking, formulations of reduced integration elements, non-conforming elements, the mixed approach, and assumed-stress elements.
Classifications of nonlinearities and their formulations,4times,Classifications of nonlinearities and numerical methods to deal with these nonlinearities.
Numerical practice,2times,Numerical practice using COMSOL.
Evaluation of student achievements,1time,

[Course requirements]

Solid Mechanics

[Evaluation methods and policy]

Course title (and course title in English)	インターンシップM（機械工学群） Engineering Internship M		Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,TSUCHIYA TOSHIYUKI Graduate School of Engineering Professor,NAGATA KOJI	
Target year	1st year students or above	Number of credits	2	Year/semesters	2025/Intensive, Second semester
Days and periods	Intensive	Class style	Practical training (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

The aim of the internship is experiencing on-site activities involved production, manufacturing, development, designing and research of industrial goods at a factory or a research laboratory of Japanese leading companies.

On-site learning of the importance of teamwork and production processes in manufacturing is also the aim.

[Course objectives]

The goal of the internship is to master a general method of thinking and methodology at Mechanical Engineering. Furthermore, by learning the relationship between a human and machines at an industry, motivate oneself to study and think about one's career development.

[Course schedule and contents]

As a general rule, the internship should meet the above purpose. The duration should be not less than two weeks. Thus, the following cases are not approved as an internship; a short internship such as a week, a company tour, a company explanation meeting and so on. Longer term more than two weeks and an overseas internship such as IAESTE can be acceptable.
Internship location: Based on recruitment from companies. You can find them at company's web sites and/or the educational affairs office of the Engineering Science office (Butsuri Kyoumu).

[Course requirements]

None

[Evaluation methods and policy]

Credits (2) are approved based on the summary report (50%) and presentation (50%) about the internship activities.

Course title (and course title in English)	English Technical Writing English Technical Writing			Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,NISHIWAKI SHINJI Part-time Lecturer,Wever Steve		
Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/Second semester		
Days and periods	Wed.4	Class style	Lecture (Face-to-face course)	Language of instruction	English		

[Overview and purpose of the course]

大学院学生にとって，英語により論文執筆する知識・能力を得ることは必須課題である．本講義では，英語による技術論文の執筆の仕方について，演習を踏まえながら講義を行う．すわなち，論文を執筆する際に必要となる，英語論文の常識，論文の構成方法，アブストラクト・緒言・結論のまとめ方，図・方法の記載方法，更にはより理解を深める英語の表現方法ついて，演習を交えながら，講述する．

[Course objectives]

英語の論文を構成・執筆できる十分な知識と能力を習得する．

[Course schedule and contents]

1) What Is Technical Writing?
This class will provide an introduction to technical writing with specific examples showing the difference between general and technical English, as well as a review of the grammar forms that are important for technical writing.

2) The Patterns of General to Specific and Comparison and Contrast
Writing well-organized paragraphs is important for communicating your ideas clearly and efficiently. This class will provide students with two common patterns used for organizing paragraphs: 1) starting the paragraph with a general idea and then expanding on this with more specific detail, and 2) describing how things are the same and how they are different.

3) The Patterns of Cause and Effect and Sequencing
This class will provide students with two more common patterns used for organizing paragraphs: 1) showing the connection between an effect and its cause, and 2) describing a sequence of steps in a process.

4) Definitions and Describing Products
In technical writing it is essential to be able to write accurate descriptions of various aspects of your research. This class will focus on how to write clear and understandable definitions of your work as well as accurately describe the characteristics of items and products.

5) The Introduction Section
This class will focus on what information is required for a good introduction to your research. Students will begin writing the Introduction section to their research.

Continue to English Technical Writing (2)↓↓↓

English Technical Writing (2)

6) The Experimental Section
This class will examine what features and language are required for the experimental section of a paper. Students will begin writing the Experimental section to their research.

7) Describing Graphs and Other Visuals
There are many kinds of figures and graphs required for technical papers. When presenting figures and graphs, you cannot just simply show them, you must also describe them in words. This class will help students describe changes over time in graphs as well as the relationship between 2 variables.

8) The Discussion Section
It is not enough just to present data. Good technical writing should also interpret the results, discuss their importance and make recommendations for action or future research. This class will focus on how to write a good Discussion section of a technical paper. Students will begin writing the Discussion section to their research.

9) The Conclusion Section
The Conclusion section is very important because it is one of the most read sections of the report. This class will focus on how to organize and write a good Conclusion for your paper. Students will begin writing the Conclusion section to their research.

10) The Title and Abstract
A good title and abstract are essential for describing the content of your report. This class will focus on how to write good titles and abstracts. Students will begin writing the Titles and Abstract section to their research.

11) Resumes - Part 1
A resume is a written description of you that potential employers, etc., use as an important first evaluation of your background, experience and accomplishments. This class will examine what information is generally given in a resume, and how to present this information in an effective manner. Students will begin writing resumes about themselves.

12) Resumes - Part 2
This is a workshop session where students will work together and with the instructor to evaluate the other students’ resumes and give feedback on improvements they can make. The goal of this class will be for each student to have a good draft resume prepared for their future use.

13) Final Paper Preparation
This is a workshop session where students will work together and with the instructor to evaluate the other students’ final papers and give feedback on improvements they can make. The goal of this class will be for each student to have a good draft final paper prepared to finalize for the next week.

14) Final Paper Submission and Class Wrap-up
Students will submit their final papers about their research. There will be a review of the semester course work with final comments and questions.

15）**学修到着度の確認**
学修到達度の確認の後に、フィードバックを行う。

Course title (and course title in English)	技術者倫理と技術経営 Engineering Ethics and Management of Technology	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,NISHIWAKI SHINJI Graduate School of Engineering Senior Lecturer,NAKANISHI HIROAKI Graduate School of Engineering Professor,KOMORI MASAHARU Graduate School of Engineering Professor,TSUCHIYA TOSHIYUKI Graduate School of Engineering Program-Specific Professor,IWASAKI　TAKASHI Graduate School of Engineering Program-Specific Associate Professor,KURISHIGE　MASAHIKO

Target year	1st year master's students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Tue.4	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Basic knowledge of Engineering Ethics and Management of Technology needed for future project leaders in companies and society is taught. Students have to make group work after-class hours as well as presentations of wrapping-up the discussions. Engineering ethics is the field of applied ethics and system of moral principles that apply to the practice of engineering. The field examines and sets the obligations by engineers to society, to their clients, and to the profession. Management of Technology is a set of management disciplines that allows organizations to manage their technological fundamentals to create competitive advantage. This course consists of lectures, exercises, discussions and oral presentations under supervision of professional faculties and extramural lecturers.

[Course objectives]

To cultivate a spirit of self-sufficiency needed for engineers

[Course schedule and contents]

Engineering Ethics,9times,1. Introduction to Engineering Ethics (EE)2.Medical Engineering Ethics3.EE by Institution of Professional Engineers, Japan and abroad4.Product Safety and Product Liability5. Course title (and course title in English)	複雑系機械工学基礎セミナー１ Basic Seminar of Complex Mechanical Engineering,1	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Senior Lecturer,SENAMI MASATO Graduate School of Engineering Professor,HIRAYAMA TOMOKO

Target year	Master's students	Number of credits	1	Year/semesters	2025/First semester
Days and periods	Tue.1	Class style	Seminar (Media-based course)	Language of instruction	English

[Overview and purpose of the course]

This seminar provides master-course students an opportunity of face-to-face group discussions to exchange ideas and information with those from other research fields. It is also emphasized in this seminar to give the attendees a chance to boost up the presentation skills necessary to broaden their own expertise across multidisciplinary research fields. The primal aim is to offer these significant experiences of leadership as a young scientist with broad perspective in the global community.

[Course objectives]

Students will be able to acquire presentation and logical thinking skills.

[Course schedule and contents]

Self introduction,1-2times, [Media-based class, simultaneous bidirectional type]
Organizing groups,1time,
Group activity,10-12times,Each group chooses an activity theme, and pursue the goal through discussion in the group. Weekly reports on the activity are required.

Course number	G-ENG05 5G061 LJ71　G-ENG06 5G061 LJ71		
Course title (and course title in English)	応用数理科学 Applied mathematical sciences	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,INOUE YASUHIRO

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Mon.3	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Mathematical science is applied to solve problems in various fields. In particular, when it comes to understanding and predicting phenomena with high complexity and uncertainty with unclear governing laws, constructing models based on mathematical ideas becomes important. This lecture focuses on learning about the practical application of mathematical science from such an applied perspective.

[Course objectives]

Study the common approaches required for resolving mathematical problems, and become proficient in the techniques for constructing mathematical models using differential equations and probability/statistics.

[Course schedule and contents]

I. Overview (1) Acquire the essential perspective necessary for constructing mathematical models.

II. Mathematical Models using Differential Equations (5) Introduce mathematical models from the perspectives of linear and nonlinear differential equations, and learn how a limited number of common mathematical models can represent a vast array of diverse phenomena in various fields.

III. Mathematical Models using Probability and Statistics (6) Present the concepts of probability and statistics that are critical for comprehending phenomena with uncertainty, and study the basics of constructing mathematical models via probability differential equations and various statistical models based on data.

IV. Group Work (2) Practice in a group work setting. Aim to attain the necessary perspectives for constructing mathematical models through experiencing the mathematical problem-solving process.

V. Confirmation (1) Confirm the level of proficiency in mathematical modeling

[Course requirements]

Require basic knowledge of calculus and probability and statistics.

[Evaluation methods and policy]

Graded through group work in lectures and report exams.

Days and periods	Intensive	Class style	Practical training (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

The purpose is to experience advanced studies related to mechanical engineering by the relatively long term research in domestic or foreign companies, universities and institutes, etc., and to learn the way of thinking and methodology.

[Course objectives]

The goal of the internship is to master a general method of thinking and methodology at Mechanical Engineering. Furthermore, motivate oneself to study and think about one's career development and to develop communication skill in group work and in international network.

[Course schedule and contents]

As a general rule, the internship should meet the above purpose. The duration should be not less than 12 weeks.
Submission of a report and presentation in a report meeting after you finish the internship are required.

[Course requirements]

None

[Evaluation methods and policy]

Course title (and course title in English)	複雑系機械工学セミナーE Seminar of Complex Mechanical Engineering for the 21st Century COE Program,E	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Senior Lecturer,SENAMI MASATO Graduate School of Engineering Professor,HIRAYAMA TOMOKO

Target year	Doctoral students	Number of credits	1	Year/semesters	2025/First semester
Days and periods	Tue.1	Class style	Seminar (Media-based course)	Language of instruction	English

[Overview and purpose of the course]

This seminar provides doctor-course students an opportunity of face-to-face group discussions to exchange ideas and information with those from other research fields. It is also emphasized in this seminar to give the attendees a chance to boost up the presentation skills necessary to broaden their own expertise across multi-disciplinary research fields. The primal aim is to offer these significant experiences of leadership as a young scientist with broad perspective in the global community.

[Course objectives]

Students will be able to acquire presentation and logical thinking skills.

[Course schedule and contents]

Self introduction,1-2times,
Organizing groups,1time,
Group activity,10-12times,Each group chooses an activity theme, and pursue the goal through discussion in the group. Weekly reports on the activity are required.
Final presentation,1-2times,Each group gives presentation of its final resutls.

[Course requirements]

None

[Evaluation methods and policy]

Based on Group Activity Reports and Personal Report

[Textbooks]

Not used

[References, etc.]

（Reference books）

[Study outside of class (preparation and review)]

Group activities

（Other information (office hours, etc.)）

All activities should be done in English.
Registration is required by the deadline. Contact at
cme-seminar@me.kyoto-u.ac.jp

Course number	G-ENG06 8X402 LB18　G-ENG05 8X402 LB18				
Course title (and course title in English)	アーティファクトデザイン論 Theory for Designing Artifacts	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,MATSUBARA ATSUSHI Graduate School of Engineering Professor,NISHIWAKI SHINJI Graduate School of Engineering Professor,KOMORI MASAHARU Graduate School of Engineering Professor,IZUI KAZUHIRO		
Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Wed.5	Class style	Lecture (Media-based course)	Language of instruction	Japanese

[Overview and purpose of the course]

The object of the design covers a wide range such as machinery, building, information systems, social system, etc. In this lecture, we first clarify the concept of "artifacts" and discuss the science of design for dealing with things and phenomena that combine the laws of nature and human purposes. The course aims to clarify the principles common to various types of design, including function, familiarity, usability, aesthetics, and innovation, among others.

[Course objectives]

The goal is to understand artifacts' design principles and learn to use systematic thinking and analyses to identify problems and conceive solutions.

[Course schedule and contents]

Introduction:
The course first clarifies the concept of "artifacts" as something to be positioned equally with natural objects. It then discusses the history of "artifacts for representation" in ancient times, "artifacts for survival" in medieval times, "artifacts for convenience" in modern times, and "artifacts for sustainment" in each period.

Function and purpose of the artifact (3 lectures):
These cover the effect of artifacts on the outside world?their function, reason for existence, and why they were created. We discuss the categorization of artifacts and their formation from the viewpoint of the symbolic process (semiotics) and the "purpose" of artifacts in the context in which they are used.

Design principles of artifacts (2 lectures):
Understanding artifacts requires knowing how their internal structures function in the outside world. We discuss cybernetics (the field concerned with circular causality in both the physical world and the world of information) and second-order cybernetics (recursive cybernetics) in the social sciences, design research, human cognition, and decision making. Cybernetics positively considers and reconsiders interactions in areas like the ecological approach, social dispersal cognition, and naturalistic decision making. These lectures describe the design principles of artifacts based on theories on human behavior.

Representation and evaluation for the design of artifacts (3 lectures):

Continue to アーティファクトデザイン論(2)↓↓↓

アーティファクトデザイン論(2)

Designs must not be confined to individual artifacts; instead, they should generate environmental and social systems, including artifacts and natural objects, and improve the quality of life. These lectures discuss methods for identifying problems, setting design objectives, resolving vagueness and goal conflicts, creating alternative designs, and evaluating designs. They also cover consensus-building among multiple parties involved in expanding design objects beyond hardware to environmental and social systems, including soft services.

User-centric artifact design (2 lectures):
The ultimate arbiters of design quality are the users. Successful design requires cooperation between designers, producers, and end-users. Complex design problems cannot be solved solely by narrowly focused specialists; sharing design knowledge among different fields is essential. These lectures discuss the internationally recognized standards in design processes and the concepts of "design rationale" and "user-centered design."

Participatory systems approach (2 lectures):
In dealing with the design of large-scale and complicated artifacts, the idea of systematizing the problem and advancing it from many viewpoints becomes essential. These lectures outline the interactive process between system designers, users, and computers, including the structured modeling technique of problem-solving through repeated interactions between experts. It discusses techniques for interpreting and evaluating user input in design decision-making to highlight the benefits of the participatory systems approach to product design.

Two hands-on exercises of the participatory systems approach:
Students will address design problems in real-world artifacts and practice using the participatory systems approach to find solutions.

[Course requirements]

Nothin in particular

[Evaluation methods and policy]

Grading method:
Exercises during the lecture period: about 20%
End-of-term exam: about 60%
Classroom contributions (e.g., asking good questions): about 20%

[Textbooks]

Other lecture notes used in classes will be distributed as appropriate.

[Overview and purpose of the course]

Understanding of intelligent behaviors of living things is very interesting. And realization of their intelligent motion by a robot is also attractive for mechanical engineering. In this lecture, we consider basic understanding of beautiful human skill ldquomanipulationrdquo on the point of view of dynamics and control. First modeling methodologies for a rigid multibody system and a general dynamic model of a manipulator are provided. Next, a typical nonlinear control law is introduced and some problems for applying the controller are shown. Based on nature of the dynamics of the manipulator, a very simple and robust controller can be derived by designing energy of the system. This lecture provides modeling methodologies and controller design strategies of the rigid multibody system and we analyze a beautiful human skill of the manipulation.

[Overview and purpose of the course]

Based on elementary thermodynamics and statistical physics, I will describe non-equilibrium thermodynamics and advanced statistical physics, including phase transition, pattern formation, and entropy production.

[Course objectives]

Understanding the principle mechanisms of phase transition, cooperation phenomena, patern formation, and relaxation phenomena, in terms of advanced statistical mechanics and non-equilibrium thermodynamics.

[Course schedule and contents]

Elementary statistical physics: review,1time,Review of equilibrium statistical mechanics
Phase transition as a cooperative phenomenon,3times,Statistical mechanics of interacting particle system - Exact calculation - Monte Carlo simulation - Mean field approximation
Pattern formation of non-equilibrium systems,3times,After a time dependent Ginzburg-Landau (TDGL) model is introduced, formation of spatial patterns is discussed from various viewpoints.
Equilibrium thermodynamics: review,2times,Review of elementary thermodynamics
Non-equilibrium thermodynamics: Basics,5times,System stability and the principle of irreversible process are discussed in terms of thermodynamics.
Non-equilibrium thermodynamics: Applications,3times,- Entropy production - Linear response theory - Onsager#039s reciprocal relation
Check and Feedback,1time,

Course title (and course title in English)	高エネルギー材料工学 High Energy Radiation Effects in Solid	Instructor's name, job title, and department of affiliation	Institute for Integrated Radiation and Nuclear Science Associate Professor,JIYO GIYUU Institute for Integrated Radiation and Nuclear Science Professor,KINOMURA ATSUSHI Institute for Integrated Radiation and Nuclear Science Assistant Professor,YABUUCHI ATSUSHI

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/First semester

Days and periods	Fri.3	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Selection, fabrication and deterioration of materials are important factors for mechanical system design. It is necessary to understand conditions under which selected materials are actually used. In particular, special design policies are required for the materials used under irradiation of high-energy particles and radiation. On the other hand, it is possible to intentionally make use of property changes of materials by high-energy particle irradiation.

Irradiation of high-energy particles such as accelerated neutrons, ions and electrons deposits very high energies at local regions. Such irradiated regions undergo extreme conditions which cannot be realized by other methods. As a result, the irradiation leads to significant structural and stoichiometric changes in materials. This lecture gives general description of materials irradiation effects, irradiation effects on materials related to nuclear power plants, and academic/industrial applications of materials fabrication/analysis by using high-energy particles.

[Course objectives]

To understand reactions and property changes of materials under radiation and high-energy particle irradiation.

[Course schedule and contents]

,15times,(1) Introduction (2) Scattering of high-energy particles with atoms in solids (3) Displacement of atoms in solids by high-energy particles (4) Motion and behaviors of point defects (5) Rate equation of point defects and secondary-defect formation (6) The influence of irradiation on material properties (7) Activation of materials (8) High-energy particle sources (9) Ion beam fabrication (10) Ion beam analysis (11) Electron beam applications (12) Materials irradiation studies (13) Neutron irradiation effects and nuclear materials (14) Positron analysis

[Course requirements]

Basic knowledge on materials engineering and mechanics

[Evaluation methods and policy]

Grading is based on small quizzes and report submission (if necessary) on the lecture.

Course title (and course title in English)	量子ビーム応用工学 Quantum Beam Application Engineering	Instructor's name, job title, and department of affiliation	Institute for Integrated Radiation and Nuclear Science Professor,OKUCHI TAKEO Institute for Integrated Radiation and Nuclear Science Associate Professor,ARIMA HIROSHI Institute for Integrated Radiation and Nuclear Science Assistant Professor,UMEDA YUHEI

Target year	1st year students or above	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Mon.4	Class style	(Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

物質材料の性質は，それを構成する原子の種類に加えて，各原子のナノスケールでの空間配列の影響を強く受けて決まる．例えばグラファイトとダイヤモンドは，同じ炭素でできていても性質が大いに異なるが，それは炭素の配列の根本的な違いに起因する．また，あらゆる物質材料は力を受けると巨視スケールの弾性変形や塑性変形を引き起こすが，それはナノスケールの空間配列の特徴的な変化を伴っている．多種多様な物質材料の性質や変形の源である原子の空間配列は，量子ビームを使いこなすことで正確に計測し，理解し，予言することができる．そこで本講義では，量子ビームの応用によって物質材料をマルチスケールで解析して評価する方法を系統的に学修する．結晶の構造を題材とした原子スケールの解析から，工業製品のイメージングやひずみ測定などを題材とした巨視スケールの解析に至るまでの量子ビーム応用の方法論を学ぶ．最初にX線，中性子線，電子線などの各種の量子ビームの特徴と使い分けについて理解を深めるとともに，マルチスケールでの具体的な応用例を学ぶ（第１部）．次に結晶原子配列の数学を用いた記述法などの原子レベルでの構造評価の基礎を習得する（第２部）．以上の知識をふまえて，高温，超高圧力，超高ひずみ等の特殊環境の生成の技術と先端量子ビームの技術を組み合わせて使うことで，特殊環境で引き起こされる原子配列の劇的な変化を捉え，そこから新しい物質や材料をつくりだす道筋を理解する（第３部）．

[Course objectives]

物質材料をマルチスケールで解析するための量子ビームの応用についての基本的な原理を学ぶ．

[Course schedule and contents]

１．量子ビームの工学応用の紹介（４～５回，奥地，有馬）
量子ビームの応用でわかること，量子ビームの作り方と使い方，量子ビームを用いたマルチスケール測定，日本と世界と京都大学の量子ビーム施設

２．量子ビームによる原子配列の解析法（５～６回，奥地，有馬）
数学による原子配列の解析法，結晶の構造解析，非晶質の構造解析，メゾスケールの構造解析，金属・セラミクス・分子結晶の原子配列と物質材料の基本的性質

３．特殊環境を用いた先端測定と応用例（４～５回，奥地，有馬，梅田）
特殊環境の生成・制御・計測と組み合わせた量子ビームの応用，物質材料研究への応用例，工学回折測定

４．フィードバック授業（１回，奥地）
学修到達度の確認

Course title (and course title in English)	光物理工学 Engineering Optics and Spectroscopy	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,HASUO MASAHIRO Graduate School of Engineering Associate Professor,SHIKAMA TAIICHI

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Tue.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Optics are widely used in many areas of modern science and technology. Students will learn the physical properties of light and light-matter interactions, and their applications. Topics such as light propagation in dielectric media, crystal optics, quantum optics, and lasers will be explored. Interactions of light with atoms, molecules and solids as examples will be also explored with introduction of the fundamentals of spectroscopy and their applications.

[Course objectives]

Understand the principles of optical engineering and spectroscopy.
Develop application abilities based on the principle understanding.

[Course schedule and contents]

Dispersion of light, 4 times, propagation of light in dielectric media (Lorentz model), crystal optics, nonlinear optics
Quantum optics, 1 time, quantum theory of light, principles of lasers
Light-matter interactions, 8 times, light-induced transition, quantum states of atoms, molecules, and solids, and rules governing the transitions (selection rules)
Selection rules and group theory, 1 time, introduction to group theory and its application to the selection rules
Confirmation of the achievement, 1 time,

[Course requirements]

Undergraduate-level electromagnetism and quantum mechanics.

[Evaluation methods and policy]

Grade evaluation will be based on report examination.

[Textbooks]

Recommended books will be discussed in class.

[References, etc.]

（Reference books）
Lecture notes will be distributed.

Course title (and course title in English)	メカ機能デバイス工学 Mechanical Functional Device Engineering	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,KOMORI MASAHARU Graduate School of Engineering Professor,HIRAYAMA TOMOKO
Target year	Master's/Doctoral students	Number of credits	2
Year/semesters	2025/Second semester		
Days and periods	Wed.3	Class style	Lecture (Face-to-face course)
Language of instruction	Japanese		

[Overview and purpose of the course]

For any machines, prime movers and powertrains are necessary to realize the required functions. In automobiles, an engine is the prime mover and a transmission, a clutch, and a shaft are parts of the powertrain. In machine tools, a motor is used as the prime mover and the powertrain uses feed screws. In this lecture, the prime mover is taken up. Types, characteristics, principles, advantages and disadvantages of the prime mover are explained. Students also learn the basics of tribology, surfaces and contacts, friction, wear, lubrication theory, dynamic guide, hydrostatic guide, rolling guide, oil seal, mechanical seal, packing.

[Course objectives]

Understand the principles and basic characteristics of the prime movers and tribology taken up in the lecture.

[Course schedule and contents]

Outline,1time,Composition of mechanical device, examples of prime movers, working parts, and powertrains, examples of actuators
Electromagnetic force,2times,Principle used for actuators, type of electromagnetic motor, principle and characteristics of synchronous motor, generating method of rotating magnetic field, induction motor, reluctance motor, DC motor, stepping motor
Electrostatic force, piezoelectric,2times,Usage of electrostatic force as actuator, explanation of principle and characteristics, piezoelectric effect, characteristics of piezoelectric effect, piezoelectric material, polarization, displacement and force, hysteresis, type and basic structure, application
Fluid pressure, ultrasonic, shape memory alloy,2times,Fluid pressure actuator, ultrasonic motor, shape memory effect, shape recovery
Tribology,5times,foundation of tribology, surface and contact, friction, wear, lubrication theory
Guide,1time,dynamic guide, hydrostatic guide, rolling guide
Seal,1time,oil seal, mechanical seal, packing
Feedback class,1time,Answer questions

Course number	G-ENG05 6G039 LB71		
Course title (and course title in English)	熱物質移動論 Transport Phenomena	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,IWAI HIROSHI Graduate School of Engineering Associate Professor,KISHIMOTO MASASHI

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Mon.1	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

This class focuses on learning the fundamental knowledge of heat and mass transfer phenomena and understanding the approach to the applications by studying practical cases, and deals with fundamental matters of transport phenomena based on diffusion (conduction) and convection. We will study the analogy among velocity, temperature and concentration fields, and the heat transport properties in micro- and nanoscale. The course will further deal with adsorption, diffusion, electron transport, and reaction kinetics at the nanoscale, multiphase flows, porous media, and systems with reactions. The course will also introduce practical examples of energy technology.

[Course objectives]

To learn and understand the basic knowledge of velocity-temperature-concentration fields accompanied by conduction and convection in heat and mass transfer systems, as well as transport phenomena at the nanoscale. Participants are expected to describe and analyze the complex transport phenomena in heat and mass transfer for appropriate controlling and solving various problems in applications at the end of the course.

[Course schedule and contents]

Fundamentals of heat and mass transfer
After introducing heat and mass transfer phenomena in familiar devices, introduce the governing equations, boundary conditions, and various dimensionless numbers, and discuss the analogies among the velocity, temperature, and concentration fields. In addition, detailed mechanisms of heat and mass transfer and their modeling approaches are described using several basic thermo-fluid systems.

Heat and Mass Transfer at the Nanoscale
Learn the heat transfer, adsorption, diffusion, and other heat and mass transfer phenomena from a microscopic perspective based on statistical thermodynamics and molecular dynamics, and further study the relevant simulation methodologies.

Mass and charge transfer in electrochemical devices
Learn the mass and charge transfer coupled by the electro/chemical reactions in complex porous materials for electrochemical devices, such as batteries and fuel cells.

[Overview and purpose of the course]

流体力学の自然現象や工学への適用においては、重力場中での密度不均一の効果が重要となる。自然界での代表例である成層流体を中心に、流体中の【波動と乱流の基礎】を学習する。

[Course objectives]

流体中の波動と乱流の基礎について、主に成層流体を中心に学習する。

[Course schedule and contents]

１．成層流体の基本的性質（4回）：鉛直方向に密度差のある成層流体が持つ、基本的な（特殊な）性質について解説する（成層流体の支配方程式、静水圧平衡、物体を過ぎる流れとブロッキング、浮力振動数、渦位の保存則、ブシネスク近似）。

２．流体中の波動の基礎（5回）：位相速度と群速度、波の線形分散関係、成層流体中の内部重力波、物体による内部重力波の励起と伝播。

３．乱流（3回）：一様等方性乱流（慣性領域と散逸領域、次元解析とKolmogorovスケール）、成層乱流（Ozmidovスケール、運動エネルギーと位置エネルギーのエネルギー交換、密度の鉛直フラックスによる熱・物質輸送）。

４．物質拡散（2回）：拡散方程式と平均２乗変位、乱流拡散（Taylor拡散、短時間極限と長時間極限）

５．フィードバック（1回）

[Course requirements]

前提とするのは、学部レベルの基礎的な流体力学（質量保存の式、流体の運動方程式、ベルヌイの定理、基本的なベクトル解析）。

[Evaluation methods and policy]

学期末のレポートにより評価する。ただし、学期途中にレポート課題を出した場合は、その評価も加味することがある（１～２割程度）。

[Overview and purpose of the course]

Particle simulations are a tool of analyzing microscopic phenomena, and widely used in various fields of science and engineering. After providing the basics of particle simulation methods through lectures and exercises, we show various practical applications in thermofluids, solid materials, biophysics, and quantum systems.

[Course objectives]

- Understanding the basics of particle simulations
- Mastering data analysis techniques

[Course schedule and contents]

Basics of MD simulations (M.Matsumoto),7times,- Numerical simulation of equations of motion - Model potentials - Data analysis - Equilibrium vs. non-equilibrium
Application: Thermofluidal systems (M. Matsumoto),2times,- Lennard-Jones fluids - Interface, phase change, energy transport, etc.
Application: Polymeric materials (Nishikawa),2times,- Fundamentals on mechanical (viscoelastic) properties of polymer materials - Application of molecular dynamics method of polymer materials
Application: Biosystems (Inoue),1time,- MD simulation of biomolecular systems - Recent examples
Application: Quantum systems (Shimada),2times,- First principle MD - Mechanical and electronic properties on nanoscale
Check and Feedback,1time,

[Overview and purpose of the course]

Micro/nano fabrication processes and materials used to realize micro/nano systems are described. Topics will be photolithography, dry-etching, thin-film deposition, which includes bulk micro machining, surface micro machining and further advanced polymer processing.

[Course objectives]

To obtain fundamental knowledge about design and fabrication of micro/nano systems and to be familiar with recent fabrication technologies and micro/nano systems.

[Course schedule and contents]

Week 1: introduction
・ Microfabrication and devices
Week 2 to 4: Advanced semiconductor device fine processing technology
・ Front-end process flow
・ Photolithography basics and recent topics
・ Plasma etching
Week 5 to 7: Basics of semiconductor physics and device application
・ Basics of semiconductor physics
・ PN junction, metal-semiconductor junction
・ Nanocarbon material and device
Week 8 to 9: Silicon and micromaterials
・ Mechanical properties of silicon
・ Evaluation of mechanical properties of micro-scale materials
Week 10 to 11: Silicon micromachining
・ Processing process based on semiconductor fine processing technology
・ Bulk and surface micromachining
Week 12 to 14: Basics of Applied Devices
・ Electrostatic transducers and its application
・ Piezoresistive effect and its application
・ Sensors / actuators
Week 15: feedback on evaluations such as reports

Course title (and course title in English)	マイクロ・バイオシステム Micro/bio system	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,YOKOKAWA RYUUJI Institute for Advanced Study Associate Professor,KAMEI KENICHIROU

Target year	Master's students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Tue.3	Class style	Lecture (Media-based course)	Language of instruction	English

[Overview and purpose of the course]

Micro/nano systems are based on micro/nano fabrications and encompasses not only individual phenomena in physics and chemistry but also the integrated phenomena observed in these fields. Moreover, recently the integrated systems utilizing biomaterials (cells, tissues, organs etc.) are being developed to realize micro/nano bio systems with potential applications in medicine, drug development, and basic studies in life sciences. In this course, we focus on the difference of physical and chemical phenomena between micro/nano and micro scales. Micro/nano fabrications for micro/nano biosystems, biomolecular sensing, DNA/protein/cell manipulation and their integration to realize complex integrated biosystems such as BioMEMS and MicroTAS will be introduced.

[Course objectives]

To understand the fundamentals of fabrication technologies for BioMEMS and MicroTAS.
To understand the roles of micro/nano fabrications in life sciences.
To understand sensing and actuation mechanisms at micro/nano scales.

[Course schedule and contents]

The specific course goals are as outlined below.
Week 1-3: Introduction for micro/bio systems - Introduce the history and fundamentals of BioMEMS and MicroTAS based on micro/nano fabrications.
Week 4-7: Soft micro machining - In micro/bio systems, biomaterials and organic/inorganic polymers are used as structural materials. Fabrication of these materials by the so-called “soft micromachining”, and their applications will be described.
Week 8-9: Micro/nano scale bio materials - Integration of functional biomolecules, cells and polymer materials to realize micro/bio systems are described.
Week 10-11: Micro Total Analysis Systems (MicroTAS) - On-chip chemical analysis systems and bio sensing devices are described.
Week 12-15: Nano bio systems - Integration of micro/nano fabrications and biomaterials for application to biomedical and regenerative medicine are described.

Course number	G-ENG06 6G211 LB71		
Course title (and course title in English)	物性物理学１ Solid State Physics 1	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Associate Professor,NAKAJIMA KAORU Graduate School of Engineering Associate Professor,NAMURA KYOKO

Target year	1st year master's students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Wed.1	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Students will learn the basics of solid-state physics through turn-based lecturing and reading of Chapters 2-6 of C. Kittle's "Introduction to Solid State Physics." Specifically, the diffraction of waves by crystals will be discussed, followed by the concept of inverse lattices. The course also covers the forces acting between the atoms constituting crystals, and discusses the elastic properties of crystals. Additionally, students will learn the properties of phonons that quantize the elastic oscillation of crystals and understand the thermal properties of crystals. Based on the free electron model, the electrical and thermal properties of metals will also be covered.

[Course objectives]

Understanding the various underlying concepts in solid-state physics, such as inverse lattices, phonons, and free electrons

[Course schedule and contents]

Lectures 1-2 Diffraction of Waves by Crystals
Using X-rays as an example, students learn the basics of the phenomenon of diffraction of waves caused by crystals.

Lectures 3-4 Reciprocal Lattice Vector
Students learn to express conditions of diffraction using reciprocal lattice vectors and understand Ewald Construction. They will also learn about structural factors.

Lectures 5-6 Crystal Bonds
Students learn about the basic types of bonds that form crystals, i.e., van der Waals interaction, Ionic bonds, Metallic bonds, Covalent bonds, and Hydrogen bonds.

Lecture 7 Elastic Constant of Crystals
After learning the relationship between crystal symmetry and elastic constants, we study the behavior of elastic waves in cubic crystals.

Lectures 8-9 Elastic Oscillation in Crystals
Students learn vibrations of crystals with a monatomic basis and understand the concept of phonons. It is extended to the cases for crystals with two or more atoms per primitive basis.

Lecture 10 Phonon Heat Capacity

Continue to 物性物理学１(2)↓↓↓

物性物理学１(2)

After studying the statistical mechanics of phonons, we introduce the Debye model for the density of states of phonons to estimate phonon contribution to the heat capacity.

Lecture 11 Phonon Thermal Conductivity
Students will study the thermal conduction by phonons and understand the contribution of the Umklapp process to the thermal resistivity of phonon gas.

Lecture 12 Free-electron Model of Metals
Under the free-electron model of metals, students learn the statistical mechanics of electron gases.

Lecture 13 Heat Capacity of Electron Gases
Based on the statistical mechanics of electron gas, we will discuss the heat capacity of electron gases.

Lecture 14 Electrical and Thermal Conductivity of Electron Gas
Students will learn the phenomenology of electrical and thermal conductivity of electron gases. In addition, we discuss the Hall effect.

Lecture 15 Feedback
Check the course's degree of achievement against the final goal. Review as needed.

[Course requirements]

Students should have a rudimentary understanding of quantum mechanics.

[Evaluation methods and policy]

The evaluation will be conducted based on participation in discussions.

Course number	G-ENG06 6V201 LB51		
Course title (and course title in English)	微小電気機械システム創製学 Micro Electro Mechanical System Creation	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,TSUCHIYA TOSHIYUKI Graduate School of Engineering Professor,YOKOKAWA RYUUJI Graduate School of Engineering Senior Lecturer,BANERJEE, Amit Graduate School of Engineering Associate Professor,HIROTANI JUN

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Fri.4	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

This is a collaborative course in which students from both Hong Kong University of Science and Technology and Tsinghua University form teams and work together to investigate, analyze, design, and present their projects in order to accomplish a given task. In addition to the acquisition of knowledge of microsystems, the course contributes to the cultivation of English-language expertise, teamwork skills in English, and communication skills in English, which are essential for students to be active in the international community.

[Course objectives]

Acquire the ability to design and analyze microsystems
Cultivate the ability to communicate and discuss in English with overseas students in groups

[Course schedule and contents]

Part 1 and 2: CAD software for device design and analysis
　Students learn how to use the CAD software for device design and analysis.
3rd and 4th: Explanation of the assignment
　The students will learn how to design Microsystems/MEMS (microelectromechanical systems) using microfabrication technologies and the basic knowledge required to accomplish the tasks.
5th-8th: Design and analysis
　Each team will design and analyze the system while communicating with team members in English via the Internet.
9th and 10th: Presentation of design and analysis results
　Each team will present and discuss the detailed design and analysis results of the device in English.
12th-13th: Device evaluation
　Detailed evaluation of prototype devices.
14thand 15th : Presentation of evaluation results, feedback
　Each team will present and discuss the results of device evaluation in English.

[Course requirements]

Microfabrication (10G204) offered in the spring semester.

[Evaluation methods and policy]

Evaluation Method
Presentation (60%) and Report (40%).

Continue to 微小電気機械システム創製学(2)↓↓↓

微小電気機械システム創製学(2)

The presentation will be evaluated not only on the design, analysis, and measurement results of the prototype device, but also on the collaboration with the team members.

[Textbooks]

Instructed during class

[References, etc.]

（Reference books）

[Study outside of class (preparation and review)]

In order to conduct problem-solving type classes, study and work outside of lecture hours are required.

（Other information (office hours, etc.)）

The online lectures for presentations may be given over 4 or 5 periods on Fridays and should be taken consecutively. This is a collaborative lecture with the Hong Kong University of Science and Technology and Tsinghua University, and lectures and presentations will be given in English. The lectures and presentations will be given in English. In addition, students are required to take prior training in CAD software. Those who wish to take the course should contact Tsuchiya (tutti@me.kyoto-u.ac.jp) by e-mail during the first semester of the course.

*Please visit KULASIS to find out about office hours.

未更新

Course number	G-ENG06 7V205 LB71		
Course title (and course title in English)	物性物理学２ Solid State Physics 2	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,SUZUKI MOTOFUMI Graduate School of Engineering Associate Professor,NAKAJIMA KAORU

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Wed.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Students will learn the basics of solid-state physics through turn-based lecturing and reading of chapters from Ch. 7 onward of C. Kittle's "Introduction to Solid State Physics." Specifically, the state of electrons inside crystals will be discussed based on Bloch's theorem, followed by understanding the band structure. Based on this, the course covers the electrical properties of semiconductors and concepts such as holes and effective mass. We will also discuss the Fermi surface of metals and understand their primary physical properties. In addition, we will learn experimental facts, phenomenological theories, and BCS theory on superconductivity.

[Course objectives]

Learning the basics of metal and semiconductor physics

[Course schedule and contents]

Lecture 1 Nearly Free Electron Model
　Students will learn the Nearly Free Electron Model.

Lecture 2 Bloch's Theorem
　Students will learn Bloch's theorem and understand the energy gap that occurs using the Kronig-Penney model.

Lectures 3-4 Energy Bands
　The energy bands of crystals are considered using a two-wave approximation based on Bloch's theorem.

Lectures 5-8 Semiconductors
　Based on the energy band structure of semiconductors, students learn the concept of holes, and then study the concept of effective mass by considering the equations of motion that electrons and holes follow in semiconductors. Next, the carrier concentration is determined based on the statistical mechanics of electrons and holes in the semiconductor. In addition, students learn about mobility, conductions of impurity, thermoelectric effects, and motion of electrons in superlattices.

Lectures 9-11 Metals
　After learning that many of the electrical properties of metals are determined by the Fermi surface, students learn how to construct the Fermi surface for nearly free electrons. In addition, students learn how to calculate energy bands using tight-binding approximation, the Wigner-Seitz method, the pseudopotential method, etc. We also consider the quantization of electron orbits in magnetic fields and learn how to examine the Fermi surface by the de Haas-van Alphen effect.

Continue to 物性物理学２(2)↓↓↓

物性物理学２(2)

Lectures 12-14 Superconductivity

Students learn the experimental facts of the phenomenon of superconducting, consider the theory of superconductivity, and study the London equation. Based on this, they discuss the London penetration depth and coherence length. In addition, we give a brief explanation of BCS theory and learn about the quantization of magnetic flux and the Josephson effect.

Lecture 15 Feedback

Check the course's degree of achievement against the final goal. Review as needed.

[Course requirements]

Students should have an understanding of Chapters 1-6 of C. Kittel's "Introduction to Solid State Physics."

[Evaluation methods and policy]

The evaluation will be conducted based on participation in discussions.

[Textbooks]

C. Kittel 『Introduction to Solid State Physics』（Wiley）ISBN:978-0471415268

Course number	G-ENG07 6C430 LJ77		
Course title (and course title in English)	航空宇宙機力学特論 Advanced Flight Dynamics of Aerospace Vehicle	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,SENDA KEI

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Mon.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Flight Dynamics and Control of Aerospace Vehicles including Analytical Mechanics, Attitude Dynamics of Vehicles, Orbital Mechamics, etc.

[Course objectives]

To understand analytical mechanics through flight dynamics of aerospace vehicles: Basic items of Analytical Mechanics, Attitude Dynamics of Vehicles, Orbital Mechamics, etc.

[Course schedule and contents]

Analytical Mechanics,7times,1. Newton equations, 2. Lagrange equations, 3. Hamilton equations
Orbital Mechamics,4times,1. Motions in central force field, 2. Conservation law, 3. Orbit transition
Attitude Dynamics and Control,4times,1. Kinematics of rotation, 2. Attitude mechanics, 3. Stability analysis of equilibrium points, 4. Attitude Control

[Course requirements]

Foundation of mechanics and mathematics, Flight Dynamics of Aerospace Vehicle (Undergraduate)

[Evaluation methods and policy]

Grades are assessed on a scale of 100 points, based on the scores of regular tests and class participation.
Class participation is assessed based on submitted assignments, class participation, and in-class comments.
Class participation is taken into account up to a maximum of 20% of the overall grade.
The assessment criteria follow the policy for grading in the Faculty of Engineering, as stated in the course handbook.

[Textbooks]

Instructed during class

Shoichro Koide 『Introductory course of physics 2 Analytical Mechanics』（Iwanami Shoten）ISBN: 9784000298629（2017, in Japanese）
Miki Wadachi 『Introductory course of physics 10 Mathematics for physics』（Iwanami Shoten）ISBN: 9784000298629（2017, in Japanese）

[Study outside of class (preparation and review)]

Students should learn the basic mechanics and mathematics in advance as necessary. They should answer the questions given as assignments, understand the lecture content, review it by reorganizing their notes, etc., and systematize the content they have learned. For this reason, it takes an average of about 4 hours of preparation and review for each lesson.

（Other information (office hours, etc.)）

Instructions will be given during class.

*Please visit KULASIS to find out about office hours.

Course number	G-ENG07 6G230 LJ77		
Course title (and course title in English)	動的固体力学 Dynamics of Solids and Structures	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,BIWA SHIRO Graduate School of Engineering Assistant Professor,ISHII YOSUKE

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Mon.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Fundamental principles for dynamic deformations of solids and structures are examined. In particular, basic characteristics of elastic wave motion in solid media are emphasized. Transient responses as well as fracture behavior of materials and structures due to dynamic loading are also considered. In contrast to the Mechanics of Materials courses in the undergraduate program which mainly deal with the stress/deformation in structural components in static equilibrium, the significance of this course lies in that the time-dependent stress/ deformation is studied in a more general framework of solid mechanics. The topics in this course is also important as the theoretical basis of the strength design of structural components subjected to dynamic loading as well as the nondestructive evaluation of material properties/damage using elastic (ultrasonic) waves.

[Course objectives]

This course aims to establish the understanding of basic characteristics of dynamic deformations, elastic waves and dynamic fracture in solid media, as well as to learn about technological applications of elastic waves in a variety of fields. Particular emphasis is put on the mathematical aspects of the physical phenomena involved.

[Course schedule and contents]

Week 1: Fundamentals of elastodynamics (Expressions of stress and strain; Conservation laws; Hooke's law; Principle of virtual work; Hamilton's principle and its applications)
Week 2: Basics of wave propagation (1) (One-dimensional wave equation; D'Alembert's solution; Harmonic waves)
Week 3: Basics of wave propagation (2) (Spectral analysis; Waves in structural members; Dispersive waves; Phase and group velocities)
Week 4: Stress waves in bars (Reflection and transmission at bi-material connection; Reflection at a free end; Stress wave by tensile loading at a bar end; Plastic wave)
Week 5: Waves in isotropic elastic media (Navier's equations; Longitudinal and transverse waves; Plane elastic waves in isotropic solids)
Week 6: Waves in anisotropic elastic media (1) (Voigt representation; Plane elastic waves in anisotropic solids; Christoffel's equation; Acoustic tensor)
Week 7: Waves in anisotropic elastic media (2) (Energy flux deviation; Group velocity; Slowness surfaces)
Week 8: Reflection and transmission (1) (Reflection and transmission of normally incident waves; Snell's law; Mode conversion)
Week 9: Reflection and transmission (2) (Reflection and refraction of obliquely incident waves; Total reflection)

Continue to 動的固体力学(2)↓↓↓

動的固体力学(2)

Week 10: Guided elastic waves (Bulk waves and guided waves; Rayleigh wave)
Week 11: Guided elastic waves (Lamb wave; SH plate wave; Love wave; Dispersion and multiple modes)
Week 12: Dynamic fracture mechanics (1) (Linear fracture mechanics; Stress intensity factor; Energy release rate)
Week 13: Dynamic fracture mechanics (2) (Stationary cracks under dynamic loading)
Week 14: Dynamic fracture mechanics (3) (Propagating cracks; Dynamic energy release rate)
Week 15: Feedback

[Course requirements]

Basic knowledge of mechanics of materials (solid mechanics, continuum mechanics) is expected.

[Evaluation methods and policy]

Grading is made based on the final examination (about 60%) and the report assignments (about 40%). The total score is evaluated between 0 and 100 points (the pass mark is 60).

[Textbooks]

No textbooks are assigned. Print-outs are handed in when needed.

[References, etc.]

（Reference books）

No reference books are assigned.

[Study outside of class (preparation and review)]

Enrolling students are expected to work on the lecture materials and the homework problems.

（Other information (office hours, etc.)）

The time units and weights for each item on the above list are subject to possible changes.

[Overview and purpose of the course]

We introduce advanced system control theory of modern control based on state equation. In particular, lectures on nonlinear control, optimal control and application to control system design of mechatronics and spacecraft will be given.

[Course objectives]

To acquire modern control theory and nonlinear control useful for mechatronics and aerospace engineering.

[Course schedule and contents]

Three lectures on aerospace and control:
1. State-space equations, 2. Basics of variational methods, 3 Integrability and Forbenius' theorem

Four lectures on stability and dissipativity:
1. Lyapunov stability, 2. La Salle's invariance principle, 3. Lp stability, 4. Dissipativity

Four lectures on optimal control:
1. Optimal control, 2. Dynamic programming, 3. Maximum principle, 4. Control Lyapunov function and inverse optimality

Three lectures on nonlinear control synthesis:
1. Passivity and passivity theorem, 2. Hamiltonian systems and passivity based control, 3. Feedback linearization.

The last lecture gives a summary.

[Course requirements]

Dynamical Systems Control Theory

[Evaluation methods and policy]

The score will be evaluated based on reports.

Course title (and course title in English)	航空宇宙工学特別実験及び演習第一 Experiments and Exercises in Aeronautics and Astronautics I	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,FUJIMOTO KENJI

Target year	Master's students	Number of credits	4	Year/semesters	2025/Intensive, year-round
Days and periods	Intensive	Class style	Experiment (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Recent topics of advanced research in aeronautics and astronautics are studied from fundamental and application-oriented points of view. The research planning, literature survey/review, and original research training are supervised by professors in order to gain highly developed research skills.

[Course objectives]

The purpose is to grasp the current trend/important issues and establish the direction of one's research for master's thesis.

[Course schedule and contents]

Literature review, 5 times: Survey and review of recent original articles related to the master's thesis
Seminar, 5 times: Report and discussion of the progress in one's research
Exercise and experiments, 5 times: Exercise and experiments for the master's thesis
The number of times and contents may be subject to change according to one's laboratory and the research topic.

[Course requirements]

None

[Evaluation methods and policy]

Grading is based on the attendance, the progress reports, the presentation and discussion at seminars.

[Textbooks]

Not used

[References, etc.]

（Reference books）

References are suggested by supervisors according to the research topic.

[Study outside of class (preparation and review)]

Reading of the suggested references is required through the term.

（Other information (office hours, etc.)）

Days and periods	Intensive	Class style	Experiment (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Recent topics of advanced research in aeronautics and astronautics are studied from fundamental and application-oriented points of view. Research training is supervised by professors for the research topic planned in Experiments and Exercises in Aeronautics and Astronautics I in order to further develop the research skills.

[Course objectives]

The purpose is to grasp the current trend/important issues and clarify the originality of one's research for master's thesis.

[Course schedule and contents]

Literature review, 5 times: Survey and review of recent original articles related to the master's thesis
Seminar, 5 times: Report and discussion of the progress in one's research
Exercise and experiments, 5 times: Exercise and experiments for the master's thesis
The number of times and contents may be subject to change according to one's laboratory and the research topic.

[Course requirements]

Experiments and Exercises in Aeronautics and Astronautics I is a prerequisite in principle.

[Evaluation methods and policy]

Grading is based on the attendance, the progress reports, the presentation and discussion at seminars.

[Textbooks]

Not used

[References, etc.]

（Reference books）

References are suggested by supervisors according to the research topic.

Course number	G-ENG36 7V413 SJ71				
Course title (and course title in English)	機能構造力学セミナー Seminar on Mechanics of Functional Solids and Structures		Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,BIWA SHIRO	
Target year	Doctoral students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Wed.4	Class style	Seminar (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

This Seminar is arranged to review advanced topics related to materials and structural systems involved in aeronautics and astronautics, as well as to nurture the presentation and discussion skills. Specific topics include the numerical methods for dynamic behavior of thin-walled structures and composite/metamaterial structures, analysis of elastodynamic functional structures, and advanced experimental techniques for nondestructive materials evaluation/structural health monitoring.

[Course objectives]

The goal is to nurture the skills to survey and discuss advanced topics in the mechanics of functional materials and structures as well as nondestructive materials evaluation/structural health monitoring, and to utilize them in carrying out the research project.

[Course schedule and contents]

Weeks 1-3: Subject setting. Literature survey is to be carried out for advanced topics in the mechanics of functional materials and structures as well as nondestructive materials evaluation/structural health monitoring.
Weeks 4-14: Presentation and discussion. The results of literature survey are presented and discussed with the critical evaluations for them.
Week 15: Finalization. Literature survey is summarized.

[Course requirements]

Enrolling students are expected to have the fundamental knowledge of solid mechanics and to be willing to work on advanced topics in the mechanics of solids/structures.

[Evaluation methods and policy]

Grading is based on the literature survey, presentation, discussion and the final report.

[Textbooks]

No textbooks are assigned.

Course number	G-ENG08 7C037 LJ28				
Course title (and course title in English)	混相流工学 Multiphase Flow Engineering and Its Application	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,YOKOMINE TAKEHIKO		
Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Wed.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Reviewing of the fundamental definition and characteristics of multiphase flows, and to learn the governmental equations and some modelings of the constitutive equations and the current status of the multiphase flows. Moreover, to review and learn the fundamental definition and characteristics of particle flows, and to learn the numerical methods to track the particle laden flows and the particle measurement method.

[Course objectives]

As for the multiphase flows, to learn its fluid dynamics behaviors, governing equations and numerical methods, and finally to discuss its applications to many engineering fields.

[Course schedule and contents]

What#039s the multiphase flows?,1time,To review the definitions and fundamental characteristics of multiphase flows.
Governing equation of gas-liquid two phase flows,2times,To learn the governing equation of gas-liquid two phase flows
Modeling of gas-liquid two phase flows,2times,To learn modeling of gas-liquid two phase flows and its constitutive equations
Numerical methods,3times,To learn the numerical methods to solve the single-phase and two-phase flows
Examples of gas-liquid two phase flow analysis,1time,To show some examples of gas-liquid two phase flow analysis
Characteristics of particle flows,1time,Review characteristics of particle flows
Fundamental aspect of particle flows,1time,Explain variables and parameters subjected to interaction between particle and particle and/or particle and flow. Moreover, momentum and heat exchange between phases, i.e., to explain One-way, Two-way and Four-way coupling numerical methods.
Particle methods,2times,Explain numerical method for thermofluid including static particles like a packed bed. Moreover, numerical methods for macroscopic and microscopic particles such as Discrete Element Method.
Measurements of particle characteristics,2times,Review several measuring methods of particle characteristics and thermofluid behaviors

Course title (and course title in English)	核融合プラズマ工学 Physics of Fusion Plasmas	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,MURAKAMI SADAYOSHI Graduate School of Engineering Assistant Professor,Morishita, Yuya

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Wed.3	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

The behavior of high-temperature plasmas, especially magnetically confined plasmas, is discussed from the kinetic point of view, including linear and nonlinear physical phenomena governing the behavior. Drift motion of particles in a magnetic field, collisional transport, micro instabilities, turbulent transport, plasma heating, edge plasma, plasma measurement, etc., will be lectured.

[Course objectives]

The course aims to provide a basic kinetic analysis of plasmas and to understand linear and nonlinear physical phenomena such as plasma transport and heating in fusion plasmas confined in magnetic fields.

[Course schedule and contents]

>Torus plasmas and MHD(1) torus plasma, coordinates and magnetohydrodynamic equilibrium of torus plasmas such as tokamaks.
>Particle trajectories(2) drift trajectories of particles in torus plasmas
>Collisions and transport between particles (2) scattering in velocity space due to collisions between particles and the resulting transport (classical and neoclassical transport)
>Microscopic instabilities(2) instabilities in velocity space and instabilities causing turbulent transport
>Turbulent transport(1)
>Confinement law (1) Plasma confinement scaling
>Plasma heating (3) Joule heating, neutral particle injection heating, wave heating
>Edge plasma (1) Physical phenomena such as atomic processes in peripheral plasma
>Plasma measurement (1) Major plasma measurement methods currently used

Course title (and course title in English)	放射線医学物理学 Medical Physics	Instructor's name, job title, and department of affiliation	Institute for Integrated Radiation and Nuclear Science Professor,TANAKA HIROKI Institute for Integrated Radiation and Nuclear Science Associate Professor,SAKURAI YOSHINORI Institute for Integrated Radiation and Nuclear Science Assistant Professor,TAKATA, Takushi

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Fri.3	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Medical physics is the general term for the physics and technology which are supporting radiation diagnosis and therapy, and particle therapy. As it covers many different fields, the important subjects are "promotion for the advance of radiation therapy" and "quality assurance for radiation therapy". The scope of this course is to learn the fundamental knowledge for radiation medical physics. Especially, the focus is put on the understanding for (1) the bases of physics, biology and so on for radiation, (2) the physics for the radiations applied to diagnosis, (3) the characteristics of radiations and particle beams applied to therapy, and (4) the quality assurance and so on for radiation diagnosis and therapy.

[Course objectives]

To learn the fundamental knowledge of medical physics, mainly for radiation physics in diagnosis and therapy

[Course schedule and contents]

Introduction to medical physics for radiation,1time,
Fundamental bilology for radiation,1time,
Radiation measurement and evaluation,2times,
Physics in radiation diagnosis,4times,
Physics in radiation therapy,5times,
Quality assurance and standard dosimetry,1time,
Achievement Assessment,1time,

[Course requirements]

It is recommended to attend the course, "Radiation Measurement for Medicine", concurrently.

[Evaluation methods and policy]

Grades will be based on report (50 points) and class performance (50 points: quizzes, comments in class, etc.)

[Textbooks]

Not specified. Handouts will be given for each topic.

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Tue.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

To deepen the understanding of the background, current situation and issues of nuclear energy utilization, and introduce it to various nuclear engineering research. Mainly, the concept, model, etc. of reactor control and safety (reaction / shielding, etc.), nuclear power plant (development process / design), nuclear fuel cycle (processing / disposal), nuclear fusion (reaction / material), etc. And lectures, including theory and analysis methods.

[Course objectives]

Understand the basic concepts, models, and theories related to the use of nuclear energy required for nuclear engineering research, and their links to developmental research.

[Course schedule and contents]

(1,2) Reactor fundamentals (fission reactions, understanding the four factors, criticality, resonance/absorption, etc.)
(3,4) Reactor control and safety (control rod value, load-following operation, accident, etc.)
(5,6) Nuclear power plant (APWR/ABWR, design, policy, etc.)
(7,8) Nuclear fuel cycle (enrichment, cycle overview, back-end, etc.)
(9) Next generation reactors
(10,11) Basics of fusion (reaction, Lawson conditions, confinement method, etc.)
(12-14) Fusion development (wall, blanket, heat/safety, materials, etc.)
(15) Feedback, confirmation of learning achievement

[Course requirements]

None

[Evaluation methods and policy]

The attendance score (50) and the grade (50) for the assignment at the time of the lecture are comprehensively evaluated.

Course number	G-ENG08 5C076 LE28		
Course title (and course title in English)	基礎電磁流体力学 Fundamentals of Magnetohydrodynamics	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,MURAKAMI SADAYOSHI Graduate School of Engineering Professor,YOKOMINE TAKEHIKO Graduate School of Engineering Senior Lecturer,NARITA EMI

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Thu.2	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

This course provides fundamentals of magnetohydrodynamics which describes the dynamics of electrically conducting fluids, such as plasmas and liquid metals. The course covers the fundamental equations in magnetohydrodynamics, dynamics and heat transfer of magnetofluid in a magnetic field, equilibrium and stability of magnetized plasmas, as well as illustrative examples.

[Course objectives]

The students can understand fundamentals of magnetohydrodynamics which describes the dynamics of electrically conducting fluids, such as plasmas and liquid metals. Moreover, the students will figure out the applications of magnetohydrodynamics to the various science and engineering fields.

[Course schedule and contents]

Liquid Metal MHD,7times,1. Introduction and Overview of Magnetohydrodynamics 2. Governing Equations of Electrodynamics and Fluid Dynamics 3. Turbulence and Its Modeling 4. Dynamics at Low Magnetic Reynolds Numbers 5. Glimpse at MHD Turbulence amp Natural Convection under B field 6. Boundary Layers of MHD Duct Flows 7. MHD Turbulence at Low and High Magnetic Reynolds Numbers
Plasma MHD,8times,1. Introduction to Plasma MHD 2. Basic Equation of Plasma MHD 3. MHD Equilibrium 4. Axisymmetric MHD Equilibrium 5. Ideal MHD Instabilities 6. Resistive MHD Instabilities 7. MHD Waves in Plasmas 8. Student Assessment

[Course requirements]

Fundamental fluid dynamics and electromagnetics should be learned prior to attend this lecture.

[Evaluation methods and policy]

Attendance and two reports

[Textbooks]

Handout of the presentation will be provided at the lecture

Days and periods	Wed.3	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Particle accelerator is essential for proceeding nuclear and particle physics but also becomes a very important tool for future nuclear sciences and engineering. In this lecture, a basics theory of accelerator physics including beam optics and dynamics of the circular accelerators is given, and also various applications of the accelerators are also presented.

[Course objectives]

This lecture aims to learn a basic accelerator theory and to attain abilities to make a primitive design of circular accelerator.

[Course schedule and contents]

Hisitory and outline of particle accelerator,1time,
Basic theory of beam dynamics in circular accelerator,1time,
Major components of accelerators,1time,
Orbit theories of the beam,3times,
Theory of radio frequency acceleration,2times,
Practice of accelerator designing,2times,
Non linear beam dynamics and others,4times,
Summary and check the accomplishment ,1time,

Course title (and course title in English)	応用中性子工学 Applied Neutron Engineering		Instructor's name, job title, and department of affiliation	Institute for Integrated Radiation and Nuclear Science Professor,HINO MASAHIRO Institute for Integrated Radiation and Nuclear Science Associate Professor,CHATAKE TOSHIYUKI	
Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Thu.3	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Neutrons are very powerful and useful tool for advanced science and technology. In particular, low-energy neutrons which are called thermal or cold neutron are well used not only for static and dynamic structure analysis by scattering, but also quantitative elemental analysis by irradiation. In the course, we offer the structures and characteristics of the research reactor and spallation neutron source,respectively. We also offer lectures on the latest trends in basic physics research and material and life science research, and neutron imaging research.

[Course objectives]

・To understand generation of low-energy neutrons and their application.

[Course schedule and contents]

1-2: Outline to application of neutron beam and irradiation,

3-4: Neutron facilities (research reactors and spallation neutron sources)

5-6: Neutron optics and the application for basic physics research

7-9: Introduction to neutron scattering

10-13:Application of life science with neutron scattering

14-15: Neutron imaging and their application.

Days and periods	Mon.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Study of basic concepts necessary for understanding the principles of various nuclear engineering studies from the physicochemical properties of atoms, nuclei, and radiation to the generation and use of energy by fission reactions.

[Course objectives]

The course objective is to understand the link between basic science and the latest research in the field of nuclear engineering, and to understand the latest advancements made in basic and applied research and future issues.

[Course schedule and contents]

Introduction to Radiation 1
1) Discovery of radiation
2) History of radiation
3) Basics of radiation
4) Interaction with substances
5) Detection of radiation
6) Generation of radiation
7) Industrial uses of radiation
Energy generation and utilization 1
8) Energy situation and nuclear power
9) Basics of reactor physics
10) Reactor control
11) Reactor selection-present
12) Reactor selection-past
13) Reactor selection-next generation reactor
14) Viewpoints on nuclear energy utilization and development
15) Feedback; confirmation of learning achievement

[Overview and purpose of the course]

Study of the fundamentals of radiation properties and their control, and energy utilization and management, necessary for understanding the principles of various nuclear engineering studies.

[Course objectives]

The course objective is to understand the association between basic science and the latest research in the field of nuclear engineering, and to understand the latest advancements made to basic and applied research and future issues.

[Course schedule and contents]

Introduction to Radiation 2
1) Radiation biology
2) Medical application of radiation
3) Effects of radiation on the human body
4) Safe use of radiation
5) Radiation-related laws and regulations
Energy generation and utilization 2
6) History and fundamentals of nuclear fusion
7) Fusion reactor development
8) Prediction and Control of Fusion Reactor
9) Power reactor systems
10) Ensuring safety
11) Advanced Materials Development
12) Radiation in the environment
13) Nuclear fuel cycle
14) Radioactive waste disposal
15) Feedback; confirmation of learning achievement

Days and periods	Tue.3	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

This course provides a comprehensive introduction to computational modeling and simulation of magnetically confined fusion plasmas. Topics include elements of nonlinear plasma physics, modeling of various phenomena in fusion plasmas, computational methods in plasma physics, and integrated simulation of fusion plasmas

[Course objectives]

>Understand basic theoretical models of nonlinear phenomena related to fusion plasma.
> Understand the simulation methods to analyze nonlinear phenomena related to fusion plasma.
>Acquire basic knowledge to deal with general nonlinear problems.

[Course schedule and contents]

Nonlinear Phenomena in Plasma Physics,1time,Review of nonlinear phenomena in plasmas; modeling of plasmas
Nonlinear Waves in Plasmas,2times,Nonlinear ion acoustic waves; Korteweg de Vries equation; Soliton; Nonlinear Schrodinger equation
Wave-Particle Interaction in Plasmas,2times,Linear wave particle resonant interaction; Landau damping; Trapping in a single wave: Nonlinear interaction with waves; Stochastic particle motion; Quasi-linear interaction
Wave-Wave Interaction in Plasmas,2times,Parametric instability; Three-wave interaction
Numerical Analysis of Differential Equations,4times,Basics of numerical simulations; Ordinary differential equation; Partial differential equation; Matrix solver
Numerical Simulation of Fusion Plasmas,3times,Numerical simulation of fusion plasmas: equilibrium, transport, heating and current drive, stability, energetic particles, integrated modeling
Assessment of Achievement,1time,Assessment of Achievement

Course title (and course title in English)	核材料工学 Nuclear Materials	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,TAKAGI IKUJI

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Tue.1	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Nuclear fusion reactors and fission reactors present severe challenges such as high temperatures, high pressure, and high radiation fields, and the nuclear materials used in them are selected with reference to various properties. This course describes in detail major nuclear materials such as nuclear fusion reactor blankets, plasma facing materials, reactor pressure vessels, and fuel cladding, as well as other nuclear materials. Also, we hold roundtable discussions to learn about the latest breakthroughs in research and development.

[Course objectives]

The goal of the course is to understand how the performance and safety of systems such as nuclear fusion reactors and fission reactors are related to the properties of materials, and to comprehend trends in materials research for improving performance and safety.

[Course schedule and contents]

Fission reactor materials, 5 classes: Give an overview of fission reactors and discuss the below components.
- Fuel (recoverable reserves, uranium abundance ratio, nuclear cross sections, MOX)
- Cladding material (zirconium alloy, corrosion, hydrogen embrittlement)
- Control material (absorption cross sections, control rods, burnable poisons)
- Moderators (scattering cross sections, moderating efficiency, diffusion length)
- Coolants (thermal properties, radioactivation, furnace types)
- Structural materials (pressure vessels, mechanical properties, radiation damages)

Nuclear fusion reactor materials, 4 classes: Give an overview of nuclear fusion reactors and explain their development history (tokamak, helical, inertial) as well as the below components.
- Structural materials (radioactivation, radiation damages, mechanical properties, effects of 14MeV neutrons)
- Coil materials (alloy superconductivity, compound superconductivity)
- Blankets (tritium breeding materials, neutron multiplication materials, fuel cycle)
- Plasma facing materials (loss and redeposition, hydrogen recycling, tritium inventory and leakage)

Latest research trends, 5 classes: Students present information they have researched on the latest in research and development, and related question and answer sessions and debates are held.

Feedback class, 1 lecture: Review the reports assigned in class as well as students’ presentations and question and answer sessions.

Course number	G-ENG09 5C214 LJ75		
Course title (and course title in English)	凝固・結晶成長学 Microstructure,solidification and crystal growth	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Associate Professor,NOSE YOSHITAROU Graduate School of Engineering Professor,HIDEYUKI YASUDA

Target year	Master's students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Mon.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

To learn science and technologies on solidification and crystal growth, which are fundamentals of processing for fabrication of almost materials. We talk on microstructures during solidification and crystal growth based on kinetics and thermodynamics including phase diagrams. To understand formation mechanism of microstructures in materials such as metals and relationship between microstructures and properties in materials.

[Course objectives]

To understand science on solidification and crystal growth.
To study a way of considering to control microstructures in materials processing, and to learn formation mechanism of microstructures from the viewpoints of thermodynamics and kinetics.

[Course schedule and contents]

(1) Introduction【1 week】
(2) Crystal growth and devices on thin film materials【6-7 weeks】
(3) Solidification, and selection of microstructures and phases【6-7 weeks】
(4) Feedback【1 week】

[Course requirements]

It is desirable to have learned thermodynamics, transport phenomena, microstructures in materials, and corresponding subjects, but it is not necessary.

[Evaluation methods and policy]

Evaluation will be based on reports.

[Textbooks]

Utilizing resumes provided in the lecture.

Course number	G-ENG09 5C263 LJ75		
Course title (and course title in English)	結晶物性学特論 Physical Properies of Crystals Adv.	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,INUI HARUYUKI Graduate School of Engineering Professor,KISHIDA KIYOUSUKE

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Wed.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Various physical properties of crystalline materials are strongly affected by their crystal symmtery and also by thier texture developed through forming and heat-treatment processes. In this course, fundamentals of crystal structure, crystal defects and crystal plasticity as well as their relationship with mechanical and functional properties will be lectured.

[Course objectives]

This class aims to help students to acquire fundamentals to control various properties of crystalline materials through understandig the influences of crystal symmetry on various properties of crystalline materials.

[Course schedule and contents]

Week 1: Basic theory of elasticity
Weak 2: Yield criteria and plastic deformation of single crystals
Weak 3: Plastic deformation of polycrystals
Week 4: Fundamentals of texture
Week 5: Anisotropic properties of crystalline materials
Week 6: Deformation twinning
Week 7: Grain boundaries
Week 8: Symmetry elements and crystal symmetry
Week 9: Crystal symmetry and diffraction
Week 10: Intermetallic compounds and lattice defects
Week 11: Planar defects in intermetallic compounds
Week 12: Dislocations and plastic deformation of intermetallic compounds
Week 13,14: Improvement of plastic deformability of intermetallic compounds
Week 15: Feedback

[Course requirements]

None

[Evaluation methods and policy]

Evaluation will be based on individual reports.

Course title (and course title in English)	磁性物理 Magnetism and Magnetic Materials	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,NAKAMURA HIROYUKI Graduate School of Engineering Associate Professor,TABATA YOSHIKAZU

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Mon.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Fundamental magnetism of condensed matters and application of magnetic materials are lectured.

[Course objectives]

Systematic understanding of magnetic properties of condensed matters and learning application of magnetic materials

[Course schedule and contents]

1-2. Magnetic moment of atom
electronic states and stability of magnetic moment of atom, intra-atomic electron correlations, spin-orbit interaction, crystal-electric field

3. Curie and Pauli paramagnetism
magnetism in the localized- and itinerant-limited electron systems without spin-spin interactions

4-6. Magnetic phase transition in the localized spin system
exchange interaction, Heisenberg and Ising models, mean-field approximation, spin wave

7-8. Antiferromagnet and other magnetic states
antiferromagnet, metamagnetic transition, frustration, quantum spin, topological order

9-10. Itinerant electron magnetism
Hubbard model, Stoner theory, spin density wave

11. Experimental methods
magnetization measurement, nuclear magnetic resonance, muSR, Moessbauer spectroscopy, neutron scattering

12-14. Magnetic materials
magnetization process, magnetic anisotropy, actual magnetic materials

15. Conclusion

Continue to 磁性物理(2)↓↓↓

磁性物理(2)

[Course requirements]

Fundamental knowledge of quantum mechanics, electromagnetism, thermodynamics, and statiscal physics. It is desirable to have already taken "Condensed Matter Physics, 3rd year, Materials Science and Engineering".

Course title (and course title in English)	原子分子工学特論 Atomic-molecular scale engineering	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Associate Professor,KUROKAWA SHIYUU Graduate School of Engineering Associate Professor,ICHII TAKASHI

Target year	Master's students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Fri.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

材料科学の基礎となる熱力学を学ぶ。まず、高校で学習した熱化学との違いを認識し、その上で、熱力学の諸法則を説明するとともに、理想気体の状態変化、相変化、自由エネルギー、平衡と相律、相図，混合物の熱力学などの基礎的事項について講述する。

[Course objectives]

本講義を学習することで、各種材料の研究開発に必要とされる、より高度な熱力学をさらに学習していくための基盤となる基礎的な知識を得る。特に、エントロピー，エンタルピー，自由エネルギーについて学習し、物質の状態変化と化学反応について熱力学的に考察する意味を理解する。

[Course schedule and contents]

熱力学の概説（2〜3回）
熱力学とは、どのような学問かについてその概略について述べる。また、熱力学で使われる諸量と単位について説明し、さらに、気体の性質および分子運動論，ボルツマン分布等について解説する。

熱力学第一法則と第二法則（3回）
熱力学第一法則、熱の定義、準静的過程、比熱の式、エンタルピー、理想気体への第一法則の適用について解説する。さらに、可逆過程と不可逆過程、第二法則、カルノーサイクル、エントロピー、理想気体サイクルの諸項目について解説する。

自由エネルギー（2〜3回）
自由エネルギー、熱力学的性質の相互関係、化学平衡などについて解説する。

純物質および単純な混合物の熱力学（3回）
純物質の物理的な変化、混合物の熱力学について解説する。相平衡、ギブズの相律、相図、理想気体の混合などが含まれる。

混合物の熱力学と化学平衡（3回）
溶液の熱力学、化学ポテンシャル、活量、熱力学の化学平衡への応用について解説する。

学習到達度の確認（1回）
学習到達度を確認する。

講義内容の理解度を高めるため、各講義時間中に小演習（不定期）を実施する。

Days and periods	Tue.2	Class style	(Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

材料科学において、計算科学的アプローチは、材料の特性や挙動を予測し、新材料の設計を加速するための重要な手法となってきている．本講義では，分子や固体における有用な電子状態計算手法，統計力学手法，機械学習手法，数学的手法など，基礎となる理論や計算手法を実例を挙げて説明する．計算科学を用いた材料設計の理解を深め，実際の問題解決にどのように適用できるかを学ぶ．

[Course objectives]

計算材料科学の基礎事項に加え，それらを材料科学における問題に応用するための方法や考え方を習得する．

[Course schedule and contents]

平衡系・非平衡系の材料統計力学の基礎理論と応用，7回，熱平衡あるいは非平衡状態での固体材料の諸特性の理解と計算に必要となる基礎知識について，特に統計力学・数学・熱力学・情報理論などの観点から多角的に解説し，応用例についても紹介する．
材料科学における統計力学計算，2回，分子動力学計算やモンテカルロ手法の基礎および材料科学への応用を紹介する．
分子・固体の化学結合とモデリング手法, 2回, 分子・固体の化学結合および原子間相互作用のモデリング手法について講述する．
材料科学における機械学習の応用，3回，機械学習の基礎および機械学習の材料科学への応用を紹介する．
学習到達度の確認, 1回, 本講義で学習した内容について，到達度を確認する．

[Overview and purpose of the course]

This course will present the theory of nonlinear dynamical systems described by nonlinear ordinary differential or nonlinear difference equations and their applications to science and technologies. In particular, the basic ideas for analyzing the behavior of global solutions described by the nonlinear systems will be explained using techniques from real analysis, geometry, topology, and functional analysis.

[Course objectives]

Students will be able to perform mathematical analysis of nonlinear problems and nonlinear phenomena arising in various fields of electrical and electronic engineering, such as system control, networks, data analysis, machine learning, AI, physical properties, materials, etc., while appropriately selecting the necessary mathematical techniques.

[Course schedule and contents]

Guidance and fundamentals (1): examples of nonlinear systems and fundamentals from the qualitative theory of ordinary differential equation (vector field, flow, autonomous and non-autonomous systems, equilibrium points, stability, etc.)

Continuous-time linear systems (2): fundamentals from linear algebra, state transition matrices, and invariant spaces (stable, unstable, and central subspace)

Continuous-time nonlinear systems (2): local linearization, Hartman-Grobman theorem, classification of equilibrium points, hyperbolicity, and stable manifold theorem

Discrete-time systems (2): diffeomorphisms, fixed points and their classification, hyperbolicity, invariant manifolds, and Arnold ’ s cat map

Closed orbits, Poincare maps, and forced oscillations (2): Limit cycles, Floquet theory, non-autonomous periodic systems, and stroboscopic maps

Asymptotic behavior, equivalence relations, structural stability (1): invariant sets, attractor sets, limit sets, chaotic attractors, topological conjugation, and topological equivalence

Bifurcation (2): types of local and global bifurcations, normal forms, and central manifold theory

Linear operator representation and data-driven applications (2): Koopman operator, Perron-Frobenius

Days and periods	Tue.1	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese and English

[Overview and purpose of the course]

The course deals with mathematical methods of system optimization mainly for combinatorial optimization problems. It covers such topics as integer optimization and its typical problems, exact solution methods including dynamic programming and the branch and bound method, approximate solution methods including the greedy method, meta-heuristics including genetic algorithms, the simulated annealing method, and the tabu search.

[Course objectives]

To acquire knowledge on formulations of combinatorial optimization problems as integer programming problems, basic concepts, algorithms, characteristics, and application procedures of exact solution methods, approximate solution methods, and meta-heuristics.

[Course schedule and contents]

1. Combinatorial optimization problems and complexity (1-2 weeks)
- necessity and importance of combinatorial optimization, typical problems, complexity, classes P and NP, complexities of combinatorial optimization problems, limitation of exact solution methods, necessities of approximate solution methods and meta-heuristics
2. Exact solution methods (3 weeks)
- Principle of Optimality, dynamic programming, branch-and-bound method, and their applications
3. Integer programming (2-3 weeks)
- formulation as an integer programming problem, relaxation problem, and cutting plane algorithm
4. Approximate solution methods (2-3 weeks)
- greedy method, integer rounding method, beam search, etc.
5. Metaheuristics (3-4 weeks)
- local search, basic ideas behind metaheuristics, iterated local search, variable neighborhood search, genetic algorithms, simulated annealing method, tabu search, etc.
6. Multiobjective optimization (1-2 weeks)
- the importance of multiobjective optimization, theoretical backgrounds, and solution methods.

The number of weeks for each topic is subject to change according to the students' level of understanding. We will provide the schedule of 15 weeks in the class so that the students will be able to prepare for the class.

Days and periods	Wed.3	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese and English

[Overview and purpose of the course]

The first half: the special theory of relativity and the covariance of Maxwell's equations
The latter half: theory and methods of computational electromagnetics

[Course objectives]

1. Understanding of the basic concepts of special theory of relativity and the covariant formulation of Maxwell#039s equations
2. Understanding of the basics of computational electromagnetics

[Course schedule and contents]

Introduction to special theory of relativity: 2-3times
- Galilean relativity and special relativity
- Lorentz transformation
Tensor representation and relativistic dynamics: 2-3times
- Introduction to tensor representation
- Relativistic dynamics
Covariant formulation of Maxwell's equations: 2-3times
- Electromagnetic field tensor
- Lorentz covariance of Maxwellrsquos equations
Foundations of computational electromagnetics: 1-2times
- Introduction to computatinal electromagnetics
Theory and methods in computational electromagnetics: 3-4times
- Methods in computational electromagnetics, e.g., finite element method
Matrix computations in computational electromagnetics: 1-2times
- Basics and state-of-the-art of matrix computations in computational electromagnetics

[Course requirements]

Basic electromagnetic theory

Course number	G-ENG10 5C611 LE72		
Course title (and course title in English)	電磁界シミュレーション Computer Simulation of Electrodynamics	Instructor's name, job title, and department of affiliation	Research Institute for Sustainable Humanosphere Professor,EBIHARA YUUSUKE Research Institute for Sustainable Humanosphere Senior Lecturer,Hsieh Yikai

Target year	1st year master's students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Tue.5	Class style	Lecture (Media-based course)	Language of instruction	English

[Overview and purpose of the course]

We learn the FDTD (Finite-Difference Time-Domain) method that is used to analyze the electromagnetic fields, and the two methods, the PIC (Particle-In-Cell) method and Vlasov simulation, for solving the interaction between electromagnetic fields and plasma particles in a self-consistent manner. We write a programming code, and present the results as an exercise. We will complete a final report by summarizing the results accomplished by our own analysis. A sample programs will be provided so that beginners in programming can accomplish the assignments.

[Course objectives]

We will understand methods to solve the evolution of electromagnetic fields, and electromagnetic phenomena in plasmas. We will write our own computer simulation codes, or modify the sample codes provided, and present the results in English. By asking questions and answering them, we will be able to deepen their physical understanding of phenomena related to electromagnetic waves.

[Course schedule and contents]

1. Introduction (1 week)
After overviewing computer simulation on electrodynamics and plasma, we first learn the finite difference method. We derive wave equations by differentiating Maxwell's equations, and an explicit form of them.

2. 1D FDTD method (2-3 weeks)
We learn the FDTD (Finite-Difference Time-Domain) method to solve the evolution of the electric and magnetic fields in 1-dimensional space. To implement the code, we learn grid assignment, time step chart, Courant condition and boundary conditions.

3. 2D FDTD method (2-3 weeks)
We learn the FDTD method in 2-dimensional space. To implement the code, we learn grid assignment, time step chart, Courant condition and boundary conditions.

4. Motion of charged particles (2-3 weeks)
We learn numerical methods to calculate trajectories of charged particles. One is to solve the ordinary differential equations directly. The other is the Buneman-Boris method.

5. Plasma simulation: An overview (1 week)
We overview various types of plasma simulation codes and classification of them. Phase space density of charged particles and Liouville's theorem are introduced.

Continue to 電磁界シミュレーション(2)↓↓↓

電磁界シミュレーション(2)

6. Particle-in-Cell (PIC) simulation (3 weeks)
We learn the Particle-in-Cell simulation, which solves the evolution of the phase space density of charged particles together with that of the electric and magnetic fields. Definitions of Eulerian and Lagrangian variables, linear interpolation method of electric and magnetic fields, calculation of charge density, calculation of current density, initial conditions for particles and fields, and diagnosis of the results are explained.

7. Vlasov simulation (3 weeks)
We learn the Vlasov-Poisson and Vlasov-Maxwell simulations, which solve the evolution of the phase space density of charged particles together with electrostatic fields and electromagnetic fields, respectively. 1-dimensional advection equation, von Neumann stability analysis, limiter function, and multi-dimensional advection equation are explained.

Days and periods	Tue.3	Class style	Lecture (Media-based course)	Language of instruction	Japanese and English

[Overview and purpose of the course]

The present lecture provides the guideline how the technology on the electronics is used in spacecraft and space systems. In particular, we give how space environments affect spacecraft design in the view points of radiations, and spacecraft charging. The lecture also covers the design of onboard components such as power, communication, and attitude control systems.

[Course objectives]

Mastery of the way how we can make use of the knowledges of the physics and technology to the space engineering.

[Course schedule and contents]

Introduction: Development of spacecraft and their launches(1 lecture)
Space environment(2 lectures)
Spacecraft charging(2 lectures)
Radiation effects to spacecraft designs (2 lectures)
Power system of spacecraft (1 lecture)
Electromagnetic Compatibility in spacecraft (1 lecture)
Thermal design of spacecraft (2 lectures)
Telecommunication (2 lectures)
Attitude control of spacecraft (1 lecture)

[Course requirements]

Plasma physics, Electromagnetics. Radio engineering, Electronics

[Evaluation methods and policy]

11 times or more attendances in lectures are mandatory. The grade is evaluated considering the attendance and the final examination. The ratio for the evaluation is 4:6. (In the case of full on-line lectures, the policy might change. Details will be given in the first lecture).

This class is in English.

以下の各項目について講述する。各項目には、履修者の理解の程度を確認しながら、【】で指示した週数を充てる。各項目・小項目の講義の順序、それぞれに充てる講義週数は固定したものではなく、担当者の講義方針と履修者の背景や理解の状況に応じて、講義担当者が適切に決める。全１５回の講義の進め方については適宜、指示をして、履修者が予習をできるように十分配慮する。
講義は基本的に英語で行う。シラバスにある日本語のテクニカルタームなどに対応する英語について予習しておくことを期待する。

（１）序論（Introduction）【１週】（Introduction）：
超伝導工学を学ぶ上で理解しておくべき背景を概説する。

（２）超伝導現象の基礎（Basics of superconducting phenomena）【３～４週】：
超伝導体の基礎的物理現象について、量子論や熱力学を使って講述する。

（３）応用の基礎となる超伝導特性（Superconducting properties as basis of applications）【２～３週】：
超伝導体の具体的応用を考える上で必要な物理現象（例えば磁束ピン止め現象など）を概説する。

（４）第二種超伝導体の電磁特性（Electromagnetic phenomena in type II superconductor）【１週】：
磁気的不安定性、交流損失、常伝導転移などについて理解するために必要な第二種超伝導体の電磁特性（混合状態と臨界状態モデル、臨界電流と磁束フロー）について講述する。

（５）磁気的不安定性（Thermomagnetic instability）【１週】：
第二種超伝導体における基礎的な電磁現象であり、実用上も注意が必要な磁気的不安定性について講述する。

（６）ヒステリシス損失（Hysteresis loss of superconductor）【１週】：

Continue to 超伝導工学(2)↓↓↓

超伝導工学(2)

超伝導体は交流で使ったときに発生する損失のうちでも代表的なヒステリシス損失について、モノリシック超伝導体を対象に発生機構と定量的表式について講述する。

（７）多心線の電磁現象（Electromagnetic phenomena in multifilament superconductor）【２週】：
磁気的不安定性抑制やヒステリシス損失低減のために多心化された超伝導線の電磁現象について講述する。具体的には、多心化によるヒステリシス損失低減、フィラメント間の電磁的結合と結合時定数、結合損失などについて講述する。

（８）超伝導ケーブル（集合導体）の電磁現象（Electromagnetic phenomena in superconducting cable (assemble conductors)））【０．５週】：
大電流化のために多心線や単心線を集合化した超伝導ケーブル（集合導体）では、ひとつ大きな空間スケールでの電磁現象が発現するので、これについて講述する。

（９）超伝導線のクエンチと保護（Quench / thermal runway of superconductor and protection ）【１.５週】：
極低温で使用する超伝導体に常伝導部が発生したときの振る舞いと、超伝導安定性・保護の考え方について講述する。

（１０）演習・フィードバック【１週】：
受講者の理解度を深めるため、適時、演習やフィードバックを実施する。

受講者の興味と時間的余裕次第では、以下の項目についても講義する。

（１１）超伝導体の電磁現象の数値解析（Numerical electromagnetic field analysis of superconductor）：
超伝導体の交流損失の評価のために有効な数値解析について紹介する。

Course title (and course title in English)	マイクロ波応用工学 Applied Microwave Engineering	Instructor's name, job title, and department of affiliation	Research Institute for Sustainable Humanosphere Professor,SHINOHARA NAOKI Research Institute for Sustainable Humanosphere Associate Professor,MITANI TOMOHIKO

Target year	Master's students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Tue.4	Class style	Lecture (Media-based course)	Language of instruction	Japanese

[Overview and purpose of the course]

This lecture picks up microwave power transmission (MPT) technology, rectifying antenna (rectenna), antenna and propagation for the MPT, microwave transmitters, and some MPT applications like the Space Solar Power Satellite/Station. This lecture also picks up the other wireless power transmission technologies like resonnance coupling, energy harvesting, and applied microwave technologies of microwave processing, wireless communications, and radar.

[Course objectives]

Students learn about applied microwave engeering, mainly microwave power transmission.

[Course schedule and contents]

Introduction,1time,The purpose and constitution of the lecture, and review of microwave engineering are explained.
Applications of Wireless Power Tramsmission,3-4times,Space Solar Power Satellite/Station and Ubiquitous power source as applications of microwave power transmission, the resonance coupling and energy harvesting as the other battery-less technologies are explained.
rectifying antenna (rectenna),1-2times,rectifying antenna (rectenna) for the MPT are explained.
antenna and propagation for the MPT,5-6times,Calculation of beam collection efficiency and beam propagation with FDTD method are explained. Phased array technologies, beam targetting method, non linear physics of microwave-plasma interation are overviwed.
Microwave transmitters,2times,High efficient semi-conductor amplifiers and microwave tubes are explained.
microwave processing, wireless communications, and radar,2times,Microwave processing, wireless communications, and radar texhnologies are explained.
The order of instruction for each topic and subtopic may vary, and the
course instructors will organize the lectures as appropriate for the students. Students will be informed of the lecture plan (for all 15 lectures) in advance and will have sufficient time for preparation.

Course number	G-ENG10 5C628 LB72		
Course title (and course title in English)	状態方程式論 State Space Theory of Dynamical Systems	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,HAGIWARA TOMOMICHI Graduate School of Engineering Associate Professor,HOSOE YOUHEI

Target year	Master's students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Wed.3	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese and English

[Overview and purpose of the course]

The course deals with the dynamical system theory based on linear time-invariant state equations. It covers such topics as state equations, controllability and observability, mode decomposition and its relevance to controllability/observability, stability of dynamical systems, and the Kalman canonical decomposition.

[Course objectives]

To acquire the knowledge on the basic theory for linear system analysis by means of state equations. To have sufficient understanding required for further studies on control system design with state equations.

[Course schedule and contents]

Feedback systems and state equations (3-4 weeks)

Fundamentals of state equations, their relationship to transfer functions and block diagram representations.

Responses of linear systems (5-6 weeks)

State transition matrices, equivalence transformation of systems, mode decomposition, and Lyapunov stability.

Controllability and observability (5-6 weeks)

Controllability and observability, mode decomposition and its relevance to controllability/observability, controllable subspace and unobservable subspace, and the Kalman canonical decomposition. Checking degrees of understanding of all the lecture topics closes the class.

[Course requirements]

Classical control theory (in terms of transfer functions), linear algebra and calculus.

[Evaluation methods and policy]

The grading will be based on the exam.

[Textbooks]

Handouts will be given at the class.

Target year	Master's students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Tue.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

The course is based on State Space Theory of Dynamical Systems, and provides the applications of the concepts given therein to systematic control system design. The course covers such topics as state feedback and pole assignment, observers, synthesis of feedback control systems, servo conditions and feedforward, and optimal control under quadratic performance indices.

[Course objectives]

To understand the basic ideas of control system design based on state space representations, and acquire fundamental knowledge and skills on practical control system design through simulated experiences with the report subjects.

[Course schedule and contents]

Pole assignment by state feedback (4-5 weeks)

State feedback, controllable canonical forms and pole assignment of scalar/multivariable systems, computation of the state feedback gains for pole assignment, transient responses, uncontrollable poles and stabilizability.

Observers (3-4 weeks)

Observable canonical forms and observability conditions, full-order observer, minimal-order observer, conditions for observers and observer-based feedback.

Synthesis of feedback systems (2-3 weeks)

Feedback systems with integral compensation, servo systems, internal model principle, synthesis of servo systems.

Optimal control under quadratic performance index (3-4 weeks)

Optimal regulators and their closed-loop poles, Riccati equations and their solutions, relationship with the pole assignment problem. Checking degrees of understanding of all the lecture topics closes the class.

[Overview and purpose of the course]

Spintronics is now attracting tremendous attention, and is recognized as one of the most potential candidates to overcome the limit of the Moore's law. Spintronics possesses attractive and profound basis physics and also a potential to practical applications towards MRAMs and spin FETs. In this lecture, I introduce some important and basic theories and experimental techniques in spintronics using semiconductors, metals, insulators, oxides and so on.

[Course objectives]

Understanding basic physics of spin transport, spin current and spin-orbit coupling. Mastering calculation skills related with these topics.

[Course schedule and contents]

Introduction,1time,Spin is a quantum quantity, and thus it is to induced by rotation of an electron (an electron is an elementary particle, i.e., it has no domain. Thus, rotation of an electron cannot be defined). Nevertheless, the spin degree of freedom can be coupled to spatial rotation because spin is a generator of infinitesimal rotation. I explain the essence of spin, its SU(2) algebra and so on.
Relativistic quantum physics and spin-orbit interaction,5times,To understand spin manipulation and spin coherence in semiconductor, it is quite important what the spin-orbit interaction (SOI) is. The SOI is a manifestation of a relativistic effect, and the Dirac equation, the equation of motion in relativistic quantum physics, is derived to understand the SOI. Next, the SOI is explicitly derived be expanding the Dirac equation. As a related important topic, electron motion in graphene, which can be described as massless Dirac fermion, and the Berry phase (a geometric phase that plays an important role in spintronics) of electrons in graphene are discussed.
Electrical and dynamical spin injection into condensed matters and generation of pure spin current ,5-6times, Pure spin current is a quite significant physical current in spintronics using semiconductors and so on. Pure spin current is a current of only a spin degree of freedom without a net charge flow. I introduced some important papers and show how to derive essential equations describing generation and propagation of pure spin current. (1) Spin drift-diffusion equation, (2) Hanle-type spin precession, (3) spin pumping using magnetization dynamics, and (4) spin current circuit theory are discussed.
Recent topics in spintronics,2-3times,Topological insulators and the Berry phase are important topics in modern spintronics. To understand the essence of them, I show the derivation of the Kubo formula, and the calculation of the Hall conductivity based on the Kubo theory. The above mentioned topics are the main contents of this lecture, but I may add or omit some topics as requests from students.

Course number	G-ENG11 7K010 SE72 G-ENG10 7K010 SE72		
Course title (and course title in English)	先端電気電子工学通論 Recent Advances in Electrical and Electronic Engineering	Instructor's name, job title, and department of affiliation	Kyoto University Not fixed

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Tue.5	Class style	Seminar (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

The class consists of a series of seminars at 3 laboratories related to Department of Electrical and Electronic Engineering (energy and electrical machinery, computers, control and systems, communications and radio engineering, and electronic devices and applied physics). Each seminar intends to give a brief introduction into a specific research field so that students can get a feel for the state-of-the-art in each topic and broaden their scope beyond their majors.

[Course objectives]

Students can understand the research contents of other laboratories and acquire a wide range of academic knowledge in electrical and electronic engineering.

[Course schedule and contents]

Explanation and investigation (6 times)
At the host laboratories (3 laboratories), students will be briefed on the current state of cutting-edge research and technology.
Students will also receive report assignments.

Submission of reports and discussion (9 times)
Submit a report on the assignment to the host laboratory (3 laboratories).
Discussion on the contents of the reports will be held.

[Course requirements]

None

[Evaluation methods and policy]

The evaluation of a student`s work is given based on his/her attendance, reports and discussions, not on examinations.

Course number	G-ENG11 5C801 LJ72		
Course title (and course title in English)	**電子装置特論** Charged Particle Beam Apparatus	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Associate Professor,GOTOU YASUHITO

Target year	Master's students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Wed.4	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Fundamental technologies of an ion beam system, such as ion sources, formation and evaluation of ion beams, transport of ion beams, and ion-solid interaction will be presented. Taking ion implantation as one of the example of the ion beam application, the relationship between the incident ion energy and implantation depth will be presented. Each element of a typical ion beam system is explained in detail.

[Course objectives]

To understand the details of an ion beam apparatus: generation, transport and evaluation of an ion beam. Understanding of the entire ion beam apparatus as a system is also purpose of the class.

[Course schedule and contents]

[Ion beam systems and their applications] Once
Outline of the class is presented. Physical properties of ions in vacuum are given, and ion beam apparatuses and their application will be introduced with some typical examples.

[Ion-solid interaction] 2 times
Interaction between high energy ion and solid atoms are given. Major topics are: how the ions transfer their energy to the target atoms, i.e., how the ions are decelerated in the solid, and relationship between incident ion energy and implantation depth is given. Concept of sputtering phenomenon is also presented.

[Nature of ion beam] Once
Concept of the acceleration voltage is introduced to explain the principle of the ion beam systems. Nature of an ion beam is also presented.

[Generation and transport of ion beam] 3 times
Methods of ion generation for various elements are explained. Important equations of beam extraction and beam transport are given. Starting with the paraxial ray equation, concept of transfer matrix is given. Finally, some important physical parameters of ion beams are given.

[Mass separators, energy analyzers, and detection of ions] 3 times
Details of magnetic sector as mass separator are given. Transfer matrix of the mass separator are presented and focusing effect is described. An important parameter of mass resolution is given. Some different kinds of energy analyzers are also introduced. Deflection and detection systems and the methods to evaluate the current of the ion beam are also introduced.

Continue to 電子装置特論(2)↓↓↓

電子装置特論(2)

[Fundamentals of vacuum engineering] Twice
Fundamentals of vacuum engineering is given. Several pumps used for ion beam systems are also introduced.

[Design of ion beam systems] Twice
Design of an ion beam system under a given condition will be presented.

[Feedback] Once
Solutions of the exercise made at class will be disclosed.

[Course requirements]

Vacuum Electronic Engineering (undergraduate course)

[Evaluation methods and policy]

Grading will be made with the results of the term-end examination. Achievements of exercises in the class are also taken into consideration.

[Textbooks]

Instructed during class
Yasuhito Gotoh, "Electron Devices" 2025 version sold at COOP Katsura shop

[References, etc.]

（Reference books）
Zyunzo Ishikawa 『Charged Particle Beams』 （Corona） ISBN:978-4-339-00734-3

[Study outside of class (preparation and review)]

After the class is over, confirm your understanding with the practices listed on the textbook.

（Other information (office hours, etc.)）

We will have brief practice in each class. Bring your calculator and A4-size writing papers.

*Please visit KULASIS to find out about office hours.

Course number	G-ENG11 5C803 LB72

Course title (and course title in English)	量子情報科学 Quantum Information Science	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,TAKEUCHI SHIGEKI Graduate School of Engineering Associate Professor,OKAMOTO RYOU Graduate School of Science Associate Professor,ETO YUJIRO Part-time Lecturer,TAKASHIMA HIDEAKI

Target year	Master's students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Mon.3	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese and English

[Overview and purpose of the course]

An overview of the quantum information sciences will be given. The topics includes the basic picture of wave/particle duality, quantum key distribution, quantum computation, quantum communication, quantum measurements.

[Course objectives]

To understand the basic concepts/mechanisms of quantum key distribution, quantum computers, and quantum metrology so that one can read and understand the scientific papers of the related area.

[Course schedule and contents]

Introduction, 3 times,
First, we outline the whole lecture and then explain basic concepts such as quantum bit, quantum gate, quantum entanglement etc.

Quantum Computer (Theory), 3 times,
On quantum computation, various quantum algorithms are discussed.

Quantum Computer (Experiment),3 times,
Quantum information processing is being studied in various physical systems such as photon, ion trap, nuclear spin and the like. We will explain how to realize them.

Quantum Key distribution and Quantum metrology,4 times,
Describe the basic concept of quantum cryptography and quantum measurements and their recent research trends.

Summary and Outlook, 2 times,
In addition to summarizing the whole, if time permits, discuss the problems of quantum information science and ethics.

Continue to 量子情報科学(2)↓↓↓

量子情報科学(2)

[Course requirements]

Basic understanding of quantum mechanics will be helpful.

[Evaluation methods and policy]

Comprehensive evaluation based on normal points (25 points) and reports (3 times, 25 points each).
・ In principle, if you miss four or more classes, you will be rejected.
・ Reports must be submitted all times.
Give high points for those that show their own ingenuity.
Note that as a result of the comprehensive evaluation, there may be the case that you fail to earn the credits even when you submit all the reports and attend all the classes.

[Textbooks]

No text book will be used.

[References, etc.]

（Reference books）

Target year	Master's students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Mon.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

This course explores the fundamentals of semiconductor physics and engineering, which are esseantial to understand semiconductor materials and devices.

[Course objectives]

[Course schedule and contents]

Band theory,2-3times,Electronic band structures are discussed. Nearly free electron and tight-binding approachs are explained. Band structures of major semiconductors such as Si and GaAs are also discussed.
Carrier transport and scattering,3-4times,Carrier transport and electrical conduction are explained by using the Boltzmann transport equation. Scattering mechanism of carriers and mobility are discussed.
High-field effect,2-3times,Drift of carriers and junction breakdown under high electric field are discussed. A few phenomena under high magnetic field are also explained.
Defects in semiconductors,1-2times,Crystallographic and electronic properties of defects (both extended and point defects) in a semiconductor are explained.
MOS physics,2-3times,Energy band diagrams and carrier statistics in a metal/insulator/semiconductor (MIS) structure are discussed.

[Course requirements]

Semiconductor engineering, quantum mechanics (undergraduate level)

[Evaluation methods and policy]

Final examination and a few reports

[Overview and purpose of the course]

近年、有機電界発光（EL）ディスプレイや有機トランジスタ、さらに有機薄膜太陽電池や有機無機ハイブリッドペロブスカイト太陽電池など、有機分子を能動的な電子材料とする応用が大きく進展している。本講義では、一般的に電気伝導性が著しく低いと考えられてきた有機分子のキャリア輸送性について、その微視的機構の基礎を理解するとともに、有機分子の有するさまざまな光・電気特性を学習する。

[Course objectives]

有機分子／電極界面におけるキャリア注入機構および有機分子材料内部におけるキャリア輸送機構の基礎を理解するとともに、個々の分子がもつ多様な物性と有機材料の巨視的な光・電子的性質の関係を学習することを目的とする。

[Course schedule and contents]

分子エレクトロニクス研究の背景（2回）
分子エレクトロニクスは、単一分子あるいは少数分子系が示すユニークな電気特性を直接応用しようとする分子スケールエレクトロニクスと、主に有機薄膜系を対象とする有機薄膜エレクトロニクスの２つの分野から構成される。両者は異なる視点からの研究分野であるが、同時に強く相互に関連している。電子材料としての有機分子材料研究および分子エレクトロニクス研究の背景、およびその発展について講述する。

分子／有機薄膜エレクトロニクスの基礎（4回）
分子エレクトロニクス研究において用いられるさまざまな有機分子材料、有機導体、導電性高分子などの基本構造・基礎物性を理解するとともに、その電子状態・電子物性の基礎について講述する。

有機薄膜の作製と電気特性（3回）
有機薄膜の作製方法や結晶化挙動について解説する。さらに、導電性分子、半導体性分子、誘電性分子の電気特性を事例紹介し、その電子状態の概要について講述する。

有機半導体におけるキャリア伝導（4回）
有機ELディスプレイや有機薄膜太陽電池などのデバイス開発において使用される有機半導体材料において、そのキャリア伝導機構について講述する。また、有機分子エレクトロニクスの近年の研究動向についても述べる。

分子エレクトロニクス研究の展開（1回）

Course title (and course title in English)	表面電子物性工学 Surface Electronic Properties	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Associate Professor,KOBAYASHI KEI		
Target year	Master's students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Tue.5	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese and English

[Overview and purpose of the course]

[Course outline]
The course explains the structures and the electronic states of solid surfaces which are the microscopic origins of the electrical and the optical properties at surfaces and/or interfaces.

[Course objectives]

[Course goals]
The course specific goals are to understand a wide variety of the properties of surfaces as the two-dimensional borders of three-dimensional bulk materials and to learn electronic materials from the point of view of surface science.

[Course schedule and contents]

[Course Plan]
Background of surface studies (2)
The lecture covers the following topics: history of surface science, surface phenomena in a variety of science and engineering fields, and development of semiconductor devices, nanometer-scale science of surfaces, and definition of surfaces and interfaces.

Spatial structures and electronic structures (4)
The lecture covers the following topics: surface spatial structures, two-dimensional Bravais lattices, surface relaxation and reconstruction, surface morphology, electronic structures in solids, tight binding model, surface electronic structures.

Quantum states of atoms and electrons (5)
The lecture covers the following topics: quantum mechanical description of atoms and electrons, mixing and hybridization of atomic orbitals, and relationship between surface structures and electronic states.

Electronic states in surface reconstruction (2)
The lecture covers the following topics: surface reconstruction of semiconductors (Si, GaAs) by surface dimerization, modification of surface atom orbitals, and charge transfer between surface atoms.

Surface electronic state measurement with scanning probe microscopy (1)
An overview of scanning probe microscopy, a technique capable of measuring the correlation between the microscopic structure and electronic states of surfaces and interfaces in real space, is provided. The cutting-edge research in this field is also introduced.

Continue to 表面電子物性工学(2)↓↓↓

表面電子物性工学(2)

Final check for the understanding of the course (1)

[Course requirements]

Basic knowledge of electronic properties and solid-state physics is desirable.

[Evaluation methods and policy]

Evaluation is based on approximately three reports.

[Textbooks]

Handouts will be distributed for some of the lectures.

[References, etc.]

（Reference books）

Some books may be introduced on request.

[Study outside of class (preparation and review)]

Organize lecture notes and supplementary materials provided, and review the lecture content.

（Other information (office hours, etc.)）

Depending on the progress of the lecture for the academic year, some parts of the lecture content may be omitted.

[Overview and purpose of the course]

Based on the fundamental understanding of quantum mechanics, we start with hydrogen atom of 1 atom and 1 hydrogen atom, hydrogen molecule ion of 2 atom electrons, hydrogen molecule of 2 atom 2 electrons, 1 electron Lecture on how to calculate the electronic state when increasing the number from the next step. We will also talk about molecular models consisting of a plurality of atoms. In order to understand fundamental handling in the case of multi electron system, consider Coulomb interaction, spin orbit interaction, as an interaction received by electrons. Simultaneously, we give an approximate calculation method necessary for these calculations.

[Course objectives]

Based on the fundamental understanding of quantum mechanics, we acquire knowledge and thinking to the extent that approximate calculation can be performed on a simple problem. In addition, we will acquire academic ability to read only specialized books such as solid state electronics based on quantum theory.

[Course schedule and contents]

Review and supplement of quantum mechanics (1 time)
Review the quantum mechanics learned at undergraduate and repair notation method to learn from now.

Approximation method (2 times)
Perturbation method, perturbation method when degenerate, time dependent perturbation method, variational method, learn while solving exercises. The approximation method learned here becomes the basis of the calculation concerning the contents of the subsequent lecture.

Combined with angular momentum (2 times)
We describe the angular momentum necessary for understanding the electronic level and its composition.

Spin orbit interaction (1 time)
Understanding the spin orbit interaction is essential for understanding the details of the electronic level of multiple electron atoms and the electronic level in solids. Here, I will give lectures and descriptions of spin orbit interactions and explain quantitative handling methods. Explain calculation by perturbation method and calculation by diagonal method.

Multiplet (1 time)
I will give a lecture on the electronic level of multiple electron atoms. In particular, we will clarify the origin of microstructure and understand how electron level is split by Coulomb interaction, spin orbit interaction, its

Continue to 量子論電子工学(2)↓↓↓

magnitude and number of divisions. In addition, we describe empirical Hunt 's law concerning the ground state of such multi - electron atoms.

Zeeman effect (2 times)
The shift of the electronic level in the magnetic field or Zeeman splitting will be explained by calculation by the perturbation method. Abnormal Zeeman effect when the magnetic field is weak, normal Zeeman effect, Paschen back effect in case of strong, handling of spin orbit interaction will be discussed.

Hartree-Fock equation (2 times)
We describe the calculation of electronic levels of multi-electron atoms about the Hartley method, the Hartley-Fock method, and the Hartree-Fock-Slater method by mean field self-consistent method.

Molecular model (2 times)
In the case of bimolecular molecules, we will explain the valence bonding method and the molecular orbital method, and explain the hydrogen level, the electronic level of hydrogen molecule, that is, the binding energy and the bonding distance. Also, we will talk about the type of molecular bond and hybrid trajectory.

Crystal field and magnetism (2 times)
The electron orbit of the atom in the crystal will be explained from the crystal electric field. In addition, we introduce Heisenberg's effective Hamiltonian and outline the paramagnetism and electronic correlation of the substance.

[Course requirements]

Basics of quantum mechanics (Schrodinger equation, one dimensional potential problem, concept of expectation, etc.)

[Evaluation methods and policy]

Examination and report

Days and periods	Tue.4	**Class style**	Lecture (Face-to-face course)	**Language of instruction**	Japanese and English

[Overview and purpose of the course]

This course explains a method for systematic analysis of the interaction between light and electrons, and how to control the interaction. First, we explain the density matrix as a method to treat the time evolution of a quantum system including the relaxation process due to the interaction with the external environment. In addition to calculating the optical response of a simplified electronic system and determining the optical absorption coefficient and gain, we show how to calculate the second harmonic generation and two-photon absorption. Next, we explain the band structure and density of states of the electron system in a semiconductor as a more realistic model, and explain that the absorption coefficient and gain can be controlled by controlling the quantum structure such as quantum wells. Furthermore, we will show that it is possible to control the interaction between light and electrons by controlling the photon system with microcavities, etc., and that it is possible to enhance the spontaneous emission rate and form electron-photon strong coupling states.

[Course objectives]

Students will learn how to calculate the optical absorption coefficient/gain and refractive index in quantum structures. Students also will understand the interaction between light and electrons, including nonlinear response. Students will understand how to control spontaneous emission.

[Course schedule and contents]

1. Introduction (1 time)
The academic background of optical quantum device engineering is described.

2-1. Methods for analyzing electron-photon interactions (4 times)
After reviewing the basics of quantum mechanics, we discuss the interaction of light with two-level electron systems. We will discuss the necessity and derivation of density matrix theory, and show that it can represent both pure and mixed states. We also explain the difference between energy relaxation and pure phase relaxation in terms of the relaxation processes that can occur due to the interaction with the external environment, by deriving them from physical models. In this way, we derive a method to describe the time evolution of a quantum system including the relaxation process using a density matrix.

2-2. Optical response of simplified electron systems (4 times)
We explain how to derive the steady-state response of the density matrix describing the interaction between a two-level electron system and classical continuous wave light. We show how to calculate the complex permittivity, the absorption (gain) coefficient, and the change in refractive index from the linear response to the incident electric field. The higher-order responses to the incident optical field are also discussed, and the

Continue to 光量子デバイス工学(2)↓↓↓

absorption and gain saturation are explained. Then, the electronic system is extended to three levels, and the principle and calculation method of optical nonlinear responses such as second harmonic generation, difference frequency generation, electro-optic effect, and two-photon absorption, which can occur only in electron systems with more than three levels, are explained.

3. Control of electronic systems and interaction of electrons and light (2.5 times)
The interaction between electrons and light in semiconductor quantum wells are explained. First, the band structure of bulk semiconductors and quantum wells are explained. Then, the calculation method of the complex permittivity by integration considering the density of states is described. After discussing the absorption spectra and polarization properties of the inter-subband transitions, the absorption spectra and polarization properties of the inter-band transitions are discussed.

4. Control of photons and electron-photon interaction (2.5 times)
We discuss control of spontaneous emission of light based on the control of photon states. First of all, the photonic system is described as a quantum state, and the system is treated as composite system of an interacting electron and photonic system, where its time evolution is described using a density matrix. Then, we derive the spontaneous emission rate of a two-level electron system in free space. Next, we discuss the enhancement of the spontaneous emission rate when a two-level electron system interacts with a single mode of a microcavity. We also discuss the physics of the strongly coupled electron-photon system.

5. Confirmation of learning achievement (1 time)
Confirmation of learning achievement

[Course requirements]

None

[Evaluation methods and policy]

Evaluations are made on the basis of reports.

[Textbooks]

The lecture notes format is used in this course.
Other reference materials may be distributed and discussed as necessary.

Course title (and course title in English)	量子計測工学 Quantum measurement	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Associate Professor,SUGIYAMA KAZUHIKO

Target year	Master's students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Mon.4	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese and English

[Overview and purpose of the course]

As an example of high precision measurements using quantum phenomena, frequency standards, which is realized with the smallest uncertainty in all measurement quantities at present, are discussed. The principle and evaluation of frequency standards are explained.

[Course objectives]

The goal of this lecture is to understand that precision measurements are realized with combination of the best technologies and is based on physics.

[Course schedule and contents]

Introduction and principle of time measurement (1 time):
Two principles of time measurement: Reproducibility postulate and dynamic model

Fundamentals of atomic frequency standards (2.5 times):
Atomic states, its energy shifts, high-resolution spectroscopy and high-sensitive detection

Cesium frequency standard and atom interferometer (2.5 times):
Principle of Ramsey resonance and its interpretation as atom interferometer

Specification of frequency standards: evaluation methods and theoretical limit (2 times):
Fundamentals of evaluation of frequency stability with Allan variance, and theoretical limit of frequency stability

Noise (2 times):
Incoherent signals and shot noise

Relativistic theory and time (3 times):
Impact of special and general relativistic theory on time measurement

Others (1 time)
If we have time, the frequency noises of masers and lasers, and other subjects will be lectured.

Evaluation of understanding (1 time)

Continue to 量子計測工学(2)↓↓↓

量子計測工学(2)

[Course requirements]

Fundamentals of physics (quantum physics, in particular) and electric circuits including linear system.
The level which average graduate students of electric and electronic science and technology acquire is sufficient.

[Evaluation methods and policy]

Absolute evaluation (raw score)
Evaluation will be based on reports (two times, at the first lecture and the after all lectures) Reports will be assessed on the basis of achievement level for course goals.

[Textbooks]

Lecture notes may be available on PandA.

Course number	G-ENG11 5C851 LJ72		
Course title (and course title in English)	電気伝導 Electrical Conduction in Condensed Matter	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,YONEZAWA SHINGO Graduate School of Energy Science Professor,DOI TOSHIYA

Target year	1st year master's students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Wed.2	Class style	Lecture (Media-based course)	Language of instruction	Japanese

[Overview and purpose of the course]

A fundamental aspect of the electrical conduction in solids is discoursed in terms of physics based on the classical dynamics and later on the quantum physics. An important concept of the phonon and the electron-phonon is discoursed, which play a very important role in the electrical conduction in solids. The electrical conductivity is discoursed with a frequency from 0, that is dc, to optical frequency, by which a unified understanding of electrical conduction and the optical property is intended.

[Course objectives]

This class in intended to bestow the understanding of the solid state physics of a level dealt in the celebrated textbook by Ashcroft and Mermin. It is also intended for those attending in this class to acquire an ability sufficient to strive through such a textbook by himself or herself after the class is completed.

[Course schedule and contents]

Lattices and reciprocal lattices (2 classes)
Explanation is made of lattices and reciprocal lattices, a fundamental item for understanding electron properties within an atom.

Fundamentals of quantum mechanics, and the hydrogen atom model (2 classes)
A simple review is made of quantum mechanics, and explication is made of electron states (energy, spatial distribution, etc.) within hydrogen and atoms other than hydrogen.

Free-electron Fermi gas (3 classes)
Explanation is made of the free-electron model as an ideal Fermi gas. Then, an overall explanation is provided of conductivity in metals, electronic specific heat, and the Hall effect.

Energy bands (2 classes)
The band structure of electron energy within a solid crystal is introduced, and explanation is provided of conductivity and the band structures of conductors, semiconductors, and insulators.

Electron-phonon interactions, and conductivity in metals and semiconductors (2 classes)
Lattice vibration is explained via quantized phonons (Bose particles) and Bose statistics, and lattice specific heat is introduced via determination of phonon density of state. Phonon scattering and electron scattering are explained. On this basis, explanation is then provided regarding the heat dependent nature of resistivity in metals, as well as of the Bloch-Gr#252neisen law at low temperature. Conductivity in semiconductors, especially scattering, is also explained.

Continue to 電気伝導(2)↓↓↓

電気伝導(2)

Superconductivity (3 classes)
With respect to superconductive phenomena, explanation is made, using the London equation, of the Meissner effect, etc. Overview explanation is made of the Ginzburg-Landau theory, and order parameters are introduced. The relationship between phase and vector potential, important for superconductivity, is explained, as well as the Josephson effect. Explained also is magnetic flux quantization within type II (high field) superconductors.

Feedback lesson (1 class)
Confirmation of learned content is made based on evaluations of short tests and the score on the final examination, etc.

[Course requirements]

Those who would like to attend in this class are recommended to study electrodynamics, statistical physics, and introduction to the solid state devices in advance. The lecture is, however, given in Japanese.

[Evaluation methods and policy]

Basically, an examination is imposed after the last class. A report may be imposed in case of necessity.

Course title (and course title in English)	Supramolecular Chemistry Supramolecular Chemistry	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Associate Professor,Juha Lintuluoto Graduate School of Engineering Senior Lecturer,LANDENBERGER, Kira Beth

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Tue.4	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

This course is open to all master and doctoral engineering students. The aim is to enhance students' knowledge of non-covalent molecular interactions found in both synthetic and natural chemical compounds and materials. Additionally, students learn how to choose methods to study and observe non-covalent molecular interactions, and how to measure and evaluate them quantitatively. Throughout the course feedback will be given by instructors. The course will also improve students to gain confidence in studying English of supramolecular topics. The course contents are suitable for a wide variety of chemistry students.

[Course objectives]

Understanding the nature and types of supramolecular interactions, and applying them into various chemical, biological and other materials applications.

[Course schedule and contents]

1. Course Introduction & Interactions and methods in Supramolecular Chemistry: Non covalent interactions (H-bonding, pi-pi; lone-pairs and metals, ionic), spectrometric methods (NMR, UV-vis, Fluorescence, CD, Mass) Oct. 7

2. Binding Constants, Cooperativity, Complementarity, Preorganization Equilibrium systems, enthalpy and entropy upon binding, quantitative analysis Oct.14

3. Cation Binding with Current Examples Cation binding, binding into anionic host molecules and neutral host molecules Oct.21

4. Anion Binding with Current Examples Anion binding, binding into cationic host molecules, and neutral host molecules Oct. 28

5. Neutral molecule binding and Self-Assembly with Current Examples Neutral molecule binding into neutral or charged host molecules, self-binding molecules Nov. 4

6. Supramolecular Devices, Sensors and Catalysis with Current Examples Electron transfer, energy transfer, information transfer in supramolecules Nov. 11

7. Crystal Engineering I: Crystal engineering, crystal classes, crystal nucleation and growth, commonly found

Continue to Supramolecular Chemistry (2)↓↓↓

Supramolecular Chemistry (2)

intermolecular interactions Nov. 18

8. Crystal Engineering II: Polymorphism, hydrates and solvates, cocrystals, crystal structure prediction Nov. 25

9. Network Solids: Zeolites, intercalates, coordination polymers (e.g. MOFs) Dec. 2

10. Solid State Inclusion Compounds I: Clathrates (structures and applications), podands, cyclophanes, etc. Dec. 9

11. Solid State Inclusion Compounds II: Cucurbiturils, cyclodextrins, cryptophands, etc. Dec. 16

12. Supramolecular Liquid Crystals: Nature and structure of liquid crystals, applications and design, polymeric liquid crystals Jan. 7

13. Supramolecular Polymers, Gels and Fibers: Supramolecular polymer structure and design, properties, kinetics and reaction mechanics of supramolecular polymers, applications Jan. 13

14. Open lecture tbd. Dec. 23
15. Feedback
Note: The dates may fluctuate.

[Course requirements]

Active engagement in lectures, which provide basis for the reports required in this course. Each student is required to submit 4 chosen reports on any given topics during the course. However, 2 reports each should be submitted for the given topics on lectures 1-6 and 8-13, excluding lecture 14.

If you have any concerns or questions regarding the course, please do not hesitate to contact (075)- 383-7065 or landenberger.kirabeth.2x@kyoto-u.ac.jp or (075)-383-2876 or lintuluoto.juhamikael.7u@kyoto-u.ac.jp .

[Evaluation methods and policy]

Evaluation: 20% participation (engaging the classes and activity), 80% reports.
*More than 3 unexcused absence can result in course failure.

[Textbooks]

Course title (and course title in English)	有機金属化学２ Organotransition Metal Chemistry 2	Instructor's name, job title, and department of affiliation	Institute for Chemical Research Professor,OHKI YASUHIRO Graduate School of Engineering Professor,NAKAO YOSHIAKI Graduate School of Engineering Professor,KONDO TERUYUKI Graduate School of Engineering Professor,OUCHI MAKOTO Graduate School of Engineering Associate Professor,MIKI KOJI Graduate School of Engineering Senior Lecturer,YAMAMOTO TAKESHI

Target year	Master's students	Number of credits	1.5	Year/semesters	2025/First semester
Days and periods	Fri.1	Class style	Lecture (Media-based course)	Language of instruction	Japanese

[Overview and purpose of the course]

This lecture course deals with synthetic methods, structural features, and important elementary reactions of transition metal complexes and their mechanisms.
This course connects with "Organometallic Chemistry 1", which is offered every other year. Across two courses, attendees are expected to understand the basic principles of applying transition metal complexes in catalytic organic synthesis and industrial synthesis of small organic molecules.
Japanese will be used as the language both in explanation and lecture materials, while questions in English are acceptable. The lecturers can switch the language occasionally upon request.

[Course objectives]

Objectives of this lecture class are as follows:
1) understanding of fundamental knowledge of the structures and reactions of transition metal complexes
2) learning important catalytic organic transformation reactions and their mechanisms
3) learning applications of transition metal complexes as catalysts in some industrial processes

[Course schedule and contents]

This lecture occasionally tolerates online participants for students from different campuses. See below in "other info" for more details.

Transition metal complexes (3 classes)
i) structures of transition metal complexes: formal oxidation states, 18-electron rule, variety of ligands, hapticity, etc.
ii) basic reaction patterns of transition metal complexes: ligand exchange reactions, oxidative addition and reductive elimination, transmetalation, etc.
iii) some unique reactions of transition metal complexes: insertion, elimination, nucleophilic addition to ligands, oxidative cyclization, etc.

Reactions of unsaturated hydrocarbons (3 classes)
i) hydrocyanation, hydroamination, hydrometalation, carbo-metalation, etc.

Continue to 有機金属化学２ (2)↓↓↓

ii) oligomerization of alkynes, Pauson-Khand reaction, isomerization of carbon-skeletons, etc.
iii) electrophilic reactions of alkynes and alkenes on metals, reactions of carbene complexes, metathesis reactions, etc.

Coupling reactions (2 classes)
i) C-C bond forming reactions: oxidative coupling, reductive coupling, corse-coupling, Tsuji-Trost reaction, bond formation between carbon and heteroatoms (O, N, B, Si), etc.
ii) some other important reactions: Heck reaction, Fujiwara-Moritani reaction, C-H acylation reaction, etc

Activation of inert chemical bonds (inert C-H bonds) (1 class)
C-H activation reactions: Murai C-H activation, C-H borylation, hydroacylation, insertion of carbene/nitrene into C-H bonds, etc.

Industrial organic synthesis (1 class)
Reppe reaction, hydroformilation, Fischer-Tropsch reaction, Monsanto process, air-oxidation of alcohols, Wacker reaction, etc.

Polymerization (1 class)
coordination polymerization, metathesis polymerization, living-radical polymerization mediated by transition metal complexes, application of cross-coupling reactions in polymer-synthesis, etc.

[Course requirements]

undergraduate level knowledge of organic and coordination chemistry will be required to understand the course contents.

[Evaluation methods and policy]

An exam is used for evaluation, plus some instructors would request some assignments.

Course title (and course title in English)	機能材料化学 Chemistry of Functional Materials	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,FUJITA KOJI

Target year	Master's students	Number of credits	1.5	Year/semesters	2025/Second semester
Days and periods	Wed.1	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

In this course, we introduce some examples of the research on various functional materials, which have been studied in the laboratories of the Department of Material Chemistry.

[Course objectives]

To gain basic knowledge on the current and future prospects of functional materials, focusing on methodologies/techniques for enhancing the functionality of various materials or adding new functions.

[Course schedule and contents]

Week 1-2 High-pressure synthesis of inorganic materials
Week 3 Development of functional materials using laser material processing
Week 4 Magneto-optical materials
Week 5 Synthetic organic chemistry driven by artificial intelligence (AI)
Week 6 Catalytic reactions in organic chemistry
Week 7 High-performance separation analysis using specific interactions
Week 8-9 Biomaterial design for disease treatment
Week10 Mechanical properties of polymers
Week11 Development of novel functional electrodes for electroanalysis

[Course requirements]

None

[Evaluation methods and policy]

Grading will be based on active participation and assignments. Assignments will be assessed on the basis of achievement level for course goals.

Course number	G-ENG12 6H013 LJ62		
Course title (and course title in English)	無機構造化学 Chemistry and Structure of Inorganic Compounds	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,MIURA KIYOTAKA Graduate School of Engineering Associate Professor,SHIMOTSUMA YASUHIKO

Target year	Master's students	Number of credits	1.5	Year/semesters	2025/Second semester
Days and periods	Fri.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

無機固体の構造に基づく物理的・化学的特性とその制御方法、ナノ・マイクロ構造体の観測手法や非晶質固体を中心とした理論化学と計算的手法を用いた構造シミュレーションについて述べる．さらに，フォトニック結晶や光導波構造を例に実用的な光学的応用についても紹介する．

[Course objectives]

無機固体や無機材料の構造に関する知識を得て，専門的な論文を読んで内容を理解できるようになる．

[Course schedule and contents]

ナノ・マイクロ構造イメージング（2回）
光や電子により、原子サイズからサブミクロン領域での無機構造をイメージングする手法について講述する．

光導波構造（3回）
光を閉じ込め伝搬する光導波構造の作製方法や伝搬特性について述べ，それらが素子やデバイスとして高速大容量光通信にどのように利用されているかについても紹介する．

無機固体の合成プロセス（２回）
無機固体の合成について講述する．セラミックスの焼結プロセス，無機材料からなる微細構造の合成プロセスについて述べる．

無機構造と光との相互作用（２回）
光技術に関連した無機ナノ構造の光学的性質，光との相互作用について，フォトニック結晶を例に挙げて説明する．

計算材料化学（2回）
無機固体を対象とした理論化学と計算機化学について講述する．無機結晶を対象とした電子構造の解釈，非晶質固体を対象とした分子動力学シミュレーションの原理とシミュレーションによって得られる結果と実験との対比などを説明する．

Days and periods	Thu.1	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

天然由来の高次構造を有する有機分子を対象にして，その生合成経路、生物活性などについて講述する

[Course objectives]

講義概要で述べたことがらを習得し，天然由来の有機化合物の生合成経路とそれらの生理活性が理解できるようになる．

[Course schedule and contents]

生合成における有機化学反応（1回）
 生体中で酵素によって触媒される有機化学反応について，生合成を理解するうえで重要なものに絞って解説する．

酢酸ーマロン酸経路（3回）
酢酸ーマロン酸経路によって生じる有機化合物の生合成経路と生理活性などについて解説する．

シキミ酸経路（2回）
シキミ酸経路によって生じる有機化合物の生合成経路と生理活性などについて解説する．

メバロン酸ーMEP経路（3回）
メバロン酸ーMEP経路によって生じる有機化合物の生合成経路と生理活性などについて解説する．

アミノ酸経路（2回）
アミノ酸経路によって生じる有機化合物の生合成経路と生理活性などについて解説する．

[Course requirements]

京都大学工学部工業化学科「有機化学I~III(創成化学)」を履修していることを前提とする.

[Evaluation methods and policy]

Days and periods	Tue.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

生物機能を意識した材料には，1）多成分が有機的に関係して現れる高度な機能、および，2） 35億年をかけた進化の結果，地球環境に優しいシステムとして機能発現している，の二つの重要な観点が必要である．生物機能を分子レベルで学びながら，その特徴を指向した，あるいは，模倣した材料創成の現状と将来について解説する．

[Course objectives]

生体機能・生物機能は多岐にわたり、その背景にある戦術には、持続的社会を形成する際に極めて重要なポイントが多々ある。このような生物学の視点に基づいた材料開発の指針を理解するため、関連する高分子科学、生化学、およびケミカルバイオロジーを習得することを目標とする。

[Course schedule and contents]

生物の構造・機能を利用した材料化学（6回）
生体を構成する高分子について、その構造と機能について材料レベルおよび分子レベルで紹介する．特に、ペプチドやタンパク質に関連する人工的なシステムや材料の現状を取り上げ、天然材料の分子機構と比較しながら評価を行う．さらに、生体機能を指向した未来材料について概説する．具体的には、生体高分子の概要（1回）、ペプチドやタンパク質の合成（1回）、物性（1回）、構造（1回）、機能（1回）、および材料化の事例（1回）について説明する。

生体と多糖とのコミュニケーション（6回）
糖類の構造と分類など、機能を理解するための基礎知識について説 明する。(1回）
複合糖質の基礎として、生物界において糖質が機能発現する複合糖質について説明する。（2回）
糖質と疾患として、糖質が様々な疾患に関連する生体分子であることを説明する。(2回）
糖質の材料利用について、糖質の機能を利用した材料応用研究と産業利用されている糖質について説明する。(1回）

Course number	G-ENG12 6H034 LJ61		
Course title (and course title in English)	材料解析化学II Analysis and Characterization of Materials II	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Associate Professor,OYAMA MUNETAKA Graduate School of Engineering Associate Professor,NONAKA HIROSHI

Target year	Master's students	Number of credits	1.5	Year/semesters	2025/Second semester
Days and periods	Wed.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

The frontier of analytical chemistry of materials that makes full use of cutting-edge technology is introduced.

[Course objectives]

Understand the principle, outline and application of the latest advanced instrumental analysis methods in the field of analytical chemistry of materials.

[Course schedule and contents]

High-speed microseparation analysis method (4)
The principle and applications of microchip analytical separation method (microchip electrophoresis / liquid chromatograph) that realizes high-performance separation in an extremely short time by further speeding up and miniaturizing capillary electrophoresis are lectured.

Analytical chemistry using metal nanoparticles (3)
Metal nanoparticles have also been used as new functional materials in recent years in the field of analytical chemistry. After explaining the characteristics and chemical preparation methods of such metal nanoparticles, their application to analytical chemistry, especially electron transfer in modified electrodes and their use as electrode catalyst elements, will be introduced.

Design of separation media for actual sample analysis (3)
In the design of separation media for solid-phase extraction required when handling biological samples and environmental samples, the method of imparting separation selectivity and the performance evaluation method of the obtained separation media.

State-of-the-art material analysis technology / confirmation of learning achievement (1)
Introducing the latest technological innovations in analytical chemistry of materials in a topical manner. At the same time, check the learning achievement level.

Feedback on evaluation of regular tests, etc. (1)
Give feedback on evaluations such as regular tests.

[Course requirements]

It is recommended that students have learned analytical chemistry and instrumental analysis at the Department of Industrial Chemistry, Faculty of Engineering, Kyoto University, such as "Analytical Chemistry (Frontier Chemistry)", "Instrumental Analysis (Frontier Chemistry)", and "Advanced Instrumental

Course title (and course title in English)	バイオ・高分子マテリアルDX論 Material digital transformation of bio/ synthetic polymer materials	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,NUMATA KEIJI

Target year	Master's students	Number of credits	1.5	Year/semesters	2025/Second semester
Days and periods	Thu.2	Class style	Lecture (Media-based course)	Language of instruction	Japanese

[Overview and purpose of the course]

世界的に高分子材料のマテリアルDXは進んでおらず、京都大学が高分子材料のマテリアルDXを学問として提案、確立し、人材を輩出することは、京都大学が当該分野を牽引するという社会的責務からも重要である。本講義では、バイオ・高分子材料の開発において、理論計算やビッグデータからの予測に基づいた方法論と現状を理解し、マテリアルDX人材を京都大学から輩出することを目指す。講義の内容は、高分子の理論、計算、自動計測・自動解析、対応した合成論からなる座学、および研究室や大型研究施設における演習から成る。講師は産業界、他大学からも招聘する。

[Course objectives]

高分子に関するビッグデータの構築手法および利用方法を身につけ、自らの目的バイオ・高分子材料を効率的に開発するマテリアルDX論を修得する。

[Course schedule and contents]

高分子科学の基礎（0.5回）【メディア授業：同時双方向型】
高分子科学の基礎、特に分子構造と物性の関係性を中心に解説する。

バイオ・高分子の計算（2.5回）【メディア授業：同時双方向型】
MD等の計算手法を用いた高分子の物性予測などについて解説する。

自動測定・解析とデータ蓄積（２回）【メディア授業：同時双方向型】
バイオ・高分子材料の自動計測・自動解析に関して、大型研究施設である放射光などの例を中心に解説する。

ビッグデータを基にした分子設計（２回）【メディア授業：同時双方向型】
バイオ・高分子の測定データから新規に分子設計する手法論を実践を交えて解説する。

機械学習を利用した分子設計（３回）【メディア授業：同時双方向型】
バイオ・高分子の測定データから新規に分子設計する手法論を実践を交えて解説する。

実地見学（1回）
自動測定・解析とデータ蓄積の現場として、放射光施設などを見学し、実際の測定などを解説する。

[Overview and purpose of the course]

物質・エネルギー変換効率の高いデバイスや反応系の構築は、省エネルギー・低炭素社会の実現やエネルギーセキュリティーの観点から重要である。本授業では、次世代エネルギー材料・デバイスに関する最新の化学研究を紹介する。 また、エネルギーの生産、貯蔵、輸送、利用に向けた技術に関する、さまざまな基礎的なトピックについても紹介する。

[Course objectives]

物質・エネルギー変換効率の高いデバイスや反応系の設計・構築に要求される諸条件と、それを達成するために必要な戦略や評価手法を理解・習得する。

[Course schedule and contents]

エネルギー資源の開発動向（1回）
再生可能エネルギーや水素エネルギーなどについて概説する。

物質・エネルギー変換材料（2回）
無機材料合成の観点から機能性セラミックスが果たす役割を解説する。

半導体光触媒の結晶構造とバンド構造（2回）
水分解のため半導体光触媒の開発、光電極の開発について、最近のトピックスを具体例として解説する。

有機化学と機械学習（3回）
機械学習を有機化学に適用する際のワークフローを概説し，最近のトピックスを具体例として解説する。

遷移金属酸化物の構造・物性・機能（3回）
材料の元素間相互作用と結晶構造決定法を解説し、先端的合成手法と応用展開について概説する。

フィードバック（1回）
講評と確認をする。

Course title (and course title in English)	物質環境化学 Green and Sustainable Chemistry		Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,OOE KOUICHI Graduate School of Engineering Professor,SAKKA TETSUO Graduate School of Engineering Professor,ABE RYUU	
Target year	Master's/Doctoral students	Number of credits	1.5	Year/semesters	2025/First semester
Days and periods	Mon.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

[Chemistry of light energy conversion by semiconductors]
The global environmental impact of energy use has become a serious issue, as has the spread of renewable energy. The conversion of solar energy into electricity utilizes properties of semiconductors. In this lecture, we will explain electrical properties, optical properties, junction and interface structures, and applications to solar cells of semiconductors in four parts, with the conversion of light energy into electrical energy in mind.

[Green Chemistry]
Green Chemistry is a chemistry and science and technology system that comprehensively achieves goals in terms of both economy and environment based on the basic principles of science, and it greatly contributes to the realization and development of an environment-friendly and sustainable society. In this charge, from among those related to the creation, design, and application of chemical substance manufacturing processes that can reduce the production and use of harmful substances, 'atom efficient manufacturing processes, ' environmentally friendly catalysts,' and 'in chemical synthesis.' Recent developments such as ' environmentally friendly reaction medium' will be explained in four parts.

[Recent progress in catalytic organic reactions that contribute to environmental conservation]
In this lecture, we will explain the recent progress of catalytic conversion reactions that contribute to environmental conservation, and explain results selected from treatises recently reported in major international academic journals, including their ideas, originality, novelty, and superiority. Then, we will recognize problems that conventional chemical conversion methods create for the environment, and give four lectures on the cutting-edge efforts being made to change them.

[Course objectives]

[Chemistry of light energy conversion by semiconductors]
・ The use of solar energy
・ Band structure, electrical properties, and optical properties of semiconductors as the basis of semiconductors
・ Semiconductor bonding and semiconductor interfaces
・ Silicon solar cells, wet solar cells, and new solar cells as light energy conversion devices

[Green Chemistry]
・ Green Chemistry.
・ Concept of atom efficiency, atom efficient conversion process
・ Eco-friendly catalysts

Continue to 物質環境化学 (2)↓↓↓

物質環境化学 (2)

・ Environmentally friendly reaction media

[Recent progress in catalytic organic reactions that contribute to environmental conservation]
・ Catalytic conversion reaction of carbon dioxide
・ Highly efficient catalytic conversion reaction of unactivated substrates
・ Methodology of molecular catalyst development that contributes to environmental conservation

[Course schedule and contents]

Semiconductor basics (once)
・ Semiconductor band structure
・ Electrical properties of semiconductors
・ Optical properties of semiconductors

Semiconductor junction and semiconductor interface (1 session)
・ P-n junction
・ Semiconductor solution interface
・ Semiconductor electrochemical

Light energy conversion device (1 time)
・ Silicon solar cell
・ Wet solar cells
・ New solar cell

Introduction to Green Chemistry (1 time)
・ Guidance on general lectures
・ What is green chemistry?
・ E-factor and atom efficiency (atom economy)
・ Organic synthesis from the viewpoint of Green Chemistry

Atomic efficient manufacturing process: Using homogeneous catalytic reaction as an example (1 session)
・ Lewis acid alternative metal complex catalyst
・ Base-substitute metal complex catalyst
・ Acid-base composite alternative catalyst
・ Oxidation catalyst

Environmentally friendly catalyst: Taking a photooxidation / reduction catalyst as an example (1 session)
・ Electron transfer oxidation catalyst
・ Electron transfer reduction catalyst

Environmentally friendly reaction medium (1 session)
・ Underwater reaction
・ Supercritical fluid
・ Fluorine-based organic solvent
・ Ionic liquid

Catalytic organic chemistry using carbon dioxide as a substrate (1) (1 session)

Continue to 物質環境化学 (3)↓↓↓

・ Lecture outline explanation
・ Physical characteristics of carbon dioxide
・ Electronic state of carbon dioxide

Catalytic organic chemistry using carbon dioxide as a substrate (2) (1 session)
・ Recent results of catalytic conversion reactions using carbon dioxide as a substrate
・ Reaction mechanism of catalytic conversion reaction using carbon dioxide as a substrate

High-efficiency catalytic conversion reaction of low-reactivity substrate (1) (1 session)
・ Highly efficient utilization of unactivated substrate
-Reaction mechanism of catalytic reaction using unactivated substrate

High-efficiency catalytic conversion reaction of low-reactivity substrate (2) (1 session)
・ Basics of CH activation reaction
-Recent results of catalytic conversion reaction through CH activation reaction

[Course requirements]

[Chemistry of light energy conversion by semiconductors]
No prior knowledge of a specific subject is required, but lecture will be conducted on the premise that basic knowledge at the undergraduate level has been acquired.

[Green Chemistry]
Lectures will be conducted on the premise that students have already acquired basic knowledge at the undergraduate level, such as organic chemistry.

[Recent progress in catalytic organic reactions that contribute to environmental conservation]
Lectures will be conducted on the premise that students have basic knowledge at the undergraduate level on subjects such as organic chemistry, physical chemistry, and inorganic chemistry.

[Evaluation methods and policy]

The grades of each shared lecture are evaluated by combining the normal score (30%) and the written test (70%), and based on the average score of the three students, 5 grades (A +: 96-100 points / A: 85-95 points / C: 65-74 points / D: 60-64 points / F: less than 60 points) will be the final evaluation of this lecture.

Course number	G-ENG13 5H205 LJ60

Course title (and course title in English)	無機固体化学 Inorganic Solid-State Chemistry	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,KAGEYAMA HIROSHI Graduate School of Engineering Associate Professor,TAKATSU HIROSHI

Target year	Master's/Doctoral students	Number of credits	1.5	Year/semesters	2025/First semester

Days and periods	Thu.5	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

金属酸化物を中心とする無機結晶固体について、構成元素の相互作用や結合様式、結晶構造について、特に近年急速に発展しつつある複合アニオン化合物を中心に講述し、これらの違いが磁性，電気伝導性，光物性など の機能性とどのように結びついているかを、基礎から最新のトピックスを含め て解説する。また、最新の合成、測定法についても紹介する。最後に、材料の結晶構造を実際に決定する方法を教える。

[Course objectives]

化学系の学生は誰しも原子、分子を出発として物事を理解しようとする。そう考えるとアボガドロ数もの巨大分子といえる無機材料は攻略できそうにないものにみえてくる。一方で、物理系の学生は分子や結合などわからなくても数式をつかって強磁性、超電導などの物性を見事に理解してきた。このように化学と無機固体には大きなギャップがあるように見えるが、本講義によって、化学的視点に立って無機結晶の結合、構造をみることの重要性を理解し、物理に対して恐怖心、アレルギーを取除くことを目指す。

直接的であれ、間接的であれ、無機物を扱うのであればどの分野（電気化学、界面化学、触媒化学など）であっても結晶構造を理解することは必須である。その意識をもって授業に望んでもらえば得るものは大きいと思うので、そのように全ての受講生に感じてもらえることが最終目標。また、無機固体材料の電気・熱・磁気現象について、最近の研究動向を踏まえ、なるべく直感的に理解できるように説明する。

[Course schedule and contents]

固体の化学結合について（２回）
・分子軌道法からみた固体の電子状態（基礎）
・分子軌道法からみた固体の電子状態（発展）

複合アニオン化合物の科学（４回）
・複合アニオン化合物の合成
・複合アニオン化合物の構造
・複合アニオン化合物の化学機能
・複合アニオン化合物の物理機能

固体材料の電気・熱・磁気現象（５回）
・固体材料の結晶構造/結晶とは？
・結晶による回折/固体材料のキャラクタリゼーション
・固体の磁性

Days and periods	Wed.1	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Students will learn the basics of homogeneous catalytic reactions as key reactions used in total synthesis research of natural products, and deepen their understanding of efficient construction methods of carbon skeletons. We will also discuss organic synthesis reactions and various reactants that are highly useful from the viewpoint of functional group selectivity and stereoselectivity. At the end of each lecture, a quiz (confirmation test) on what you learned in the unit will be conducted to cultivate the ability to apply homogeneous catalytic reactions and organic conversion methods.

[Course objectives]

・ Construction of retrosynthetic routes for structurally complex compounds
・ Chemistry of protecting groups
・ Basic organometallic reactions
・ Cross-coupling reaction
・ Asymmetric synthesis
・ How to use synthetic chemistry of alkene complexes
・ How to use synthetic chemistry of metathesis reactions
・ Asymmetric aldol reaction
・ Organic catalysts
・ Diels-Alder reaction
・ Cyclization oligomerization reaction of alkynes
・ How to use synthetic chemistry of carbene and nitrene complexes

[Course schedule and contents]

Total synthesis of Minfiensine (2 sessions)
・ Guidance on general lectures
・ Transmetallation reaction
・ Suzuki / Miyaura coupling reaction
・ Asymmetric Mizoroki-Heck reaction
・ Synthetic chemical utilization of alkene complexes

Total synthesis of Vitamin E (1 session)
・ Asymmetric Domino Wacker-Heck reaction

(+)-Total synthesis of Laurenyne (1 session)
・ CBS asymmetric reduction reaction

Continue to 有機触媒化学 (2)↓↓↓

・ [3,3] Sigmatropic reaction

(+)-Total synthesis of Cyanthiwigin U (2 sessions)
・ Alkene metathesis reaction
・ Chiral pool method

Total synthesis of Miriaporone 4 (2 sessions)
・ Evans aldol reaction
・ Alcohol oxidation reaction by TEMPO and IBX
・ 1, 3-Dipole addition reaction

Total synthesis of BIRT-377 (1 session)
・ Organic catalyst
・ Pinnick oxidation reaction
.
(-)-Total synthesis of Tetrodotoxin (2 sessions)
・ Reaction of carbene complex
・ Reaction of nitrene complex
・ Chiral pool method
・ Felkin-Anh model

[Course requirements]

Lectures on synthetic organic chemistry and organometallic chemistry will proceed on the premise that you have already acquired basic knowledge at the undergraduate level.

[Evaluation methods and policy]

A quiz is given at the end of each lecture, and results of the quiz and final exam for each lecture are evaluated comprehensively.

[Overview and purpose of the course]

材料の性質は界面に大きく影響される。その中でも光学的な性質は界面に敏感である。このことは、界面を工夫することにより光をより効果的に扱うことができることを意味している同時に、界面を調べる手段として光を使うことが有効であることも意味している。講義の前半では、化学系の学部カリキュラムではあまり取り扱わない光やレーザーに関する基本的事項について解説する。後半では、光が関与するさまざまな界面現象について解説し、物質界面の分光法による研究にどのように利用できるかについて説明する予定である。

[Course objectives]

光が関与する物質界面の多様な現象を理解し、界面を調べるためのさまざまな分光法の原理を理解すること。

[Course schedule and contents]

序論（1回）
・界面と光について

光とレーザーの基礎（5回）
・光の基本的性質
・レーザー
・スペクトルと分光分析

界面現象と光（5回）
・界面張力波と光散乱
・電磁場の境界条件とフレネル式
・表面プラズモンポラリトン
・光高調波発生

[Overview and purpose of the course]

This course explains the basic chemistry of functional organometallics, aiming to help students understand the syntheses/structures/reactivities/functions of these compounds with a focus on applications in molecular transformation and organic synthesis.

[Course objectives]

To gain molecular-level insight into the reactivity and photo- and electro-functions of organometallic compounds based on elements science and to be able to apply it to the students; daily research, hopefully.

[Course schedule and contents]

course guidance and introduction,1time,4/9 course guidance/introduction/assessment test
syntheses, properties, and applications of functional metal nano particles,6times,4/16-5/28 main group organometallics in molecular transformations
syntheses, properties, and applications of organo main group metal compounds,4times,6/4-7/2 transition metal organometallic in photo- and electro-functional materials

[Course requirements]

knowledge of undergraduate organic chemistry

[Evaluation methods and policy]

examinations (quizes in classes and final achievement test)

[Textbooks]

Not fixed

（Reference books）

[Study outside of class (preparation and review)]

（Other information (office hours, etc.)）

This course is provided at Uji campus in the odd-number academic years and at Katsura campus in the even-number academic years.

*Please visit KULASIS to find out about office hours.

Course number	G-ENG13 5H232 LJ60		
Course title (and course title in English)	**物質エネルギー化学特論第五** Energy and Hydrocarbon Chemistry, Adv.V	Instructor's name, job title, and department of affiliation	Part-time Lecturer,SASAMORI TAKAHIRO Graduate School of Engineering Professor,FUJIHARA TETSUAKI

Target year	1st year students or above	Number of credits	1.5	Year/semesters	2025/Intensive, Second semester
Days and periods	Intensive	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

有機化学・無機化学研究において、単結晶X線結晶構造解析の果たしている役割について紹介する。測定原理、測定の流れ、などの紹介とともに、有機化学・無機化学研究の特に合成に携わる研究者が単結晶X線結晶構造解析を行う際の手順と注意事項について解説する。合成化学研究における単結晶X線結晶構造解析の意味を理解し、その結果について考察ができる基礎知識を習得する。

[Course objectives]

化学研究における単結晶X線結晶構造解析の意味を理解し、その結果について考察ができるようになる。

[Course schedule and contents]

１．X線結晶構造解析とは
２．X線結晶構造解析の原理
３．X線結晶構造解析の基礎
４．結晶の作り方、選び方
５．X線回折・測定
６．X線結晶構造解析
７．X線結晶構造解析の結果の評価
８．難しい解析・注意点
９．まとめ
１０．X線結晶構造解析の実例・デモンストレーション
１１．確認テストと演習

[Course requirements]

一般的な有機化学および無機化学に関する知識を有する。

[Evaluation methods and policy]

小テスト70%、レポート課題30%

Course number	G-ENG14 5H401 LJ60		
Course title (and course title in English)	統計熱力学 Statistical Thermodynamics	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,SATO HIROFUMI

Target year	Master's students	Number of credits	1.5	Year/semesters	2025/Second semester
Days and periods	Thu.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Many of our surrounding substances are condensed systems in which countless molecules are gathered. In this lecture, we aim to understand the behaviors of various condensing systems from the viewpoint of statistical mechanics. Starting from the basics of statistical mechanics, we learn statistical mechanics handling of realistic molecular system.

[Course objectives]

Confirm the relationship between thermodynamics and statistical mechanics, and acquire statistical mechanics ideas to understand various phenomena as well.

[Course schedule and contents]

Fundamentals of statistical mechanics (3times)
cumulant, phase space, micro canonical ensemble, grand canonical ensemble

Fundamentals of statistical mechanics of quantum system (3times)
Fermi statistics, Bose statistics

Interacting classical system (5times)
imperfect gas, cluster expansion, functional derivative, distribution function, integral equation theory for liquids

[Course requirements]

Knowledge of thermodynamics of undergraduate level and elementary statistical mechanics

[Evaluation methods and policy]

Evaluation will be based on active participation and an examination.

[Overview and purpose of the course]

化学現象を理解するための分子の量子論の基礎的事項について講述する。

[Course objectives]

分子の量子論の基礎とその理解に必要なフレームについて習熟する。

[Course schedule and contents]

線形代数の復習、解析力学（1回）
線形空間、内積、Lagrange形式、Hamilton形式

量子力学の基礎（2回）
ブラ、ケット、オブザーバブル、正準量子化、厳密に解けるいくつかの例

分子の量子力学（2回）
Born-Oppenheimer近似、回転、振動

定常状態摂動論とその応用（2回）
非縮退・縮退状態の摂動論、分極率、磁化率

時間に依存する摂動論（2回）
Fermiの黄金則、Dyson級数、輻射・無輻射遷移速度定数

Green関数法（2回）
Feynmanダイアグラム、Dyson方程式、自己エネルギー

学習到達度の確認（1回）

[Overview and purpose of the course]

この授業では、磁気共鳴、NMR、フォトルミネッセンス分光、共焦点レーザー顕微鏡による計測、誘電緩和 (電気双極子を用いた分子分光)などの基礎理論および応用について講義します。
それら分光法や計測法の基礎をもとに、有機ELで用いられる可視光領域における時間分解フォトルミネッセンス測定法、共焦点レーザー顕微鏡による単一発光中心計測、ダイヤモンドやSiC中の発光中心の量子情報処理応用研究などについて講義します。

In this class, fundamental theories and applications of magnetic resonance, NMR spectroscopy, photoluminescence spectroscopy, measurement by confocal laser microscopy, and dielectric relaxation (molecular spectroscopy with electric dipoles), etc., will be lectured.

Based on these spectroscopy and measurement methods, time-resolved photoluminescence spectroscopy in the visible light region used in organic light-emitting diodes, measurement of single color centers by a confocal laser microscope, quantum information processing by using color centers in diamond and SiC will be lectured.

[Course objectives]

Days and periods	Fri.2	Class style	Lecture (Media-based course)	Language of instruction	Japanese

[Overview and purpose of the course]

Scattering theory of an electron for XAFS Analysis and Introduction to Catalytic Science.
The lectures are delivered online but it is not certain.

[Course objectives]

Learning fundamentals of catalytic science and acquiring elementary scattering theory to understand XAFS spectroscopy as a powerful tool for catalyst characterization.

[Course schedule and contents]

1 Solving Schroedinger equation in central force field (2)
variable separation method; angular momentum; radial equation; solution for bound condition; solution for scattering condition

2 Hydrogen-like atom problem in two dimension(1)
Schroedinger equation of hydrogen-like atom in two dimension is solved according to the solution in lecture 1.

3 Fermi's golden rule(1)
perturbation theory (non-degenerated system); time dependent Shroedinger equation; time-dependent pertubation theory

4 EXAFS Analysis(1)
EXAFS analysis

5 Application of EXAFS(1)
examples and recent topics

6 Introduction to catalytic science(1)
fundamentals of catalyst and catalysis; design of catalysts

7 Introduction to photocatalysis(1)
fundamentals of photocatalyst and photocatalysis

8 Industrial catalysis(1)
catalysts for petroleum chemistry

Continue to 分子触媒学(2)↓↓↓

分子触媒学(2)

9 Chemistry of adsorption(1)
physisorption and chemisorption

10 Physical chemistry for catalysis(1)
thermodynamics and reaction kinetics in catalysis.

Course title (and course title in English)	分子レオロジー Molecular Rheology	Instructor's name, job title, and department of affiliation	Institute for Chemical Research Associate Professor,MATSUMIYA YUMI		
Target year	Master's/Doctoral students	Number of credits	1.5	Year/semesters	2025/First semester
Days and periods	Wed.3	Class style	Lecture (Media-based course)	Language of instruction	Japanese and English

[Overview and purpose of the course]

Lecture is given for the rheology and dynamics of polymeric liquids and their molecular basis.

[Course objectives]

Understanding phenomenological aspect of rheology in general and molecular aspect of polymer rheology.

[Course schedule and contents]

Basics of Rheology,1time,Rheology and its role in science and engineering, flow / deformation/ stress, viscosity, modulus
Rheological behavior of matter,1time,Rheological behavior of matter and classification, viscoelasticity, non-Newtonian flow, plastic flow
Viscoelastic relaxations,2times,Boltzmann's principle, relaxation functions, relaxation time, conversion among response functions, complex modulus
Viscoelasticity and temperature,1time,Glass transition, time-temperature superposition, WLF equation
Stress expression of polymers,2times,Stress expression, tension / free-energy / distribution-function of subchains
Rouse/Zimm model,1time,Model description, model equation, derivation of stress and relaxation modulus, discussion on the relaxation behavior
tube model,2times,Model description, model equation, derivation of stress and relaxation modulus, discussion on the relaxation behavior, comparison to Rouse dynamics
feedback of evaluation and confirmation of level of understanding,1time,Feedback of evaluation of report etc, and confirmation of level of understanding

[Course requirements]

Some basics on differential equations and statistical physics of polymers

[Evaluation methods and policy]

Mainly with report

Course number	G-ENG44 6H429 LE61　G-ENG14 6H429 LE61		
Course title (and course title in English)	Molecular Nano-Biosensors and Smart Biomaterials Molecular Nano-Biosensors and Smart Biomaterials	Instructor's name, job title, and department of affiliation	Institute for Advanced Study Senior Lecturer,NAMASIVAYAM, Ganesh Pandian

Target year	1st year students or above	Number of credits	1.5	Year/semesters	2025/Second semester
Days and periods	Mon.2	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

This course will discuss the bioengineering concepts required to understand the design and biological applications of nano-sized biosensors and smart (Programmable functional recognition) biomaterials.

[Course objectives]

The intention of this course is to allow students to become familiar with imaging, sensing, and delivery system by combining designable nanoscale structure and biofunctional chemistry. This course will give a overview of self contained integrated molecular nano-devices capable of providing analytical information, using a biological recognition module in conjunction with a secondary functional module. Different biomaterial systems ranging from biological nanopores, through to functional biomolecules and machine learning will be discussed. Instruction is also given in the general principles of sampling, big data analysis and statistical representation.

[Course schedule and contents]

Lecture topics include (but are not limited to) 1. Basic concepts of electrochemistry, molecular cell biology, molecular nanosystems, programmable nanodevices and artificial intelligence (2 sessions). 2. Broad overview of Chemical sensors, biosensors, design of nano-scale biosensors and microfluidic devices(2 sessions). 3. Overview of Solid-state and Biological Nanopores, Molecular Transport in porous media (micro-, meso and macro-scale), Permeability and selectivity in membranes and porous materials (3 sessions). Case study 1: Application to control of cellular functions, and diagnostics and medical applications (2 sessions). Case study 2: Application in DNA and RNA sequencing in mammalian cells (2 sessions).

[Course requirements]

None

[Evaluation methods and policy]

The course grade will be determined based on class performance/attendance (40%) and a final report(60%).

Days and periods	Tue.2	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

This course will discuss the physical chemistry and engineering application of porous materials in the areas of adsorption and membrane separation processes.

[Course objectives]

The intention of this course is to allow students to become familiar with a range of porous materials, and the practical ways such materials are used. Although the course is not intended to be exhaustive in covering all porous materials and all applications, examples will be followed that are relevant to socially important problems, such as global warming, or water shortage.

[Course schedule and contents]

Overview 1 Introduction to course, and broad overview of porous materials
Thermodynamics of Mixing 2 Phase equilibria and structure formation processes
Adsorptive processes 2 Physical chemistry of adsorptive processes in porous materials
Diffusive processes 2 Physical chemistry of diffusion limited processes in porous materials
Case Study: Membrane Processes for liquid separation 2 Liquid filtration systems for nanofiltration, desalination
Case Study: Membrane Processes for gas separation 2 Case Study: Membrane Processes for gas separation

[Course requirements]

None

[Evaluation methods and policy]

The course grade will be determined based on class performance/attendance (40%) and a final report(60%).

[Overview and purpose of the course]

Lectures on various inorganic syntheses a characterization of inorganic materials are given mainly by Professor Saburo Hosokawa of Kyoto Institute of Technology. In addition, application of inorganic materials to heterogeneous catalyst is described.

[Course objectives]

Learning the fundamentals of catalyst preparation and the method for structural analysis of catalyst materials

[Course schedule and contents]

1 Synthesis methods of inorganic materials(1)
co-precipitation method; polymerized complex method; solvothermal methd

2 Characterization of inorganic materials(2)
XRD(X-ray Diffraction); XAFS(X-ray Absorption Fine Structure); IR (Infrared spectroscopy); TPR(Temperature programmed reduction)

3 Catalysis by inorganic materials(1)
Environmental catalysts like automotive catalysts for purification of exhaust gas.

[Overview and purpose of the course]

Understanding of interaction between electromagnetic wave and matter

This series of lectures are given by Dr. Yusuke Tsutsui in 2021.
This course concerns theory and practice in interaction between electromagnetic wave and matter with wide range of time-frequency domain, which is necessary to describe dynamics of matter, especially on molecular engineering. The advanced measurement techniques will be explained in the final stage on this course.

[Course objectives]

[Course schedule and contents]

1st: Frequency of electromagnetic wave and related phenomena
2nd: Classical/quantum treatment 1
3rd: Classical/quantum treatment 2
4th: Advanced techniques in recent researches

[Course requirements]

[Overview and purpose of the course]

A concise explanation is given of physical properties of polymer solutions and polymeric solids along with relevant basic theories.

[Course objectives]

Fundamental knowledge of physical properties of polymer materials.

[Course schedule and contents]

Polymer Chain Conformation in Dilute Solutions,4times,After a clarification of basic factors which determine the conformations of real polymer chains in dilute solutions, some polymer chain models are introduced to describe the equilibrium conformational behavior of the real chains. Further, behavior of average chain dimensions as a functions of molecular weight is considered based on the chain models.
Thermodynamics and Phase Behavior of Polymer Solutions,4times,Various phase transition phenomena in polymer solutions (phase separation, hydration, association, gelation, etc.) are systematically explained from thermodynamic and statistical-mechanical viewpoints. Phase separation of polymer solutions, Aqueous polymer solutions, and Association and gelation of polymers are discussed in the lectures.
Exercise,1time,Exercise in polymer solutions.
Structure and Mechanical Properties of Polymeric Solids,5times,Polymeric solids such as rubber and plastics, especially thermodynamics of rubber elasticity, polymer crystallization and crystalline/amorphous higher-order structures, are discussed. Moreover, fundamentals of viscoelastic properties of polymers are introduced to provide the understandings of relaxation phenomena such as glass transition.
Electronic and Optical Properties of Polymeric Solids,5times,The electronic and optical properties of polymers is reviewed. The application of polymer materials in the opto-electronics and display devices is also presented.
Exercise,1time,Exercise in polymeric solids.

Days and periods	Wed.3	Class style	Lecture (Media-based course)	Language of instruction	Japanese

[Overview and purpose of the course]

This lecture will cover the basics of polymer synthesis as well as the applications.
In particular, polymerization mechanisms and characteristics of ionic polymerization, radical polymerization, coordination polymerization, and ring-opening polymerization are explained.
The lecture will also cover the concept specific to polymers and polymer synthesis leading to the physical properties/functions of polymers. The precise synthesis of new polymers is explained as well as the synthesis of new polymers with the latest papers.

[Course objectives]

Students can understand the latest technologies based on the history and fundamentals of polymer synthesis. They can also understand how the synthesis technology is related to the evaluation of physical properties and the development of materials. Furthermore, students can consider their own ideas and future developments of polymers.

[Course schedule and contents]

Introduction of Polymer Chemistry (1 time)
Ionic Polymerization and Radical Polymerization (3 times)

[Overview and purpose of the course]

In this class, optoelectronic functions of polymeric materials are discussed on the basis of photochemistry and photophysics. In particular, the importance of designing nanostructures of polymer assembly is highlighted by explaining examples of state-of-the-art applications, which include optical fibers, organic light-emitting diode, and organic solar cells.

[Course objectives]

Students will gain an understanding of the importance of polymer materials and nano-assembled structures that support polymer functions. Students will also foster their abilities to consider advanced functional materials on the basis of fundamental knowledge of polymer chemistry and photochemistry.

[Course schedule and contents]

Course overview (1 class)
Explanation is made of fields in contemporary society in which polymeric functional materials are actively utilized. The overall orientation of this course is also overviewed.

Conductive functions of polymers (3 classes)
Detailed explanation is made of the basic electronic properties of polymers, including conductive polymers, polymer semiconductors, etc. Functions of such polymer materials are found in the organic electronics field, including photoconductive materials and thin-film transistors.

Optoelectronic functions of polymers (4 classes)
Explanation is made of the development of optical function polymers, photoexcitation dynamics, and basic processes of photochemistry, together with optical functions used in related applications. Fundamentals concerning the optical properties of polymer materials are discussed, as well as polymer-related developments in the optics field.

Photovoltaic conversion functions of polymers (3 classes)
The importance of electron transfer is explained using as an example energy conversion in photosynthesis systems. Also described are application developments in organic photovoltaics (OPV) and organic light-emitting diodes (OLED), etc., which convert light into electricity, and electricity into light.

This lecture will be given by face-to-face classes and media classes (simultaneous interactive type).

Continue to 高分子機能学(2)↓↓↓

高分子機能学(2)

[Course requirements]

As prerequisites for this course, students are to have completed courses in physical chemistry and polymer chemistry in the faculty of engineering chemistry.

[Evaluation methods and policy]

【Evaluation method】
Evaluation will be based on reports (80%) and class performance (20%).
- Those who are absent more than half will not be credited.

【Evaluation policy】
Achievement of goals is evaluated according to the grade evaluation policy of the graduate.

[Textbooks]

Copies of lecture notes will be distributed and used in classes.

[References, etc.]

（Reference books）

None:

[Study outside of class (preparation and review)]

Students are to review distributed copies of lecture materials and perform review study in relevant domains.

Course number	G-ENG15 6H616 LJ61		
Course title (and course title in English)	高分子集合体構造 Polymer Supermolecular Structure	Instructor's name, job title, and department of affiliation	Institute for Chemical Research Professor,TAKENAKA MIKIHITO

Target year	Master's students	Number of credits	1.5	Year/semesters	2025/Second semester
Days and periods	Tue.3	Class style	Lecture (Media-based course)	Language of instruction	Japanese

[Overview and purpose of the course]

Polymers self-assemble or self-organize by intra- and/or intermolecular interaction to form assembled structures of polymer molecules. Such structures are closely related to the properties of the polymeric materials, it is necessary to control the assembled structures of the constituent polymer molecules in order to control the properties of polymeric materials, especially solid materials. In this lecture particularly, formation mechanisms, analytical techniques, and elucidated structures of crystalline polymers, phase-separated structures of polymer mixtures, microphase-separated structures of block and graft copolymers will be discussed.

[Course objectives]

This course aims for the development of the faculty to infer the properties of polymeric materials from their morphology based on the knowledge of structure-property relationships of higher-order structures of crystalline polymers, phase-separated structures of polymer mixtures (blends), microdomain stuctures of block copolymers, etc.

[Course schedule and contents]

Self-assembly and Self-organization,1time,The differences between self-assembly and self-organization will be discussed by referring the examples in natural phenomena and polymeric systems.
Crystalline Polymers,3times,In the lectures, unit cell structures and hierarchical higher-order structures of polymer crystals such as folded-chain lamellar crystals and spherulites, as well as deformation and thermal behavior of polymer crystals will be discussed.
Polymer Blends,3times,Miscibility, phase-diagrams, mechanisms and dynamics of phase transitions, relationships between phase-separated structures and properties, methods to control the phase-separated structures will be discussed.
Block and Graft Copolymers,3times,The lectures include nano-scale domain formation of block copolymers by microphase-separation, miscibility and phase diagrams, order-disorder and order-order transitions, bicontinuous structures, structure formation in thin films, blends with homopolymers or other block copolymers, multi-component multi-block copolymers, miktoarm star block copolymers, and more.
Evaluation of Degree of Understandings,1time,Degree of understandings of the lectures will be evaluated by means of a short test and group discussions.

[Overview and purpose of the course]

Molecular mechanism of characteristic physical properties of polymeric systems is lectured on the basis of the equilibrium and non-equilibrium statistical mechanics. Main topics are phase separation of polymer solutions and mixtures, microphase separation of block copolymers, gelation, rubber elasticity, and rheology of physical gels.

[Course objectives]

Understanding the molecular mechanism of characteristic physical properties of polymeric systems based on the equilibrium and non-equilibrium statistical mechanics.

[Course schedule and contents]

phase separation of polymer solutions and mixtures,3times,phase diagram, Flory-Huggins theory, mean-field theory, phase separation, spinodal decomposition
microphase separation of block copolymers,3times,microphase separation, density functional theory, directed self-assembly
structure and property of polyelectrolyte solution,2times,electrostatic interaction between polyions, screening effects, dilute and semi-dilute solutions
vibrational mode and spectroscopy of polymer solid,2times,vibration of continuous medium, vibration of polymer chain, spectroscopic experiment

[Overview and purpose of the course]

This course aims at better understanding of fundamentals on living radical polymerization and describes its application to graft polymerization for novel surface modification as well as its related matters.

[Course objectives]

[Course schedule and contents]

Introduction to radical polymerization,1time,radical polymerization, mechanism, kinetics, elementary reaction
Fundamentals on living radical polymerization and its application to material design,2times,living radical polymerization, mechanism, kinetics, functional polymer, material design
Physical chemistry on surfaces and polymer brushes,2times,Surface, interface, physical chemistry, polymer brush, theory, structure, property
Living radical polymerization and polymer particles,2times,Living radical polymerization, surface-initiated polymerization, polymer brush, hairy particle, star polymer
Synthesis of polymer particles by radical polymerizations,2times,Emulsion polymerization, suspension polymerization, dispersion polymerization, precipitation polymerization, self-organized precipitation, nonspherical particle
Applications of polymer particles,2times,Self-assembly, dispersion and aggregation, depletion force, pickering emulsion, composites, biochemical and biomedical applications

[Overview and purpose of the course]

Effects of stiffness and local conformations of polymer chains on polymer solution properties observed in the light scattering and viscosity experiments are considered based on appropriate polymer chain models.

[Course objectives]

[Course schedule and contents]

Review,1time,Definitions of physical quantities determined from the light scattering and viscosity measurements and the theoretical formulations of those quantities.
Experiments in dilute polymer solutions,2times,Principles of the light scattering and viscosity experiments.
Polymer chain models and their statistics,2times,Static models for polymer chains: the Gaussian chain, the wormlike chain, and the helical wormlike chain. A comparison of experimental data for the mean-square radius of gyration with relevant theories.
Excluded-volume effects,2times,Intra- and intermolecular excluded-volume effects represented by the expansion factors and the second virial coefficient, respectively.
Steady-state transport properties,2times,A comparison of experimental data for the intrinsic viscosity and diffusion coefficient with relevant theories.
Dynamic properties,2times,Dynamic models for polymer chains: the Rouse-Zimm spring-bead model and the dynamic helical wormlike chain. A comparison of experimental data for the first cumulant of the dynamic structure factor with relevant theories.

[Course requirements]

Basic knowledge of polymer solutions given in the lecture Polymer Physical Properties (10D651).

Target year	Master's students	Number of credits	1.5	Year/semesters	2025/First semester
Days and periods	Wed.2	Class style	Lecture (Media-based course)	Language of instruction	Japanese

[Overview and purpose of the course]

General knowledge and concepts of polymer synthesis required in industry or academia are explained.

[Course objectives]

Students acquire knowledge of polymer synthesis appropriate for graduates of the Master's Course in Polymer Chemistry, Graduate School of Engineering, Kyoto University.

[Course schedule and contents]

Introduction of Polymer Chemistry and Coordination Polymerization (1 time)
Ionic Polymerization (1 time)
Radical Polymerization (1 time)
Step-Growth Polymerization (1 time)
Supramolecules (1 time)
Polymer Reactions and Block/Graft Copolymers (1 time)
Helical Polymers (1 time)
Inorganic Polymers (1 time)
Functional Polymers (1 time)
Luminescent organic semiconductor materials (1 time)

Course number	G-ENG44 6H651 LJ61				
Course title (and course title in English)	高分子生成論特論 Design of Polymerization Reactions, Adv.	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,OUCHI MAKOTO		
Target year	Doctoral students	Number of credits	1.5	Year/semesters	2025/Second semester
Days and periods	Wed.3	Class style	Lecture (Media-based course)	Language of instruction	Japanese

[Overview and purpose of the course]

This lecture will cover the basics of polymer synthesis as well as the applications.
In particular, polymerization mechanisms and characteristics of ionic polymerization, radical polymerization, coordination polymerization, and ring-opening polymerization are explained.
The lecture will also cover the concept specific to polymers and polymer synthesis leading to the physical properties/functions of polymers. The precise synthesis of new polymers is explained as well as the synthesis of new polymers with the latest papers.

[Course objectives]

Students can understand the latest technologies based on the history and fundamentals of polymer synthesis. They can also understand how the synthesis technology is related to the evaluation of physical properties and the development of materials. Furthermore, students can consider their own ideas and future developments of polymers.

[Course schedule and contents]

Introduction of Polymer Chemistry (1 time)
Ionic Polymerization and Radical Polymerization (3 times)
Living Polymerization (1 time)
Coordination Polymerization (1 time)
Ring-Opening Polymerization (2 times)
Copolymerization (1 time)
Stereospecific Polymerization (1 time)
Recent Precision Polymerization (1 time)

[Overview and purpose of the course]

In this class, optoelectronic functions of polymeric materials are discussed on the basis of photochemistry and photophysics. In particular, the importance of designing nanostructures of polymer assembly is highlighted by explaining examples of state-of-the-art applications, which include optical fibers, organic light-emitting diode, and organic solar cells.

[Course objectives]

Students will gain an understanding of the importance of polymer materials and nano-assembled structures that support polymer functions. Students will also foster their abilities to consider advanced functional materials on the basis of fundamental knowledge of polymer chemistry and photochemistry.

[Course schedule and contents]

Course overview (1 class)
Explanation is made of fields in contemporary society in which polymeric functional materials are actively utilized. The overall orientation of this course is also explained.

Conductive functions of polymers (3 classes)
Detailed explanation is made of the basic electronic properties of polymers, including conductive polymers, polymer semiconductors, etc. Functions of such polymer materials are found in the organic electronics field, including photoconductive materials and thin-film transistors.

Optoelectronic functions of polymers (4 classes)
Explanation is made of the development of optical function polymers, electroexcitation dynamics, and basic processes of photochemistry, together with optical functions used in related applications. Fundamentals concerning the optical properties of polymer materials are discussed, as well as polymer-related developments in the optics field.

Photovoltaic conversion functions of polymers (3 classes)
The importance of electron transfer is explained using as an example energy conversion in photosynthesis systems. Also described are application developments in organic photovoltaics (OPV) and organic light-emitting diodes (OLED), etc., which convert light into electricity, and electricity into light.

This lecture will be given by face-to-face classes and media classes (simultaneous interactive type).

Continue to 高分子機能学特論(2)↓↓↓

高分子機能学特論(2)

[Course requirements]

As prerequisites for this course, students are to have completed courses in physical chemistry and polymer chemistry in the faculty of engineering chemistry.

[Evaluation methods and policy]

【Evaluation method】

Evaluation will be based on reports (80%) and class performance (20%).

- Those who are absent more than half will not be credited.

【Evaluation policy】

Achievement of goals is evaluated according to the grade evaluation policy of the graduate.

[Textbooks]

Copies of lecture notes will be distributed and used in classes.

[References, etc.]

（Reference books）

None:

[Study outside of class (preparation and review)]

Students are to review distributed copies of lecture materials and perform review study in relevant domains.

（Other information (office hours, etc.)）

[Overview and purpose of the course]

Effects of stiffness and local conformations of polymer chains on polymer solution properties observed in the light scattering and viscosity experiments are considered based on appropriate polymer chain models.

[Course objectives]

[Course schedule and contents]

Review,1time,Definitions of physical quantities determined from the light scattering and viscosity measurements and the theoretical formulations of those quantities.
Experiments in dilute polymer solutions,2times,Principles of the light scattering and viscosity experiments.
Polymer chain models and their statistics,2times,Static models for polymer chains: the Gaussian chain, the wormlike chain, and the helical wormlike chain. A comparison of experimental data for the mean-square radius of gyration with relevant theories.
Excluded-volume effects,2times,Intra- and intermolecular excluded-volume effects represented by the expansion factors and the second virial coefficient, respectively.
Steady-state transport properties,2times,A comparison of experimental data for the intrinsic viscosity and diffusion coefficient with relevant theories.
Dynamic properties,2times,Dynamic models for polymer chains: the Rouse-Zimm spring-bead model and the dynamic helical wormlike chain. A comparison of experimental data for the first cumulant of the dynamic structure factor with relevant theories.

[Course requirements]

Basic knowledge of polymer solutions given in the lecture Polymer Physical Properties (10D651).

[Evaluation methods and policy]

Term-end examination.

[Overview and purpose of the course]

Molecular mechanism of characteristic physical properties of polymeric systems is lectured on the basis of the equilibrium and non-equilibrium statistical mechanics. Main topics are phase separation of polymer solutions and mixtures, microphase separation of block copolymers, gelation, rubber elasticity, and rheology of physical gels.

[Course objectives]

Understanding the molecular mechanism of characteristic physical properties of polymeric systems based on the equilibrium and non-equilibrium statistical mechanics.

[Course schedule and contents]

phase separation of polymer solutions and mixtures,2times,phase diagram, Flory-Huggins theory, mean-field theory, phase separation, spinodal decomposition
microphase separation of block copolymers,1time,microphase separation, density functional theory, directed self-assembly
gelation,1time,definition of gels, classification of gels, classical theory of gels, sol-gel transition, elastically effective chains
rubber elasticity,3times,affine network theory, phantom network theory, tetra-PEG gel, slide-ring gel
rheology of associating polymers,3times,telechelic associating polymers, linear viscoelasticity, Maxwell model, shear thickening, transient network theory, colloid/polymer mixture, shear-induced gel
verification of understanding,1time,

Course title (and course title in English)	高分子集合体構造特論 Polymer Supermolecular Structure, Adv.		Instructor's name, job title, and department of affiliation	Institute for Chemical Research Professor,TAKENAKA MIKIHITO	
Target year	Doctoral students	Number of credits	1.5	Year/semesters	2025/Second semester
Days and periods	Tue.3	Class style	Lecture (Media-based course)	Language of instruction	Japanese

[Overview and purpose of the course]

Polymers self-assemble or self-organize by intra- and/or intermolecular interaction to form assembled structures of polymer molecules. Such structures are closely related to the properties of the polymeric materials, it is necessary to control the assembled structures of the constituent polymer molecules in order to control the properties of polymeric materials, especially solid materials. In this lecture particularly, formation mechanisms, analytical techniques, and elucidated structures of crystalline polymers, phase-separated structures of polymer mixtures, microphase-separated structures of block and graft copolymers will be discussed.

[Course objectives]

This course aims for the development of the faculty to infer the properties of polymeric materials from their morphology based on the knowledge of structure-property relationships of higher-order structures of crystalline polymers, phase-separated structures of polymer mixtures (blends), microdomain stuctures of block copolymers, etc.

[Course schedule and contents]

Self-assembly and Self-organization,1time,The differences between self-assembly and self-organization will be discussed by referring the examples in natural phenomena and polymeric systems.
Crystalline Polymers,3times,In the lectures, unit cell structures and hierarchical higher-order structures of polymer crystals such as folded-chain lamellar crystals and spherulites, as well as deformation and thermal behavior of polymer crystals will be discussed.
Polymer Blends,3times,Miscibility, phase-diagrams, mechanisms and dynamics of phase transitions, relationships between phase-separated structures and properties, methods to control the phase-separated structures will be discussed.
Block and Graft Copolymers,3times,The lectures include nano-scale domain formation of block copolymers by microphase-separation, miscibility and phase diagrams, order-disorder and order-order transitions, bicontinuous structures, structure formation in thin films, blends with homopolymers or other block copolymers, multi-component multi-block copolymers, miktoarm star block copolymers, and more.
Evaluation of Degree of Understandings,1time,Degree of understandings of the lectures will be evaluated by means of a short test and group discussions.

[Overview and purpose of the course]

This course aims at better understanding of fundamentals on living radical polymerization and describes its application to graft polymerization for novel surface modification as well as its related matters.

[Course objectives]

[Course schedule and contents]

Introduction to radical polymerization,1time,radical polymerization, mechanism, kinetics, elementary reaction
Fundamentals on living radical polymerization and its application to material design,2times,living radical polymerization, mechanism, kinetics, functional polymer, material design
Physical chemistry on surfaces and polymer brushes,2times,Surface, interface, physical chemistry, polymer brush, theory, structure, property
Living radical polymerization and polymer particles,2times,Living radical polymerization, surface-initiated polymerization, polymer brush, hairy particle, star polymer
Synthesis of polymer particles by radical polymerizations,2times,Emulsion polymerization, suspension polymerization, dispersion polymerization, precipitation polymerization, self-organized precipitation, nonspherical particle
Applications of polymer particles,2times,Self-assembly, dispersion and aggregation, depletion force, pickering emulsion, composites, biochemical and biomedical applications

Course title (and course title in English)	有機設計学 Organic System Design	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,SUGINOME MICHINORI Graduate School of Engineering Senior Lecturer,YAMAMOTO TAKESHI

Target year	Master's/Doctoral students	Number of credits	1.5	Year/semesters	2025/First semester
Days and periods	Tue.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

有機触媒反応の設計と触媒反応の合成化学的な利用を理解するため，触媒的不斉反応を取り上げ，その概説とともに有機ホウ素化合物を用いた不斉反応を例として挙げながら解説する。

[Course objectives]

キラル触媒を用いた不斉触媒反応の原理と，有機合成化学への応用における意義を理解する。

[Course schedule and contents]

不斉合成の概観・基礎(1回)
不斉合成の基本的事項（光学分割法、エナンチオ選択的反応）について概説する。

不斉合成の各論：遷移金属触媒反応(4回)
キラル配位子と有機金属化合物を用いる触媒的不斉反応について詳述する。(1)キラル遷移金属触媒を用いた不斉水添及び関連反応，(2)ホウ素を含んだσ結合の炭素ー炭素多重結合への不斉付加反応，(3)クロスカップリングによる不斉炭素ー炭素結合形成，(4)不斉共役付加反応，を取り上げる。

不斉合成の各論：有機触媒反応(2回)
キラル有機触媒を用いる触媒的不斉反応について詳述する。(1)不斉求核触媒，エナミン形成触媒，およびイミニウム形成触媒，(2)キラル相間移動触媒およびキラルブレンステッド酸触媒，を取り上げる。

不斉合成の各論：不斉触媒反応の新しいコンセプト(2回)
不斉触媒反応に関する最近のトピックスを解説する。(1)不斉増幅を伴う不斉触媒反応，動的キラリティ，(2)エナンチオ収束反応，ジアステレオマーの不斉自在合成，を取り上げる。

不斉合成の各論：不斉触媒反応開発の最前線(1回)
不斉触媒反応の開発研究における最新の成果を解説する。

全体のまとめ(1回)
不斉合成の概観および展望を総括する。

Course number	G-ENG16 5H808 LJ61						
Course title (and course title in English)	物理有機化学 Physical Organic Chemistry			Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,MATSUDA KENJI Graduate School of Engineering Senior Lecturer,HIGASHIGUCHI KENJI		
Target year	Master's/Doctoral students	Number of credits	1.5	Year/semesters	2025/Second semester		
Days and periods	Thu.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese		

[Overview and purpose of the course]

Properties of organic compounds, such as electric conductivity, magnetism, photophysical properties, are discussed in terms of molecular structure and electronic structure.

[Course objectives]

The goal of this course is to understand principles of photochemistry.

[Course schedule and contents]

Photochemical Reaction(1)
Photochemistry, Photophysics, einstein (unit), Jablonski diagram, Excitation, Internal conversion, Intersystem crossing, Fluorescence, Phosphorescence, Photochemical reaction

Excited States in Molecular Orbital Theory(2)
Born-Oppenheimer approximation, Flanck-Condon principle, Singlet, Triplet, Energy gap, n-pi*, pi-pi*, Potential energy surface, Conical intersection, Solvatochromism

Electronic Transition(2)
Transition probability, Fermi's golden rule, Transition moment, Oscillator strength, Polarized light, Stimulated emission, Einstein coefficient, Beer-Lambert law, Selection rule, Spin-orbit coupling

Radiative Transition(2)
Fluorescence, Phosphorescence, Fluorescence excitation spectrum, Mirror relationship, Vibrational structure, Fluorescence quantum yield, Emission rate constant

Behavior of the Excited Molecule(2)
Energy Transfer, Quenching, Trivial, Foerster, Dexter, FRET, Stern-Volmer plot, Excimer, Exciplex, Triplet sensitization

Phororeaction, Photoisomerization(2)
Quantum yield, Photochromism, Conversion in photoisomerization

Days and periods	Wed.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

さまざまな生化学反応の起こる場としての細胞を外界から隔てる生体膜の構成や、生体膜を介した物質の輸送について解説する。細胞の集合体としての多細胞生物で見られる高次生命現象や、その調節システムの破綻として起こるがんなどの疾患について解説する。また生体の環境応答について、特に多くの生命体の寿命の調節などにも重要な活性酸素種（ROS）の役割や、線虫などモデル生物を用いた解析についても解説する。

[Course objectives]

生命の基本単位として外界から区分けされた内部環境を保持する細胞の成り立ちや、細胞の集合体としての多細胞生物で見られるより高次の生命機能を、生体分子の相互作用として理解できることを目標とする。

[Course schedule and contents]

細胞膜と膜輸送（４回）
脂質の二重層を基本とする細胞膜の構成や性状について、またチャネルやトランスポーターなどの膜タンパク質による特異的な物質輸送の仕組みについて説明する。

がん（４回）
哺乳動物など多細胞生物における細胞の増殖制御の仕組みや、その調節システムの破綻として起こる疾患としてのがんについて説明する。

活性酸素種（２回）
生体の環境応答について、寿命の調節などに重要な活性酸素種（ROS）の役割や、線虫などモデル生物を用いた解析について説明する。

生体認識化学演習（１回）

Course title (and course title in English)	生物工学 Microbiology and Biotechnology	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,ATOMI HARUYUKI Graduate School of Engineering Associate Professor,SATOU TAKAAKI

Target year	Master's/Doctoral students	Number of credits	1.5	Year/semesters	2025/First semester
Days and periods	Thu.2	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

This lecture will introduce the various forms of life that are present on our planet as well as the mechanisms involved in sustaining their life. Commonly used tools in the fields of biochemistry, molecular biology and genetics will also be discussed. In addition, methods to utilize cells and their enzymes in biotechnology will be introduced. Lectures will be given in English, with the aim to improve communication/discussion skills.

[Course objectives]

Basic knowledge on the various forms of life that are present on our planet as well as the mechanisms involved in sustaining their life. An understanding of the commonly used tools in the fields of biochemistry, molecular biology and genetics as well as methods to utilize cells and their enzymes in biotechnology. Lectures will be given in English, with the aim to improve communication/discussion skills.

[Course schedule and contents]

Introduction 1
Diversity of life, classification of organisms, structure and function of fundamental biomolecules. (Interactive media class)
Basic mechanisms to sustain life 3
Strategies to conserve energy, biosynthesis, cell division, cell differentiation. (Interactive media class)
Strategies to adapt to environmental conditions 2
Effect of environmental conditions on cells and biomolecules, thermophiles, acidophiles and their enzymes. (Interactive media class)
Protein engineering 2
Methods to study enzymes and enzyme reactions, methods to enhance their performance. (Interactive media class)
Cell engineering 2
Methods utilized in metabolic engineering, cell surface engineering, synthetic biology. (Interactive media class)
Topic discussion 1
Particular topics will be chosen for discussion. (Interactive media class)

Course number	G-ENG08 7C014 LJ28		
Course title (and course title in English)	核燃料サイクル工学１ Nuclear Fuel Cycle 1	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,SASAKI TAKAYUKI Graduate School of Engineering Associate Professor,TAISHI KOBAYASHI

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Wed.1	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

The physical properties of actinides that form the basis of the "nuclear fuel cycle" from the natural uranium and thorium resources used in nuclear reactors as nuclear fuel, and from the nuclear reactor to disposal as waste The viewpoints of actinide aqueous solution chemistry (complexation, redox, solubility), chemistry in geological disposal environment, and dry reprocessing. Some lectures may be given in the form of presentations by students.

[Course objectives]

The goal is to understand the contents of the nuclear fuel cycle from the front end to the back end, and especially to know the chemical and physicochemical properties of nuclear fuel.

[Course schedule and contents]

Introduction, 1time, Introduction to the nuclear fuel cycle
Fuel, 3times, fuel properties, reactor nuclear reaction, spent fuel
Actinide chemistry, 3times, Properties of actinide elements, spectroscopy, etc.
Waste treatment disposal, 4times, advection-dispersion-diffusion, solubility, colloid, separation conversion
Decommissioning, 1time, the current status of decommissioning technology, etc.
Other topics, 2times, dry reprocessing, fusion reactor fuel cycle, etc.
Feedback, once, confirmation of learning achievement

[Course requirements]

None

[Evaluation methods and policy]

Based on report evaluation of the issues on the contents of the nuclear fuel cycle.

[Textbooks]

Days and periods	Wed.4	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

原子力発電に関わる核燃料工学の中から、放射性廃棄物の計画・設計を行う際に必要となるアクチノイド凝縮系物質の基礎となる理論と応用を論ずる。アクチノイド物性化学の立場から、関連する放射化学、無機化学、固体物理学、金属工学に関する基礎事項を講述し，長寿命放射性廃棄物としての分離・保管・処理や、アルファ放射体としてのアクチノイド元素の医療応用における物理化学量の予測手法へ応用できる研究手法と解析方法を講述する。

[Course objectives]

本講義を通じて、受講生は以下の能力を身につけることを目指す。
1. アクチノイドの凝縮系諸相の構造、安定性、および調製法を理解し、それらを適切に説明できる。

2. 周期系および孤立系の物質における電子秩序と、それに基づく準位形成のメカニズムを理論的に説明できる。
3. アクチノイド元素の分光法・回折法の原理と応用を理解し、実験データの解釈ができる。
4. アクチノイドを含む核反応のホスト材料の特性とその応用について、物理化学的観点から論じることができる。
5. 長寿命放射性廃棄物の分離・保管・処理、およびアクチノイド元素の医療応用に関する理論的枠組みを理解し、具体的な応用例について説明できる。

[Course schedule and contents]

導入（第1回から第3回）：原子力において重要なアクチノイド物質の物性分野の状況について、この分野で出版されているテキスト、開催されている国際会議等に触れながら紹介する。また、アクチノイド系列元素の性質について、発見の経緯や、無機化学の観点から入手法、分離・精製法を講述する。さらに、当該分野の研究に重要な結晶構造・固相について、結晶と解析法、結晶育成法の講述を行う。
導入（第4回から第14回）：参考書の以下の項目に沿って、ランタノイドとの比較を行いながら講述する。アクチノイド元素の概要、自由原子とイオンのスペクトルと電子構造、化合物中および溶液中のイオンの光学スペクトルと電子構造、熱力学的性質、磁気的性質、金属状態、構造化学、溶液化学とイオン反応速度論、ハロゲン化物と二元酸化物、分離プロセス。
第15回は予備日（研究上のトピックなどの紹介）とする。

Course number	G-ENG17 9E038 LJ76		
Course title (and course title in English)	プロセス設計 Process Design	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,SOTOWA KENICHIRO

Target year	Master's students	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Fri.3	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Students will learn fundamental skills of designing chemical processes which consist of various unit operations. A conceptual design exercise of a chemical process will be carried out using the knowledge of chemical engineering and process simulation system.

[Course objectives]

It is requested to understand the way of conceptual design, and to have the skill of designing chemical processes by applying the knowledge of chemical engineering and related field.

[Course schedule and contents]

Concept of process design,1time,The assembly of the optimally designed unit operations does not result in the total optimum system. The concepts of the system boundary and the total optimal design are explained.
Computer-aided process design,1time,In an actual process design, use of a process simulator is indispensable. The design technique using the sequential modular approach, which is mainly used in the process simulator, is explained.
How to use process simulators,2times,How to use the process simulator which is widely used in the real process design is explained.
Reality of process design,6times,Process design consists of successive steps such as the acquisition of market research and data, process synthesis, and an equipment design. For these steps, the problems which should be taken into consideration are made clear, and the techniques which can be used at each step are explained.
Practice of a chemical process design, 1 times,The design exercise is executed by 2 to 3 students#039 group.
Oral presentation,4times,The design result at each group is presented at the oral session where all the faculty members attend.

[Course requirements]

The basic knowledge of chemical engineering such as the unit operation and reaction engineering are requested.

[Evaluation methods and policy]

The results are evaluated by the contents of the final report and the oral presentation.

[Textbooks]

Lecture materials are distributed in the class.

Target year	Master's students	Number of credits	2	Year/semesters	2025/Intensive, year-round
Days and periods	Intensive	Class style	Practical training (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

専攻として企画・実施しているドイツ国でのインターンシップについて，滞在先および帰国後の報告会により成績を評定し，単位認定を行なう．なお，専攻で指定する他のインターンシップも含まれる。

[Course objectives]

１．外国企業・外国文化の中での自己実践
２．世界的企業の研究活動に関する経験・知見の蓄積
３．語学（英語）力の向上と異なる背景を持つ人とのコミニュケーション力の向上
これらの達成度は、英語で実施する研修報告会を通して、評価・判断する。

[Course schedule and contents]

国際インターンシップ（27回）成績優秀な日本人学生をドルトムント工科大学を管理拠点として、EU企業に派遣し、2か月間のインターンシップ研修を受けさせ、日本とは異なる国での企業倫理、ものづくりの在り方ならびにヨーロッパ文化を学ばせる。
成果報告（2回）日本ならびにドイツにおいてそれぞれ1回ずつ、あわせて2回の研修報告会を英語で実施する。
国際交流会（2回）日独双方の学生がインターンシップで経験し学んだことを互いに発表し合い、意見交換を行うセミナーを開催し、専門分野のみならず、それぞれの国の文化についての体得させる。

Course number							
Course title (and course title in English)	化学工学計算機演習 Computer Programming in Chemical Engineering			Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,KAWASE MOTOAKI Graduate School of Engineering Senior Lecturer,ASHIDA RIYUUICHI		
Target year	1st year students or above	Number of credits	2	Year/semesters	2025/Second semester		
Days and periods	Tue.4	Class style	(Face-to-face course)	Language of instruction	Japanese		

[Overview and purpose of the course]

Lectures and practices of fundamentals of computer algorithms and programming using FORTRAN 77 and Visual Basic for Applications (VBA) for learning basic knowledge and skills of computation required for chemical engineers. FORTRAN 77 has been often employed for numerical calculation and VBA is practical on PCs.
*This course is in Japanese.
*Graduate students who learned the "Computer Programming in Chemical Engineering" course at the undergraduate school (Kyoto University) cannot get a credit of this course.

[Course objectives]

To learn syntaxes of FORTRAN 77 and VBA, how to write programs, and how to execute program for solving basic chemical engineering problems.

[Course schedule and contents]

Weeks 1--3: Computer algorithms and programming I
1) Introduction to digital computers and programming languages as well as inputs, outputs, and simple programs, 2) Logical IF statement and GO TO statement, data types, 3) Array and DO loop, 4) Description of assignments

Weeks 4--5: Practice of computer algorithms and programming I
To write and execute 2 or 3 programs solving fundamental problems. e.g. Simple calculations, integration by the trapezoidal rule, Newton method, bisection method

Weeks 6--8: Computer algorithms and programming II
1) Built-in functions, function and subroutine subprograms, 2) Data format, input from and output to file, 3) Interpolation, numerical integration, 4) Description of assignments

Weeks 9--11: Practice of computer algorithms and programming II
To write and execute 2 or 3 programs solving fundamental chemical engineering problems. e.g. Statistics, linear least square

Week 12: VBA programming
Fundamentals of Visual Basic for Applications and some examples of VBA codes

Weeks 13--14: Practice of VBA programming

Continue to 化学工学計算機演習(2)↓↓↓

化学工学計算機演習(2)

To write and execute some VBA programs solving problems, some of which are shared with FORTRAN practice

Week 15: Qualification
To qualify achievement of the practices

[Course requirements]

None

[Evaluation methods and policy]

Absolute evaluation based on the assignments with taking into account participation in practice classes, quizzes, and examination.

Days and periods	Tue.3	Class style	(Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

化学工学に関連する問題を例題として、代数計算、非線形方程式の求解、微分方程式の解法、積分、行列計算、線形回帰、非線形最小自乗法などの計算、解析手法を学び、VBA，Pythonによるプログラム作成を行う。

[Course objectives]

化学工学に関する計算を通じて各種計算手法とVBA, Pythonによるプログラム作成技術を修得する。

[Course schedule and contents]

第1回　オリエンテーション
VBA，Pythonの環境設定と四則演算、単位換算のプログラム作成を行う。

第2回　代数方程式
化学工学計算の例題として、流体の摩擦係数とレイノルズ数の問題や反応を伴うプロセスの物質収支計算の問題を解くプログラムを作成する。

第3～4回　繰り返し計算による陰関数の解法
逐次代入法やニュートン法などの繰り返し計算法について学び、van der Waals気体の体積や、多成分系の沸点・露点を求めるプログラムを作成する。

第5～6回　常微分方程式の数値解法
オイラー法やルンゲ・クッタ法など常微分方程式を数値的に解く方法について学び、これらを用いてバイオリアクターや不可逆一次反応リアクターの動的な挙動を表現する微分方程式を解く。

第7～8回　行列計算
行列の演算（足し算・引き算・掛け算）のプログラムの作成、掃き出し法による連立１次方程式を解くプログラムの作成を行う。

第9回　偏微分方程式
偏微分方程式を数値的に解く差分法について学び，熱伝導方程式から温度分布の時間発展を求める問題を解く。

第10～12回　最適化計算

Continue to 計算化学工学(2)↓↓↓

計算化学工学(2)

多変数関数の極値探索法として、多変数ニュートン法、最急降下法、マーカット法等の手法について学び、データから非線形モデルのパラメータを決定するプログラムを作成する。

第13～14回　データ分析
ベイズ推定やベイズ最適化によるデータ解析法を学ぶ。確率分布解析、ベイズ線形回帰、ガウス過程回帰のプログラムを作成する。

第15回　フィードバック

[Course requirements]

授業はエクセルを用いて行う。パソコンの起動ならびにエクセルの立ち上げ方は既知のものとする。

[Evaluation methods and policy]

プログラムを作成する試験を期末に行い、平常の課題提出（プログラム）と併せて成績を評価する。

[Textbooks]

教員が作成したプリントを使用する。

Course number			
Course title (and course title in English)	化学工学シミュレーション Simulations in Chemical Engineering	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,YAMAMOTO RYOICHI Graduate School of Engineering Associate Professor,WATANABE SATOSHI

Target year	1st year students or above	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Tue.2	Class style	(Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

計算機シミュレーションは，工学的現象解析や装置設計の手法として極めて有用であり，今日のハードウェアの発達に伴い，もはや日常的ツールとなりつつある。本講では化学工学分野で多用される数種のシミュレーション手法をとりあげ，その基礎原理の理解と応用の実践を図る。

[Course objectives]

常微分方程式・偏微分方程式の数値解法、流れのシミュレーション、分子シミュレーションについて、それぞれの基礎を理解する。各内容ごとに，学習到達度を確認するためにプログラミング実習・課題演習を行う.

[Course schedule and contents]

常微分方程式の数値解法,3回
化学工学では物質・運動量・熱など巨視的変数の移動現象を扱うことが必要である。簡単な例題については解析解を求めることが可能であるが、現実の問題の多くは解析的に解を求めることが困難でありコンピュータを用いて数値的に解くことが要求される。そのための基礎と手法について講述する。具体的には，常微分方程式の数値解法について解説を行い，同時にコンピュータを用いた演習で理解を深める。

常微分方程式の実習,1回
学習到達度を確認するためにプログラミング実習を行う．各自の習熟度に柔軟に対応できるように,実習に要する時間の制限は設けず，実施場所や実施時間も任意のオンデマンド型で行う．【メディア授業:オンデマンド型】

偏微分方程式の数値解法,2回
偏微分方程式の数値解法について詳しく解説する。コンピュータを用いた演習も行う。

偏微分方程式の実習,1回
学習到達度を確認するためにプログラミング実習を行う．各自の習熟度に柔軟に対応できるように,実習に要する時間の制限は設けず，実施場所や実施時間も任意のオンデマンド型で行う．【メディア授業:オンデマンド型】

流れのシミュレーション,2回
化学工学において特に重要であるナビエストークス方程式のシミュレーション（遅い流れ、乱流）について詳しく解説する。コンピュータを用いた演習も行う。

Continue to 化学工学シミュレーション(2)↓↓↓

化学工学シミュレーション(2)

学習到達度を確認するためにプログラミング実習を行う．各自の習熟度に柔軟に対応できるように，実習に要する時間の制限は設けず，実施場所や実施時間も任意のオンデマンド型で行う．【メディア授業:オンデマンド型】

分子シミュレーション,4回
分子動力学（ＭＤ）法の基礎を講述するとともに，簡単な例として２次元 Lennard-Jones流体のＭＤプログラムを解読し，具体的計算法の理解を図る。各種条件下での流体挙動のシミュレーションを行い，温度，圧力，拡散係数，動径分布などの統計量の求め方を把握するとともに，単純流体の特性についての微視的理解を深める。

分子シミュレーションの演習,1回
学習到達度を確認するために演習問題を課す。【メディア授業:オンデマンド型】

[Course requirements]

「化学工学計算機演習」，「計算化学工学」，「移動現象」，「物理化学I(化学工学)」

[Evaluation methods and policy]

常微分方程式・偏微分方程式の数値解法、流れのシミュレーション、分子シミュレーションについての基礎の理解とサンプルプログラムを用いた計算機上でのシミュレーションの実行について，講義時間内に行う小テストや演習問題、課題レポートの内容を総合的に評価して判定する。

Course title (and course title in English)	移動現象特論 Advanced Topics in Transport Phenomena	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,YAMAMOTO RYOICHI

Target year	Master's/Doctoral students	Number of credits	1.5	Year/semesters	2025/First semester
Days and periods	Tue.4	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

After general introductions on the flow properties (Rheology) of polymeric liquids as typical examples of non-Newtonian fluids, the relationship (known as the constitutive equation) between strain rate and stress is explained. In addition to classical phenomenological approaches, molecular approaches based on statistical mechanics will be taught in this course. To this end, basic lectures on “ Langevin Equation ”, “ Hydrodynamic Interaction ”, and “ Linear Response Theory ” will also be given.

[Course objectives]

To understand strength and weakness of both phenomenological and molecular approaches to formulate general behaviors of non-Newtonian fluids mathematically as forms of constitutive equations. Also to learn mathematical and physical methodologies necessarily to achieve this.

[Course schedule and contents]

- Polymeric Liquids / Rheology 6 Shedding lights on the nature of polymeric liquids in comparisons with simple Newtonian liquids. Various formulations on the characteristic behaviors of polymeric liquids based on both empirical and molecular approaches are lectured.
- Stochastic Process / Langevin Equation 3 To deal with Brownian motions of particles in solvents, a lecture on Langevin equation is given after some basic tutorials on stochastic process.
- Green Function / Hydrodynamic Interaction 2 To deal with motions of interacting particles in solvents, a lecture on the hydrodynamic interaction is given after some basic tutorials on Green function and Poisson equation.

Understanding Check 1

[Course requirements]

Under graduate level basic knowledge on “ Fluid Mechanics / Transport Phenomena ” and basic mathematics including “ Vector Analyses ” are required.

[Evaluation methods and policy]

Answers to several questions and exercises, which will be given during the course, are used to judge.

Course title (and course title in English)	分離操作特論 Separation Process Engineering, Adv.	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,SANO NORIAKI

Target year	Master's/Doctoral students	Number of credits	1.5	Year/semesters	2025/First semester
Days and periods	Mon.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

The separation related with transport phenomena of heat and mass and particles will be lectured. Adsorption, drying, distillation will be explained. In addition, new separation methods will be explained.

[Course objectives]

This course will deepen the students#039 understanding on multiphase transport phenomena by lecturing separation operations, and the students will know how to develop effective separation methods. Also they will know recent developments of separation techniques in chemical engineering.

[Course schedule and contents]

Separation using electric field (2times): Purification of gas and water using electric discharges and particle separation using dielectrophoresis are explained.

Distillation (3times) Distillation is used commonly in chemical industries. Here, advanced knowledge on distillation about multi-component distillation, equipment design using enthalpy-component diagram, extraction distillation, etc. will be explained.

Other separation operations (1time): Other separation operations, for example liquid-liquid extraction, membrane separation, etc. will be lectured.

Drying(3times):Drying is a typical operation utilizing phase transformation and simultaneous transport of heat and mass. Quantitative understanding of drying rate will be lectured based on drying mechanism, and the students will solve the practice problems to learn them. Under the situation that varieties of drying apparatuses have been developed to dry many kinds of target materials, the general drying operations, quality of products, and the drying apparatuses will be lectured.

Adsorption (2times):Analysis using adsorption is used for structural analysis of porous materials, and it is important to evaluate adsorbents. Here, basic knowledge about these analysis will be explained. The pore characteristics of adsorbents and appropriate analytical methods are lectured. According to the progress of the class, the other separation methods will be explained.

Course number	G-ENG17 5H009 LE76		
Course title (and course title in English)	Chemical Reaction Engineering, Adv. Chemical Reaction Engineering, Adv.(English lecture)	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,KAWASE MOTOAKI Graduate School of Engineering Associate Professor,NAKAGAWA HIROYUKI Graduate School of Engineering Senior Lecturer,ASHIDA RIYUUICHI

Target year	Master's/Doctoral students	Number of credits	1.5	Year/semesters	2025/First semester
Days and periods	Wed.3	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

This lecture is given in English.
The following contents are covered: - Kinetic analysis of gas-solid-catalyst reaction, gas-solid reaction, electrochemical reaction, and CVD reaction, - Operation and design of reactors for gas-solid-catalyst and gas-solid reactions, and - Industrial reactors including fixed bed, fluidized bed, moving bed, simulated moving bed, and stirred tank types.

[Course objectives]

To understand kinetic analysis of chemical reactions utilized in the industry and procedure to design and operate industrial reactors.

[Course schedule and contents]

Gas-solid-catalyst reaction (1) Fundamentals [1 week]
Commercial catalysts and industrial gas-solid-catalyst reactions are overviewed. Chemical reaction engineering fundamentals of the gas-solid-catalyst reaction is explained.

Gas-solid-catalyst reaction (2) Generalized effectiveness factor and selectivity in complex reactions [1 week]
The generalized effectiveness factor and the selectivity affected by mass transfer are explained.

Gas-solid-catalyst reaction (3) Deactivation of catalyst [1 week]
Deactivation mechanisms of solid catalysts are overviewed. The deactivation and consequent change in selectivity are explained in terms of the decay function and specific activity.

Gas-solid-catalyst reaction (4) Design and operation of industrial catalytic reactors [1 week]
Industrial catalytic reactors including fixed-bed and fluidized-bed reactors are overviewed. Design and operation of these reactors including thermal stability are explained.

Liquid-solid-catalyst reaction -- Simulated moving bed reactor [1 week]
Concept and applications of simulated moving bed reactor are explained. Model-based analysis of simulated moving bed reactor is explained.

Electrochemical reaction [1 week]
Chemical reaction engineering analysis of gas diffusion electrode employed in hydrogen fuel cell is explained. Electrochemical reaction rate is described from chemical reaction engineering point of view.

Continue to Chemical Reaction Engineering, Adv. (2)↓↓↓

Chemical Reaction Engineering, Adv. (2)

CVD reaction [1 week]
 Fundamentals of CVD reactions are explained from chemical reaction engineering view point. Kinetic analysis of CVD is described. Reaction models including elementary reaction model and overall reaction model are derived and applied to some examples.

Gas-solid reaction (1) Kinetic analysis [2 weeks]
 Kinetic measurement and analysis of complicated gas-solid reactions, particularly coal pyrolysis, are explained with the first-order reaction model to the distributed activation energy model (DAEM).

Gas-solid reaction (2) Kinetic analysis of gas-solid reaction [2 weeks]
 Concepts and derivation of the reaction models including the grain model and the random-pore model are explained. Application of the models to coal gasification is overviewed.

[Course requirements]

Needs knowledge of chemical reaction engineering including heterogeneous reactions.

[Evaluation methods and policy]

The score is based on the result of examination at the end of term and the results of quizzes and reports imposed every week. The full mark is 100 points.

[Textbooks]

Handouts are provided at the class.

Target year	Master's/Doctoral students	Number of credits	1.5	Year/semesters	2025/Second semester		
Days and periods	Wed.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese		

[Overview and purpose of the course]

化学工学に関連する熱・統計力学について重要項目を絞り，演習を含めた講義により理解の確実な定着をはかる．また，近年の熱・統計力学分野における新たな展開についても紹介する．

[Course objectives]

化学工学に関連する熱・統計力学の重要法則について，考え方や導出を含めて理解を定着させるとともに，それらを応用する力を養う．また，最新動向に関する知見を得る．

[Course schedule and contents]

・概論（1）　講義内容の概要説明と授業の進め方の説明を行う．
・熱・統計力学の基礎の復習（1）　熱・統計力学の基礎の復習を行う．
・準平衡熱機関（1）　準平衡熱機関とその効率について説明する．
・非平衡熱機関（1）　非平衡熱機関とその効率について説明する．
・分布関数１（1）　確率分布の基礎，二項分布，正規分布，それらの応用について説明する．
・中間試験および前半のまとめ（1）　試験により講義前半部分の理解の確認を行う．
・フィードバック＋α（1）　中間試験の講評，ランダムウォーク，ゴムの統計熱力学などのサブトピックスについて説明する．
・分布関数２（1）　その他の代表的分布関数，ボルツマン分布，エントロピーについて説明する．

・分布関数３（1）　光子統計（プランク分布），放射熱（ステファン・ボルツマン則），量子統計（B-E 分布，F-D 分布）について説明する．
・分配関数（1）　分配関数とその応用について説明する．
・情報熱力学（1）　情報熱力学について説明する．
・学修到着度の確認(1)　学修到達度の確認を行う．

[Course requirements]

基本的な熱力学，数学の理解を前提とする．

[Evaluation methods and policy]

平常点，演習課題，中間・期末試験を総合して評価する.

Course number	G-ENG17 5H020 LJ76		
Course title (and course title in English)	界面制御工学 Surface Control Engineering	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Associate Professor,WATANABE SATOSHI Graduate School of Engineering Assistant Professor,HIRAIDE SYOTARO

Target year	Master's/Doctoral students	Number of credits	1.5	Year/semesters	2025/Second semester
Days and periods	Mon.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Molecules in contact with solids often behave differently from the bulk state as a result of physicochemical interactions from the solid wall. In this lecture, we will give an overview of the historical development of molecules' behavior, especially in the interface region where solids are involved, followed by lectures on molecular simulation methods and their statistical thermodynamic basics based on the importance of molecular approaches. While doing so, students will experience molecular simulation in a simple system.

[Course objectives]

The goal is to learn about the behavior of molecules in the interface region experimentally while comparing classical thermodynamic understanding with microscopic aspects by molecular simulation.

[Course schedule and contents]

Surface / interface features (1 session)
Surface / interface instability implied by surface tension, overview of lecture

Development of the theory of air-solid interface molecular phase (2 sessions)
We will discuss the historical development and current understanding of the theory of adsorption phenomena on solid surfaces and the behavior of molecules in confined spaces.

Outline of molecular dynamics method and simulation exercise in simple systems (3 sessions)
After outlining the basics and applications of molecular dynamics methods, we will practice molecular dynamics simulation in the interface region using a simple system.

Statistical thermodynamics as the basis of molecular simulation (2 sessions)
As the basis of the Monte Carlo (MC) method, we will lecture on classical statistical thermodynamics and placement integrals.

Outline of MC method and simulation exercise in simple system (3 sessions)
We will lecture on the state transition probability in the Markov process and work on practice of the MC method, which is a stochastic molecular simulation, in order to obtain the molecular arrangement according to the state appearance probability in various ensembles. In the final round, proficiency will be evaluated.

Continue to 界面制御工学(2)↓↓↓

界面制御工学(2)

[Course requirements]

Thermodynamics, rudimentary statistical thermodynamics, rudimentary programming and data processing

[Evaluation methods and policy]

[Evaluation method]
Report grade (80%) Normal score evaluation (20%)
The normal score evaluation includes participation status in the class and the degree of understanding of quizzes given during lectures. It is difficult to reach a passing score without submitting all reports.
[Evaluation policy]
Achievement targets are evaluated according to the grade evaluation policy of the Faculty of Engineering.
Report assignments are flexible with a high degree of freedom, and those with unique ideas are given high marks.

[Textbooks]

Not used

[References, etc.]

（Reference books）

Akira Ueda "Molecular Simulation-From Classical Systems to Quantum Systems Techniques" (Shokabo), Yosuke Nagaoka "Iwanami Basic Physics Series 7" Statistical Mechanics "" (Iwanami Shoten), Morikazu Toda "Physics 30 Lecture Series" Thermal Phenomena "30 Lectures" (Asakura Shoten), Ryogo Kubo "New Edition: Statistical Mechanics" (Kyoritsu Publishing), B. Widom, Translated by Kenichiro Koga "Introduction to Statistical Mechanics in Chemical Systems" (Chemicals)

[Study outside of class (preparation and review)]

Review each lecture thoroughly. In addition, since the code of molecular simulation requires only a brief explanation, it is necessary to decipher it by yourself and perform execution, data analysis, and report creation appropriately.

（Other information (office hours, etc.)）

Office hours are to to be set depending on students' requests.

Course number	G-ENG17 5H021 LJ76		
Course title (and course title in English)	化学材料プロセス工学 Engineering for Chemical Materials Processing	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Associate Professor,NAGAMINE SHINSUKE

Target year	Master's/Doctoral students	Number of credits	1.5	Year/semesters	2025/First semester
Days and periods	Wed.4	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Materials are used in various forms, such as particles, fibers, and thin films, depending on their applications. This course will introduce the fabrication and structure control methods of materials. In addition, this course will cover the principles of structural evaluation methods and the physical chemistry of phase separation and nucleation involved in structure formation.

[Course objectives]

To understand the principles of fabrication methods, structural control methods, and structural evaluation methods for various forms of polymeric and inorganic materials.

[Course schedule and contents]

1-3. Polymeric materials
Learn about the mechanical and thermal properties of polymers and polymer processing.
4-6. Inorganic materials
Learn about the fundamentals of the sol-gel method and the production of porous materials, fine particles, thin films, based on the sol-gel method.
7-9. Characterization methods
Learn about the principles of electron microscopy, XRD, nitrogen adsorption method.
10-11. Physical Chemistry of Phase Separation
Learn about phase separation and nucleation involved in the structure formation of materials.
12. Confirmation of learning achievement

[Course requirements]

Basic of Transport Phenomena and Physical Chemistry

[Evaluation methods and policy]

40% midterm quiz, 60% exam at end

Course number	G-ENG17 5H024 LJ76				
Course title (and course title in English)	生物物理工学 Physics in Biological Engineering	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,MAEDA YUSUKE		
Target year	Master's/Doctoral students	Number of credits	1.5	Year/semesters	2025/First semester
Days and periods	Thu.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

This lecture will offer the fundamental theory and applications of transport phenomena related to chemical engineering of mass transfer, momentum transfer, heat transfer, and information transfer. Nonlinear kinetics of chemical reactions and the non-equilibrium physics of fluctuating particles and biomolecules are discussed based on statistical mechanics. For more advanced topics, the transport phenomena of self-propelled particles , which exhibit autonomous motion, and their application will be discussed.

[Course objectives]

To understand the basic theory of transport phenomena in chemical engineering. The topics cover the basic theory of fluctuating dynamics of systems far from equilibrium, and the recent development in the chemical engineering of soft and active matter.

[Course schedule and contents]

1. Introduction (１回): Introductory guidance of transport phenomena and soft/active matter.
2. Nonlinear dynamics（３回）：Limit cycle oscillation, Pattern formation, Reaction-diffusion system, Linear stability analysis
3. Non-equilibrium mechanics（３回）：Brownian motion, Transport phenomena, Molecular motors, Interfacial dynamics
4. Autonomous transport phenomena（４回）：Self-propelled motion, Active matter, Motility-induced separation, Possible applications in chemical engineering
5. Feedback（１回）

[Course requirements]

None

[Evaluation methods and policy]

Evaluated by three report assignments（60%）and a final report assignment（40%）.

Days and periods	Tue.3	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Efficient use of fossil fuels and utilization of renewable energy is said to be one of the most important agendas from the viewpoint of depletion of fossil fuels and global warming. This course will cover the fundamental concepts of energy, especially power generation, and recent developments of the technique for hydrogen utilization.

[Course objectives]

・ Evaluating the energy balance and efficiency for power generation and heat utilization processes
・Understanding the feature of renewable energy resources and current developments of their utilization processes

[Course schedule and contents]

1. Worldwide energy supply and demand (energy consumption in Japan and the world)
2. Energy from fossil fuel sources
3. Renewable energy sources I (biomass)
4. Renewable energy sources II (solar, wind, coastal)
5. Energy utilization (waste heat energy, heat integration)
6. Energy efficiency enhancement (Cogeneration, Kalina cycle)
7. Mass utilization (Mass integration)
8. Assessment of chemical releases into the environment (impact on humans, ecosystem, sources)
9. Sustainable chemical processes and Green chemistry
10. Inherently safe processes
11. Life cycle impact assessment

[Course requirements]

Basic process design, mathematics

[Evaluation methods and policy]

Evaluation will be based on assignments (8 times, 5 points each), and examinations (twice, 30 points each).

[Overview and purpose of the course]

本科目「化学工学特論第四続論」では「化学工学特論第四」（前期１１回。授業の概要・目的については同科目のシラバスを参照）の講義を発展させ、個々のエネルギー変換技術について詳しく学ぶ。講義は集中講義で実施する。それぞれの技術がどのような原理に基づいて開発され、どのように社会実装されている・されていくのかを知るために、「化学工学特論第四」履修の如何に関わらず、本科目の履修を勧める。

[Course objectives]

・エネルギー変換に関わる科学・技術・工学の幅広い、体系的な知識

[Course schedule and contents]

第１回
１．燃料の燃焼：　燃焼熱、断熱火炎温度、予混合燃焼と拡散燃焼、着火温度、燃焼限界、燃焼速度、燃料の互換性、NOxの生成と抑制、酸素富化燃焼、バーナー燃焼、容器内燃焼、石炭・コークス等の燃焼、湿式脱硫、アンモニアによる脱硝、脱硫・脱硝の同時処理、三元触媒、吸蔵還元触媒
２．燃料の熱化学的変換：　燃料熱化学的変換の必要性・意義、熱分解、部分酸化、水蒸気改質、自己熱改質、水素添加、空気分離、フィッシャー・トロプシュ反応、水成ガスシフト反応、メタネーション、メタノール合成

第２回
３．熱機関：　カルノーサイクル、スターリングサイクル、エリクソンサイクル、ブレイトンサイクル、オットーサイクル、ディーゼルサイクル、ランキンサイクル、超臨界サイクル、超々臨界サイクル、バイナリーサイクル、オープンサイクル
４．コンバインドサイクルとコージェネレーション：　コンバインドサイクル、GTCC、IGCC、IGFC、熱機関によるコージェネレーション、燃料電池によるコージェネレーション
５．ヒートポンプと冷凍：　ヒートポンプの熱力学、吸収式ヒートポンプ、吸着式ヒートポンプ、蒸気圧縮式ヒートポンプ、ガスの冷凍液化、電子冷却、磁気冷凍

第３回
６．燃料電池：　燃料電池の原理と種類、カチオン交換型とアニオン交換型、低温作動型と高温作動型、固体高分子型、リン酸型、溶融炭酸塩型、固体酸化物型
７．電力貯蔵：揚水発電、圧縮空気エネルギー貯蔵、二次電池、アニオン交換型とカチオン交換型、リチウムイオン電池、金属ー空気電池、電気二重層キャパシタ、リチウムイオン・キャパシタ、パワーツーガス、液体水素、有機ハイドライド、アンモニア

Continue to 化学工学特論第四続論(2)↓↓↓

化学工学特論第四続論(2)

第４回
８．再生可能エネルギー発電：　風力発電、太陽光発電、水力発電、地熱発電、海流発電、潮汐発電、海洋温度差発電、バイオマス発電
９．バイオマスの生物化学的変換：　バイオエタノール生産の原理、原料別バイオエタノールの生産、バイオエタノールの濃縮と利用、バイオジェット・ディーゼル燃料、バイオガス、バイオマス由来燃料のエネルギーバランス

[Course requirements]

化学工学・化学とエネルギー変換の基礎知識

[Evaluation methods and policy]

・授業における平常評価 100%（履修生が分担して教材の重要部分を発表し、質疑応答。着眼点、理解度、課題提起力を評価）

[Overview and purpose of the course]

Process intensification has become an important research field in chemical engineering. It is about devising a non-classical apparatuses or operation methods, which attain a substantial improvement in the process performance. Microreactor is a typical device which achieves intensification of reaction process. Periodic operation of chemical apparatuses, and process with highly integrated heat and mass exchange system are viewed as results of the process intensification. In this class, several different approaches to process intensification, with successful examples, will be introduced in this class.

[Course objectives]

Students will understand the typical approaches and examples of process intensification.

Course number	G-ENG47 6T010 LJ76		
Course title (and course title in English)	化学工学特別セミナー７ Special Seminar in Chemical Engineering 7	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,YAMAMOTO RYOICHI Graduate School of Engineering Associate Professor,TANIGUCHI TAKASHI

Target year	Doctoral students	Number of credits	2	Year/semesters	2025/Intensive, Second semester
Days and periods	Intensive	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Some topics in the state-of-the-art studies related to chemical engineering are lectured. In the first half, extension of chemical engineering to electrochemical reaction processes is explained with taking a polymer electrolyte fuel cell as an example. In the latter half, application of chemical engineering to reactions of complex heavy carbonaceous resources is presented and kinetic modeling of reactions of solids and heavy liquids for predicting the rate and quality of the products is explained.

[Course objectives]

[Course schedule and contents]

Chemical reaction engineering of fuel cells 5 Extension of chemical engineering to electrochemical reaction processes is explained with taking a polymer electrolyte fuel cell as an example.
Case studies of polymer electrolyte fuel cell 4 Based on the proposed theory, some case studies are discussed in which the effects of convective flow as well as the effects of catalyst layer structure including the catalyst layer thickness, pore structure parameters, and catalyst activity on the cell performance are estimated.
Chemical reaction engineering of conversion of heavy carbonaceous resources 6 Approach to conversion processes of heavy carbonaceous resources including low-rank coal and biomass from the view point of chemical reaction engineering is explained.

Course title (and course title in English)	構造工学実験法 Strucutual Testing Technology	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,SUGIURA KUNITOMO Graduate School of Engineering Professor,YAGI TOMOMI

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/Intensive, year-round
Days and periods	Intensive	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

The structural design method is going to shift to the performance based design. Since applications of new construction methods and new technology can be accelerated by the use of performance based design, it is necessary to evaluate the performance of structures by the material and structural tests. In this class, the various test methods under static and dynamic loading will be discussed including shaking table test, wind tunnel test and nondestructive evaluation. Instrumentation to measure strain, force, acceleration, temperature and other physical state variables is also discussed through the course work.

[Course objectives]

To carry out the structural performance evaluation by material test and structural test based on fundamental understanding of measurement of strain, deflection and vibration in conjunction with the development of design methodology, computing technology, electronics and instrumentations.

[Course schedule and contents]

Physical Modeling in Structural Engineering(1)
 -Response and failure
 -Modeling process
 -Similitude requirements

Instrumentation(1)
 -Data acquisition of Strain, Stressm Displacement,Force, Acceleration, & Temperature
 -Data analysis
 -Nondestructive evaluation(Ultrasonic test, Magnetic particle test & Infrared test)

Loading System(1)
 -Loading apparatus
 -Hydraulic system
 -Computer control
 -Loading techniques

Loading Test for Buckling(1)
Loading Test for Fatigue Cracking(1)
Loading Test for Bolted Connections(1)
Loading Test for Composite Structures(1)

Continue to 構造工学実験法(2)↓↓↓

構造工学実験法(2)

Material Test(3)
 -Universal testing machine
 -Fatigue testing machine
 -Stress vs. strain relation

Structural Loading Testing(3)
 -Static loading test
 -Hybrid loading test
 -Considerations in testing

Shaking Table Test(1)
 -Structural models for seismic loading
 -Similitude requirements
 -Considerations in shaking table test

Wind Tunnel Test(1)
 -Structural models for wind loading
 -Similitude requirements
 -Considerations in wind tunnel test

Course number	G-ENG50 6W019 PJ71				
Course title (and course title in English)	インターンシップM（応用力学） Engineering Internship M	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,TSUCHIYA TOSHIYUKI Graduate School of Engineering Professor,NAGATA KOJI		
Target year	Master's students	Number of credits	2	Year/semesters	2025/Intensive, Second semester
Days and periods	Intensive	Class style	Practical training (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

The aim of the internship is experiencing on-site activities involved production, manufacturing, development, designing and research of industrial goods at a factory or a research laboratory of Japanese leading companies.

On-site learning of the importance of teamwork and production processes in manufacturing is also the aim.

[Course objectives]

The goal of the internship is to master a general method of thinking and methodology at Mechanical Engineering. Furthermore, by learning the relationship between a human and machines at an industry, motivate oneself to study and think about one's career development.

[Course schedule and contents]

As a general rule, the internship should meet the above purpose. The duration should be not less than two weeks. Thus, the following cases are not approved as an internship; a short internship such as a week, a company tour, a company explanation meeting and so on. Longer term more than two weeks and an overseas internship such as IAESTE can be acceptable.
Internship location: Based on recruitment from companies. You can find them at company's web sites and/or the educational affairs office of the Engineering Science office (Butsuri Kyoumu).

[Course requirements]

None

[Evaluation methods and policy]

Credits (2) are approved based on the summary report (50%) and presentation (50%) about the internship activities.

[Overview and purpose of the course]

The purpose is to experience advanced studies related to mechanical engineering by the relatively long term research in domestic or foreign companies, universities and institutes, etc., and to learn the way of thinking and methodology.

[Course objectives]

The goal of the internship is to master a general method of thinking and methodology at Mechanical Engineering. Furthermore, motivate oneself to study and think about one's career development and to develop communication skill in group work and in international network.

[Course schedule and contents]

As a general rule, the internship should meet the above purpose. The duration should be not less than 12 weeks.
Submission of a report and presentation in a report meeting after you finish the internship are required.

[Course requirements]

None

Course number	G-ENG52 5H404 LE61

Course title (and course title in English)	分子機能と複合・集積機能 Molecular Function and Composite-Assembly Function	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,IMAHORI HIROSHI Institute for Chemical Research Professor,KAJI HIRONORI Fukui Institute for Fundamental Chemistry Professor,SATOU TOORU Graduate School of Engineering Professor,OOKITA HIDEO Graduate School of Engineering Professor,MATSUDA KENJI Institute for Chemical Research Professor,TSUJII YOSHINOBU Institute for Chemical Research Professor,NAKAMURA MASAHARU Graduate School of Engineering Professor,NAKAO YOSHIAKI Graduate School of Engineering Professor,NUMATA KEIJI Graduate School of Engineering Associate Professor,TANAKA TAKAYUKI Graduate School of Engineering Professor,SUGIYASU KAZUNORI Institute for Advanced Study Senior Lecturer,NAMASIVAYAM, Ganesh Pandian

Target year	Master's/Doctoral students	Number of credits	1.5	Year/semesters	2025/First semester
Days and periods	Mon.1	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

Principles and their examples of revealing molecular function will be described based on molecular design. We also focus on guidelines of molecular design and their representative examples to achieve function of molecular composites and assemblies.

[Course objectives]

The goal of this course is to acquire abilities of proposing and performing research plans with regard to functions of molecular composites and assemblies by learning their principles and examples exhibiting molecular functions.

[Course schedule and contents]

Molecular function and composite-assembly function relating to light, 1 time.
This lecture describes photosynthesis and artificial photosynthesis as examples of molecular function and composite-assembly function relating to light. Organic photonics and electronics including molecular photovoltaics are also highlighted as potential practical applications (Imahori).

Self-assembly using chemical biology of nucleic acids, 2 times.
This lecture introduces the principles of the chemical biology of nucleic acids and describes how the

Continue to 分子機能と複合・集積機能(2)↓↓↓

molecular recognition properties of DNA can be harnessed to construct and control complex and functional nanostructures. Practical applications of nano-sized DNA origami structures with a case study demonstration of precision diagnostics will be highlighted (Namasivayam)

Molecular design for efficient and sustainable catalysis, 2 times.
This lecture describes several important ideas for development of highly efficient organotransition metal catalysts in green and sustainable chemistry. Highly efficient coupling reactions for carbon-carbon bond formation employing 3d transition metal, especially iron, catalysts are included (Nakamura).

Photovoltaic conversion based on molecular assembly of organic semiconductors, 2 times.
This lecture gives an introduction to polymer solar cells. It starts by introducing various conjugated polymers as semiconductor, which are promising materials for organic optoelectronics such as organic light-emitting diode displays and organic photovoltaic cells. The fundamental mechanism of organic solar cells is then briefly explained to clarify how self-assembling structures of semiconducting materials impact on the photovoltaic performance. Recent progress in this field is overviewed and several challenging studies are also introduced (Ohkita).

Theoretical design for functional molecules from the view of electron-vibration interactions, 2 times.
This lecture describes theoretical design principles for highly efficient emitting and carrier-transporting molecules in organic light-emitting diodes (OLED) from the view of electron-vibration interactions (vibronic couplings)
(Sato).

Molecular design and device function of organic light-emitting diodes, 2 times.
This lecture focuses on recently-developed organic light-emitting diodes (OLEDs). The contents are: 1) the history, 2) basic concept, 3) molecular design to realize excellent light-emitting performance, 4) charge transport simulation, and 5) device fabrication (Kaji).

[Course requirements]

Knowledge of an undergraduate level of chemistry as well as of English, especially listening and reading, is required.

[Evaluation methods and policy]

The grading will be done on a basis of your participation and assignments.

Course number	G-ENG52 5H407 LJ61		
Course title (and course title in English)	複合系の物理化学と解析技術 Physical Chemistry and Analytical Techniques of Complex Systems	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,TANAKA KATSUHISA Graduate School of Engineering Professor,SAKKA TETSUO Graduate School of Engineering Professor,KOGA TSUYOSHI Graduate School of Engineering Professor,NAKAMURA YOU Graduate School of Engineering Professor,YAMAMOTO RYOICHI

Target year	Master's/Doctoral students	Number of credits	1.5	Year/semesters	2025/Second semester
Days and periods	Mon.5	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

This course focuses on fundamentals of physical chemistry for a quantitative understanding of structure, reaction, and properties of matters in complex systems. Analytical techniques including theoretical, numerical, and experimental approaches for clarification of the phenomena in complex systems are also introduced.

[Course objectives]

To understand the fundamentals of physical chemistry necessary to quantitatively explain the phenomena of complex systems, and to acquire knowledge about analytical methods for complex systems.

[Course schedule and contents]

1. Introduction on physical chemistry and analytical techniques for complex systems as well as course guidance (1)

2. Magnetism of random spin systems (2)
Lectures on magnetism of solids, especially amorphous oxides, in which spins are randomly distributed

3. Laser-induced plasma and its emission spectra (2)
Lecture on generation mechanism of laser-induced plasma in water and application to in-situ emission spectroscopy

4. Precise characterization of polymers (2)
Lecture on typical model and analytical method for properties of diluted solution of polymer, for which it is possible to obtain useful information about the static hardness and the local structure of polymer chain by analyzing the properties based on adequate model

5. Characterization of associative polymers (2)
Lecture on theory and numerical simulations for mechanism at a molecular level of structure formation including micellization, sol-gel transition, and physical gel formation as well as rheological properties

Continue to 複合系の物理化学と解析技術 (2)↓↓↓

複合系の物理化学と解析技術 (2)

6. Science of soft matter (2)
   Lecture on numerical simulations for soft matters including colloid,
   polymers, and biological materials

[Course requirements]

This course assumes that a student understands the content of undergraduate physical chemistry lectures.

[Evaluation methods and policy]

Evaluation will be based on assignments and class performance.

Days and periods	Tue.5	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

In the cutting-edge of research fields, chemistry and biology are being closely related each other. In this class, progress in such interdisciplinary areas and topics including natural products, biophysics, bio-imaging, bio-materials, regenerative medicine, microbiology, cell biology, structure biology, chemical biology, molecular physiology and others, are briefly explained and discussed.

[Course objectives]

Students will be able to understand recent progress and trends in broad interdisciplinary areas between biology and chemistry (engineering) and make their own ideas in these research fields from a viewpoint of individual researchers and engineers.

[Course schedule and contents]

The guidance for this lecture course will be conducted at the first day of this class.

[Course requirements]

Fundamentals in chemistry, biochemistry, biology, and materials science.

Course number	G-ENG52 6H446 SE61				
Course title (and course title in English)	English for Debate and Communications English for Debate and Communications	Instructor's name, job title, and department of affiliation	Kyoto University Not fixed		
Target year	Master's/Doctoral students	Number of credits	1.5	Year/semesters	2025/Second semester
Days and periods	Fri.3,4	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

The course is built up with 6 units. Through these six units one by one, the students can learn how to give, explain, organize their own opinion and conduct the debate.

[Course objectives]

Learn the basic and key phrases of active listening, interrupting, clarifying and confirming, paraphrasing, hesitating, and showing your understanding. After discussion and simulation of debating, debate is conducted for given questions.

[Course schedule and contents]

Unit 1: Giving Your Opinion,2times,Discussion Focus/ Key points Language Focus 1; Active Listening, Hesitating Practice Language Focus 2: Opinions/suggestion Putting them together. Discussion and Simulations. Debate Question of the Week 1
Unit 2: Explaining Your Opinion,2times,Discussion Focus/ Key points Topic Sentence, Primary Sentence, Debatable/No-debatable Practice Primary Supporting Sentence Practice Connecting Words amp Practice Discussion and Simulation. Debate Question of the Week 2
Unit 3: Organizing Your Opinion,2times,Discussion Focus/ Key points Secondary Supporting Sentence Developing and Argument Practice Putting them together. Discussion and Simulations. Debate Question of the Week 3
Unit 4: Interrupting/Refuting Opinions,2times,Discussion Focus/ Key points Interrupting, Interrupting Practice Refuting Opinions, Refutation Practice Discussion and Simulations. Debate Question of the Week 4
Unit 5:Challenging Support,2times,Discussion Focus/ Key points Persuading Language, Making Proposals Practice Speaking Practice Challenging and Defending Language Discussion and Simulations. Debate Question of the Week 5
Unit 6: Delivery/Performance,2times,Discussion Focus/ Key points Persuasive Language Delivery Focus: Word/Sentence Stress. Intonation Discussion and Simulations. Debate Question of the Week 6

Course title (and course title in English)	JGP国際インターンシップ Ｉ（短期） JGP International Internship I	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,NAKAO YOSHIAKI

Target year	Master's/Doctoral students	Number of credits	1	Year/semesters	2025/Intensive, year-round
Days and periods	Intensive	Class style	Practical training (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

At the overseas cooperation university in Kyoto University Top Global Program, a research-based internship of one month is executed. Through the internship, study how to proceed the research at the advanced universities, and improve the English communication ability.

[Course objectives]

This course aims to understand the way of managing the research at the foreign university, and obtain the communication skills by which they can argue the details of research with foreign researchers.

[Course schedule and contents]

International Internship,20times,At the overseas cooperation university in Kyoto University Top Global Program, a research-based internship of one month is executed.
Seminar,1time,The contents of the internship is reported at the seminar.

[Course requirements]

Careful plan of internship should be prepared under the supervision of Japanese supervisor. Enough English ability for discussing with the foreign supervisor during the internship is requested.

[Evaluation methods and policy]

The student in internship is requested to submit internship plan before the internship, some progress reports during the internship and the final report at the end of the internship. The seminar presentation is also requested after finishing the internship. The grading is conducted based on the period and the performance of the internship.

Course number	G-ENG14 6P448 LE60				
Course title (and course title in English)	JGPセミナーⅠ Japan Gateway Project Seminar I	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,NAKAO YOSHIAKI		
Target year	Master's/Doctoral students	Number of credits	0.5	Year/semesters	2025/Intensive, year-round
Days and periods	Intensive	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

This is a series of lectures which are carried out by the professors who are invited with Japan Gateway: Kyoto University Top Global Program (JGP). By attending a lecture from the world top level professors, this course aims to grasping the newest trend of the specific field and extending the view of thinking.

[Course objectives]

Understand the fundamental and/or latest contents of a field of chemistry or chemical engineering in English, and obtain the skill of discussing the related contents in English.

[Course schedule and contents]

Introduction,1time,The contents of a series of seminar are explained.
Intensive lectures of the specific theme,2times,For a given theme, a series of lectures is executed.
Summary,1time,The contents of a series of seminar are summarized, and the exercise for evaluating the level of understanding is executed.

[Course requirements]

The basic knowledge for understanding the specific theme and the ability of understanding the lecture in English are requested.

[Evaluation methods and policy]

Attendance at a series of four lectures or more is requested. The report assigned in the lecture and/or the result of final examination are used for evaluation.

[Textbooks]

A copy of related contents is offered.

[References, etc.]

（Reference books）

Announced in the lecture.

[Study outside of class (preparation and review)]

Read through the documents if they are given before the lectures.

（Other information (office hours, etc.)）

Professors of the faculty of engineering who are doing similar research support a student#039s study. In some cases, this course consists of a series of lectures by two or more researchers.

*Please visit KULASIS to find out about office hours.

Target year	Master's/Doctoral students	Number of credits	0.5	Year/semesters	2025/Intensive, year-round
Days and periods	Intensive	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

This is a series of lectures which are carried out by the professors who are invited with Japan Gateway: Kyoto University Top Global Program (JGP). By attending a lecture from the world top level professors, this course aims to grasping the newest trend of the specific field and extending the view of thinking.

[Course objectives]

Understand the fundamental and/or latest contents of a field of chemistry or chemical engineering in English, and obtain the skill of discussing the related contents in English.

[Course schedule and contents]

Introduction,1time,The contents of a series of seminar are explained.
Intensive lectures of the specific theme,2times,For a given theme, a series of lectures is executed.
Summary,1time,The contents of a series of seminar are summarized, and the exercise for evaluating the level of understanding is executed.

[Course requirements]

The basic knowledge for understanding the specific theme and the ability of understanding the lecture in English are requested.

[Evaluation methods and policy]

Attendance at a series of four lectures or more is requested. The report assigned in the lecture and/or the result of final examination are used for evaluation.

[Textbooks]

A copy of related contents is offered.

[References, etc.]

（Reference books）

Announced in the lecture.

[Study outside of class (preparation and review)]

Read through the documents if they are given before the lectures.

（Other information (office hours, etc.)）

Professors of the faculty of engineering who are doing similar research support a student#039s study. In some cases, this course consists of a series of lectures by two or more researchers.

*Please visit KULASIS to find out about office hours.

[Overview and purpose of the course]

がんの放射線治療について、治療全体の流れや治療方法の概要、実際の放射線治療前に実施される治療計画の流れを講義する。治療計画を作成する治療計画装置、治療計画に用いる医用画像の種類や特徴、患者セットアップ誤差や治療時に想定される照射誤差を治療計画に反映させる方法とその基本概念について学修する。さらに、実際の治療現場にて患者セットアップから治療計画を経て治療を実施するまでの過程の見学や治療計画装置を用いた治療計画作成実習を行い理解を深める。また、放射線治療の基本となる線量測定について、放射線計測機器や臨床における線量検証の重要性について講義するとともに、実際の治療装置を用いて治療計画検証の線量測定の実習を行う。

[Course objectives]

がんに対する放射線治療について、放射線治療全体の流れや放射線治療法の概要、放射線治療前の工程を説明できる。
放射線治療計画や品質管理/品質保証について理解する。

[Course schedule and contents]

集中講義（3日間）で下記内容を実施予定。
（1）放射線治療概論【1回】
（2）放射線治療計画概論【2回】
（3）放射線計測理論【2回】
（4）治療計画装置・計算アルゴリズム【2回】
（5）治療計画実習【4回】
（6）線量測定実習【4回】

Course title (and course title in English)	融合光・電子科学通論 Recent Advances in Interdisciplinary Photonics and Electronics	Instructor's name, job title, and department of affiliation	Kyoto University Not fixed

Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Tue.5	Class style	Seminar (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

The class consists of a series of seminars at 3 laboratories related to Department of Electrical and Electronic Engineering (energy and electrical machinery, computers, control and systems, communications and radio engineering, and electronic devices and applied physics). Each seminar intends to give a brief introduction into a specific research field so that students can get a feel for the state-of-the-art in each topic and broaden their scope beyond their majors.

[Course objectives]

Students can understand the research contents of other laboratories and acquire a wide range of academic knowledge in electrical and electronic engineering.

[Course schedule and contents]

Explanation and investigation (6 times)
At the host laboratories (3 laboratories), students will be briefed on the current state of cutting-edge research and technology.
Students will also receive report assignments.

Submission of reports and discussion (9 times)
Submit a report on the assignment to the host laboratory (3 laboratories).
Discussion on the contents of the reports will be held.

[Course requirements]

None

[Evaluation methods and policy]

The evaluation of a student`s work is given based on his/her attendance, reports and discussions, not on examinations.

Days and periods	Wed.5	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

This lecture aims to get student to comprehensively and deeply understand issues related to Human Security Engineering as a system of technologies for designing and managing cities that enable inhabitants to live under better public health conditions, and environemntal destruction, as listed in the Millennium Development Goals from the viewpoint of four existing fields, i.e. urban governance, urban infrastructure management, health risk management, and disaster risk management. In addition, we#039ll provide lectures on this new discipline systematically based on the relationship between four existing fields.

[Course objectives]

人間安全保障工学に関連した問題への実用的アプローチ法を習得する

[Course schedule and contents]

Orientation(1time)
Orientation, Self-Introduction and Photo Session

Overview of Human Security Engineering(1time)
What is Human Security Engineering? We will give brief answer to this question.

Urban Governance(5times)
Lecture on Human Right, Property and Social Capital, and Community Dimension of Human Security in Urban Context. Presentation by students and discussion will be also carried out.

Urban Infrastructure Management(2times)
The role and importance of urban infrastructure management for establishment of human security will be

Course title (and course title in English)	人間安全保障工学インターンシップ Internship for Human Security Engineering	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,YOKO SHIMADA

Target year	Doctoral students	Number of credits	2	Year/semesters	2025/Intensive, year-round
Days and periods	Intensive	Class style	Practical training (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

The internship aims to develop practical capabilities to secure urban human security, in addition to acquiring expert knowledge and the ability to develop new research fields by carrying out research activity related to human security engineering and presenting research results at international conferences. Specific examples include participating in internships domestically or abroad at companies or research institutes which conduct the operation of international projects, conducting field surveys, and attending academic conferences.

[Course objectives]

Acquire practical approaches to problems concerning human security engineering.

[Course schedule and contents]

planning(1time)
Attending seminars, presentations at international conferences, and internships are planned by students for this class.

research and investigation(13times)
Students attend seminars, make presentations at international conferences, and carry out internships to get practical knowledge and experiences.

final report(1time)
Students need to submit a report summarizing what they did and what they got in the activities.

Course number	G-ENG55 7X351 SE73				
Course title (and course title in English)	人間安全保障工学セミナーA Human Security Engineering Seminar A	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,YOKO SHIMADA		
Target year	Master's students	Number of credits	4	Year/semesters	2025/Intensive, year-round
Days and periods	Intensive	Class style	Seminar (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

In the style of seminar, each student is given a theme for research related to human security problem to be solved by engineering methods, and the understanding on such a problems will be deepen from a specialized viewpoint of each student. Each student will get individual guidance by the supervisor about the method of the study on the problem or the collection method of the related information. Reports and presentation will be assigned after discussion with the supervisor.

[Course objectives]

To master the practical method to approach actual problems related to human security engineering.

[Course schedule and contents]

Issue 1 setting (1 time)
Set issue 1 on human security engineering that each student studies.

Survey and progress report (1 time)
Each student conducts survey and research on selected issue 1.

1st presentation (1 time)
Each student presents the contents of survey and research on issue 1 to the teachers in charge and receives questions and evaluations.

Task 2 setting (1 time)
Set issue 2 on human security engineering that each student studies.

Survey and progress report (1 time)
Each student conducts survey and research on selected issue 2.

2nd presentation (1 time)
Each student presents the contents of research and research on issue 2 to the teachers in charge and receives questions and evaluations.

Issue 3 setting (1 time)
Set issue 3 on human security engineering to be studied by each student.

Survey and progress report (1 time)

Course number	G-ENG55 7X352 SE73		
Course title (and course title in English)	人間安全保障工学セミナーB Human Security Engineering Seminar B	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,YOKO SHIMADA

Target year	Master's students	Number of credits	4	Year/semesters	2025/Intensive, year-round
Days and periods	Intensive	Class style	Seminar (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

In the style of seminar, each student is given a theme for research related to human security problem to be solved by engineering methods, and the understanding on such a problems will be deepen from a specialized viewpoint of each student. Each student will get individual guidance by the supervisor about the method of the study on the problem or the collection method of the related information. Reports and presentation will be assigned after discussion with the supervisor.

[Course objectives]

To master the practical method to approach actual problems related to human security engineering.

[Course schedule and contents]

Issue 1 setting (1 time)
Set issue 1 on human security engineering that each student studies.

Survey and progress report (1 time)
Each student conducts survey and research on selected issue 1.

1st presentation (1 time)
Each student presents the contents of survey and research on issue 1 to the teachers in charge and receives questions and evaluations.

Task 2 setting (1 time)
Set issue 2 on human security engineering that each student studies.

Survey and progress report (1 time)
Each student conducts survey and research on selected issue 2.

2nd presentation (1 time)
Each student presents the contents of research and research on issue 2 to the teachers in charge and receives questions and evaluations.

Issue 3 setting (1 time)
Set issue 3 on human security engineering to be studied by each student.

Survey and progress report (1 time)

Course number	G-ENG56 6V202 SE77				
Course title (and course title in English)	微小電気機械創製学 Introduction to the Design and Implementation of Micro-Systems	Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor,TSUCHIYA TOSHIYUKI Graduate School of Engineering Professor,YOKOKAWA RYUUJI Graduate School of Engineering Senior Lecturer,BANERJEE, Amit Graduate School of Engineering Associate Professor,HIROTANI JUN		
Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Fri.4	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

This is a collaborative course in which students from both Hong Kong University of Science and Technology and Tsinghua University form teams and work together to investigate, analyze, design, and present their projects in order to accomplish a given task. In addition to the acquisition of knowledge of microsystems, the course contributes to the cultivation of English-language expertise, teamwork skills in English, and communication skills in English, which are essential for students to be active in the international community.

[Course objectives]

Acquire the ability to design and analyze microsystems
Cultivate the ability to communicate and discuss in English with overseas students in groups

[Course schedule and contents]

Part 1 and 2: CAD software for device design and analysis
Students learn how to use the CAD software for device design and analysis.
3rd and 4th: Explanation of the assignment
The students will learn how to design Microsystems/MEMS (microelectromechanical systems) using microfabrication technologies and the basic knowledge required to accomplish the tasks.
5th-8th: Design and analysis
Each team will design and analyze the system while communicating with team members in English via the Internet.
9th and 10th: Presentation of design and analysis results
Each team will present and discuss the detailed design and analysis results of the device in English.
12th-13th: Device evaluation
Detailed evaluation of prototype devices.
14thand 15th : Presentation of evaluation results, feedback
Each team will present and discuss the results of device evaluation in English.

[Course requirements]

Microfabrication (10G204) offered in the spring semester.

[Evaluation methods and policy]

Evaluation Method
Presentation (60%) and Report (40%).

Continue to 微小電気機械創製学(2)↓↓↓

微小電気機械創製学(2)

The presentation will be evaluated not only on the design, analysis, and measurement results of the prototype device, but also on the collaboration with the team members.

[Textbooks]

Instructed during class

[References, etc.]

（Reference books）

[Study outside of class (preparation and review)]

In order to conduct problem-solving type classes, study and work outside of lecture hours are required.

（Other information (office hours, etc.)）

The online lectures for presentations may be given over 4 or 5 periods on Fridays and should be taken consecutively. This is a collaborative lecture with the Hong Kong University of Science and Technology and Tsinghua University, and lectures and presentations will be given in English. The lectures and presentations will be given in English. In addition, students are required to take prior training in CAD software. Those who wish to take the course should contact Tsuchiya (tutti@me.kyoto-u.ac.jp) by e-mail during the first semester of the course.

*Please visit KULASIS to find out about office hours.

Course number	G-ENG76 53237 LJ11　G-ENG76 53237 LJ12　G-ENG76 53237 LJ13		
Course title (and course title in English)	情報システムデザイン Information Systems Design	Instructor's name, job title, and department of affiliation	Graduate School of Informatics Professor,Takayuki ITO Institute for Liberal Arts and Sciences Professor,TAJIMA KEISHI Part-time Lecturer,MATSUBARA SHIGEO

Target year	Doctoral students	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Tue.2	Class style	Lecture (Face-to-face course)	Language of instruction	English

[Overview and purpose of the course]

This course introduces fundamental concepts, methodologies and underlying technologies for analyzing, designing and implementing social information systems. In particular, the course presents fundamental concepts and methodologies regarding the basics of set data representation, design considering security and privacy protection, and incentive design. Students will examine design methodology and implementing/ operation technologies to learn how information systems are designed, implemented and operated.

[Course objectives]

The student will understand the concepts and methodologies of the basics of set data representation, design considering security and privacy protection, and incentive design, which are used for the design and development of information systems.

[Course schedule and contents]

Basics of Set Data Representation (Tajima)
1. Set
2. Datalog
3. Redefining and extending sets by using relation and function

Data System Design (Yoshikawa)
4. Operational vs. analytical data
5. Data models
6. Access control
7. Cryptographic tools
8. Privacy protection
9. Secret sharing

Incentive Design (Matsubara)
10. Game theory basics
11. Incentive design for crowdsourcing
12. Security game: Stackelberg competition
13. Gamification: optimal contest design
14.Two-sided matching: kidney exchange
15. Information elicitation

August 1 Final exam

Days and periods	Mon.3	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Damage from disasters is defined by two factors: scale of hazard and social vulnerability. Two strategies exist to reduce damage from disasters - namely, crisis management as a post-event countermeasure and risk management as a pre-event measure. This course introduces students to a system for effective emergency management, consisting of response, recovery, mitigation, and preparedness.

[Course objectives]

Understand risk and crisis management processes to maximize the capability of organizational operational continuity and requirements for effective support information system in emergency management.

[Course schedule and contents]

[1] What is emergency management?
[2] Emergency management in disaster response
[3] History of information processing in disaster response
[4] Case study on emergency management in Great East Japan Earthquake 2011
[5] Case study on emergency management in recent disaster
[6] Advanced emergency management with private support group 1
[7] Advanced emergency management with private support group 2
[8] Advanced emergency management with private support group 3
[9] Design of disaster response support systems 1
[10] Design of disaster response support systems 2
[11] Design of disaster response support systems 3
[12] Design of disaster response support systems 4
[13] Natural-hazard triggered technological accidents(Natech)
[14] Business continuity plan, Standardization of disaster response
[15] Examination

Days and periods	Wed.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese		

[Overview and purpose of the course]

歴史を切断し、新しい世界を表現する、広義の「イノベーション」の方法論を学ぶ。イノベーションとは消費者の欲求を満たすことや問題を解決するだけでは生まれない。既存の「意味のシステム」を解体することが、イノベーションである。何に意味があり、何がよく、何が悪いということを規定する意味のイノベーションからは排除されている敗者がいる。敗者は意味が与えられないため、無-意味となる。この敗者を特定し救済することで既存の意味のシステムを解体し、そして既存の意味のシステムから潔く切断した全く新しい世界を描くことが求められている。この科目は実践のための方法論を扱い、その背景にある考え方や理論は、「社会デザイン論」(経営管理大学院、全学横断科目)で扱う。この両方を受講することが望ましい。

本科目は全て日本語のみで実施する。This course is in Japanese only.

[Course objectives]

- 様々な事象を布置として捉え、社会が向かっている方向を読み解けること。
- 既存の意味のシステムから排除された敗者を感じ取れること。
- 敗者を救済するために、価値転換ができること。
- 既存の意味のシステムから潔く切断し、新しい世界をシンプルに簡潔に表現できること。
- 意味を込めるのではなく、空虚なデザインを表現できること。

[Course schedule and contents]

1. 導入 (1回)

2. 社会をよく見る - 無-意味を感じ取る (4回)
様々な事象を配置することで、イデオロギーの星座を作成し、社会の変化を読み解く。

3. 価値を転換する - 無-意味を救済する (4回)
題材を設定し、その題材を救済するとともに、無-意味の敗者を救済し、人々の新しい自己表現の方向を導く。

4. 世界観を綴じる - 無-意味を表現する (4回)
既存の意味のシステムから潔く切断し、曖昧模糊とした状況の中でも、ひとつひとつの意思決定を出来事に忠実に進めることで、シンプルで完結した世界観を表現する。

5. 最終発表 (1回)

（Other information (office hours, etc.)）

In principle, all lectures will be given in English.
Students must apply for the course by the separately indicated deadline. For inquiries, please contact cme-seminar@me.kyoto-u.ac.jp

*Please visit KULASIS to find out about office hours.

Course number	G-ENG56 8X477 PJ18				
Course title (and course title in English)	問題発見型/解決型学習(FBL/PBL)L 1 Field based Learning/Problem based Learning (FBL/PBL) L1	Instructor's name, job title, and department of affiliation	Graduate School of Engineering KANKEI KYOIN Graduate School of Engineering Professor,MATSUBARA ATSUSHI Graduate School of Engineering Professor,KANKI KIYOKO Graduate School of Engineering Professor,KOMORI MASAHARU		
Target year	Master's/Doctoral students	Number of credits	2	Year/semesters	2025/Intensive, First semester
Days and periods	Intensive	Class style	Practical training (Media-based course)	Language of instruction	Japanese

[Overview and purpose of the course]

Through FBL (Field-based Learning), students of this course will experience the process of discovering problems to be solved from given real-world situations in teams, acquire design theory and design methods, and through PBL (Problem-based Learning), learn design theory and design methods by experiencing the process of solving a given practical problem in teams.

The objectives of this course are as follows.
In FBL, to (1) observe and analyze a given real-world situation to understand the structure of the situation and discover the root cause of the problem to be solved; (2) acquire the design theory necessary for discovering the problem, (3) learn the design methods necessary to discover the problem and practice them in the project, and (4) define a realistically solvable problem.
In PBL: to (1) acquire the design theory necessary for problem-solving; (2) acquire the design methods required for problem-solving and implement them in projects; and (3) formulate feasible solutions.

[Course objectives]

・Using the design theory and design techniques that they have learned to identify real problems in society, define them as solvable problems, and formulate feasible solutions.
・Communicating fluently with members from different fields of expertise, sharing problems and working together to solve them.
・Understanding their role in response to the needs of society and within the team. Effectively communicate the contents of the team's work to third parties both inside and outside the university.

[Course schedule and contents]

Introduction, 1 Class
The outline of this exercise and how to proceed with the project will be explained. We will also address the handling of intellectual property.
FBL/PBL Practice (13 Classes)
FBL/PBL conducted for each project. There will be weekly, discrete, intensive, or other forms of implementation based on the individual project, which should be conducted accordingly.
Presentations, 1 Class
Presentation of the results for each project.

The location of the project will vary depending on the project (on campus, off-campus field). In cases where

Continue to 問題発見型/解決型学習(FBL/PBL)L１ (2)↓↓↓

students are on different campuses, we will use media classes (less than 8 sessions of the above) to reduce travel time or when it is deemed difficult to attend face-to-face.

[Course requirements]

None in particular. However, students are expected to have analytical and problem-solving abilities in their own specialized fields.
Since specific course plans (programs) vary every year, details will be posted on PandA (this program's site). Please coordinate with these schedules and set up your course schedule with the faculty member supervising the program's implementation.

[Evaluation methods and policy]

This course aims to acquire design theories and design methods by practicing design through FBL (Field-based Learning)/PBL (Problem-based Learning).
・Acquisition of methods for discovering and solving problems 50% (based on reports and exams)
・Quality of problem discovery and solution 20% (based on reports and exams)
・Contribution to teams: 30% (by faculty observation)
・Attendance of over 80% is a prerequisite for credit (based on attendance verification)

[Textbooks]

In addition, materials used in practical training shall be distributed as necessary.

[References, etc.]

（Reference books）

In addition, materials used in practical training shall be distributed as necessary.

（Related URLs）

((Instructions will be given in class.))

[Study outside of class (preparation and review)]

The supervisor of each project will give instructions as appropriate. A mid-term presentation will be held in the middle of the semester to provide an opportunity for students to share information and get feedback from others. In principle, all participants are required to attend the mid-term presentation.

（Other information (office hours, etc.)）

The relevant subjects and schedule implemented shall be posted under this program's site on PandA at the beginning of the semester. Students should register for the course and apply to participate after confirming the details. Email addresses and other information will also be posted there. Students who wish to take the course should read it carefully. Specific questions, etc., will go through appointments, and we will accept questions via email, etc., as appropriate.

*Please visit KULASIS to find out about office hours.

Course number	G-ENG56 8X479 PB18		
Course title (and course title in English)	フィールドインターンシップL（デザイン学） Filed Internship L	Instructor's name, job title, and department of affiliation	Graduate School of Engineering KANKEI KYOIN

Target year	Doctoral students	Number of credits	2	Year/semesters	2025/Intensive, year-round
Days and periods	Intensive	Class style	Practical training (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

"Field internships" is an attempt to utilize the "educational power of the field," and involve a group of people who spend several weeks or months in the field working on an international or social issue that involves different specializations. Students are individually required to find sites for internships and apply to them. Students shall submit a written plan in advance, participate in the internship, submit a report after the internship, and make a presentation at a debriefing session. Students will be dispatched to the internship location regardless of whether it is in Japan or overseas. Unlike previous internship programs with an individual focus, this program aims to develop leadership skills through group activities. This course also covers dispatch to overseas international organizations and training at overseas companies such as Aesthetics, AIESEC, and Vulcanus in Europe.
The course objectives are to: (1) understand the structure of the situation and discover the root cause of problems to be solved by observing and analyzing the situation in the field, (2) implement the design theory and methods learned thus far in a project in the field, and (3) to define a realistically solvable problem in the field and formulate a feasible solution.

[Course objectives]

The objective of field internships is to put the design theory and design methods already learned in practice to real problems in the field.

[Course schedule and contents]

Introduction, 1 Class
The outline of this subject and how to proceed with the project will be explained. We will also address the handling of intellectual property and crisis management education.

Practical, 13 Classes
Internships will be carried out for each project. There will be different forms of implementation based on the individual project, such as splitting field activities several times, which shall be conducted accordingly.

Presentations, 1 Class
Presentation of the results for each project.

Continue to フィールドインターンシップL（デザイン学）(2)↓↓↓

フィールドインターンシップL（デザイン学）(2)

[Course requirements]

Only students who meet the schedule and other requirements for the intensive on-site training will be accepted.

[Evaluation methods and policy]

Credit will be awarded based on whether the student has cultivated the flexibility and creativity needed in society, whether the student has developed the flexibility and assertiveness essential for group work, and whether the student has cultivated an international perspective and improved the ability to communicate with others internationally.

1 Status of the practice of design theory and design methods used to discover and solve problems 50% (based on reports and exams)
・Quality of problem discovery and solution 20% (based on reports and exams)
・Contribution to teams: 30% (based on observation by faculty or the person responsible at the dispatch site).

[Textbooks]

In addition, materials used in internships shall be distributed as necessary.

[References, etc.]

（Reference books）

In addition, "**フィールド情報学入門**" Kyoritsu Shuppan 2009. "Filed Informatics" Springer 2011.

[Study outside of class (preparation and review)]

Internships involve hands-on efforts in the real world. Therefore, before starting the internship, the participants should gather information about the subject and have a basic understanding of the local community. This information should be shared among the participants. It is essential to consider and share newly discovered events among the participants during the internship to further develop the implementation plan.

（Other information (office hours, etc.)）

Information regarding internship opportunities in this course will be communicated on the course website on PandA as needed. Prospective students or current students should read that carefully. The contact email address of the faculty member in charge of each field internship to be conducted will be provided separately.

*Please visit KULASIS to find out about office hours.

Course number	G-ENG56 8X480 PB18		
Course title (and course title in English)	リサーチインターンシップL（デザイン学） Research-Intensive Abroad Internship L	Instructor's name, job title, and department of affiliation	Graduate School of Engineering KANKEI KYOIN

Target year	Doctoral students	Number of credits	2	Year/semesters	2025/Intensive, year-round
Days and periods	Intensive	Class style	Practical training (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

Research internships aim to cultivate the ability to stay in the laboratory of an overseas research institution for a few weeks to a few months to search for the truth in boundary areas that cross existing academic fields from the perspective of design studies through joint research with local researchers and to organize and lead research teams in new research fields. To achieve this, students shall search for an internship at a prominent foreign research institute, an international collaboration partner of this university, and determine their host research institution while considering their joint research proposals, plans, and accommodations for the stay. Students must submit a research plan in advance and undergo a preliminary review from the relevant faculty member before participating in the internship. After the internship, they are expected to submit a report and present it in the debriefing session. Evaluation will consider each researcher's research results, as well as their contribution to the host institution. Participation in short-term intensive schools held at overseas partner universities shall also be considered.
For this course, the decision on whether to dispatch a researcher shall be made through peer review by internal and external reviewers, including overseas reviewers, based on the following criteria: (1) the research proposal must be for a theme related to design studies that integrates multiple different fields, and (2) the plan must include joint research with an overseas research institution.

[Course objectives]

This course is an internship for conducting joint research at a host institute based on the following criteria: (1) the research proposal must be for a theme related to design studies that integrates multiple different fields, and (2) the plan must include joint research with an overseas research institution. Through joint research with overseas researchers, students will cultivate the ability to form dialogue and negotiate to communicate information in foreign cultures and different fields of study. In addition, the internship program cultivates a cooperative spirit for students to understand different cultures and fields and the cross-disciplinary vision to understand the "interrelationship of knowledge" among different fields based on the solid academic knowledge rooted in one's own culture and specialized field.

[Course schedule and contents]

Introduction, 1 Class
Understanding the objectives and goals of the course, examining the details of the internship program, and implementing the plan for each student. We will also address the handling of intellectual property and crisis management education.
Practice, 13 Classes
The internship program will be conducted as needed based on the implementation plan.
Presentation, 1 Class

Target year	Master's students	Number of credits	4	Year/semesters	2025/Intensive, year-round
Days and periods	Intensive	Class style	Seminar (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

This course aims to familiarize students with research results, diverse research methods, and evaluation methods through discussions on the latest research, vital past research, and peripherally related areas, focusing on the research themes in various fields of design. Students will learn both conventional research methods and creative thinking and develop their problem-finding and -solving abilities through discussions with other students. About 15 lab seminars will be held for the first and second sessions of M1.

[Course objectives]

Students will learn to understand specific problems and solutions in relevant areas and how to identify and solve problems on their own.

[Course schedule and contents]

The 30 sessions of the course entail research, presentations, and discussions on design science; setting research themes and frames; conducting surveys and experiments; analyzing data; summarizing research results; and discussions of presentations at research conferences in Japan and overseas throughout the year.

[Course requirements]

Nothing in particular

[Evaluation methods and policy]

Through presentations and discussions at seminars, students will comprehensively judge their proficiency in research methods and evaluation methods and their ability to collect information, detect problems, and solve problems.

[Textbooks]

Instructions will be given during the exercises.

Target year	Master's students	Number of credits	4	Year/semesters	2025/Intensive, year-round
Days and periods	Intensive	Class style	Seminar (Face-to-face course)	Language of instruction	Japanese

[Overview and purpose of the course]

This course provides research guidance to students in various design fields on setting goals, research themes, and methodology. It covers basic thesis writing techniques for students presenting research results to external academic conferences and other institutions. Students will learn to conduct and disseminate research by thoroughly discussing the position of their research themes in the relevant field, the significance of the results obtained, and future development potential. Before and after M2, we hold about 30 laboratory seminars.

[Course objectives]

Students must be able to set their own goals regarding how and to what extent they should solve problems they have discovered in the fields related to their research themes. In addition, students should be able to properly present the problem and acquire skills for efficiently solving problems through discussion.

[Course schedule and contents]

Research, presentations, and discussions on design science (15 sessions): These cover setting research themes and frames, conducting surveys and experiments, analyzing and interpreting data, summarizing research results, and discussing presentations at research conferences in Japan and overseas throughout the year.

[Course requirements]

As a general rule, you will be taking Design Special Exercise I.

[Evaluation methods and policy]

Through presentations and discussions at seminars, students will comprehensively judge their proficiency in research and evaluation methods and their ability to collect information, detect problems, and solve problems.

[Textbooks]

[Overview and purpose of the course]

As a methodology of field analysis required to make product designs of products, services and business in the real field, we give some lectures and related exercise which include field research methods (ethnography, surveys method), quantitative analysis methods (various statistical analysis methods) and model building and simulation methods. After learning of the target field selection, setting of the investigation, and determination of the contents of the survey, you carry out the field research work using ethnography, survey methods and so on. At the next step, you learn data analysis methods using field data obtained from the field works. Finally, we hold the design workshop using the results of the actual field works which are obtained from construction of field analysis model, system dynamics, multi-agents simulation and so forth.

Instructor's name, job title, and department of affiliation	Graduate School of Informatics Program-Specific Professor,KUROHASHI SADAO Academic Center for Computing and Media Studies Professor,MORI SHINSUKE Graduate School of Informatics Associate Professor,MURAWAKI YUGO		
Target year	Doctoral students	Number of credits	2	Year/semesters	2025/First semester		
Days and periods	Mon.3	Class style	Lecture (Face-to-face course)	Language of instruction	English		

[Overview and purpose of the course]

This lecture focuses on morphological analysis, syntactic analysis, semantic analysis, and context analysis, including machine learning approaches, which are necessary to process natural language texts. We also explain their applications such as information retrieval and machine translation.
