Modern ethics based on engineering aspect are becoming essential to present engineers and scientists Instructors from various faculties give lectures about ethics in their research fields

#### [Course Goals]

The goal of this class is to understand engineering ethics, and to develop the ability to judge by yourself when ou encounter ethical issues

#### [Course Schedule and Contents]

Significance to learn engineering ethics. (4/11) 1time. As an introduction to this course, the mea engineering ethics and the significance to learning it are explained. Examples are shown in building engineering area on daily disastrous accidents and fire event. The significances of engineering ethics to those examples are discussed. (K. Harada: Architecture)

Geotechnical engineering and engineering ethics. (4/18) 1 time. Geotechnical Engineering is indispensable in discussing the underground public use, slope stability, geo-sequestration of byproduct for the energy generating. Introducing some examples of natural disasters and construction accidents, geotechnical engineering and engineering ethics will be discussed. (K. Kishida: Global Engineering) Engineering and engineering curics win be discussed. (K. Kishida: Grobal Engineering)

Engineering ethics as an applied ethics. (4/25) 1 time. In this lecture, I will show the basic Idea of

Engineering Ethics by comparing with the other fields of Applied Ethics. And show its unique character in

the age of information technology. (M. Mizutani: Graduate School of Letters)

Ethical theories for engineering ethics. (5/2) 1 time. This lecture focus on various ideas in ethics

(utilitarianism, deontology, virtue ethics, professional ethics etc.) which will be useful for thinking about particular ethical problems in engineering ethics. (T. Iseda: Graduate School of Letters) Art-view concept for engineering. (5/9) Itime. Concept of "quality of life" is required for human related engineering. Some practical examples in medical-care and welfare fields will be introduced, and problem of the QOL-evaluation will be discussed from both function-optimizing view point and art view point. (N. Tomita: Engineering Science)

Ethics of biotechnology and stem cell research. (5/16) 1time. With the rapid development of genome editing echnology and stem cell engineering, editing of the human genome that goes beyond generations has become possible, at least technically. In this lecture, I will introduce these latest technologies and think about ethical problems accompanying technological development. (G. Eiraku: Industrial Chemistry)

Research and engineering ethics. (5/23) 1 time. It is said that He that will do no ill, must do nothing that belongs thereto. The sense of ethics necessary to whom conducts research and engineering work in society is discussed in terms of the importance of equitability and fair evaluation to anyone involved in each area of research or engineering. (H. Mikada: Global Engineering)

Ethics in biomedical engineering. (5/30) 1time. Recent dramatic progress in biology-related techniques, such as reproductive medicine, genome editing, and clone-animal techniques, is causing revolutions in the fields of

Continue to 工学倫理(2)

# 工学倫理(2)

medicines and food productions. Associated with it, problems of their safety and ethics are arising, which should be addressed by our societies. In this class, the recent progress in biology-related techniques, and problems we have and will have in near future are described. (M. Shirakawa: Industrial Chemistry) Patents and ethics (Part 1). (6/6) Itime. This course will teach the students about 1) patent systems which protect inventions and research results and 2) ethical issues in patents. The first class, in preparation for the ext subject of patent ethics, introduces Japan 's patent system with comparisons to the patent systems in the s major countries and international framework. (M. Nakagawa: Electrical and Electronic Engineering)

Patents and ethics (Part 2). (6/13) 1time. Students, equipped with the basic knowledge of patent systems by he previous lecture, will get familiar with actual case studies on ethical and legal issues in patents. (M. Nakagawa: Electrical and Electronics Engineering) Ethics required for advanced science, (6/27) 1 time. Engineers and researchers are at the forefront of

preventing harm caused by advanced chemistry. Think about social roles and ethics required by engineers and esearchers through relationships between chemical substances and environmental problems, efforts to avoid azards of nanomaterials. (K. Miura: Industrial Chemistry)

Ethics in press release, (7/4) 1 time. Press Release is an essential process for introducing the research to our ociety through various medias. In this lecture, issues related to Press Release in University are addressed and discussed. (K. Umeno: Informatics and Mathematical Science)

Failure accidents and inspection/maintenance (7/11) 1time. On the occasions of failure accidents of vehicles and plants, the appropriateness of inspection/maintenance of their structures is often questioned. Some actual failure accidents are reviewed to discuss the importance of inspection/maintenance together with the relation to engineering ethics. (S. Biwa: Engineering Science)

Ethics in nuclear engineering. (7/18) 1 time. Discussion on engineering ethics in the TEPCO accident from view point of Tsunami evaluation by the Japanese government. (I. Takagi: Engineering Science) Ethical issues on sound design. (7/25) 1 time. Every working things consuming energy emits acoustic sou Even a small sound energy affect human as noise and may create annoyance and health problems. Sound ming energy emits acoustic sound. problems of various things are introduced in the lecture. Ethical issues, which shall be considered during design and operation environment, will be discussed. (Y. Takano: Architecture)

[Outline and Purpose of the Course]

The purpose of this course is to study about how worldwide leading company, institute, etc. make proposals and find solutions for expanding their own technologies to the international market. Throughout hands-on training on their laboratory, students investigate the methodology of team organization, proposal, market prediction and conception ability by group works. After the investigation, students are expected to improve their comprehension and explanation capability. As extended exersice subject of this course, the Global Leadership Seminar II is opened in the second semester.

#### [Course Goals]

The goal of this course is to improve student's comprehension and explanation capability for processes of proposal and expantion on the international market investigating worldwide leading companies by group work.

#### [Course Schedule and Contents]

Week 1, Guidanc

Week 2-13, Hands-on training

Week 14, Pre-presentation

Week 15, Final presentation

#### [Class requirement]

How to register will be announced later. Students who want to join this course is requested to attend the first class.

# [Method, Point of view, and Attainment levels of Evaluation]

Students are prohibited to skip hands-on training. Evaluation will be based on presentation.

#### [Outline and Purpose of the Course]

Acquisition of international skills with the training of foreign language through the internship programs hosted by the University, the Faculty of Engineering, or the undergraduate school the applicant belongs to.

# [Course Goals]

The acquisition of international skills with the training of foreign language through the to internship programs hosted by the University is the major expectation to the students.

# [Course Schedule and Contents]

Overseas Internship,1time,The contents to be acquired should be described in the brochure of each internship program.

Final Presentation,1time,A presentation by the student is required followed by discussion among participants.

#### [Class requirement]

Described in the application booklet for each internship program. The registrant is requested to have enough language skills for the participation.

#### [Method, Point of view, and Attainment levels of Evaluation]

Marit rating is done based on the presentation or reports after each internship program. Each D epartment responsible to identify if the credit earned by this subject to be included as mandatory ones or not. If the credit is not included in the undergraduate school in which the participant belongs to, the credit is granted by the Global Leadership Education Center as a optional credit. The number of credits, either 1 or 2, will be determined depending on the contents and the duration of the program that the participant has participated in.

# [Outline and Purpose of the Course]

This course is a small-group workshop program where students are supposed to extract or set up challenges by themselves aiming at creating new social values. In concrete, abilities of planning and problem-solving are trained through group works in residential training and skills of presentation and communication are enhanced through oral presentations regarding contents of the proposal at each step of the process from a preliminary draft to its completion.

# [Course Goals]

Ability of planning, from extraction or setting up challenges to proposal of solutions aiming at creating new social values, is trained through group works.

# [Course Schedule and Contents]

Lectures,2times,Lectures by experts are given

Orientation,1time,A brief overview and a schedule of the course are explained and working groups are organized.

Group works,3times,Setting up challenges, extraction of problems, collecting information, and group works are done.

Residential training, 7times, Through intensive group works based on discussion, a proposal for solving problems is planned, a draft report is made, and a few presentations are made.

Preliminary review meeting, Itime, A preliminary review meeting is held and discussions are made. Report meeting, Itime, Final presentations are made and reports are submitted.

# [Class requirement]

None

# [Method, Point of view, and Attainment levels of Evaluation]

It is required to join the residential training. A report meeting is held and comprehensive evaluation concerning abilities in group discussion to extract or set up challenges and to propose solutions for achieving a goal is made through presentation of the proposal as well as a submitted report.

This course is designed for students specializing in chemistry.

Students will study basic examples of environmental issues and their effects on society from the perspective of preservation of the environment at the university, the air environment, the aquatic environment, and a sound material-cycle society. We will help develop students ' understanding of environmental preservation for their future research and social activities.

# [Course Goals]

The major course objectives:

- (1) To learn the background and basic mechanisms of environmental problems, specifically as they relate to air and water, as well as how to establish a sound material-cycle society.
- (2) To understand relationships between various activities and their environmental impacts on campus.

# [Course Schedule and Contents]

Environmental Issues of Our Time, 3 times

With a particular focus on chemicals, we will study the background and current status of environmental issues and discuss possible future problems. We will also examine how environmental issues are related to uman activities and resource/energy consumption.

2. Environment Preservation at Kyoto University, 2 times

Students will learn about environmental protection systems at Kyoto University. We will explain systems for water quality control, liquid waste treatment, and specially controlled waste management. We will also detail systems and regulations for proper use and management of chemical substances.

3. Air Environment, 5 times

We will discuss the current status of global air pollution. We will learn about a variety of regulations and the relevant background of rules created based on the Air Pollution Control Law. We will discuss in detail air pollutants emitted by factories and automobiles in urban areas and look closely at their chemical reactions in the air, with a particular focus on radical reactions.

Students will study the conservation of water quality, specifically (1) water contamination by organic substances and related purification methods, (2) water contamination by heavy metals and related treatment methods, and (3) management of environmentally persistent substances. They will also learn about environmental criteria, effluent standards, and environmental protection technologies for water quality

# 環境保全概論(2)

control.

5. Waste Management and a Sound Material-Cycle Society, 2 times

Students will develop a better understanding of waste treatment/management and a sound material-cycle society by studying (1) mass balance and indexes on the macro level, (2) definitions of waste and the current status of waste treatment, (3) waste and dioxin problems, and (4) approaches toward establishing a sound naterial-cycle society.

6. Confirmation of students' levels of understanding, 1 time

Students ' level of understanding of course topics will be checked.

# [Class requirement]

# [Method, Point of view, and Attainment levels of Evaluation]

Evaluation: test scores + attendance rates

# [Textbook]

Not specified. Materials and references will be distributed in class when needed.

# [Reference books, etc.]

( Reference books )

To be announced in class

# [Regarding studies out of class (preparation and review)]

Review on the materials and references distributed. Specified points willbe announced in class.

# ( Others (office hour, etc.) )

Process control is used for operating the production processes in chemical and the steel industries. Pressure, temperature, liquid level and flow rate are major process variables to be controlled automatically (i.e., computers). Understanding the process dynamics is the first step to develop a good control system. Then, as the second step, the optimal selection and manipulation of the process input variables has to be determined. The class teaches to derive the physico-chemical dynamic models of chemical processes and transfer function models, which are obtained by taylor expansion of the physico-chemical models. Then, the design scheme of controller is described. To make the understanding easier, computer simulation exercises using Matlab and Simulink are offered. 1.

# [Course Goals]

The goal of the class is to educate the students to be able to develop the dynamic process model, design the process controller and to analyze the control performance so as to design the optimal process control systems

#### [Course Schedule and Contents]

Introduction of Process Control, 1 time, Showing several examples, the necessity, objectives and importance of process control are described. Then, the concepts of feedback and feed-forward controls and technical terms on process control are explained. Some issues on process control design are explained. The basic design procedure of the control system for solving the issues is explained.

Development of Dynamic Models, Itime, The first step for developing better process control systems is to understand the dynamic behaviors of the process to be controlled. The modeling method using the material and heat balance equations is lectured to construct the model showing the dynamic behavior of the process appropriately. Then, how to derive the linear transfer model using Taylor expansion of the first principle odel is explained.

Laplace transform and Transfer function,1time,The Laplace transform is revisited first. Then, how to derive the transfer function from the linearized dynamic model among the input and the output variables is lectured. How to obtain the linear model from the step response is also taught.

Exercise with Matlab for learning dynamic behavior, Itime, [Exercise] After learning the basics of Matlab and Simulink, the dynamic behaviors of some typical dynamic systems such as the first-order lag system and the second-order lag system are simulated. Then, for a given process, the exercise on developing the model and executing the simulation is executed.

PID Control,1time,The most popular controller in process industries is PID (Proportional, Integral, and Derivative) controller. The basic features of three elements (P, I, D) are explained. Then, after explaining the

basic feature of PID controller, how to adjust the control parameters is taught.

Dynamics of controlled system, I time, The relationship between the pole of the transfer function and the stability is lectured. Then, the basic feature, the steady-state characteristics, and the stability of the feedback control system are explained. 

# プロセス制御工学**(2)**

Mid-term exam,1time,To know the level of understanding, the mid-term examination is conducted. Frequency response,1time,The relationship between the sine wave input and the output (the frequency response), and how to detect the stability from the frequency response are lectured. The features of various filters are also explained.

PID control system design ,1time,The adjusting method of PID parameters based on the IMC control procedure is explained. Then, several revised controllers of the basic PID controller for improving the performance are lectured.

Exercise of control system design ,1time,[Exercise] For a given process, the exercise of tuning the control parameters and verifying the performance under the developed system using Matlab/Simulink is executed. Cascade control and Multi-loop control, 1 time, The concept of cascade control is explained. Then, as a control system dealing with the two-input and two-output process, the multi-loop control system is introduced, and how to remove the interaction among the control loops is explained.

Exercise of multi-loop control, Itime, [Exercise] For a given process, the exercise of developing a controller

for a two-input and two-output process is executed.

Equipment for control, I time, The equipment used for the real process control system are explained. The concept of proportional band and the reason why non-dimensional system is used are explained Overall exercise of process control design,1time,[Exercise] Starting with the construction of the first principle model of a chemical/bio process, a two-input and two-output control system (multi-loop controller) is designed and the parameters are tuned by using Matlab and Simulink

Feed-back time, 1 times, The question and answer to the final exercise, and the whole of the lectures are conducted.

# [Class requirement]

Basic understanding of linear algebra, ordinal differential equations and Laplace transform

# [Method, Point of view, and Attainment levels of Evaluation]

The score is determined by considering the quality of homeworks, midterm exam, term-end exam and final project.

# [Textbook]

Process Control Engineering, Hashimoto, Hasebe, Kano, Asakura book store, isbn{}{4254250312}

# [Reference books, etc.]

# ( Reference books )

Process Control System, Ohshima, CORONA Publishing isbn{}{4339033146}

# [Regarding studies out of class (preparation and review)]

The final term project will be given

| processes. In<br>powders, pro | [Outline and Purpose of the Course]  From raw materials to finished products, powders#8212particle aggregates#8212are often used in chemical processes. In this course, students will learn about the fundamental properties of particles, characteristics of powders, properties of dispersed particles in a gas (vapor) or liquid phase, particle dynamic behavior analysis, and the generation, separation, and collection of particles. |       |   |                    |        |                |                     |  |  |  |                      |  |  |

[Course Goals] Students will acquire an understanding of the characteristics of particles and powders, and of methods of analyzing the dynamic behavior of fine particles. Students will also foster their abilities in applications and

#### developments involving the manipulation of fine particles, including their generation, separation, and collection.

生化学II(2)

[Course Schedule and Contents]

Overview of fine-particle engineering (1 class)

Explanation is made of the role of fine engineering in chemical processes, with examples from classical processes and natural phenomena

Particle properties and measurement (4 classes)
In these lectures, explanation is made regarding the following: particle diameter expression method, particle is the destribution and related statistical processing methods, dynamic properties, especially the basic properties of elastic deformation and plastic deformation, physicochemical properties including droplet formation and capillary condensation, etc., electrostatic properties related to electrical charge, optical properties from the relationship between light wavelength and particle diameter, etc., as well as the properties of individual particles, and the characteristics of particle interactions and particle aggregates (assemblies). Measurement nethods for these will also be discu

Gas (vapor)-phase particle systems (5 classes)

Lectures focus on the basics of microparticle generation via pulverization and nucleation, as well as motion of gas-phase dispersed particles. Explanation is made of analysis methods for basic phenomena such as wall-surface deposition, fine particle aggregation, etc. Using this as a foundation, discussion is then made of various operations, including dispersion, classification, solid-gas separation, materials processing, etc.

Liquid-phase particle systems (4 classes) Explanation is made of interactions of liquid-phase dispersion particles, and this base is used to discuss unit operations including dispersion, aggregation, filtration, etc. Examples of ordered structure formation based on particle group interactions are explained next. Finally, confirmation is made of the extent that students have inderstood the contents of this course

The chemical processes consist of various unit operations. In this course, the concepts and the methods of optimal synthesis, optimal design and production management are described. The mathematical methods for ptimization are also explained.

This course aims to understand the systematic modelling procedures of the design and operational problem for chemical processes. In addition, it is requested to understand the optimization methods for solving the problems which are formulated as the linear, non-linear or combinatorial programming problem

# [Course Schedule and Contents]

What is PSE?,1time,The concept of process systems engineering is explained

Modelling of the processes -physical model. I time. The feature of physical models used in the process design and operation problems is explained.

Modelling of the processes - statistical model, 1 time, The least square method used in constructing the statistical model is explained.

Procedure of process design,1time,The procedure of process design and the solution method using input and output model are explained.

Process design using simulation, 1 time, The sequential modular approach which is commonly used in the

process simulators is explained. Process synthesis,1time,The combinatorial programming method and multi-step heuristic method which are

used in the conceptual design are explained. Heat exchanger network synthesis,2times,A systematic synthesis method using T-Q diagram is explained for

the heat exchanger network synthesis problem Production management of chemical processes,1time,The concept of production management including

supply chain problem is explained.

Solution procedure using LP,2times,The formulation of the production planning problem as a linear

programming problem, and its solution method using the simplex method are explained. Scheduling problem and BampB method, 2 times, The formulation of the scheduling problem of batch processes as a traveling salesman problem and its solution procedure using the branch and bound method are

Various scheduling problems of batch processes, 1 time, Various scheduling problems which arise in batch processes and their solution methods are explained.

Evaluation of learning achievement, 1 times, The comprehensive review is executed, and the nisunderstanding of the homework is explained.

# [Class requirement]

The basic knowledge of chemical engineering such as the unit operation and reaction engineering, and that of The basic knowledge of Chambour Confined Confined to プロセスシステム工学(2)

[Outline and Purpose of the Course]

The fundamental skills of designing chemical processes which consist of various unit operations are learned. Then, a conceptual design exercise of a chemical process is executed using the knowledge of chemical engineering and process simulation system.

# [Course Goals]

It is requested to understand the way of conceptual design, and to have the skill of designing chemical processes by applying the knowledge of chemical engineering and related field.

# [Course Schedule and Contents]

Concept of process design,1time,The concept of process design and the procedure of conceptual design are Evaluation methods, 1 time. After explaining the fundamental terms on economical efficiency evaluation, a

single-year evaluation method and a multi-year evaluation method are explained.

How to use process simulators, I time, The sequential modular approach that is commonly used in the process simulators is explained. Then, how to use process simulator is explained using the demonstration. Reality of process design, 6times, According to the procedure of process design, some important points and available methods on market research, acquisition of data, process synthesis and equipment design are explained. (Intensive course)

Practice of a chemical process design,17times,The exercise on process design is performed by group consisting of 2 or 3 students

Oral presentation,4times,The final design of each group is presented at the workshop where all members of the faculty attend.

# [Class requirement]

The basic knowledge on chemical engineering such as unit operation is requested.

# [Method, Point of view, and Attainment levels of Evaluation]

The results are evaluated by the contents of the final report and the oral presentation

# [Textbook]

The reference materials are prepared by teachers

# [Reference books, etc.]

Solving several Chemical Engineering problems with computer language, Visual Basic (VBA) in Excel, the students earn the basic computational skills for engineering calculations. They will be learing how to solve the linear and nonlinear algebraic equations, differential equations, integral and linear and nonlinear least square method for parameter fittings

# [Course Goals]

The goals of this course is to write computer programming codes by students themselves for solving the simple Chemical Engineering Problems.

# [Course Schedule and Contents]

1. Orientation

After the instruction on how to start the VBA Editor, the students write the programs for basic arithmetic calculation and unit conversion.

Algebraic equation

The simple chemical engineering problems that can be formulated by algebraic equations are assigned to solve with VBA.
3-4. Iterative calculation methods

After leaning the successive iteration and Newton iteration, the students write the programs to obtain the solutions of algebraic equations that are not analytically solvable.

5-6. Differential equation
After learning the Euler and RKG methods for solving the differential equations, the students work on the calculation of chemical reactor

7-8. Numerical integration After learning computer algorithm like trapezoidal method and Simpson method, the students write programs to integrate numerical data.

Partial differential equation After learning the scheme of approximating the partial differential equation with difference equations, the students numerically solve the heat conduction equation and obtain the time evolution of temperature

10-11. Matrix calculation

First the programming codes for performing basic matrix calculations is taught. Then, the students learn Gaussian elimination to solve the simultaneous linear equation and develop a computer program to derive a near regression model from the data.

12-14. Parameter fitting

The students learn the steepest descent method, Newton method and Marquardt method to seek local extremum of multivariable function, and write the program to determine the parameters to fit the model with

Numbering code Graduate School of Engineering Professor, KAWASE MOTOAKI Affiliated 化学プロセス工学基礎「T19, T201 Graduate School of Engineer Professor,SANO NORIAKI <English> Fundamental Chemical Process Engineering Graduate School of Engi enior Lecturer, ASHIDA RIYUUICHI Course offered vear/period Target year 2nd year students or above Number of credits 2019/First semester Day/period Thu.2 Class style Lecture Language Japanese [Outline and Purpose of the Course]

Transport phenomenon of materials, energy, and momentum are important not only in chemical processes by also in environmental problems and energy problems which include diffusion of pollutants and efficient utilization of heat. In this course, beginning with material and energy balances, momentum transport, energy transport, and material transport are explained. As well, fundamentals of chemical reaction engineering which aims to analyze and design chemical reactors are lectured. Categorization of reactor operation and shapes of reactors is explained from engineering viewpoint and methods for formulating reaction rate equations from experimental data and for designing reactors are then explained.

# [Course Goals]

To learn fundamentals of chemical process engineering particularly transport phenomena and chemical eaction engineering.

# [Course Schedule and Contents]

Weeks 1 and 2: Fluid dynamics (momentum transport)--- Basic concepts of transport phenomena, momentum transport in fluids as well as Newton's law of viscosity, laminar flow of Newtonian fluid, turbulent flow and friction factor, and macroscopic flow and application of balance equation to actual processes are lectured.

Weeks 3 and 4: Heat transfer (energy transport)--- Types of heat transfer, heat conduction and Fourier's law, heat transfer at fluid--solid interface and heat transfer coefficient, convective heat transfer, and principles of heat exchanger are lectured.

Weeks 5 and 6: Diffusion (material transport)--- Diffusion and Fick's laws, analogy between momentum transport, energy transport, and material transport, equimolar counter diffusion and one-directional diffusion. and application to diffusion problems are lectured.

Week 7: Review of transport phenomena--- Comprehensive lecture of fluid dynamics, heat transfer, and diffusion which were taught previous weeks is given.

Week 8: Confirmation of understanding of transport phenomena--- Intermediate examination on transport phenomena as practice

Week 9: Classification of chemical reactions and chemical reactors--- Basic concept of chemical reaction engineering is lectured and categorization of reactions and reactors from engineering viewpoint is explained.

Weeks 9 and 10: Reaction rate equation--- Definition of reaction rate and its dependency on temperature are explained. Steady-state approximation and partial equilibrium approximation fro formulation of overall

Continue to 化学プロセス工学基礎 [ T19 , T20 ] (2)

# 化学プロセス工学基礎 [ T19 , T20 ] (2)

Weeks 10 and 11: Fundamental equations of designing and operating reactors--- Stoichiometry during reaction and kinetic balance equations of batch reactor, continuous tank reactor, and tubular reactor are explained.

Week 12: Kinetic analysis of simple reaction--- Measuring data in experiments using batch reactor, tubular reactor, or continuous tank reactor, analyzing those data, and formulating reaction rate as a function of concentrations and temperature are explained.

Weeks 13 and 14: Design and operation of reactors--- Design and operation of reactors are taught and exercised.

Week 15: Comprehensive lecture on chemical reaction engineering which were lectured in previous weeks is given.

# [Class requirement]

None

# [Method, Point of view, and Attainment levels of Evaluation]

Absolute evaluation of intermediate and final examinations. Take-home assignments and in-class quizzes are mposed and evaluated if necessary.

# [Textbook]

K. Hashimoto and F. Ogino ed. 
Gendai Kagakukogaku (2001) 
(Sangyo Tosho ) ISBN:4782826095

# [Regarding studies out of class (preparation and review)]

Read through a corresponding part of the textbooks before the lecture. Assignments are usually taken from

# ( Others (office hour, etc.) )

All registered students are divide into 3 classes. The 3 classes run separately though the contents are shared. Fundamental knowledge on ordinary differential equations is needed. Be sure to take two examinations on the former part (transport phenomena) and the latter part (chemical reaction engineering).

[Outline and Purpose of the Course]

In Physical Chemistry III (frontier chemistry), lectures will focus on quantum chemstry, which is one of the core subjects in physical chemistry as well as thermodynamics and statistical thermodynamics: quantum chemistry describe the dynamics and properies of microscopic systems such as electrons and molecules thermodynamics provides systematic description of macroscopic properties and characteristics, and statistical thermodynamics makes links between microscopic and macroscopic properties. The lectures will also focus on how quantum theory serves as a basis for understanding electron configuration in atoms, chemical bonds, nolecular structure, and various spectroscopic properties.

#### [Course Goals]

Students will understand quantum theory systematically, which provides the fundamental laws of the molecular world. Students will also become able to explain, on the basis of quantum theory, electron configuration in atoms, chemical bonds, molecular structures, and various spectroscopic properites.

### [Course Schedule and Contents]

- (1) Quantum theory (5 classes)
- Origins of quantum mechanics and microscopic system dynamics
- Quantum-mechanical principles
- Translational motion, vibrational motion
- (2) Atomic structure and atomic spectra (2 classes)
- Structure and spectra of the hydrogen atom
- Structure and complex atomic spectra of multielectron atoms
- (3) Molecular structure (2 classes)
- Valence bond method, molecular orbital method
- · Polyatomic molecular system orbitals
- (4) Molecular spectroscopy 1 (2 classes)
- Rotational spectrum Vibrational spectrum
- (5) Molecular spectroscopy 2 (1 class)
- Electron transition
- (6) Molecular spectroscopy 3 (1 class)
- Magnetic resonance

Continue to 物理化学III(創成化学)(2)

# 物理化学Ⅲ(創成化学)(2)

- (7) Intermolecular interactions (1 class)
- Electrical properties
- Intermolecular interactions

Final examination/ Confirmation of extent of student learning (1 class)

Feedback (1 class)

# [Class requirement]

Prerequisites for this course are completion of the following courses: Fundamentals of Physical Chemistry and Practical Exercises, Physical Chemistry I (Frontier Chemistry), and Physical Chemistry II (Frontie Chemistry).

# [Method, Point of view, and Attainment levels of Evaluation]

Grading method

Final examination scores (80%) and class attendance and participation (20%)

The "class attendance and participation" evaluation will include attendance records of students and valuations of short reports.

The following grades are given in accordance with the goal-achievement levels of each individual student:

A+: Course goals have been accomplished at an extremely high level, from all perspectives.

- A: Course goals have been accomplished at a high level, from all perspectives
- B: Course goals have been accomplished, from all perspectives.
- C: Confirmation can be made, from a majority of perspectives, of effects of student learning, and course oals have been accomplished to a certain extent
- D: While course goals have been accomplished to a certain extent, further effort by the student is
- F: No confirmation can be made of effects of student learning, and it is difficult to say that a student has ccomplished the goals of this class.

#### [Outline and Purpose of the Course]

Advanced research being performed in frontier chemistry research labs will be explained in an easy-toinderstand way by researchers themselves. This is a concentrated course: Two classes will be held one after the other on Friday afternoons at 13:00-14:30 and 14:45-16:15, for a total of seven class days. Course dates are posted separately elsewhere.

#### [Course Goals]

Students will gain knowledge of frontier research as currently practiced in representative chemistry research areas, as well as of likely future trends. Students will also understand the role that chemistry plays in society

#### [Course Schedule and Contents]

Frontlines of polymer properties (2 classes)

As macromolecules form a variety of molecular assembly structures, they display superior properties. In these lectures, an overview explanation is provided on how block copolymers and graft copolymers form, via self-organization, regular micro-phase separated structures on nanometer orders. These nano-patterns are then used in the development of devices and new materials.

Frontlines of polymer synthesis (2 classes)

An overview explanation is provided of basic chain polymerization functions, methods of precise synthesis of nacromolecules via chain polymerization, and the characteristics of polymers thus precisely synthesized.

Frontlines of macromolecular design (2 classes)

rountines of macromolecular design (a classics)

Chemistry for the rational design and synthesis of macromolecules is indispensable to activities that aim to proactively grant new functions to polymers. Students will gain a deeper understanding of the fundamentals of living radical polymerization, which has undergone remarkable developments in recent times, and surface-graft polymerization; an overview of applications and related items will also be presented from the viewpoint of material design, especially applications in surface graft polymerization.

Frontlines of polymer characterization (2 classes)

An overview explanation is provided of light scattering in polymer solutions and of methods for determining nolecular parameters from intrinsic viscosity measurement. Also discussed are application examples for each type of macromolecule (polymer).

Frontlines of organic chemistry and analytical chemistry (2 classes)

Fine organic synthesis using organometallic compounds has become the most powerful tool of molecular architecture. An overview is made of the theories of fine organic synthesis, and concrete advanced research cases are introduced. Micro- and nanoscale high-performance separation and analysis techniques are ntroduced to showcase the frontlines of novel topics

Numbering code nstitute for Frontier Life and Medical Science Affiliated 化学生物学 Professor,EIRAKU GENJI <English> Chemical Biology Institute for Frontier Life and Medical Science Job title,Name Associate Professor OHGUSHI MASATOSHI Course offered Target year 3rd year students or above Number of credits 2019/Second semester Day/period Thu.2 Class style Language Japanese [Outline and Purpose of the Course]

It is important in the field of life science to understand biochemistry and biological medicine in terms of organic material chemistry. The way to think and view the biological system and bioprocess at the molecular level can make clear the academic knowledge of life science and contribute to the development of engineering-medicine-pharmacy interdisciplinary research area. In this lecture, proteins, polysaccharides, and lipids of bio-related substances as well as cells, cell membrane, extracellular matrix of biological system are explained in terms of chemical biology. As a representative of engineering-medicine-pharmacy interdisciplinary research area, drug delivery system (DDS) and regenerative medicine are introduced. In addition, some topics in the field of life science, including stem cells, body defense and immunology, and ndocrine disruptor, are also covered.

# [Course Goals]

The objective of the lecture is to obtain the fundamental knowledge of proteins, polysaccharides, lipids, cells, and extracellular matrix and understand stem cells, body defense, DDS, regenerative medicine, and endocrine lisruptor of life science application

#### [Course Schedule and Contents]

Proteins and enzymes,2times,Structure and function of proteins and enzymes

Polysaccharides and lipids, 1time, Structure and function of polysaccharides and lipids Cell and cell membrane, 1time, Structure and function of cells and membrane transportation

Signal transduction,1time,Signal transduction at cell membrane

Energy conversion, 1 time, Oxidative phosphorylation to generate ATF Cytoskeleton, 1time, Cellular biomechanics and biochemistry of cytoskeleton

Body defense and immunology,1time,System and function of body defense and immunology

Stem cells,1time,System, function, and medical application of stem cells Cell and extracellular matrix,1time,Structure and function of extracellular matrix

Regenerative medicine and material science, 2 times, Overview of regenerative medicine based on material

Drug delivery system (DDS),1time,Overview of DDS based on material science

Endocrine disruptor, Itime, Overview of endocrine disruptor based on material science Achievement evaluation, Itime, Credit evaluation based on the understanding level of lecture contents

# Continue to 化学生物学(2)

# 化学のフロンティア(創成化学)(2)

Frontlines of inorganic materials chemistry (2 classes)

Discussion will be made of the synthesis and function of novel inorganic materials synthesis for applications involving spin electronics and photonics materials.

Frontlines of polymer materials chemistry (2 classes)

Explanation will be made of recent issues associated with the characteristics and properties of such things as elastomers and polymer gels. Lectures discuss the flow of development from supramolecular assembly to supramolecular organization, trends in molecular architecture such as catenane and rotaxane, and the

Evaluation is made of the extent of learning achieved in the course overall, and in regards to the degree that students have achieved course goals.

# [Class requirement]

Students are recommended to have finished fundamental courses in organic chemistry, physical chemistry, norganic chemistry, analytical chemistry, and polymer chemistry.

# [Method, Point of view, and Attainment levels of Evaluation]

Grades will be determined based on an overall evaluation of attendance and scores (results) on reports

# [Textbook]

No textbook will be used. Materials and PowerPoint presentations will be distributed and/or used during

Based on the courses quotFundamental Polymer Science I and IIquot (covering polycondensation and radical polymerization), this course is to discuss the concepts and the characteristics of coordination, stereospecific, nic (anionic and cationic), ring-opening, and living polymerizations. Examples are provided for initiators, nonomers, reaction mechanism, polymerization intermediates, and produced polymers.

#### [Course Goals]

To discuss fundamental aspects of polymer chemistry, particularly the fundamental nature of polymers and their synthesis (polymerization reactions).

#### [Course Schedule and Contents]

Coordination Polymerization, 2times, To discuss: The fundamentals of coordination and Ziegler-Natta olymerizations, including ring-opening metathesis polymerization, and the relation between catalyst design and polymerization mechanism

Stereospecific Polymerization,2times,To discuss: The fundamentals of stereospecific polymerization polymer characterization therein, and the relation between polymer steric structure and polymerization echanism

Study Achievement Test (1),1time,To examine as quotfeed-backquot: The achievement of studying in the subjects that have already been discussed (coordination and stereospecific polymerizations).

Anionic Polymerization, 3times, To discuss: The fundamental of anionic polymerization, including initiators, nonomers, their structurendashreactivity relationships, elementary reactions, kinetics. and reaction

Cationic Polymerization, 3times, To discuss: The fundamental of cationic polymerization, including initiators. monomers, their structurendashreactivity relationships, elementary reactions, kinetics. and reaction mechanisms

Ring-Opening Polymerization, 1 time, To discuss: The fundamental of ring-opening polymerization, including nitiators, monomers, their structurendashreactivity relationships, elementary reactions, kinetics. and reaction nechanisms

Living Polymerization, 2times, To discuss: The definition and examples of quotliving quot polymerization, ncluding initiators, catalysts, monomers, their structure-reactivity relationships, elementary reactions, kinetics, and reaction mechanisms

Study Achievement Test (2), Itime, To examine as quotfeed-backquot: The achievement of studying in the subjects that have already been discussed (ionic and living polymerizations).

# [Course Schedule and Contents]

Guidance, 2times, Guidance on how this class is operated, and how to use computing facility for this class.\\ Basic knowledge on the role of IDS in network security and how machine learning can help the intrusion

Intrusion Detection by Signature-Based IDS,5times,Learn the mechanism of intrusion detection by signature-based IDS by studying open source signature-based IDS and attacks, such as correspondence between alarms

issued from IDS and communications, and adding signatures to detect attacks.

Intrusion Detection by Machine Learning, 7times, Learn the method of classifying normal and malicious traffic by machine learning algorithms and public dataset for benchmarking intrusion detection performance. Presentation, Itime, Based on the exercise, students presents their methods of intrusion detection using machine learning, and discuss it with other students and instructors.

化学反応の理解に必要な熱力学及び化学反応速度に関する基礎的な内容を講義する。

#### [Course Goals]

物理化学基礎及び演習に続く内容で、応用熱力学及び反応速度論を使いこなすための能力を養う。

#### [Course Schedule and Contents]

以下の各項目について講義する。各項目では,受講者の理解の程度を確認しながら,【 】で示した回数を充てる。各項目・小項目の講義の順序は固定したものではなく,講義担当者の講義方針と 受講者の背景や理解の状況に応じて,講義担当者が適切に決定する。

(1)相【3回】 相の考え方,相平衡,相律,化学ポテンシャル (2)溶液の熱力学【3回】 部分モル量,活量,浸透圧と蒸気圧 (3)化学平衡[3回] 動的平衡,標準自由エンタルピー,非理想系の平衡,フガシティー (4)化学反応速度論【5回】

化学反応速度,反応速度式,速度定数と平衡定数,衝突理論,活性複合体理論,連鎖反応 化学及心速度,及心速度式 触媒反応 (5)学習到達度の確認【1回】 (6)フィードバック【1回】

# [Class requirement]

前期配当の物理化学基礎及び演習の知識を必要とする。

### [Method, Point of view, and Attainment levels of Evaluation]

平常点と定期試験を合わせて評価する。

#### [Outline and Purpose of the Course]

Repetition of thinking again and again is only the way to master the Physico-Chemical concepts; there is no shortcuts to learn them in principle. This is also the case to learn the concepts in Solid State Physics. Once you master the concepts into yourselves, you will never forget and lose them. It will take a bit longer time to master them, but everybody are able to master them by the "simple repetition of thinking", however never master them, but everybody are able to master them by the simple repetition of minking , nowever never acquire the concepts if stop the thinking. Mastering the concepts will allow you to judge/make an immediate decision on critical factors controlling data/phenomena in our natural systems, or allow you to interpret the factors changing the systems. This is the "Master of (Physico-Chemical) Concepts". Statistical mechanics and thermodynamics, the major target of the present class, are representative of Physical Chemistry due to their versatility to reproduce our practical systems.

The major aim of the present class is:

To understand macroscopic phenomena in our practical/natural system quantitatively by an use of Physico-Chemical concepts, particularly on statistical physics.

In the first half of this class, we start to discuss on quantitative definition of "entropy" based on the simple the first hard of unsclass, way from the hysterical/conventional definition of entropy in line of classical thermodynamics. The discussions on "statistical entropy" will be extended to represent a variety of tensive variables of some practical system via the concept of "Ensemble", followed by the discussi the feasibility of statistical mechanics for understanding the physical properties of matters/chemical reactions

#### [Course Goals]

- 1) Definition of entropy by statistical mechanics and understanding the concepts of entropy via mathematical derivations
- 2) Requisites for statistical mechanical approach to the systems
- 3) Concepts of ensembles: the extension to the real systems
- 4) Derivation of a series of intensive variables representative of systems
- 5) Feasibility of the above concepts to understand the practical systems, spectroscopic techniques, physical properties of matters, and practical chemical reactions

Finally we approach to the limitations of the classical statistical mechanics, leading to the dawn of quantum mechanical treatment for the thermodynamic bodies: unlikely to the case for the requirements of the treatments in atomic structures/blackbody radiations. We finally discuss on the gap between Maxwell-Boltzmann systems and Fermi-Dirac/Bose-Einstein statistical systems.

Continue to 柳理化学 Ib (工業基礎化学) (2)

# 物理化学 I b (工業基礎化学)(2)

# [Course Schedule and Contents]

- . Principles of Statistical Mechanics and Entropy; mathematical backgrounds
- Definition of Entropy: Approaches from statistical mechanics and conventional thermodynamics
- . Boltzmann Principles: Historical reviews starting from the discussions by Clausius
- Translational Motion of Atoms/Molecules
- . Phase Transitions revisited by Statistical Mechanical Approaches: Heat Capacity of Matters b. Distribution of Molecular Motions in Gases: Partition Functions
- Canonical Ensembles: Partition Functions
- A Varieties of Intensive Variables: in relation to macroscopic thermodynamic systems
- 9. Mid-Term Exam
- 10. Entropy Elasticity
- 11. Brownian Motions and the Collision Theory of Particles
- 12. Arrhenius Equation and Law
- 13. Eyring Equations and the Transition State Theory
- 14. Limitations of Classical Statistical Mechanics towards Quantum Statistical Mechanics

# [Class requirement]

# [Method, Point of view, and Attainment levels of Evaluation]

Scores will be made by the following dual ways (finalized by the better one)

- 1) Active participation + midterm examination + final examination in total

No makeup exam after the final examination

Walter J. Moore Physical Chemistry (Longman Publishing Group ) ISBN:978-0582442344

In quotInorganic Chemistry Iquot, following four topics will be explained: 1) Acids and bases of inorgan compounds 2) Oxidation and reduction 3) Concept of group theory, which is necessary for the understanding of molecular structures 4) Fundamentals of d-block coordination compounds

# [Course Goals]

Acids and bases, oxidation and reduction, a group theory, and coordination compounds will be understood for Inorganic chemistry II at 3rd grade and Electrochemistry at 4th grade.

### [Course Schedule and Contents]

Asids and Bases,4times,Bronstead acids and bases and the Lewis acids and bases will be described. Hard and Soft Acids and Bases (HSAB) theory by Peason will be explained. Finally, solvent parameters which can valuate the degree of intensities of acids and bases will be described.

Oxidation and Reduction, 4times, Oxidation and Reduction will be explained mainly by using electrochemistry. In particular, stand ard potentials will be explained in detail. By using the potentials, oxidation and reduction reactions will be explained.

Molecular Symmetry,4times,Based on the molecular shapes, point groups can be determined. By using point groups, various physical phenomena of molecules will be described.

Coordination compounds, 2times, Coordination compounds based on metal ions of Lewis acids and ligands of Lewis bases will be described and their geometrical structures will be explained. Evaluation,1time,Evaluaion

### [Class requirement]

Based on the understanding of quotFundamental Inorganic Chemistryquot, lectures will be done.

無機化学 I (工業基礎化学)[工化1・工化3](2)

# [Method, Point of view, and Attainment levels of Evaluation]

Grading is based on the examination held at the end of the semester. The attendance rate and the reports ubmitted during the course may be counted in evaluation.

This course is designed for student who already learned basic organic chemistry. This course consists of thre major parts. The first part concerns stereochemistry of organic compounds and reactions. The second part focuses on the reaction of saturated organic compounds bearing leaving groups. Nuceophilic substitution and elimination are involved in this part. The third part gives the details of the reactivities of unsaturated organic compounds bearing p-electrons such as alkenes, enols, enolates, and aromatic compounds.

#### [Course Goals]

#### [Course Schedule and Contents]

Guidance, 2times, Guidance on how this class is operated, and how to use computing facility for this class.\\
Basic knowledge on the role of IDS in network security and how machine learning can help the intrusion detection

Intrusion Detection by Signature-Based IDS,5times,Learn the mechanism of intrusion detection by signature ased IDS by studying open source signature-based IDS and attacks, such as correspondence between alarms ssued from IDS and communications, and adding signatures to detect attacks.

Intrusion Detection by Machine Learning, 7times, Learn the method of classifying normal and malicious traffic by machine learning algorithms and public dataset for benchmarking intrusion detection performance. Presentation, Itime, Based on the exercise, students presents their methods of intrusion detection using machine learning, and discuss it with other students and instructors.

#### [Outline and Purpose of the Course]

Inorganic Chemistry II is an advanced course after learning Basic Inorganic Chemistry and Inorganic Chemistry I.

Structures, electronic spectra and reaction mechanism in coordination chemistry of metal complexes and organometallic compounds are lectured.

#### [Course Goals]

Understanding of the basis of steric structure, electronic structure, electronic spectra and reaction mechanism in metal complexes and organometallic compounds

# [Course Schedule and Contents]

19. d-Metal complexes: electronic structure and spectra,7times

Coordination chemistry: reactions of complexes,4times

21. d-Metal organometallic chemistry,3times,

Lecture review, 1 time, [Class requirement]

#### None

#### [Method, Point of view, and Attainment levels of Evaluation]

Grades based on attendance and a final exam

# [Outline and Purpose of the Course]

\*Please visit KULASIS to find out about office hours

The lecture is given on Organic Chemistry which is indispensable to a researcher and an engineer. After the Organic Chemistry I (2nd year, 2nd term) and the Organic Chemistry II (3rd year, 1st term), the lecture is given on the chapters 22 - 26 of the same textbook, which covers characteristic reactions of electron-deficient alkenes and aromatic compounds, protection and deprotection of functional groups, and chemistry of carbonyl compounds including various reactivity of enolates.

# [Course Goals]

Comprehensive understanding of reactions of aromatic compounds, reactivities of functional groups, and chemistry of carbonyl compounds including alkylation of enolates, the aldol reaction, and other condensation reactions is a goal of this course. By combining ideas learned in the Organic Chemistry I and the Organic Chemistry II, high-level knowledge of organic chemistry must be acquired which is indispensable for a ccomplished researcher and engineer

# [Course Schedule and Contents]

Conjugate addition and nucleophilic aromatic substitution, 3 times, Conjugate addition reactions, conjugate ubstitution reactions, nucleophilic epoxidation, electrophilic aromatic substitution, addition-elimination nechanism, diazonium compounds, reactions via benzyne intermediate (Chapter 22)

Chemoselectivity and protecting groups, 3times, Reducing agents, reduction of carbonyl groups, catalytic hydrogenation, removal of functional groups, dissolving metal reductions, selectivity in oxidation reactions, reactivities of functional groups, protecting groups (Chapter 23)
Regioselectivity,2times,Regioselectivity in electrophilic aromatic substitution reactions, electrophilic attack

on alkenes, regioselectivity in radical reactions, nucleophilic attack on allylic compounds, electrophilic attack on conjugated dienes, direct addition vs. conjugate addition (Chapter 24)

Alkylation of enolates, 3times, Alkylation of nitriles and nitroalkanes, electrophiles for alkylation, alkylation of lithium enolates, alkylation using enolate equivalents, alkylation of beta-dicarbonyl compounds,

regioselectivity in alkylation of ketones (Chapter 25)
Reactions of enolates with carbonyl compounds: the aldol and Claisen reactions,3times,The aldol reaction, cross aldol condensation, aldol reactions using enolates and their equivalents, intramolecular aldol reaction, acylation of enolates, Claisen condensation, cross Claisen condensation, intramolecular cross Claisen condensation (Chapter 26)

Continue to 有機化学III (工業基礎化学) [工化1・工化3](2)

有機化学Ⅲ(工業基礎化学)[工化1・工化3](2)

#### [Class requirement]

Basic Organic Chemistry A. Basic Organic Chemistry B. Organic Chemistry I(Fundamental Chemistry). Organic Chemistry II(Fundamental Chemistry)

#### [Method, Point of view, and Attainment levels of Evaluation]

The grade is given based on the final examination.

Attendance and reports during the class could be considered

#### [Textbook]

Organic Chemistry Second Edition (J. Clayden, N. Greeves, S. Warren, Oxford University Press, 2012) isbn{ }

#### [Reference books, etc.]

(Reference books) マクマリー 有機化学 - 生体反応へのアプローチ(マクマリー著; 柴崎正勝, 岩澤伸治, 大和田智彦, 増野匡彦 監訳; 東京化学同人, 2009) isbn{}{9784807906918}

#### [Regarding studies out of class (preparation and review)]

#### (Others (office hour, etc.))

Two classes are lectured at the same time.

\*Please visit KULASIS to find out about office hours

# [Course Schedule and Contents]

Guidance, 2times, Guidance on how this class is operated, and how to use computing facility for this class. ||
Basic knowledge on the role of IDS in network security and how machine learning can help the intrusion

Intrusion Detection by Signature-Based IDS,5times,Learn the mechanism of intrusion detection by signaturepased IDS by studying open source signature-based IDS and attacks, such as correspondence between the such as corresponde

Intrusion Detection by Machine Learning, 7times, Learn the method of classifying normal and malicious traffic by machine learning algorithms and public dataset for benchmarking intrusion detection performance. Presentation, I time, Based on the exercise, students presents their methods of intrusion detection using machine learning, and discuss it with other students and instructors.

Fundamentals of spectroscopy, Molecular structure and rotational and vibrational spectra, Electronic ransitions and photochemistry, Magnetic resonance, Statistical thermodynamics, Molecular Interactions

# [Course Goals]

The goal of this course is to understand basic concept of spectroscopy and statistical thermodynamics

# [Course Schedule and Contents]

Fundamentals of spectroscopy, 1time

Rotational and vibrational spectroscopy, 4times Electronic transitions and photochemistry, 2times

Magnetic resonance, 3times

Statistical thermodynamics, 4times

Lecture review, 1time

# [Class requirement]

The following are prerequisites for this class: Physical Chemisry: Fundamentals and Exercises

Physical Chemistry I

Physical Chemistry II

# [Method, Point of view, and Attainment levels of Evaluation]

Grades will be evaluated based on final examination, short reports, and class attendance

# [Textbook]

P. W. Atkins Physical Chemistry, 10th edition (Oxford University Press)

# [Reference books, etc.]

(Reference books)
W. J. Moore Physical Chemistry, 4th edition (Prentice-Hall)

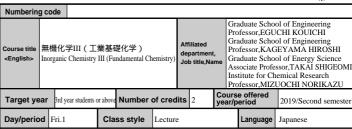

# [Regarding studies out of class (preparation and review)]

The basic knowledge of quantum mechanics is prerequisite for this class, so we recommend to review it efore the class

# (Others (office hour, etc.))

Two parallel classes will be held based on the class assignment

\*Please visit KULASIS to find out about office hours.

# [Outline and Purpose of the Course]

This class deals with the topics related to inorganic solids, such as synthesis methods, structures, and properties

# [Course Goals]

Goal of the class is to understand the synthesis method and characterization of inorganic solids, crystals structure, crystallography and diffraction techniques, phase diagrams, crystal defects, non-stoichiometry, solid solutions, and bonding in solids.

#### [Course Schedule and Contents]

Synthesis method,2times,Solid state reaction, gas phase methods, liquid phase methods, intercalation, electrochemical methods, single crystal growth, and hydrothermal methods will be lectured.

Characterization of solids, 2times, The characterization of solids will be lectured, such as optical microscope, electron microscope, IR spectroscopy, Raman spectroscopy, NMR, XAFS, and thermal analysis.

Crystal Structure, 2times, Symmetry in crystals will be lectured from the point view of the crystal structures. Crystallography and diffraction techniques, 2 times, Crystallography and x-ray diffraction methods will be

Phase diagrams, 2times, Phase diagrams including actual chemical compounds and their interpretations will be

Crystal defects, non-stoichiometry, solid solutions, 2times, Solid solution, several types of the defects in solids will be lectured

Electrical properties, 2 times, Metallic conductivity, superconductivity, semiconductivity, and ionic conductivity will be lectured

Term-end examination, 1 time, Understanding of this class will be examined.

#### [Class requirement]

None

# [Method, Point of view, and Attainment levels of Evaluation]

Grading will be determined by a term-end examination

Solid State Chemistry and its Applications (2nd Edition, Wiley), A. R. West isbn{}{9781119942948} The following textbooks are also allowed.

he following textbooks are also allowed:

# [Reference books, etc.]

( Reference books )

# [Regarding studies out of class (preparation and review)]

# (Others (office hour, etc.) )

Homework is to read the textbook before the class and to solve the problem.

Characteristic structures (such as crystalline and amorphous structures) and characteristic properties (such as viscoelasticity) of polymers result from the thread-like primary structure of polymer molecules. Focusing on his point, this lecture addresses the structures and properties of polymers in solutions, in melts, and in solids.

To understand molecular origin(s) of the characteristic structures, dynamics, and properties of polymers.

#### [Course Schedule and Contents]

Conformation of Polymer Chain, 2times, The conformation distribution of flexible polymers and the

relationship between their average size and molecular weight are explained.

Solution Properties, 3 times, The thermodynamic behavior of polymer solutions, such as the osmotic pressure and phase separation, is explained on the basis of the Flory-Huggins theory. For this purpose, molecular expressions are derived for the mixing entropy, mixing enthalpy, and chemical potential. In addition, a brief introduction is given for methods of molecular weight determination on the basis of the solution properties. Structure in Solid State, 2 times, Various morphology of crystalline polymers, i.e., single crystal, spherulite, lamellar crystalline, and extended chain crystal, are introduced and basic crystallization processes giving this variety of morphology are explained. In addition, methods of analysis of these crystalline structures are

intriduced and the results of the analysis are explained.

Glass Transition, 1 time, The glass transition phenomenon is explained in relation to the thermal motion of solymer chains. Changes of the thermal and mechanical properties on this transition are explained are related to the motion of the polymer chains

Rubber Elasticity, 2 times, From a molecular point of view, the conformation distribution of flexible polymer chains above the glass transition point is related to the rubber elasticity. The molecular expression is derived for the stress and modulus of rubbers.

Polymer Dynamics,4times,The viscoelastic behavior of flexible polymer melts is related to the large scale notion of the polymer chains. In particular, the entanglement effect due to the uncrossability of the chains is explained from a molecular point of view, and some basic models are introduced. In addition, for polymers having type-A dipoles parallel along the chain backbone, a relationship between viscoelastic and dielectric properties is explained

Summary,1time,Essence of the whole lecture and a relationship among all items in the lecture are immarized, thereby improving the understanding of the attending students in particular for the items not well addressed in the the exams.

# [Outline and Purpose of the Course]

To understand scientific and technological English, and to learn how to express your ideas in English, specially English for practical use in the field of science and technology.

# [Course Goals]

To play an active role internationally as scientists and engineers, an ability for expressing things in quotpractical quot English is gained through understanding the way to write and explain backgrounds, uestions, object, methods, results, discussion of the study in English.

# [Course Schedule and Contents]

科学英語(工業基礎化学)(2)

Guidance,2times,Guidance on how this class is operated, and how to use computing facility for this class.\\ Basic knowledge on the role of IDS in network security and how machine learning can help the intrusion

Intrusion Detection by Signature-Based IDS,5times,Learn the mechanism of intrusion detection by signature-based IDS by studying open source signature-based IDS and attacks, such as correspondence between alarms

| issued from IDS and communications, and adding signatures to detect attacks.  Intrusion Detection by Machine Learning, 7times, Learn the method of classifying normal and malicious traffic by machine learning algorithms and public dataset for benchmarking intrusion detection performance Presentation, Itime, Based on the exercise, students presents their methods of intrusion detection using machine learning, and discuss it with other students and instructors. |

#### [Outline and Purpose of the Course]

The aim of this class is to learn the fundamental mathematics commonly used in Chemical Process Engineering, Chemical System Engineering, such as ordinary differential equations, Laplace transformation, nethods to solve differential equations by using Laplace transformation, and vector analysis. The style of the class is mainly lecture style.

#### [Course Goals]

To attain the mathematical knowledge and skill how to solve ordinal differential equations by using Laplace ransformations

#### [Course Schedule and Contents]

Vector Analysis.7times.We learn the following items: \\ Vector Analysis (including differentiation of vectors) \\ Integration of vectors\\ Integral Theorem (Gauss divergence Theorem, Stokes Theorem)
Ordinary differential Equation,4times,We learn that various physical phenomena seen in our daily life can be described by ordinary differential equations. \\ As method to solve 1st and 2nd order ordinary differential equation, the following methods will be learned: 1. Method of separation of variables \\ 2. Method of ariation of parameters \

Laplace Transformation,3times,After learning the historical background and the discovery of Laplace transformation. We learn how to solve ordinal differential equations and integral equations by using Laplace transformation, and also learn applications of Laplace transformation to definite integration. Confirmation of the level of attainment, 1 time, Confirmation of the level of attainment \\ Comments on the

term-end Exam

# [Class requirement]

Basic knowledge on differentiation, integral, matrix operations

# [Method, Point of view, and Attainment levels of Evaluation]

Grade will be evaluated by (i) the examination at the end of semester and (ii) homework during semester.

# [Outline and Purpose of the Course]

Chemical Processes consist of variety of units and operations. Here, distillation, gas absorption, extraction, and so forth which aim substance separation and purification will be lectured from basic principle and phenomena to kinetics and quantitative expression.

#### Course Goals

By taking typical separation operations as examples, mass balance, the students will understand the concept of mass transfer, and equilibrium, and they will master how to use them in quantitative manner. Additionally, they cultivate their ability to use differential contact operation and stage operation.

#### [Course Schedule and Contents]

Fundamental of mass separation and mass purification,3times,Principles and methods in substance separation and purity, which are important for chemical process, will be lectured. Fundamentals of molecular diffusion and mass transport will be explained.

gas absorption, 4times, Equilibrium of gas with liquid, diffusion in liquid phase, gas diffusion rate, and design of gas absorption will be lectured, and the students will understand the idea of differential contact operation. distillation, 4times, Method to correlate the gas-liquid equilibrium will be lectured, and fundamental principle of distillation operation is explained as operation for purification of liquid mixture. The design method of continuous rectifying trays tower will be lectured as the most simple multi-stage contact operation method. extraction, 3times, Method to correlate the gas-liquid equilibrium will be lectured, and fundamental principle of distillation operation is explained as operation for purification of liquid mixture. The design method of continuous rectifying trays tower will be lectured as the most simple multi-stage contact operation method. Feedback class, Itime, A supplementary lecture or exercise class will be conducted as an additional class to give advanced knowledge or to confirm the attainment level of the course goals on diffusion, gas absorption and distillation.

# [Class requirement]

Introduction to Industrial Chemistry (Material and energy balances), Fundamentals of Chemical Process Engineering.

# [Method, Point of view, and Attainment levels of Evaluation]

Evaluation will be made based on midterm exam, routine exam at the end of semester, and reports often given

Based on the contents of Physical Chemistry I, you learn the phase transition and separation for multicomponent systems, etc. Also, you learn molecular and solid-state physical chemistry in the view of quantum theory.

### [Course Goals]

Understand the phase-separation phenomenon of multi-component systems, and master how to read the phase diagrams. Further, understand the quantum theory, its difference and relation to the physical chemistry of macroscopic systems.

#### [Course Schedule and Contents]

Physical chemistry of multi-component liquids and gases: 8 times

Physical chemistry of molecules and solids: 6 times

Feedback lecture: 1 time

#### [Class requirement]

Assume the completion of Physical Chemistry I (Chemical Engineering)

# [Method, Point of view, and Attainment levels of Evaluation]

Final (end-term) exam score, etc.

# [Textbook]

Atkins Physical Chemistry a (10th edition, Chaps. 4-10)

#### [Reference books, etc.]

( Reference books )

# [Regarding studies out of class (preparation and review)]

Remind the contents of Physical Chemistry I (Chemical Engineering).

# [Outline and Purpose of the Course]

We will give a series of lectures on necessary mathematical knowledge and skills when students will learn subjects in the chemical engineering course, especially on Probability and Statistics, Fourier Transformation, Partial Differential Equations.

# [Course Goals]

Goal of the class is that students attain necessary mathematical knowledge that is needed when students learn subjects in the chemical engineering course.

# [Course Schedule and Contents]

Probability and Statistics (fundamentals),5times,1-1. Definition and properties of probability \\ 1-2. Conditional probability \\ 1-3. Stochastic variable and its properties \\ (a) Probability distribution function, \\ (b) Average, Expectation value, Moment, \\ (c) Moment generating function \\ 1-4. Multi-stochastic variable case \\ (a) simultaneous distribution function \\ (b) marginal and conditional probability \\ (c) covariance, correlation coefficient \\

Confirmation of the level of attainment, 1 time, Confirmation of the level of attainment

# [Class requirement]

It is required that students have already had the lecture: Mathematics for Chemical Engineering I in the former semester.

# [Method, Point of view, and Attainment levels of Evaluation]

Grading will be determined by a test at the end of series of lectures, and reports and short tests in class, if necessary.

#### [Regarding studies out of class (preparation and review)]

After each class of Probability and Statistics, homework is given to students, and their solution will be shown at the class in two weeks

It is highly recommended that students solve them before the class.

To understand various separation opertions used in industrial chemical processes, multiphase transport phenomena, transport properties, methods to design separation operations will be lectured. Expecially, drying adsorption, menbrane separation and crystallization will be taken as practical examples.

The present course aims at achieving the following three goals by taking some types of solid-phase separation operations for example: (1) understanding mass balance, heat balance, and simultaneous transport phenomena of mass and heat, (2) cultivating the ability to design and develop separation units and materials used for ulti-phase separations, and (3) developing knowledge on recent trends of separation techniques

# [Course Schedule and Contents]

Adsorption Operations,4times,Adsorption equlibrium as dynamic equilibrium, adsorption isotherm, diffusion in pores and at surface, adsorption rate, and so forth will be explained. In addition, how to disign adsorption peration and how to calculate breakthrough curve in fixed bed type adsorbing column will be lectured. Humidification Operations, 1 time, Humidication operation will be lectured as example of simultaneous ransport of heat and mass at gas-liquid interface. The students will understand the idea of wet-bulb temperature and how to use humidity chart.

Drying Operations,4times,The mechanisms and kinetics of drying and expertise to select and desing of the dyring unit type will be lectured, relating operation condistions with properties of the dried products.

Membrane Separation Operations,3times,With the main focus on the gas separation, permeability equations and process designs of membrane separation processes will be lectured.

Crystallization Operations,2times,The mechanism of the crystallization and kinetic analysis of the crystal growth will be lectured, followed by the explanation on the population balance required for the design of apparatuses. Finally, studentsrsquo understanding on the course will be tested.
Feedback class, Itime, A supplementary lecture or exercise class will be conducted as an additional class to

give advanced knowledge or to confirm the attainment level of the course goals.

Experimental training on chemical analyses (gravimetric analysis, titration analysis) and fundamentals of chemical engineering (physical chemistry, transport phenomena, reaction engineering, etc.)

# [Course Goals]

This course will enhance studentsrsquo understanding of quantitative chemical analysis and chemical engineering.

# [Course Schedule and Contents]

Fundamentals on chemical analyses, 15times, training regarding glass tools, electric balance, condensation, filtration, volumetric measurement, titration, etc. Also study tour for Kyoto University Environmental

Preservation Research Center is organized to learn waste liquid treatment.

Chemical Engineering I/Physical Chemistry,14times,freezing point drop, precise measurement of liquid density and partial molar volume, Liquid-liquid equilibrium, gas-liquid equilibrium, measurement of gas diffusivity, fabrication of pH meter, surface tension and wettability

Chemical Engineering I/Transport Phenomena,4times,viscosity and flow dynamics, pressure drop in liquid

Chemical Engineering I/Reaction Engineering,4times,kinetic analysis in batch reactor, characterization of flow reactor
Chemical Engineering I/Apparatus Setup,2times,electric-cooling temperature-controlled batch,

# [Class requirement]

Fundamentals of Chemical Process Engineering, Physical Chemistry I (Chemical Engineering), Fundamental Fluid Mechanics, Chemical Reaction Engineering I are recommend to take in advance.

# [Method, Point of view, and Attainment levels of Evaluation]

Attendance, performance in experiments, reports will be evaluated

# [Textbook]

Textbook edited by teaching staff in department of chemical engineering

# [Reference books, etc.]

# [Outline and Purpose of the Course]

Balances of mass, volume, mole amount, and elements of substances as well as balance of energy is a fundamental of chemical engineering. Physical and chemical principles which are required for taking material and energy balance in problems about chemical processes are lectured. How to calculate the mass, component (element), and energy balance as for application processes is explained and practiced.

#### [Course Goals]

To acquire capability to analyze complicated chemical industrial processes from balance point of view as well as to cope with design and operation of chemical processes quantitatively.

# [Course Schedule and Contents]

Week 1: Dimensions and units--- How to express dimensions and units, which are basic concept of measurement, and importance of dimensions and units is lectured.

Weeks 2--4: Fundamentals of material balance--- Flow system (closed and open), steady and unsteady operations, expression of composition of mixture, material balance over a single apparatus, and their exercises.

Weeks 5--6: Fundamentals of energy balance--- Forms of energy, calculation of apparent and latent heats, energy balance with no chemical reactions, and their exercises.

Weeks 7--8: Process flow diagram and unit operations--- Various unit operations, principles of separation processes, and process flow diagram are lectured.

Weeks 9--10: Material and energy balance of complicated processes--- Calculation of balance of processes including chemical reactions or phase changes is lectured. As well, how to understand material balance in case of many apparatus connected, merging, splitting, and recycling included is explained.

Weeks 11--13: Practice of taking balance in chemical processes--- Calculation of material and energy balance in complicated chemical processes is exercised.

Weeks 14: Scale-up. Methodology of scaling up apparatus is generally explained as well as introduction to kinetics required for design is lectured.

Week 15: Learning achievement evaluation.

feek 15: Learning achievement Constitute to 化学工学量論(2)

# 化学工学量論(2)

# [Class requirement]

Basic knowledge on thermodynamics lectured in Physical Chemistry: Fundamentals and Exercises, and Physical Chemistry I (Chemical Engineering) is required.

# [Method, Point of view, and Attainment levels of Evaluation]

Evaluation will be based on exercises at class, assignments, and an examination.

# [Textbook]

Masao Sudo ed. FKiso Kagakukogaku (Kyoritsu Shuppan) ISBN:9784320088702

# [Reference books, etc.]

# ( Reference books )

ome handouts are given at class.

# [Regarding studies out of class (preparation and review)]

As many exercises as possible will be imposed at class. Assignments will be imposed every week. Bring a scientific calculator to the class.

# (Others (office hour, etc.) )

Please visit KULASIS to find out about office hours.

This course aims to give students an opportunity to use and expand on their current English skills in a Scientific context, specifically within the field of Chemical Engineering. In addition, since all instruction is in English, the course focuses on creating an environment where students can develop their overall skills in International Communication in both oral and written formats.

#### [Course Goals]

The goals of this course are: 1. To enable students to become conversant in English within various aspects of Chemical Engineering. 2. To improve and expand student#039s specialized vocabulary and pronunciation skills. 3. To give students confidence in oral and written communication skills regarding technical data, unit operations, process design and technical descriptions in English. 4. To develop student#039s overall ability in speaking, listening, reading and writing, as well as, critical thinking skills with regards to Chemical Engineering topics. 5. To develop and contribute to the student#039s confidence and knowledge to be able to attend international conferences, conduct presentations and publish papers in English.

#### [Course Schedule and Contents]

Unit 1-15,times, The course is divided into 15 classes over 15 weeks and the topics have been selected and sequenced to take the students through key aspects of Chemical Engineering beginning with elementary specialized vocabulary and pronunciation, culminating in technical trouble shooting and presentation of a olution.

Unit 1 Chemistry/Chemical Engineering - periodic table, organic and inorganic chemistry nomenclature, 1time,The student will be able to correctly pronounce and be aware of the differences in terminology between Japanese and English chemistry nomenclature.

Unit 2 Mathematical Sciences, 1 time, The student will be able to clearly explain mathematical operations, calculations and results obtained by experiment.

Unit 3 Units of Measurement/Explaining process equipment dimensions (piping, valves, instrumentation,

pumps, vessels and various process equipment), Itime, The student will be able to express units of measurement and Conversions, explain physical dimensions and process equipment features.

Unit 4-11 Unit Operations - Fluid Transportation, Heat Transfer, Mass Transfer, Thermodynamic Processes and Mechanical Processes,8times, The student will be able to describe various unit operations in English and

describe how they integrate with different processes. Focusing on specific vocabulary, phrasal yerbs and order of adjectives in describing.

Unit 12 Oral Assessment - Presentation of a unit operation, I time. The student will be able to present, describe and explain the application to a process for a unit operation of their choice.

Unit 13 Process and Instrumentation Diagrams incorporating unit operations,1time,The student will be able to ead and explain process instrumentation diagrams in English.

Unit 14 Plant Start-up and Shut-down/operating instructions,1time,The student will be able to provide and describe sequencing instructions for plant operations.

# 科学英語(化学工学)(2)

critical thinking skills to troubleshoot a Process and instrumentation diagram and explain their solution.

# [Class requirement]

Students enrolled in the Chemical Process Engineering Course of the School of Industrial Chemistry.

# [Method, Point of view, and Attainment levels of Evaluation]

Assessment 1 (week 12) - 20% Assessment 2 (week 15) - 20% Final Written exam - 60%

issued from IDS and communications, and adding signatures to detect attacks.

Intrusion Detection by Machine Learning,7times,Learn the method of classifying normal and malicious traffic by machine learning algorithms and public dataset for benchmarking intrusion detection performance Presentation, Itime, Based on the exercise, students presents their methods of intrusion detection using machine learning, and discuss it with other students and instructors.

Intrusion Detection by Signature-Based IDS,5times,Learn the mechanism of intrusion detection by signature-based IDS by studying open source signature-based IDS and attacks, such as correspondence between alarms

# [Regarding studies out of class (preparation and review)]

Because the content of the class basically follows the textbook raised above, it is recommended that the students look through before the class.

In addition, because the students need fundamental knowledge of vector analysis as prerequisite knowledge, it is highly recommended for the students to parallelly take a class of "vector analysis".

# [Course Goals]

#### [Course Schedule and Contents]

Guidance, 2times, Guidance on how this class is operated, and how to use computing facility for this class.\\
Basic knowledge on the role of IDS in network security and how machine learning can help the intrusion detection.

Intrusion Detection by Signature-Based IDS,5times,Learn the mechanism of intrusion detection by signaturebased IDS by studying open source signature-based IDS and attacks, such as correspondence between alarms issued from IDS and communications, and adding signatures to detect attacks. Intrusion Detection by Machine Learning,7times,Learn the method of classifying normal and malicious

Intrusion Detection by Machine Learning,7times,Learn the method of classifying normal and malicious traffic by machine learning algorithms and public dataset for benchmarking intrusion detection performance Presentation,Itime,Based on the exercise, students presents their methods of intrusion detection using machine learning, and discuss it with other students and instructors.

制御された化学反応を駆動力とする化学自動車模型(Chem-E-Car)をグループで設計、製作する。 設計開始前には電池や熱電効果等に関する実験を行い、Chem-E-Carに関する基礎を習得する。製作 したChem-E-Carが、決められた荷重を搭載して目的とする距離を走行できるかをコンテスト形式で 競う。

# [Course Goals]

・電池における物理化学を理解し、その活用についての理解を深める。 電気化学、熱電効果、発熱・吸熱、ガス発生等を含む、様々な化学・物理的現象を利用する発想力 を磨く。 目的とするChem-E-Carの走行性能を実現するための化学反応の選択、制御の工夫を通して創造性を

養う。

# [Course Schedule and Contents]

- 【Course Schedule and Contents】

  (1) 安全講習【1週】: Chem-E-Car作製、走行実験に必要な安全に関する講習
  (2) 基礎実習【5週】: 電気化学、熱電効果、等に関する講義; 一次電池、燃料電池、熱電効果
  等を使用したモデルChem-E-Carの作製
  (3) 設計方針討論【1週】: グループによるChem-E-Carの設計方針の討論
  (4) 工作実習【1週】: Chem-E-Caの製作に必要な工作技術や工作機械の使用方法の説明、実習
  (5) Chem-E-Car製作、試運転【5週】: グループによるChem-E-Carの設計、製作、走行実験、基本データの採取
  (6) 発表会【1週】: グループによるChem-E-Carに関する発表(走行・停止の原理、特徴、等)
  (7) コンテスト、講評会【1週】: Chem-E-Car走行コンテスト、Chem-E-Carの走行データに関する解説等

# [Class requirement]

None

# [Method, Point of view, and Attainment levels of Evaluation]

Chem-E-Carの走行性能(コンテスト結果)、成果報告会における発表、レポートにより評価する。

# [Textbook] 教員が配布するプリント

Continue to Chem-E-Car設計·実験(2)

Chem-E-Car設計・実験(2)

# [Reference books, etc.]

(Reference books) アトキンス 『物理化学(上) 第10版 』

[Regarding studies out of class (preparation and review)]

授業中に指示する

( Others (office hour, etc.) )
