Course title (and course title in English)	工業数学 A 1 Applied Mathematics A1		Instructor's name, job title, and department of affiliation	Graduate School of Informatics Associate Professor, SHIBAYAMA MITSURU	
Target year	2nd year students or above	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Thu.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese
[Overview and purpose of the course]					
Complex analysis, traditionally known as the theory of functions of a complex variable, is the branch of mathematical analysis that investigates functions of complex numbers. Students will study the foundation and apply it to compute some integral.					
[Course objectives]					
To understand properties of complex functions with a skill for evaluation of integrals appearing in applied mathematics and physics.					
[Course schedule and contents]					
1. Complex function 2. Holomorphic functions 3. Elementary functions 4. Integrals in the complex plane 5. Cauchy's integral theorem 6. Power series 7. Taylor series 8. Isolated singularities 9. Laurent series 10. Multivalued functions 11. Analytic continuation 12. Residue 13. Integrals including trigonometric functions 14. Application to improper integral 15. Point at infinity and Riemann sphere					
[Course requirements]					
Calculus, Linear algebra

[Overview and purpose of the course]					
Fourier analysis originated in Fourier's work on thermal conduction and now becomes very important not only in mathematics but also in engineering, including applications in measurement technology. This course provides its theories and applications along with the Laplace transforms closely related to it.					
[Course objectives]					
To understand the fundamental theories of Fourier analysis and Laplace transforms and develop an ability to apply them to concrete problems.					
[Course schedule and contents]					
Fourier series expansions, 3-4 times: The definition of Fourier series expansions for periodic functions are given and their fundamental results such as computation of Fourier coefficients and convergence of Fourier series are discussed. Properties and applications of Fourier series, 3-4 times: Several properties of Fourier series and their applications to differential and difference equations and signal processing are discussed. One-dimensional Fourier transform, 4-5 times: The definition of one-dimensional Fourier transforms is given, and their fundamental properties such as the inversion formula and applications to partial differential equations are discussed. Laplace transforms, 2-3times: Fundamental properties of Laplace transforms and their applications are discussed. Summary and learning achievement evaluation, 1 time: A summary and supplements of this course are given and the learning achievement of students is evaluated.					
[Course requirements]					
Calculus, Linear Algebra and Differential Equations					
[Evaluation methods and policy]					
Evaluation depends mainly on marks of mid-term examinations (20%) and final one (80%).

[Overview and purpose of the course]					
<p>Engineering is to inquire after truth, to develop useful technologies, and to establish ways how to give back development results of technology to the society.</p> <p>First, we offer special lectures regarding the basic knowledge that students in faculty of engineering are expected to have.</p> <p>Then, we offer a series of intensive lectures about how engineering can suggest solutions of current and future problems of our society, the value of technology, and the responsibilities that researchers and engineers are expected to fulfill.</p>					
[Course objectives]					
Students learn basic matters such as attitudes and responsibilities they are expected to take as a member of social community. They find value in studying engineering and become to consider what they do in future by understanding technology can suggest solutions of problems our society is facing, especially problems about safety and security.					
[Course schedule and contents]					
<p>Special lectures,1time, About basic knowledge and attitude as students who start to learn engineering, and the role of engineering in society.</p> <p>Intensive lectures,6times, A series of lectures offered by special lecturers playing on global stages of science and technology. Lectures are for understanding the role that technology is playing in modern society, for reconfirming importance to study engineering and to work as a researcher and engineer in society, and are to be opportunities to consider own future path. Essays are assigned in every lecture to summarize the lecture content and opinions of other students.</p> <p>Schedule of the lectures are announced later.</p>

Course title (and course title in English)	工学部国際インターンシップ 1 Faculty of Engineering International Internship 1		Instructor's name, job title, and department of affiliation	Graduate School of Engineering Professor, HONDA MITSURU Graduate School of Engineering Senior Lecturer, KOWHAKUL, Wasana	
Target year	3rd year students or above	Number of credits	1	Year/semesters	2025/Intensive, year-round
Days and periods	Intensive	Class style	Seminar (Face-to-face course)	Language of instruction	Japanese and English
[Overview and purpose of the course]					
The internships and related training programs (lasting less than three months) offered through the Faculty of Engineering at Kyoto University, whether conducted overseas or domestically but expected to have a similar educational effect as internships abroad, are targeted. The aim is to cultivate independence, proactivity, internationality, and language skills by placing students in diverse environments, thereby contributing to their career development after graduation.					
[Course objectives]					
The purpose is to enhance the expansion of international perspectives, the acquisition of international sensibilities, the improvement of foreign language proficiency (communication skills), and the enhancement of cultural receptiveness (cross-cultural adaptability) by experiencing internships in diverse environments such as overseas universities and companies.					
[Course schedule and contents]					
<p>[Submission of the internship plan (1 time)] Complete and submit the form ‘ International Internship Plan ’ at least one month before the internship takes place and undergo a preliminary review.</p> <p>[Overseas internship (1 time)] Participate in an internship abroad.</p> <p>[Results debriefing (1 time)] Internship participants report on the results of their internship and discuss their findings.</p>					
[Course requirements]					
<p>Have sufficient language skills in the language(s) spoken at the internship site.</p> <p>* Must have purchased the prescribed overseas travel insurance before traveling to the internship site.</p> <p>* Have submitted an overseas travel registration form in advance.</p>					
[Evaluation methods and policy]					
<p>After registering for the course, one month prior to participating in the internship, students must fill out the “ International Internship Plan ” on the designated form and submit it to the Undergraduate Student Section of Educational Affairs Division for prior review by the faculty members of the ER center.</p> <p>After completion of the internship, students will be awarded credits (100%) based on the submission of an</p>					
<div style="text-align: right;">Continue to 工学部国際インターンシップ 1 (2)</div>					

工学部国際インターンシップ 1 (2)

internship report and the content of the presentation at the debriefing session.

It is also advisable to submit a certificate of completion from the institution hosting the internship.

The decision to grant credits for graduation will be made by each undergraduate school. If the credits are not approved as credits required for graduation, the ER center will make the decision. In this case, the credits will be treated as excess credits.

Whether the internship is approved as credit for “ 1 ” (1 credit) or “ 2 ” (2 credits) of the International Internship Program of the Faculty of Engineering is determined based on the duration of the internship and the content of the practical training during the internship period, but in the case of “ 2, ” overseas travel is required.

Course number	U-ENG20 22403 SJ77				
Course title (and course title in English)	グローバル・リーダーシップセミナーⅠ(企業調査研究) Global Leadership Seminar I (Study for methodology in a company)		Instructor's name, job title, and department of affiliation	Graduate School of Engineering Senior Lecturer, hirai yoshikazu	
Target year	2nd year students or above	Number of credits	1	Year/semesters	2025/Intensive, year-round
Days and periods	Intensive	Class style	Seminar (Face-to-face course)	Language of instruction	Japanese
[Overview and purpose of the course]					
The purpose of this course is to study about how worldwide leading company, institute, etc. make proposals and find solutions for expanding their own technologies to the international market. Throughout hands-on training on their laboratory, students investigate the methodology of team organization, proposal, market prediction and conception ability by group works. After the investigation, students are expected to improve their comprehension and explanation capability. As extended exercise subject of this course, the Global Leadership Seminar II is opened in the second semester.					
[Course objectives]					
The goal of this course is to improve student's comprehension and explanation capability for processes of proposal and expansion on the international market investigating worldwide leading companies by group work.					
[Course schedule and contents]					
Week 1, Guidance Week 2-13, Hands-on training Week 14, Pre-presentation Week 15, Final presentation					
[Course requirements]					
How to register will be announced later. Students who want to join this course is requested to attend the first class.

- Tsutomu Mukai, Senior Manager, Panasonic HD: Promotes open innovation with venture companies in Israel.

Professor Mitsuaki Oshima is one of Japan's "Top 10 Representative Inventors," known for inventing and developing fundamental patents in technologies such as camera image stabilization in iPhones and high-speed and ultra-low latency communication for 5G mobile phones. Additionally, he invented multi-disciplinary technologies like anti-piracy measures for Nintendo Wii software, digital TV broadcasting standards in Japan, the US, and Europe, and IoT home appliances. He is famous as a serial innovator. Professor Oshima will introduce how groundbreaking inventions that change society originate.

In addition to the mentors, you can learn about the support system for startups and patent strategies from the invited lecturers. For those considering starting a startup, there is information that can be immediately utilized, and for others, there are valuable lessons that will be beneficial when entering society.

More information can be found on the following page (in Japanese):
<https://www.erc.t.kyoto-u.ac.jp/ugrad>

[Notes]

This seminar is intended for students in their second year of the Engineering Department or higher. The seminar is worth one credit, but whether it is recognized as a required credit for graduation depends on the undergraduate school. Please confirm with your undergraduate school office. Also, a camp is planned for December 6th and 7th, so it is necessary to be enrolled in the Personal Accident Insurance for Students Pursuing Education and Research(" Gakkensai "). Participation in the camp is recommended.

[Course objectives]

Through group work, you can acquire the ability to plan and propose solutions, starting from identifying and setting challenges to envisioning the creation of social value.

[Course schedule and contents]

The course will be conducted in person.

- [Orientation] (1 session): The overview and schedule of the course will be explained.
- [Lectures] (4 sessions): Special lectures by experts will be conducted.
- [Team Building] (1 session): An exercise in team building, essential for group work, will be carried out.
- [Group Work] (7 sessions): Students will engage in setting challenges, problem identification, data collection, and group work. Through intensive group work discussions, they will plan and propose solutions to the identified issues, create a draft report, and conduct 2-3 presentations. Holding mini-lectures by special instructors will also be planned.
- [Camp] (1 session): An intensive session dedicated to project work in an environment exclusive to participants and mentors through overnight training camp.
- [Preliminary Review Session] (1 session): A class to practice presentations in preparation for the final presentation event.
- [Final Presentation Event] (1 session): The final presentations will take place, followed by submission of presentation materials.

[Course requirements]

If the number of students enrolling in the course is large, the maximum number of students may be determined.

[Evaluation methods and policy]

[Evaluation Method]

Grades will be based on regular participation (20%) and the presentation and submission of presentation materials at the final presentation event held during the last lecture session (80%). Regular participation evaluation will focus on the student's active participation in the lectures.

[Evaluation Policy]

We will comprehensively evaluate the ability to identify and set challenges through group discussions, as well as the ability to propose solutions towards achieving goals. Students are required to develop individual or group business plans through the challenges and group work, and to present them at the final presentation event.

Attendance in lectures per se is not a criterion for grade evaluation; however, as the course involves group work, regular attendance is strongly recommended.

[Textbooks]

We will let you know if necessary.

[References, etc.]

(Reference books)

III. Oreilly, Charles A. 『Lead and Disrupt: How to Solve the Innovator's Dilemma』 (Stanford Business Books, 2021) ISBN:978-1503629523

We will let you know if necessary.

[Study outside of class (preparation and review)]

Please prepare and develop your own ideas in advance that you would like to work on throughout the course.

(Other information (office hours, etc.))

[Schedule for the 2024 Academic Year]

The classes will be conducted in person on Fridays during the 5th period in Lecture Room W3, Research Building 9.

*Note: The 3rd lecture will be held in Lecture Room W301, Research Building 9 (subject to change in lecture room).

- Orientation: October 3

- Fundamentals of Group Work: October 17

- Special Lectures, In-Person Group Work: October 10, 24, 31; November 7, 14, 28; December 5, 12, 19, 26; January 9

- Camp: December 6 (Sat) 13:00 - December 7 (Sun) 13:00 @ AWL Keihoku (tentative)

- Preliminary Review Session: January 16

- Final Presentation: January 17 (Sat)

*Please note that whether the credits earned are recognized as necessary for graduation depends on your undergraduate school. Refer to your undergraduate school course guide for more information.

*Registration for the course is not through KULASIS but via the following page. It is scheduled to open around September 2025:

https://www.t.kyoto-u.ac.jp/fs/erc/2025Fall_GL_seminar2

For details on office hours, please check KULASIS.

*Please visit KULASIS to find out about office hours.

(3) Details of practical classes delivered based on instructors' practical work experience

Course number	U-ENG25 35018 LJ71 U-ENG25 35018 LJ75 U-ENG25 35018 LJ77				
Course title (and course title in English)	量子物理学 1 (材原宇) 情報 Quantum Physics 1		Instructor's name, job title, and department of affiliation	Part-time Lecturer, Itoh Akio	
Target year	3rd year students or above	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Fri.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese
[Overview and purpose of the course]					
<p>Quantum theory is one of the most successful theories in the modern physics. It explains well a lot of peculiar phenomena which can not be understood within the classical theory. The main purpose of this course is to understand the fundamental mathematical structure of the quantum theory.</p> <p>We may use online materials. Check PandA in advance.</p>					
[Course objectives]					
<p>An important purpose of this course is to understand the fundamental mathematical structure of the quantum theory. In addition one is hoped to become capable to calculate some basic properties of a quantum mechanical particle on one-dimensional space.</p>					
[Course schedule and contents]					
<ol style="list-style-type: none"> 1. Introduction. Wave mechanics and matrix mechanics. 2. Mathematical structure of quantum theory (1) State and observable. 3. Mathematical structure of quantum theory (2) Hilbert space and state vectors. 4. Mathematical structure of quantum theory (3) operators and observables 5. Mathematical structure of quantum theory (4) Schroedinger equation and time evolution 6. One particle on one-dimensional space (1) classical theory and its quantization 7. One particle on one-dimensional space (2) CCR and Robertson's uncertainty relation 8. Potential problem (1) General theory 9. Potential problem (2) General theory and its mathematical addendum 10. Square well potential 11. Box potential 12. Scattering theory 13. Harmonic oscillator (1) 14. Harmonic oscillator (2) 15. Summary 					
[Course requirements]					
Classical mechanics, Linear algebra

(3) Details of practical classes delivered based on instructors ' practical work experience

Course number	U-ENG25 25300 LJ71 U-ENG25 25300 LJ77				
Course title (and course title in English)	エレクトロニクス入門（機宇） 情報 Introduction to Electronics		Instructor's name, job title, and department of affiliation	Graduate School of Informatics Associate Professor,AWANO HIROMITSU Graduate School of Informatics Associate Professor,UENO REI	
Target year	2nd year students or above	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Mon.4	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese
[Overview and purpose of the course]					
In this course, students will learn about the basic characteristics of electronic circuits, digital circuits that are indispensable in today's information society, and computer architecture as hardware for running programs.					
[Course objectives]					
In this course, students will learn the minimum level of electronic circuits required for research in the Department of Physics and the Department of Computer Science, and as researchers and engineers.					
[Course schedule and contents]					
The order and number of lectures for each topic are not fixed, and are subject to change by the lecturer depending on the lecture policy of the instructor and the background and understanding of the students.					
<ul style="list-style-type: none"> * Fundamentals of Electronic Circuits (3 classes) Learn DC, AC, and transient analysis. * Amplification Circuits (1 class) Learn about amplification circuits using operational amplifiers. * Fundamentals of digital logic circuits (1 class) Learn fundamentals of logic circuits including Boolean algebra, Karnaugh diagrams, etc. * Sequential circuits (1 class) Learn how to construct circuits with internal states. * Circuit Delay (1 class) Learn about what determines the operating speed of a circuit. * Digital representation of numbers (1 class) Learn how to represent numbers including floating point format, which is often used in scientific and technological calculations. * Arithmetic logic circuits (1 class) Learn about the structure of arithmetic circuits for digitally represented numbers. * Overview of computer architecture (1 class) Learn about the configuration of computers, the hardware that executes programs. * Machine language (1 class) Learn about the relationship between high-level languages such as C and instructions that can be interpreted by hardware. * Composition of computer architecture (2 classes) Learn about the composition and operation of computers, using a processor that can execute simple instructions as an example. * Integrated circuit manufacturing process (1 class) * Feedback (1 class)

Course number		U-ENG26 26010 LJ72					
Course title (and course title in English)	電子回路 Electronic Circuits			Instructor's name, job title, and department of affiliation		Graduate School of Engineering Associate Professor,SUGIYAMA KAZUHIKO	
Target year	2nd year students or above	Number of credits		2	Year/semesters	2025/First semester	
Days and periods	Fri.2	Class style	Lecture (Face-to-face course)		Language of instruction	Japanese	
[Overview and purpose of the course]							
<p>Following the lecture of fundamentals of active device circuits in the course "Electric and Electronic Circuits", modeling of active devices, fundamentals of transistor circuits, various amplifier circuits, negative feedback in circuits, operational amplifiers, and oscillators are lectured. Nonlinear circuits, power supplies, and noise would be included in the course, when the lecture time remains.</p>							
[Course objectives]							
<p>The goal of this course is to acquire the fundamentals of electronic circuits. Starting with understanding of a fundamental concept of electronic circuits i.e., modeling of active devices, the lecture based on the fundamental concept proceeds step by step to understand electric circuits. In this style, the lecturer wants to give the students an ability to understand the principles of more complicated circuits by application of deep understanding the fundamentals. The main targets to be understood are the circuits with bipolar transistors and operational amplifiers, as well as the fundamental concepts.</p>							
[Course schedule and contents]							
<p>Modeling of active devices (3 times): The essential concepts in the electronic circuit are lectured in order to treat active devices in the electric circuit theory. The concepts are the controlled source and the linearization. The decoupling between the bias and the signal, another important concept, is lectured.</p> <p>Fundamentals of transistor circuits (3 times) The characteristics of the basic bipolar-transistor circuits of three different common references are lectured based on the operation principle of the bipolar transistor. The biasing circuits are lectured with somewhat practical circuits.</p> <p>Various amplifier circuits (3 times) Several power amplifier circuits are lectured as we focus on their power efficiencies. DC amplifier circuits are lectured as we bear in mind that they are applied in operational amplifiers.</p> <p>Operational amplifiers (2 times): The concept and advantages of the negative feedback circuit are lectured, and an important concept in the operational amplifier, the virtual short, is explained. The linear operational circuits such as integrator and differential circuits, and nonlinear operational circuits such as logarithmic and exponential amplifiers are introduced.</p>							
<div style="text-align: right;">Continue to 電子回路(2)</div>							

電子回路(2)

Oscillators (2 times):

The principle of the oscillator circuit is lectured as a concept of the positive feedback. Various oscillator circuits are introduced with their characteristics.

Others (1 time):

If we have a more lecture time, nonlinear circuits of multiplier and modulation/demodulation circuits, power supplies for electronic circuits, and the noise in electronic circuits will be lectured.

Feedback (1 time):

We make an examination in order to investigate the achievement in the lecture. We will offer an additional chance for discussion to the students who do not achieve satisfactorily.

[Course requirements]

"Electric and Electronic Circuit (60030)" and "Fundamentals of Circuit Theory (60630)". (The lecturer recommends moderate understanding of fundamentals of electric circuit as the minimum prerequisites to achieve this course.)

[Evaluation methods and policy]

Examination and reports. Details about evaluation of the reports are opened on the homepage of this lecture located on Panda.

Course number	U-ENG26 36032 LJ72				
Course title (and course title in English)	通信基礎論 Modulation Theory in Electrical Communication		Instructor's name, job title, and department of affiliation	Graduate School of Informatics Professor, HARADA HIROSHI Part-time Lecturer, MIZUTANI KEIICHI	
Target year	3rd year students or above	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Wed.1	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese
[Overview and purpose of the course]					
This course discusses all types of modulation methods, that is, the theories of amplitude, frequency, phase, pulse modulations, as well as the principles of modulation/demodulation. Further focus is made on signal processing basics, sampling theory, etc., including of related applications.					
[Course objectives]					
Students will gain an understanding of the fundamentals of communication theory, used in mobile telephones, wireless local area networks (LAN), optical fiber communications, etc. Specifically, students will master signal expression and signal processing (modulation/demodulation) within time axis and frequency axis of communication signals, chiefly in the physical layers of communication signals.					
[Course schedule and contents]					
<p>"Signal processing (4-5 classes)</p> <p>Clarification is made of the concept of " frequency, " and students learn of tools for handling frequency, namely, Fourier series and Fourier transforms and their practical applications. Discussion is next made especially of the basics of random signals and theories regarding the standardization and quantization of random signals.</p> <p>Analog modulation and demodulation methods (5-6 classes)</p> <p>Discussion is made of the principles of amplitude modulation and angle modulation and their generation and modulation methods, with comparison of their respective characteristics, including occupied bandwidth and signal-to-noise ratio, etc.</p> <p>Digital modulation and demodulation methods (4-5 classes)</p> <p>After description of various methods of pulse modulation, there is discussion of principles and methods of digital modulation types, including modulation phase shift keying (PSK), etc., plus the basics of signal space. Confirmation is made of the extent of student understanding, with supplementary discussion to further improve levels of understanding.</p> <p>Confirmation of extent of student learning (1 class)</p> <p>Confirmation is made of the extent that students have learned the contents of this course. Additional explanation is provided for those students whose understanding remains incomplete or imperfect.</p>					
Continue to 通信基礎論(2)					

通信基礎論(2)

[Course requirements]

Students are required to have taken the course Industrial Mathematics (Fourier Analysis) and Electronic Circuits.

[Evaluation methods and policy]

Evaluation is made of extent of student's understanding of course contents via written examination.

Course title (and course title in English)	システム解析入門 (数理) Introduction to Systems Analysis		Instructor's name, job title, and department of affiliation	Graduate School of Informatics Professor, MORIMOTO JUN	
Target year	2nd year students or above	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Tue.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese
[Overview and purpose of the course]					
We will start by showing some examples of dynamical systems in engineering. Then we mention modelling and analysis techniques. We explain Electrical circuits and mechanical systems that use the linearization technique in detail. Throughout the course, we aim to understand the importance of dynamical system modeling and the implication of system control based on mathematical models.					
[Course objectives]					
We will learn examples of dynamical systems and the rudiments of dynamical systems and approximated linearized systems. This course will be the basics of Linear Control Theory (90720) and Modern Control Theory (90580).					
[Course schedule and contents]					
<p>Introduction to system analysis, 2 times, Overview of the course.</p> <p>Linear dynamical systems, 3 times, First and second order systems such as electric circuits consisting of a capacitor and an inductor and mechanical systems consisting of a spring and a damper.</p> <p>State equation and linear approximation, 1 time, Linearized systems at an operating point. Linear dynamical systems and their responses.</p> <p>Laplace transform and transfer function, 2 times, Laplace transform and linear differential equations. Transfer functions of first and second order systems.</p> <p>Examples of system modeling, 2 times, Examples of system modeling including mechanical systems, biological systems, and social infrastructures.</p> <p>Discrete-time systems, 1 time, Discrete-time systems described by difference equations.</p> <p>System identification, 1 time, System modeling using input-output data.</p> <p>Exercises, 3 times, Exercises.</p>					
[Course requirements]					
Linear Algebra (A and B) and Calculus (A and B) are recommended.					
[Evaluation methods and policy]					
The grade is determined by the final examination.					
[Textbooks]					
Handouts are given.

Course number	U-ENG29 29030 LJ10				
Course title (and course title in English)	グラフ理論 (数理) Graph Theory		Instructor's name, job title, and department of affiliation	Graduate School of Informatics Associate Professor, HARAGUCHI KAZUYA	
Target year	2nd year students or above	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Thu.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese
[Overview and purpose of the course]					
After basic notations and properties on graphs and networks are given, algorithms to some representative problems such as the shortest path problem, the minimum spanning tree problem and the maximum flow problem are described. Applications of these results and extensions of them in discrete mathematics are also presented.					
[Course objectives]					
Not only to learn the notions on graph structure as knowledge but to understand proofs to mathematical properties on discrete structures and logical mechanisms in computational methods					
[Course schedule and contents]					
<p>graphs and networks ,1time,Basic terminology on graphs and networks are defined, and some representative problems such as the Eulerian trail problem, the Hamiltonian cycle problem and the graph isomorphism problem are introduced.</p> <p>connectivity,1time,Graph connectivity such as k-connectivity of undirected graphs and strong connectivity of digraphs are defined and some properties for them are derived.</p> <p>plane graphs and dual graphs,2times,Some combinatorial aspects of graphs such as Kratowski's theorem, which characterizes the planar graphs, duality of plane graphs, the four-color theorem are described.</p> <p>representation for graphs,1time,As representation for data to input graphs, matrix and adjacency lists are introduced.</p> <p>graph search,2times,The depth first search and the width first search are introduced, and as their applications, an algorithm for computing cut-vertices and biconnected components is designed.</p> <p>shortest path ,2times,Properties on shortest paths and Dijkstra's method, as a representative shortest path algorithm, are described.</p> <p>trees and cut-sets,1time,Important properties on spanning trees and cut-sets, especially the roles of fundamental cycles and fundamental cut-sets are described.</p> <p>minimum spanning tree ,1-2times,Kruskal's method and Prim's method, as representative minimum spanning tree algorithms, are described, and data structure for them and their computational complexities are discussed.</p> <p>maximum-flow ,2times,The maximum-flow and minimum-cut theorem in networks and an algorithm for finding a maximum flow are described.</p>

Course title (and course title in English)	応用代数学 Applied Algebra		Instructor's name, job title, and department of affiliation	Graduate School of Informatics Professor, TSUJIMOTO SATOSHI	
Target year	3rd year students or above	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Mon.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese
[Overview and purpose of the course]					
An introduction with application to basic algebra in informatics.					
[Course objectives]					
To understand basic ideas and some applications of algebras (mainly group theory).					
[Course schedule and contents]					
Introduction to group theory, 2-3 times, Definition and examples of group: symmetric group, permutation group, cyclic group, general linear group and so on. Structure of groups, 4-5 times, Subgroup, coset, normal subgroup, quotient group, the isomorphism theorems. Symmetric group and enumeration problem, 3-4 times, Action of the symmetric group on a finite set. Enumeration problem. Group representation, 3-4 times, Groups in terms of linear transformations of vector space. Summary and assessment, 1 time, Summary and supplement of this course. Measure the progress of students in acquiring knowledge and skills.					
[Course requirements]					
Linear algebra					
[Evaluation methods and policy]					
Evaluation depends mainly on marks of examination, but marks of exercises are taken into account when needed.

Course title (and course title in English)	現代制御論 (数理) Modern Control Theory		Instructor's name, job title, and department of affiliation	Graduate School of Informatics Professor, KASHIMA KENJI	
Target year	4th year students or above	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Tue.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese
[Overview and purpose of the course]					
This course provides the fundamentals in modern control theory - centered around the so-called state space methods - as a continuation of classical control theory taught in Linear Control Theory. Emphasis is placed on the treatment of such concepts as controllability and observability, pole allocation, the realization problem, observers, and linear quadratic optimal regulators.					
[Course objectives]					
The objective is to study controllability and observability that are the basis of modern control theory, and also understand design methods such as optimal regulators. It is hoped that the course provides a basis for a more advanced topic such as robust control theory.					
[Course schedule and contents]					
<p>Introduction to modern control, 1time, We give real examples for which the modern control theory are applied. We also give a state-space formulation for modeling dynamical systems.</p> <p>Mathematics for modern control, 1time, We discuss some fundamental properties of mathematics, in particular, vectors and matrices.</p> <p>Controllability and observability, 2times, We introduce the fundamental notions of controllability and observability for linear dynamical systems, and also discuss their basic properties and their criteria.</p> <p>Canonical decomposition, 2times, We give the canonical decomposition for linear systems.</p> <p>Realization problem, 2times, We introduce the realization problem that constructs state space representations from transfer functions for single-input and single-output systems.</p> <p>Stability, 2times, We discuss the stability of dynamical systems described by state-space equations. We also give mathematical tools for checking if a system is stable or not.</p> <p>State feedback and dynamic compensators, 2times, We introduce the construction of dynamic compensators via state feedback, pole allocation and observers. The relationships with controllability and observability are also discussed.</p> <p>Optimal regulators, 2times, We give the basic construction of optimal regulators, in particular, the introduction of the matrix Riccati equation, its solvability, relationship to stability and observability, and root loci.</p> <p>Overall summary, 1time</p>					
Continue to 現代制御論 (数理) (2)					

現代制御論（数理）(2)

[Course requirements]

It is desirable that the student has studied classical control theory (linear control theory). Fundamental knowledge on linear algebra is assumed, e.g., matrices, determinants, rank of a matrix, dimension of a vector space, isomorphism.

[Evaluation methods and policy]

The grading is based on the evaluation of reports and final examination.

[Textbooks]

None specified.

Course number		U-ENG29 49059 LJ55 U-ENG29 49059 LJ10			
Course title (and course title in English)	情報システム理論 (数理) Theory of Information Systems		Instructor's name, job title, and department of affiliation	Graduate School of Informatics Professor, TANAKA TOSHIYUKI	
Target year	3rd year students or above	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Thu.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese
[Overview and purpose of the course]					
This course covers modeling and performance evaluation methods for optimal design of information/service systems, focusing on queueing theory and Markov analysis.					
[Course objectives]					
This course aims to deepen the understanding of the fundamental results of both queueing theory and Markov analysis for the modeling and performance evaluation methods of information/service systems.					
[Course schedule and contents]					
<p>Week 1: Introduction. The contents of this course are outlined, together with introducing the significance and history of performance evaluation of information/service systems in terms of queueing theory and Markov analysis.</p> <p>Weeks 2-6: Fundamentals of probability theory. Notions, such as random variables, probability distributions, Markov chains etc., are explained.</p> <p>Week 7: Poisson processes. After describing counting processes and renewal processes, properties of Poisson processes, in particular the memoryless property and its significance in queueing theory, are reviewed.</p> <p>Week 8: Results applicable to generic queues. Results on generic queues without specific assumptions, such as the relation between the arrival rate and the departure rate, results on customer distributions, Little's law, are reviewed.</p> <p>Weeks 9-12: Discrete-time Markov chains. Properties of discrete-time time-homogenous Markov chains, such as the irreducibility and recurrence, as well as conditions for existence of a stationary distribution, are discussed.</p> <p>Weeks 13-14: Representative queueing models. Properties and performance evaluation of the M/G/1 model and GI/M/1 model, that are representative queueing models, are discussed.</p>					
[Course requirements]					
Stochastic discrete event systems, and basics of queueing theory.					
[Evaluation methods and policy]					
Evaluation will be based on the score of the term examination. Scores of mid-term quizzes may be added to the score upto a maximum of 10 %.

[Study outside of class (preparation and review)]

Familiarity with modern probability theory is desired.

Reviewing the contents with the handouts after each class is encouraged.

（ Other information (office hours, etc.) ）

*Please visit KULASIS to find out about office hours.

論理システム（計算機）(2)

Students learn about design methods and analysis methods for combinational circuits.

Sequential machines and sequential circuits (4 classes)

Students learn about design methods for sequential circuits, and especially regarding the minimization of, and state allocation for, sequential machines.

Term-end examination (1 class)

Feedback (1 class)

Review, including of the problems on the final examination, etc.

[Course requirements]

None

[Evaluation methods and policy]

Evaluation is performed regarding each element of this course's end goals, namely, the final examination (approximately 90%) and exercises (approximately 10%). If an understanding is shown of 80% or higher on the final exam, then the student will pass the course.

Course title (and course title in English)	力学系の数学 Dynamical Systems		Instructor's name, job title, and department of affiliation	Graduate School of Informatics Associate Professor, SHIBAYAMA MITSURU	
Target year	3rd year students or above	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Tue.3	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese
[Overview and purpose of the course]					
<p>Dynamical systems represent general mathematical models such as differential equations for time-dependent phenomena and a mathematical field having originated in the work of the greatest mathematician in 19th century, Poincare. Dynamical systems theory provides tools to treat nonlinear phenomena such as bifurcations and chaos, and its application range is very wide since there are numerous time-dependent phenomena in natural and social sciences. This course provides fundamentals of dynamical systems theory with a special focus on differential equations.</p>					
[Course objectives]					
<p>(1) To understand dynamics of differential equations and maps near neighborhoods of equilibria and fixed points (2) To understand mechanisms for nonlinear phenomena such as bifurcations and chaos (3) To master fundamental techniques for dynamical systems</p>					
[Course schedule and contents]					
<p>Examples of Dynamical Systems, 1 time: Classical dynamical systems given by differential equations and maps are considered and nonlinear phenomena occurred in numerical simulations of these systems are reviewed. Introduction to Dynamical Systems, 5-6 times: Fundamentals of differential equations are reviewed and elementary concepts such as Poincare maps, stability, dynamics of linear systems and invariant manifolds are explained. Local Bifurcations, 4-5 times: Bifurcations of equilibria and fixed points, center manifold reductions and normal forms are discussed. Chaos, 3-4 times: Horseshoe maps, homoclinic theorem and Melnikov's method are discussed. Summary and learning achievement evaluation, 1 time: A summary and supplements of this course are given and the learning achievement of students is evaluated.</p>

Course number	U-ENG29 39094 LJ57 U-ENG29 39094 LJ10				
Course title (and course title in English)	物理統計学 (数理) Statistical Physics		Instructor's name, job title, and department of affiliation	Graduate School of Informatics Senior Lecturer,UEHARA ERIKA	
Target year	3rd year students or above	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Thu.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese
[Overview and purpose of the course]					
Probability theory, statistical mechanics, and theory of stochastic processes are explained as methods to investigate systems with many degrees of freedom. Technics for describing dynamics, and fluctuation in equilibrium or stationary systems and some topics for nonequilibrium systems are explained.					
[Course objectives]					
To gain firmly the fundamental skills for understanding various phenomena with the use of probability theory and stochastic process.					
[Course schedule and contents]					
<p>Fundamentals of probability and entropy,3times,Continuous and discrete stochastic variables are introduced and entropy, KL entropy and mutual information are explained.</p> <p>Fundamentals of statistical mechanics,3times,Fundamentals of thermodynamics are reviewed and statistical mechanics is formularized with the maximum entropy principle. Applications to ideal gases and spin systems are explained.</p> <p>Stochastic processes and random walks,3times,Stochastic processes, especially Markov processes are explained. As examples, Gauss process, Poisson process, Wiener process and random walks are explained. Langevin equaitons and Fokker-Planck equations,3times,Brownian motion is introduced as an example of Langevin equations. Derivation of Fokker-Planck equations from Langevin equations are described and several applications of both equations are explained.</p> <p>Some topics for nonequilibrium systems,2times,We explain some topics chosen from entropy production in relaxation processes from nonequilibrium states to equilibrium states, the linear responce theory, the fluctuation theory, thermal excitation, diffusion and so on.</p>					
[Course requirements]					
Fundamentals of calculus and linear algebra					
[Evaluation methods and policy]					
Based on quizzes and the semester final exam.

Course number	U-ENG29 39096 LJ10 U-ENG29 39096 LJ55				
Course title (and course title in English)	確率離散事象論 Stochastic Discrete Event Systems		Instructor's name, job title, and department of affiliation	Graduate School of Informatics Associate Professor,HONDA JUNYA Graduate School of Informatics Professor,TANAKA TOSHIYUKI	
Target year	3rd year students or above	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Mon.5	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese
[Overview and purpose of the course]					
In the analysis of stochastic discrete event systems, the theoretical results on Markov chains are useful mathematical tools. This course covers the fundamental results of Markov chains and their applications to ranking/rating methods and to the analysis methods of basic queuing models.					
[Course objectives]					
This course aims to deepen the understanding of the fundamental results of Markov chains and their applications.					
[Course schedule and contents]					
<p>Outline of this course and review of fundamental notions,1?2times,The contents of this course are outlined. Furthermore, basic notions, such as random variables, probability distributions and generating function methods, are explained.</p> <p>Discrete-time Markov chains,3?4times,The discrete-time Markov chain is introduced. Topics include the basic notions of the Markov chain, such as irreducibility, period, and recurrence, as well as the condition for the existence of its stationary and limiting distributions.</p> <p>Markov methods for ranking/rating,2 ~ 3times,Markov methods for ranking/rating are lectured, focusing on the group of web pages.</p> <p>Continuous-time Markov chains,3 ~ 4times,The Poisson process and continuous-time Markov chain are introduced. Furthermore, the properties of a birth-and-death process (a special case of the continuous-time Markov chain) are explained, together with the derivation of its stationary distribution.</p> <p>Exponential-type queueing models,2 ~ 3times,Exponential-type queueing models (which are reduced to birth-and-death processes) are lectured, focusing on the derivation of their performance measures, such as the stationary queue length distribution and the waiting time distribution.</p>					
[Course requirements]					
Background knowledge on probability and statistics is helpful to learn this course but it is not prerequisite.					
[Evaluation methods and policy]					
Based on the scores of the term examination.					
[Textbooks]					
Handouts are provided.

Course number		U-ENG29 39111 LJ11			
Course title (and course title in English)	情報システム（計算機） Information Systems		Instructor's name, job title, and department of affiliation	Institute for Liberal Arts and Sciences Professor,TAJIMA KEISHI	
Target year	3rd year students or above	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Wed.3	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese
[Overview and purpose of the course]					
Course lectures cover fundamental theory and related techniques for constructing information systems. Discussions will especially focus on architecture of Web information systems, techniques for processing structured documents and semi-structured data used in Web information systems, theories for web information retrieval systems and other information retrieval systems, and techniques for graph data analysis.					
[Course objectives]					
The goals of this course are for students to have gained an understanding of architecture of Web information systems, techniques for processing structured documents and semi-structured data used in Web information systems, theories for web information retrieval systems and other information retrieval systems, and techniques for graph data analysis.					
[Course schedule and contents]					
<p>1. History of information systems: From hypertext to Web services (2 classes)</p> <p>An overview is provided of the history of developments in information systems for supporting the intellectual work of humans. Specifically, lectures will discuss hypertext (Memex, Dexter model, HyperCard), GUI and hypermedia (Smalltalk development environment, SMIL), structured documents (SGML, HTML, XML), stylesheets, as well as architecture of Web information systems (SOAP, REST, Ajax).</p> <p>2. Structured documents and semi-structured data processing (2 classes)</p> <p>XML is taken up as an example case of data formatting that are used for representing structured documents and semi-structured data. Discussion is made of general-purpose processing techniques for XML data (DOM and SAX) and techniques for querying and converting them (XPath, XQuery, and XSLT). Differences between the paradigms of each method are discussed. Also, local tree grammar, regular tree grammar, and single-type tree grammar are taken up as examples of tree grammar, used to define the schema of tree-structured data. Differences between the expressive power of each language are explained.</p> <p>3. Information retrieval: Evaluation measures (2 classes)</p> <p>Overview explanation is made of the fundamental concepts of information retrieval, and the various measures used in performance evaluation of information retrieval systems (precision, recall, F-measure, mean reciprocal rank (MRR), mean average precision (MAP), normalized discounted cumulative gain (nDCG), average mutual information, correlation coefficient, rank correlation coefficient). The user models that lies behind these measures will also be explained in overview.</p> <p>4. Information retrieval: Retrieval models (3 classes)</p>					
----- Continue to 情報システム（計算機）(2) -----					

情報システム（計算機）(2)

Overview explanation is made of the three representative basic information retrieval models, and of their various successor models (Boolean model, fuzzy set model, extended Boolean model, vector space model, latent semantic indexing (LSI), latent Dirichlet allocation (LDA), word2vec, probability model, binary independence model, and query likelihood model).

5. Information retrieval: Other topics (1 class)

Several other concepts related to information retrieval will be overviewed. The topics include: techniques for query modification and recommendation, techniques for creation of data set for evaluation of information systems, and information recommendation techniques such as collaborative filtering.

6. Web analysis (2 classes)

These lectures describe analysis techniques for graph structures of Web data. Taken up especially as representative analysis methods are PageRank, Topic-Specific PageRank, TrustRank, HITS, SimRank, etc.

7. Network analysis (2 classes)

Fundamental concepts of network analysis are explained. Specifically explained are the concepts of scale-free properties, small-world properties, cluster properties, and analysis methods including the infection model and community extraction methods.

8. Feedback (1 class)

Questions about the examination from students are answered.

[Course requirements]

It is not mandatory but desired that students have basic knowledge taught in the following courses: Introduction to Algorithms and Data Structures, Language and Automata, Graph Theory, Databases, and Fundamentals of Statistical Modeling.

[Evaluation methods and policy]

Evaluations will be made based on the scores of the final examination, which examine if the students understand the basics and the theories of technologies concerning the construction of Web information systems, information retrieval systems, graph data analysis, and processing of structured documents and semi-structured data used in Web information systems.

[Textbooks]

Lecture notes will be used as teaching materials.

Course title (and course title in English)	アルゴリズムとデータ構造入門 Introduction to Algorithms and Data Structures		Instructor's name, job title, and department of affiliation	Graduate School of Informatics Professor, KASHIMA HISASHI	
Target year	1st year students or above	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Mon.1	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese
[Overview and purpose of the course]					
Algorithms and data structures are two fundamental components of computer programs. This course gives their basic concepts, design principles, techniques, and other important concepts in computer science.					
[Course objectives]					
The goals of the course is to understand: - mathematical models of computers and concepts of computational complexity, - basic algorithms and data structures, - design principles of algorithms, such as divide-and-conquer method and dynamic programming, - classes of hard problems and solutions to them, and - basic ideas of graph algorithms, approximation algorithms, and online algorithms.					
[Course schedule and contents]					
Introduction, 1time, Overview algorithms, 2.5times, sorting, search, ... data structures, 2.5times, list, stack, queue, binary search, heap, hash, ... algorithm design, 2times, divide-and-conquer, dynamic programming, ... graph algorithms, 2times, - Trees and graphs - depth-/breadth-first search - shortest path algorithms - maximum-flow algorithms computational complexity, 3times, P, NP, NP-complete, NP-hard, ... advanced topics, 1time, approximation and online algorithms final exam, 1time,					
[Course requirements]					
None					
[Evaluation methods and policy]					
Mid-term and final examinations					
[Textbooks]					
will be specified in the lectures					
[References, etc.]					
(Reference books) will be specified in the lectures

Course number	U-ENG29 39116 LJ12				
Course title (and course title in English)	人工知能 Artificial Intelligence		Instructor's name, job title, and department of affiliation	Graduate School of Informatics Professor, KANDA TAKAYUKI	
Target year	3rd year students or above	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Wed.3	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese
[Overview and purpose of the course]					
This lecture introduces basic technologies of artificial intelligence. Topics will be selected from search, machine learning, and real-world agent.					
[Course objectives]					
Learning the concept of artificial intelligence and the basic models and algorithms of search, machine learning, and real-world agent.					
[Course schedule and contents]					
<p>Introduction, 1time, Introducing the history of artificial intelligence researches.</p> <p>Search, 3-4times, Introducing breadth-first search, depth-first search, heuristic search, AND/OR-graph search, adversarial search, constraint satisfaction, etc. Applications of search techniques such as computer chess, Sudoku, are also introduced.</p> <p>Machine Learning, 7-8times, Introducing decision tree learning, perceptron, SVM, genetic algorithm, reinforcement learning, deep learning, etc. Applications of machine learning techniques such as data mining are also introduced.</p> <p>Real-world agent, 3-4times, Introducing AI techniques for uncertain situation, including basic perception and robotics, and probabilistic reasoning over time. Applications of AI for robotics are also introduced.</p> <p>Achievement level check, 1time, Checking the achievement level</p>					
[Course requirements]					
None					
[Evaluation methods and policy]					
By reports and a final examination.					
[Textbooks]					
Materials will be distributed.

Course title (and course title in English)	パターン認識と機械学習 Pattern Recognition		Instructor's name, job title, and department of affiliation	Graduate School of Informatics Professor, KAWAHARA TATSUYA	
Target year	3rd year students or above	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Wed.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese
[Overview and purpose of the course]					
This course provides foundations of modeling and systems, which extract useful information for classification and prediction from real-world data. It covers a variety of machine learning techniques oriented for pattern recognition.					
[Course objectives]					
to master basic approaches and major techniques of machine learning. to be able to design a system for pattern classification and recognition.					
[Course schedule and contents]					
1. Introduction to pattern recognition 2. Discriminant function and machine capacity 3. Discriminant function based on Gaussian distribution 4. Clustering and Gaussian mixture model 5. DP matching and HMM (classification of sequential patterns) 6. Maximum likelihood estimation and Bayes learning 7. Naive Bayes classifier and logistic regression model 8. Perceptron and Support Vector Machines 9. Neural network 10. Statistical feature extraction 11. Deep learning 12. Autoencoder and VAE 13. RNN and Transformer 14. Pattern recognition systems and non-supervised learning 15. Examination and Feedback					
[Course requirements]					
None					
[Evaluation methods and policy]					
The grading is based on the examination following the course, and some exercises provided in the course.

Course title (and course title in English)	数理工学実験（数理:H26以降入学者） Applied Mathematics and Physics Laboratory		Instructor's name, job title, and department of affiliation	Graduate School of Informatics Assistant Professor, OOKI KENTAROU Graduate School of Informatics Assistant Professor, KOBAYASHI KATSUKI Graduate School of Informatics Assistant Professor, KAWAGOE DAISUKE	
Target year	2nd year students or above	Number of credits	4	Year/semesters	2025/Second semester
Days and periods	Mon.3,4,Tue.3,4	Class style	Experiment (Face-to-face course)	Language of instruction	Japanese
[Overview and purpose of the course]					
Applied Mathematics and Physics is a scientific discipline that gives theoretical foundations to understand and explain the behavior of systems and physical phenomena around us, as well as give us means to solve various problems. This experiment class is a chance to see in action the basic principles of mathematical modeling behind engineering that have been learned in elementary mathematics and physics courses. In addition, students will work on developing their programming skills and learn how to produce scientific reports in the LaTeX system.					
[Course objectives]					
<ul style="list-style-type: none"> • Understand basic algorithms and develop skills to implement them in a programming language, as well as use experimental results to analyze, understand, and conjecture about certain phenomena. • Become familiar on using the LaTeX writing system, and producing scientific reports. 					
[Course schedule and contents]					
Seven contents are provided, and each of them takes four days. Instructors may exchange the order of the contents.					
Day 1-2 : Class guidance and instructions on writing reports <ul style="list-style-type: none"> • Guidance on the course of the classes, as well as using the BYOD class system • General instructions on writing scientific reports • Producing plots of a set of data, including illustrations using the LaTeX system, etc. Day 3-6: Numerical linear algebra Day 7-10: Least squares method Day 11-14: Ordinary differential equations Day 15-18: Monte Carlo simulation Day 19-22: Finding function roots; Continuous optimization Day 23-26: Combinatorial optimization Day 27-30: Image generation by neural networks (VAE and GAN, etc)					
[Course requirements]					
Acquired credits for all Basic Subjects offered by the Applied Mathematics and Physics Course.					
<div style="text-align: right;">Continue to 数理工学実験（数理:H26以降入学者）(2)</div>					

数理工学実験 (数理:H26以降入学者) (2)

[Evaluation methods and policy]

The evaluation will be based on a report for each class topic. Submitting reports for all topics is necessary to get credit for the class (note: it is not guaranteed that credit will be earned if all reports are submitted). In addition, tardiness, absence from class, and resubmitting a report will reduce the grade.

[Textbooks]

An experiment manual prepared by the instructors will be distributed in class.

[References, etc.]

(Reference books)

Supplemental materials will be introduced if deemed necessary.

[Study outside of class (preparation and review)]

Pre-class preparation by reading the provided experiment manual, class notes, and other reference materials is highly recommended.

(Other information (office hours, etc.))

This class is in BYOD (Bring Your Own Device) style, and it is mandatory to bring your own computer for the class.

In addition, it is necessary to prepare the necessary environment and software for conducting the class:

- Prepare to use the LaTeX system to produce reports
- Prepare an environment of programming language in advance. Any programming language is not specified, but check if the language is suitable for scientific computation.

For the details, check Panda.

*Please visit KULASIS to find out about office hours.

Course number	U-ENG29 29127 LJ11				
Course title (and course title in English)	計算機の構成 Computer organization		Instructor's name, job title, and department of affiliation	Academic Center for Computing and Media Studies Professor,IWASHITA TAKESHI	
Target year	2nd year students or above	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Wed.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese
[Overview and purpose of the course]					
This course presents an overview study of the basic organization of computers and their operation principles, instructions of computers, computer arithmetic, how to design simple computers, and overview of memory hierarchy and I/O of computers.					
[Course objectives]					
1. Students will understand and be able to explain basic organization of a computer and its operation principles. 2. Students will understand and be to explain instructions of computers. 3. Students will understand and be able to explain computer arithmetic. 4. Students will understand and be able to explain design methods of simple processors. 5. Students will understand and be able to explain overview of memory hierarchy and I/O of computers.					
[Course schedule and contents]					
Basic computer organization and its operation principles (2 classes) Students will learn about basic computer organization and its operation principles, as well as performance evaluations. Instructions of computers (5 classes) Students learn about instructions of computers. Computer arithmetic (3 classes) Students learn about computer arithmetic and floating-point arithmetic. Design of simple processors (3 classes) Students learn design methods of simple processors. Overview of memory hierarchy and I/O of computers. (1 class) Students learn about an overview of memory hierarchy and I/O of computers. Term-end examination (1 class) Feedback (1 class) Review, including of the problems on the final examination, etc.					

Continue to 計算機の構成(2)					

計算機の構成(2)

[Course requirements]

Having knowledge on logic circuits is preferable.

[Evaluation methods and policy]

Evaluation is performed regarding each element of this course's end goals, namely, the term-end examination (approximately 90%) and exercises (approximately 10%). If an understanding is shown of 80% or higher on the term-end exam, then the student will pass the course.

Course title (and course title in English)	電気電子回路入門 Introduction to Electric and Electronic Circuit Theory		Instructor's name, job title, and department of affiliation	Graduate School of Energy Science Professor, SHIMODA HIROSHI Graduate School of Energy Science Associate Professor, IWAOKAWAYAMA	
Target year	2nd year students or above	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Wed.1	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese
[Overview and purpose of the course]					
It has long been introducing computers to various situations of our daily lives and these computers can work based on electric signals. If you look around society, electricity is used in various contexts such as lighting, air conditioning, motive power and control, and its fundamental principle is electric or electronic circuit. The purpose of this subject is explanation of basic knowledge of electric and electronic circuit, to understand the fundamental principles and to get the ability to analyze simple circuits.					
[Course objectives]					
To understand; <ul style="list-style-type: none"> • basic way of thinking and principles of electric circuit, • analysis method of simple electric circuits consisting of power supplies and passive components, • principles of active components such as diodes and transistors, • principles of amplifier circuits and oscillation circuits employing active components, and • basic principle of digital electronic circuits. 					
[Course schedule and contents]					
1. Direct current circuit (1.5 times) <ul style="list-style-type: none"> • Ohm's law • Kirchhoff's law • Voltage source and current source • Thevenin's theorem and Norton's theorem 2. Alternating current circuit (3.5 times) <ul style="list-style-type: none"> • Sinusoidal alternating current • Inductance and capacitance • Vector display of sinusoidal alternating current • Resonance circuit • Bridge circuit 3. Basics of semiconductor devices (2 times) <ul style="list-style-type: none"> • Diode • Bipolar transistor • Field effect transistor 4. Analog electronic circuit (4 times) <ul style="list-style-type: none"> • Basic concept of electronic circuit • Amplification circuit 					
Continue to 電気電子回路入門(2)					

電気電子回路入門(2)

- Oscillation circuit
 - Operational amplifier circuit
5. Digital electronic circuit (3 times)
- Semiconductor switch element
 - Semiconductor logic circuit
 - Digital input/output interface circuit
6. Feedback (1 time)
- Q&A

[Course requirements]

- To know high school level knowledge of electric circuit, and
- To understand simple differential and integral calculus.

[Evaluation methods and policy]

The achievement will be evaluated through submission of exercises given in the class (20%), submission of report assignments (20%) and the result of final examination(60%).

Course number		U-ENG29 39132 EJ72 U-ENG29 39132 EJ10			
Course title (and course title in English)	システム工学実験（数理） System Analysis Laboratory		Instructor's name, job title, and department of affiliation	Graduate School of Informatics Assistant Professor, OOKI KENTAROU Graduate School of Informatics Assistant Professor, YAGI SATOSHI	
Target year	3rd year students or above	Number of credits	4	Year/semesters	2025/First semester
Days and periods	Thu.4,5,Fri.4,5	Class style	Experiment (Face-to-face course)	Language of instruction	Japanese
[Overview and purpose of the course]					
Systems engineering consists of three factors: (1) modeling, (2) analysis, and (3) control. Our course aims at making students have a solid grasp of systems engineering through applications of their knowledge to the two real systems: Flexible-Link Manipulator and Inverted Pendulum. Students will master control and learning theoretic methods through computer simulations and pilot experiments. Students will be divided into two groups in the first guidance class to study all two different systems in turn.					
[Course objectives]					
To understand the following theoretical knowledge through the control experiment of the real systems: -- Physics modeling based on the first principle -- Parameter identification based on statistical learning and optimization -- System stabilization and reinforcement learning Students will learn how to collect and use data according to control purposes and acquire mathematical and data science solutions to problems that may occur in real systems. To precisely express one's own understanding of the experiments through presentations and reports.					
[Course schedule and contents]					
Guidance, one time, Introduction of topics and dividing students into two groups if necessary Flexible-Link Manipulator, 13 times, 1. A recursive estimation of the frequency transfer function and parameter identification 2. Tracking step signals 3. Data-driven control and optimal control design *The specialized software MATLAB and SIMULINK are used for the experiment. Inverted Pendulum, 13 times, 1. Mathematical modeling of inverted pendulum and parameter identification 2. Designing a controller for a simulation model using reinforcement learning 3. Stabilizing an inverted pendulum using reinforcement learning *The specialized softwares Python and SIMULINK are used. Feedback, three times.

Course title (and course title in English)	統計的モデリング基礎 Foundations of Statistical Modeling		Instructor's name, job title, and department of affiliation	Graduate School of Informatics Professor, KASHIMA HISASHI	
Target year	3rd year students or above	Number of credits	2	Year/semesters	2025/First semester
Days and periods	Wed.4	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese
[Overview and purpose of the course]					
This course gives foundations of statistical data modeling methods to capture the uncertainty in target systems and to estimate the probability of future events for prediction and control.					
[Course objectives]					
The goal of this course is to learn how to choose and apply appropriate processing and modeling approaches to analyze various types of data.					
[Course schedule and contents]					
Basic ideas, 1time, Basic ideas of statistical data analysis , 1time, Regression models, 1time, Linear regression model and estimation methods Model estimation, 2times, Model estimation frameworks including maximum likelihood estimation Model selection, 2times, Model selection frameworks including information criterion Models for categorical data, 2times, Predictive models for categorical data including logistic regression Correlation and causation, 2times, Difference between correlation and causation. Methods for estimating causality. Bayesian estimation, 2times, Statistical inference methods based on Bayesian statistics Models for various data types, 2times, Models for various data types including time series and texts					
[Course requirements]					
Basic knowledge of probability and statistics					
[Evaluation methods and policy]					
Mid-term and final examinations					
[Textbooks]					
None

Course title (and course title in English)	情報セキュリティ演習 Practice in Information Security		Instructor's name, job title, and department of affiliation	Academic Center for Computing and Media Studies Professor, OKABE YASUO	
Target year	3rd year students or above	Number of credits	1	Year/semesters	2025/Intensive, First semester
Days and periods	Intensive	Class style	Seminar (Face-to-face course)	Language of instruction	Japanese
[Overview and purpose of the course]					
IDS (Intrusion Detection System), which detects attempts of unauthorized access, creates an enormous number of alarms, and it is difficult to analyze them manually. In this class, students learn the mechanism and role of IDS, and classify normal communication and attacks from IDS alarms by machine learning.					
[Course objectives]					
Students understand the role of IDS in network security. Students understand the mechanism of signature-based IDS, and can explain advantages and disadvantages of the IDS. Students understand the mechanism of intrusion detection by machine learning, and can explain advantages and disadvantages of machine learning approach.					
[Course schedule and contents]					
Guidance, 2 times, Guidance on how this class is operated, and how to use computing facility for this class. Basic knowledge on the role of IDS in network security and how machine learning can help the intrusion detection. Intrusion Detection by Signature-Based IDS, 5 times, Learn the mechanism of intrusion detection by signature-based IDS by studying open source signature-based IDS and attacks, such as correspondence between alarms issued from IDS and communications, and adding signatures to detect attacks. Intrusion Detection by Machine Learning, 7 times, Learn the method of classifying normal and malicious traffic by machine learning algorithms and public dataset for benchmarking intrusion detection performance. Presentation, 1 time, Based on the exercise, students present their methods of intrusion detection using machine learning, and discuss it with other students and instructors.					
[Course requirements]					
Students should be able to have basic knowledge of Linux operations (editing files, etc). Students should be able to write simple programs by Python.					
[Evaluation methods and policy]					
The achievement of the tasks and the content of the presentations within the class.

[Study outside of class (preparation and review)]

Students should be able to have basic knowledge of Linux operations and Python.

(Other information (office hours, etc.))

It is assumed that students will bring their own laptop computers. If you cannot bring your own, please contact the instructor in charge in advance.

*Please visit KULASIS to find out about office hours.

Course number		U-ENG29 39142 LJ55 U-ENG29 39142 LJ72 U-ENG29 39142 LJ10			
Course title (and course title in English)	情報符号理論続論 Mathematical theory of information and communications		Instructor's name, job title, and department of affiliation		Graduate School of Informatics Associate Professor, OBUCHI TOMOYUKI Graduate School of Informatics Associate Professor, HONDA JUNYA
Target year	3rd year students or above	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Tue.3	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese
[Overview and purpose of the course]					
Lectures discuss information theory, a basic theory related to storing and transmission of information. While referring to contents of the course “ Information and Coding Theory, ” lectures take up topics such as entropy of continuous-valued random variables, Gaussian communication channels, rate-distortion theory, universal coding, etc. More advanced topics are also introduced, including network information theory and more.					
[Course objectives]					
Our goal is to gain an understanding that enables appropriate responses to questions and issues regarding examples introduced during lectures, topics set for written reports, etc.					
[Course schedule and contents]					
<p>Introduction (1 class) Confirmation of basic concepts, including information entropy, mutual information, source coding, channel coding, etc.</p> <p>Information theory of continuous-valued random variables (3 classes) When considering wireless communications and measurements, a theory is needed for random variables which take continuous values. The argument will proceed by introducing differential entropy for continuous random variables, and by taking up concrete examples from Gaussian communication channels, with discussion of the information transmission capabilities of such channels.</p> <p>Rate-distortion theory (4 classes) Toleration of a certain extent of information degradation enables more efficient data compression than when no degradation is permitted. Lectures focus on rate-distortion theory, the theory underpinning information compression with degradation toleration.</p> <p>Mid-term review of learning achievement (1 class) In order to check the level of students' learning achievement, we will ask them to write some reports and give them feedback through questions and explanations about the reports.</p> <p>Information theory and statistics (4 classes) Type theory is introduced so as to discuss universal information compression, large-deviations theory, hypothesis testing, and other applications.</p>					
----- Continue to 情報符号理論続論(2) -----					

情報符号理論続論(2)

Network information theory (1 class)

Thanks to the development and spread of information and communications technologies, one-to-one information exchanges have been superseded by many-to-many information exchanges. There is a growing need, then, for discussions regarding these changes. Lectures will focus on fundamental network information theory, necessary for proceeding with such discussions.

Final review of learning achievement (1 class)

In order to check the level of students' learning achievement, we will ask them to solve problems/questions etc., related to the course, and further advice will be provided.

[Course requirements]

Prerequisites are knowledge of basic probability theory, and knowledge regarding the course "Information and Coding Theory." Knowledge of statistics and Markov chains is also desirable.

[Evaluation methods and policy]

Grading is performed both on the basis of reports submitted when necessary during the term and the final exam.

[Textbooks]

T. M. Cover and J. A. Thomas 『Elements of Information Theory, 2nd ed.』 (Wiley-Interscience) ISBN: 9780471241959 (The e-book version can be accessed from within the university. A Japanese translation is also available from Kyoritsu Shuppan Publishing Co.)

[References, etc.]

(Reference books)

Other materials will be introduced in class as necessary.

[Study outside of class (preparation and review)]

Since a prerequisite of this class is the course "Information and Coding Theory," an appropriate review of that course's contents is recommended prior to attendance. Assigned pages in the course textbook should be read before each lecture. A good way to review each class is to do the problems at the end of assigned chapters.

(Other information (office hours, etc.))

Course title (and course title in English)	プログラミング演習 (数理:H31以降入学者) Exercise on Programming			Instructor's name, job title, and department of affiliation	Graduate School of Informatics Assistant Professor,HARADA KENJI Graduate School of Informatics Assistant Professor,TSUTSU HIROKI Graduate School of Informatics Assistant Professor,YAMAGUCHI YOSHIYUKI
Target year	2nd year students or above	Number of credits	4	Year/semesters	2025/First semester
Days and periods	Mon.3,4	Class style	Seminar (Face-to-face course)	Language of instruction	Japanese
[Overview and purpose of the course]					
C言語によるプログラミング実習を行う。手続き型言語を用いたプログラミングの基礎となる、データ型・演算子・配列・関数・条件分岐・繰り返し処理・多次元配列・ファイル操作等を、数理工学での基礎的なアルゴリズム実装を題材にして学ぶ。					
[Course objectives]					
数理工学の各分野において、コンピュータを有効活用するために必要なプログラミングの知識と技術を修得する。					
[Course schedule and contents]					
第1回 ガイダンスとレポートの書き方 レポートの適切な書法と各種ツールの活用について学ぶ。					
第2回～第4回 手続き型言語入門・条件分岐と繰り返し構造と関数 基本的な文法、基本的なデータ型、基本的な関数とそれを用いたサンプルプログラミングの実行方法までを学び、プログラムの基本パーツである条件分岐や繰り返し構造、関数について、数値積分（台形公式）、1変数非線形方程式の解法（ニュートン法）などのアルゴリズム実装を題材にして学ぶ。					
第5回～第9回 多次元配列 多次元配列の使い方を、基本的な行列演算、行列固有値問題の数値解法（べき乗法）、常微分方程式の数値解法、線形方程式の数値解法（ガウスの消去法）などのアルゴリズム実装を題材に学ぶ。					
第10回～第14回 データ構造とファイル操作 構造体、ポインタ、動的メモリ確保などをソーティングや動的計画法などのアルゴリズム実装を題材に学ぶ。さらに、ファイルからのパラメータ入力や結果の出力やリダイレクトを組み合わせたコード作成についても学ぶ。					
第15回 学習到達度の確認 プログラミング技術の到達度を確認する。					
<div>Continue to プログラミング演習 (数理:H31以降入学者) (2)</div>

Course title (and course title in English)	最適化入門 Introduction to Optimization		Instructor's name, job title, and department of affiliation	Graduate School of Informatics Professor, YAMASHITA NOBUO	
Target year	1st year students or above	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Thu.4	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese
[Overview and purpose of the course]					
<p>数理最適化は、データ解析や機械学習、金融工学など様々な分野で使われる基礎的技術である。数理最適化の基本的な方法のひとつである線形計画法を中心に、数理最適化モデルの構築法や線形計画問題の解法について講述する。</p> <p>本科目は「線形計画」の科目名を変更したものである。「線形計画」を既に習得済みの場合は、本科目を習得しても卒業に必要な単位とならない。</p>					
[Course objectives]					
基本的な最適化モデルの考え方と定式化手法を習得するとともに、線形計画問題の理論的性質と解法を理解する。					
[Course schedule and contents]					
<p>数理最適化とは,1回,数理最適化の概要を紹介する。また、本授業で必要となる数学的事項、特に線形代数について復習する。</p> <p>数理最適化モデル,4回,代表的な数理最適化モデルである線形計画モデル、ネットワーク最適化モデル、非線形最適化モデル、組合せ最適化モデルを、機械学習などにあらわれる簡単な例を用いて紹介する。</p> <p>線形計画問題と基底解,2回,線形計画問題を標準形に定式化し、基底解、実行可能基底解、最適基底解などの基本的な概念を説明する。</p> <p>シンプレックス法(単体法),2回,線形計画問題の古典的な解法であるシンプレックス法(単体法)の基本的な考え方とその具体的な計算法について述べる。さらに、実行可能解を見出すための二段階法を説明する。</p> <p>双対性と感度分析,3回,線形計画問題の重要な数学的性質である双対性について述べ、さらに問題を総合的に分析し意思決定を行う際に非常に有力な手段である感度分析の考え方を説明する。</p> <p>発展的話題,2回,上回生科目である「最適化」につながる最適化の理論やアルゴリズムの考え方について述べる。</p> <p>補足とまとめ,1回,講義内容のまとめ、補足および学習到達度の確認を行う。</p>					
<div> <div></div> <div>Continue to 最適化入門(2)</div> </div>					

最適化入門(2)

[Course requirements]

線形代数の基本的な事項(行列とベクトルの掛け算, 2×2 の行列の逆行列計算など)を履修していることが望ましい.

[Evaluation methods and policy]

期末試験の成績による.

Course number		U-ENG29 39145 LJ10 U-ENG29 39145 LJ57			
Course title (and course title in English)	流体力学（数理） Fluid Dynamics		Instructor's name, job title, and department of affiliation	Graduate School of Informatics Professor, TAGUCHI Satoshi Graduate School of Informatics Associate Professor, TSUJI TETSURO	
Target year	3rd year students or above	Number of credits	2	Year/semesters	2025/Second semester
Days and periods	Tue.2	Class style	Lecture (Face-to-face course)	Language of instruction	Japanese
[Overview and purpose of the course]					
<p>流体（液体・気体）や弾性体をはじめとする連続体の力学的挙動を理解するための入門として，流体力学の初歩について講義する。内容は流体力学に焦点をあてるが弾性体についても多くの事項は共通である。</p>					
[Course objectives]					
<p>流体の変形および運動を解析するための基礎的事項および数理的手法を習得すること。とくに流体方程式とその解析における微分積分学の役割を理解し，初等的な応用ができるようになること。完全流体、粘性流体の物理的および数理的特徴に関する理解を深めること</p>					
[Course schedule and contents]					
<p>第1回 連続体の概念および物質微分と加速度 連続体の概念について説明し，連続体を取り扱う方法の大枠を学ぶ。連続体の記述としてラグランジュ的記述とオイラー的記述について理解する。物質微分（ラグランジュ微分）を導入する。流体における速度と加速度について学ぶ。</p> <p>第2回 質量保存則と輸送定理 質量保存則である連続の式を学ぶ。またレイノルズの輸送定理をもとに、連続の式の理解を深める。</p> <p>第3回 応力と運動方程式 運動方程式を導く準備として応力を学ぶ。その物理的意味，表現法（応力ベクトル，応力テンソル）について学ぶ。</p> <p>第4回 流体の運動方程式とエネルギー式 ニュートンの運動法則から応力テンソルを用いた流体の運動方程式を導く。また熱流を導入することでエネルギー方程式を定式化する。3つの保存則（連続の式，運動方程式，エネルギー方程式）を概観する。静力学の応用としてアルキメデスの原理を導く。</p> <p>第5回 完全流体の動力学（１） 完全流体の基礎事項について学ぶ。オイラー方程式からベルヌーイの定理を導出する。ベルヌーイの定理の応用についても学ぶ。</p> <p>第6回 完全流体の動力学（２） 完全流体の運動の基礎としてケルビンの循環定理をオイラー方程式にもとづいて示す。さらに渦管</p>					
<div style="text-align: right;">Continue to 流体力学（数理）(2)</div>					

流体力学（数理）(2)

に関するヘルムホルツの渦定理を学び、完全流体の特徴を理解する。

第7回 流体の局所運動の表現

ナビエ・ストークス方程式を導く準備として、流体の局所変形を記述するために歪み速度テンソルを導入し、その意味について学ぶ。連続体の局所運動が局所変形と局所回転の合成であることを学ぶ。

第8回 ナビエ・ストークス方程式

ニュートン流体を定義する。ニュートン流体における歪み速度テンソルと応力テンソルの関係式について説明し、圧力の意味付けおよび粘性係数の定義と意味について説明し、粘性流体の支配方程式であるナビエ・ストークス方程式を導く。

第9回 ナビエ・ストークス方程式によって表される代表的な流れ（１）

ナビエ・ストークス方程式の厳密解としてクエット流やポワズイユ流といった基本的な流れを学ぶ。

第10回 ナビエ・ストークス方程式によって表される代表的な流れ（２）

代表的な非定常流の一つとしてストークス問題（レイリー問題）について学ぶ。この問題は空間1次元熱方程式の非定常境界値問題でもある。

第11回 レイノルズの相似則・ストークス近似とStokeslet

レイノルズの力学的相似則について学ぶ。粘性流体の相似パラメータであるレイノルズ数を学ぶ。レイノルズ数が小さいときに有効なストークス近似の基礎事項を学ぶ。

第12回 球を過ぎる流れとストークスの抵抗則

ストークス方程式をもとに代表的な軸対称流れである球を過ぎる流れを扱う。ストークスの抵抗則を流体方程式から導出することを学ぶ。

第13回 圧縮性の効果：音波

圧縮性流体の代表的現象として音波について学ぶ。圧縮性オイラー方程式から波動方程式を導き音波の基礎事項について学ぶ。

第14回 総括

講義の振り返りを行う。連続体理論の優れたところを概観するとともにその限界についても述べる。時間が許せば演習の解説も行う。

<<期末試験>>

第15回 フィードバック

履修者の理解度や当該年度の講義の進み具合を考慮して、一部の内容を変更する場合がある。

[Course requirements]

学部1、2 回生で学修する程度の微分積分学、線形代数学、ベクトル解析、および力学の知識は仮定する。

Continue to 流体力学（数理）(3)

流体力学（数理）(3)

[Evaluation methods and policy]

到達目標に対する達成度を課題レポート（40％）と定期試験（60％）の結果に基づいて評価する。
詳細は講義開始時に説明する。

[Study outside of class (preparation and review)]					
各学生の研究課題に応じて教員が指示する。					
(Other information (office hours, etc.))					
*Please visit KULASIS to find out about office hours.					

Course number		U-ENG29 49991 GJ12 U-ENG29 49991 GJ10 U-ENG29 49991 GJ11			
Course title (and course title in English)	特別研究 1 (数理) Graduation Thesis 1		Instructor's name, job title, and department of affiliation	Graduate School of Informatics Professor, AOYAGI TOSHIO	
Target year	4th year students or above	Number of credits	2	Year/semesters	2025/Intensive, First semester
Days and periods	Intensive	Class style	Seminar (Face-to-face course)		Language of instruction Japanese
[Overview and purpose of the course]					
教員の指導のもと、情報学（数理工学）に関連する研究課題を設定し、研究動向を把握したうえで、その課題解決力の向上を目指す。					
[Course objectives]					
研究課題の設定、関連研究の調査、研究計画の立案等を通じて、研究活動に必要な力を向上させる。					
[Course schedule and contents]					
研究課題の設定、関連研究の調査、研究計画の立案等について、教員が指導する。各学生の研究課題の特性、研究活動の進捗状況に応じて計画するが、授業計画の目安は以下のようになる。					
<div> 第 1 ～ 4 回 研究課題の設定 第 5 ～ 9 回 関連研究の調査 第 10 ～ 11 回 研究計画の立案 第 12 ～ 15 回 先行研究の調査等 </div>					
[Course requirements]					
数理工学コースの特別研究着手に必要な条件を満たしていること。					
[Evaluation methods and policy]					
一連の研究活動の実施状況に基づいて行う。					
[Textbooks]					
各学生の研究課題に応じて教員が指示する。					
[References, etc.]					
(Reference books) 各学生の研究課題に応じて教員が指示する。					
[Study outside of class (preparation and review)]					
各学生の研究課題に応じて教員が指示する。					
(Other information (office hours, etc.))

[Overview and purpose of the course]							
教員の指導のもと、特別研究 1 で設定した課題について研究を行い、課題解決力を向上させるとともに、研究成果を特別研究報告書としてまとめ、特別研究試問会で発表する。							
[Course objectives]							
研究の実施、特別研究報告書の作成、特別研究試問会での発表等を通じて、研究活動に必要な力を向上させる。							
[Course schedule and contents]							
研究の実施、報告書の作成、試問会での発表準備等について、教員が指導する。各学生の研究課題の特性、研究活動の進捗状況に応じて計画するが、授業計画の目安は以下のようになる。							
第 1 ～ 1 2 回 研究の実施 第 1 3 ～ 1 4 回 報告書の作成 第 1 5 回 試問会での発表準備							
[Course requirements]							
「特別研究 1 」を修得済みであること。							
[Evaluation methods and policy]							
一連の研究活動の実施状況、特別研究報告書の内容、特別研究試問会の発表内容に基づいて行う。							
[Textbooks]							
各学生の研究課題に応じて教員が指示する。							
[References, etc.]							
(Reference books) 各学生の研究課題に応じて教員が指示する。
