

SYLLABUS

2012

[C] Advanced Engineering Course Program

Kyoto University, Graduate School of Engineering

[C] Advanced Engineering Course Program

Civil and Earth Resources Engineering

10F251 Exercise on Project Planning	1
10U051 Integrated Seminar on Infrastructure Engineering A	2
10U052 Integrated Seminar on Infrastructure Engineering B	3
10U055 Seminar on Infrastructure Engineering A	4
10U056 Seminar on Infrastructure Engineering B	5
10U059 Internship on Infrastructure Engineering	6
10F063 Practice in Infrastructure Engineering	7
10U060 ORT on Infrastructure Engineering	8
10U063 Practice in Advanced Infrastructure Engineering	9
10F003 Continuum Mechanics	10
10F067 Structural Stability	11
10F068 Material and Structural System & Management	12
10F261 Earthquake Engineering/Lifeline Engineering	13
10W001 Infrastructural Structure Engineering	14
10F009 Structural Design	15
10F010 Bridge Engineering	16
10A019 Concrete Structural Engineering	17
10F227 Structural Dynamics	18
10F263 Seismic Engineering Exercise	19
10F415 Ecomaterial and Environment-friendly Structures	20
10F089 Infrastructure Safety Engineering	21
10F075 Hydraulics & Turbulence Mechanics	22
10A216 Hydrology	23
10F019 River Engineering and River Basin Management	24
10A040 Sediment Hydraulics	25
10F464 Hydrologic Design and Management	26
10F245 Open Channel Hydraulics	27
10F462 Coastal Wave Dynamics	28
10F267 Hydro-Meteorologically Based Disaster Prevention	29
10A222 Water Resources Systems	30
10F077 River basin management of flood and sediment	31
10F269 Coastal and Urban Water Disasters Engineering	32
10F466 Basin Environmental Disaster Mitigation	33
10F011 Computational Fluid Dynamics	34
10F065 Hydraulic Engineering for Infrastructure Development and Management	35
10F100 Applied Hydrology	36
10F103 Case Studies Harmonizing Disaster Management and Environment Conservation	37
10F106 Integrated Disasters and Resources Management in Watersheds	38
10F025 Geomechanics	39

10K016 Computational Geotechnics	40
10F057 Principles of Geotechnics	41
10F237 Management of Geotechnical Infrastructures	42
10F241 Construction of Geotechnical Infrastructures	43
10F242 Geo-Risk Engineering	44
10F405 Fundamental Geofront Engineering	45
10F407 Environmental Design in Geo-front Engineering	46
10A055 Environmental Geotechnics	47
10F023 Numerical Methods in Geomechanics	48
10F109 Disaster Prevention through Geotechnics	49
10X313 Governance for Regional and Transportation Planning	50
10F203 Public Finance	51
10F207 Urban Environmental Policy	52
10F213 City Logistics	53
10F219 Quantitative Methods for Behavioral Analysis	54
10F215 Intelligent Transportation Systems	55
10A806 Advanced Geoinformatics	56
10A808 Civic and Landscape Design	57
10F223 Risk Management Theory	58
10X333 Disaster Risk Management	59
693287 Disaster Information	60
10A845 Theory & Practice of Environmental Design Research	61
10A402 Resources Development Systems	62
10F053 Applied Mathematics in Civil & Earth Resources Engineering	63
10K008 Computational Mechanics and Simulation	64
10A405 Environmental Geosphere Engineering	65
10F069 Modelling of Geology	66
10F071 Applied Elasticity for Rock Mechanics	67
10F073 Fundamental Theories in Geophysical Exploration	68
10F087 Design of Underground Structures	69
10A420 Lecture on Exploration Geophysics	70
10F085 Measurement in the earth's crust environment	71
10F039 Time Series Analysis	72
10F086 Energy System Management	73
10F081 Infrastructure Creation Engineering	74
10X311 Urban Infrastructure Management	75
10F112 Introduction to Sustainability/ Survivability Science	76
693291 Emergency Management Systems	77
10F201 Information Technology for Urban Society	78
10Z001 Urban Transport Policy	79
10Z002 Policy for Low-Carbon Society	80
10Z003 Urban Transport Management	81
10Z004 Policy for Low-Carbon Society, Advanced.	82
10Z005 Urban Transport Management, Advanced.	83

10Z006 Capstone Project Practice	84
10Z063 Dialog/Liveable Cities	85
10Z064 Dialog/Design of Liveable Cities	86
10Z065 Basic Civil Engineering & Health Sciences I	87
10Z066 Basic Civil Engineering & Health Sciences II	88
10Z067 Policy for Liveable Cities	89
10Z068 Methodology for Liveable Cities	90
10Z058 Seminar on Liveable Cities A	91
10Z059 Seminar on Liveable Cities B	92
10Z069 Disaster and Health Risk Management	93
10Z070 KANSEI Urban Spaces	94
10Z062 Exercise on Project Planning	95
10F381 Disaster and Health Risk Management for Liveable City	96

Urban Management

10F201 Information Technology for Urban Society	97
10F251 Exercise on Project Planning	98
10F253 Capstone Project	99
10U201 Integrated Seminar on Urban Management A	100
10U203 Integrated Seminar on Urban Management B	101
10F257 Seminar on Urban Management A	102
10F259 Seminar on Urban Management B	103
10F150 Long-Term Internship	104
10U210 Practice in Urban Management	105
10U216 ORT on Urban Management	106
10U212 Practice in Advanced Urban Management	107
10F003 Continuum Mechanics	108
10F067 Structural Stability	109
10F068 Material and Structural System & Management	110
10F261 Earthquake Engineering/Lifeline Engineering	111
10W001 Infrastructural Structure Engineering	112
10F009 Structural Design	113
10F010 Bridge Engineering	114
10A019 Concrete Structural Engineering	115
10F227 Structural Dynamics	116
10F263 Seismic Engineering Exercise	117
10F415 Ecomaterial and Environment-friendly Structures	118
10F089 Infrastructure Safety Engineering	119
10F075 Hydraulics & Turbulence Mechanics	120
10A216 Hydrology	121
10F019 River Engineering and River Basin Management	122
10A040 Sediment Hydraulics	123
10F464 Hydrologic Design and Management	124
10F245 Open Channel Hydraulics	125

10F462 Coastal Wave Dynamics	126
10F267 Hydro-Meteorologically Based Disaster Prevention	127
10A222 Water Resources Systems	128
10F077 River basin management of flood and sediment	129
10F269 Coastal and Urban Water Disasters Engineering	130
10F466 Basin Environmental Disaster Mitigation	131
10F011 Computational Fluid Dynamics	132
10F065 Hydraulic Engineering for Infrastructure Development and Management	133
10F100 Applied Hydrology	134
10F103 Case Studies Harmonizing Disaster Management and Environment Conservation	135
10F106 Integrated Disasters and Resources Management in Watersheds	136
10F025 Geomechanics	137
10K016 Computational Geotechnics	138
10F057 Principles of Geotechnics	139
10F237 Management of Geotechnical Infrastructures	140
10F241 Construction of Geotechnical Infrastructures	141
10F242 Geo-Risk Engineering	142
10F405 Fundamental Geofront Engineering	143
10F407 Environmental Design in Geo-front Engineering	144
10A055 Environmental Geotechnics	145
10F023 Numerical Methods in Geomechanics	146
10F109 Disaster Prevention through Geotechnics	147
10X313 Governance for Regional and Transportation Planning	148
10F203 Public Finance	149
10F207 Urban Environmental Policy	150
10F213 City Logistics	151
10F219 Quantitative Methods for Behavioral Analysis	152
10F215 Intelligent Transportation Systems	153
10A806 Advanced Geoinformatics	154
10A808 Civic and Landscape Design	155
10F223 Risk Management Theory	156
10X333 Disaster Risk Management	157
693287 Disaster Information	158
10A845 Theory & Practice of Environmental Design Research	159
10A402 Resources Development Systems	160
10F053 Applied Mathematics in Civil & Earth Resources Engineering	161
10K008 Computational Mechanics and Simulation	162
10A405 Environmental Geosphere Engineering	163
10F069 Modelling of Geology	164
10F071 Applied Elasticity for Rock Mechanics	165
10F073 Fundamental Theories in Geophysical Exploration	166
10F087 Design of Underground Structures	167
10A420 Lecture on Exploration Geophysics	168
10F085 Measurement in the earth's crust environment	169

10F039 Time Series Analysis	170
10F086 Energy System Management	171
10F081 Infrastructure Creation Engineering	172
10X311 Urban Infrastructure Management	173
10F112 Introduction to Sustainability/ Survivability Science	174
693291 Emergency Management Systems	175
10Z001 Urban Transport Policy	176
10Z002 Policy for Low-Carbon Society	177
10Z004 Policy for Low-Carbon Society, Advanced.	178
10Z005 Urban Transport Management, Advanced.	179
10Z006 Capstone Project Practice	180
10Z063 Dialog/Liveable Cities	181
10Z064 Dialog/Design of Liveable Cities	182
10Z065 Basic Civil Engineering & Health Sciences I	183
10Z066 Basic Civil Engineering & Health Sciences II	184
10Z067 Policy for Liveable Cities	185
10Z068 Methodology for Liveable Cities	186
10Z058 Seminar on Liveable Cities A	187
10Z059 Seminar on Liveable Cities B	188
10Z069 Disaster and Health Risk Management	189
10Z070 KANSEI Urban Spaces	190
10Z062 Exercise on Project Planning	191
10F381 Disaster and Health Risk Management for Liveable City	192

Urban and Environmental Engineering

10F439 Environmental Risk Analysis	193
10A632 Urban Metabolism Engineering	194
10F454 Systems Approach on Sound Material Cycles Society	195
10F441 Water Quality Engineering	196
10F234 Water Sanitary Engineering	197
10F461 Nuclear Environmental Engineering, Adv.	198
10F446 Atmospheric and Global Environmental Engineering, Adv.	199
10F400 Seminar on Urban and Environmental Engineering A	200
10F402 Seminar on Urban and Environmental Engineering B	201
10U401 Advanced Seminar on Urban and Environmental Engineering A	202
10U403 Advanced Seminar on Urban and Environmental Engineering B	203
10A643 Environmental Microbiology, Adv.	204
10A626 Advanced Environmental Health	205
10W424 Environmental-friendly Technology for Sound Material Cycle	206
10A622 Geohydro Environment Engineering. Adv.	207
10X321 Lecture on Environmental Management Leader	208
10F456 New Environmental Engineering I, Advanced	209
10F458 New Environmental Engineering II, Advanced	210
10F468 Environmental Organic Micropollutants Analysis Lab.	211

10F470 Advanced Environmental Engineering Lab.	212
10F472 Seminar on Practical Issues in Urban and Environmental Engineering	213
10F449 Exercises in Urban and Environmental Engineering A	214
10F450 Exercises in Urban and Environmental Engineering B	215
10F475 ORT on Urban and Environmental Engineering	216
10D051 Frontiers in Modern Science & Technology	217
10D040 Exercise in Practical Scientific English	218

**Architecture and Architectural Engineering (Advanced Engineering Course Program
(3yr Course))**

10Q021 Advanced Theory of Architecture and Architectural Engineering I	219
10Q022 Advanced Theory of Architecture and Architectural Engineering II	220
10Q005 Seminar on Architectural Design and Planning I	221
10Q006 Seminar on Architectural Design and Planning II	222
10Q017 Seminar on Architectural Design and Planning III	223
10Q018 Seminar on Architectural Design and Planning IV	224
10Q008 Seminar on Structural Engineering of Buildings I	225
10Q009 Seminar on Structural Engineering of Buildings II	226
10Q015 Seminar on Structural Engineering of Buildings III	227
10Q016 Seminar on Structural Engineering of Buildings IV	228
10Q011 Seminar on Environmental Engineering I	229
10Q012 Seminar on Environmental Engineering II	230
10Q013 Seminar on Environmental Engineering III	231
10Q014 Seminar on Environmental Engineering IV	232
10D051 Frontiers in Modern Science & Technology	233
10D040 Exercise in Practical Scientific English	234
10i041 Professional Scientific Presentation Exercises (English lecture)	235
10i042 Advanced Engineering and Economy (English lecture)	236
10i043 Leadership and Communication in Multi-Cultural Project (English lecture)	237
10i044 Inter-Engineering Project (English lecture)	238

Mechanical and Architectural Engineering

10G001 Applied Numerical Methods	239
10G003 Solid Mechanics, Adv.	240
10G005 Thermal Science and Engineering	241
10G007 Introduction to Advanced Fluid Dynamics	242
10G009 Quantum Condensed Matter Physics	243
10G011 Design and Manufacturing Engineering	244
10G013 Dynamic Systems Control Theory	245
10G057 Engineering Ethics and Management of Technology	246
10G017 Fracture Mechanics	247
10Q607 Materials Strength at Elevated Temperatures	248
10G019 Molecular Fluid Dynamics	249
10V010 Seminar on Molecular Gas Dynamics	250

10B628 Physics of Neutron Scattering	251
10B407 Robotics	252
10G023 Vibration and Noise Control	253
10G025 Mechanical Functional Device Engineering	254
10G029 Patent Seminar	255
10G036 Basic Seminar on Mechanical Engineering and Science A	256
10G037 Basic Seminar on Mechanical Engineering and Science B	257
10G031 Seminar on Mechanical Engineering and Science A	258
10G032 Seminar on Mechanical Engineering and Science B	259
10G041 Advanced Finite Element Methods	260
10B418 Strength of Advanced Materials	261
10B622 Thermophysics for Thermal Engineering	262
10G039 Transport Phenomena	263
10G021 Engineering Optics and Spectroscopy	264
10G403 Optimum System Design Engineering	265
10B631 High Energy Radiation Effects in Solid	266
10B634 Advanced Experimental Techniques and Analysis in Engineering Physics	267
10Q807 Theory for Design Systems Engineering	268
10B828 High Precision Engineering	269
10V003 Biomechanics	270
10D450 Biomolecular Dynamics	271
10W603 Introduction to Biomedical Engineering	272
10B440 Environmental Fluid Dynamics	273
10Q402 Turbulence Dynamics	274
10G055 Crystallography of Metals	275
10Q610 Seminar: Dynamics of Atomic Systems	276
10V007 Neutron Science Seminar 1	277
10V008 Neutron Science Seminar II	278
10K013 Advanced Mechanical Engineering	279
10K004 New Engineering Materials, Adv. (English lecture)	280
10G045 Complex Mechanical Systems	281
693518 Theory of Symbiotic Systems	282
693510 Control Theory for Mechanical Systems	283
693513 Theory of Human-Machine Systems	284
693431 Dynamical Systems,Advanced	285
653316 Heat Engine Systems	286
653322 Combustion Science and Engineering	287
10V012 Advanced Exercise in Mechanical Engineering and ScienceA	288
10V013 Advanced Exercise in Mechanical Engineering and ScienceB	289
10V014 Advanced Exercise in Mechanical Engineering and ScienceC	290
10V015 Advanced Exercise in Mechanical Engineering and ScienceD	291
10V016 Advanced Exercise in Mechanical Engineering and ScienceE	292
10V017 Advanced Exercise in Mechanical Engineering and ScienceF	293
10G049 Internship M	294

10V019 Internship DS	295
10V020 Internship DL	296
10V025 Seminar of Complex Mechanical Engineering,A	297
10V027 Seminar of Complex Mechanical Engineering,B	298
10V029 Seminar of Complex Mechanical Engineering,C	299
10V031 Seminar of Complex Mechanical Engineering,D	300
10V033 Seminar of Complex Mechanical Engineering,E	301
10V035 Seminar of Complex Mechanical Engineering,F	302
10G051 Experiments on Mechanical Engineering and Science,Adv. I	303
10G053 Experiments on Mechanical Engineering and Science,Adv. II	304

Micro Engineering

10G001 Applied Numerical Methods	305
10G003 Solid Mechanics, Adv.	306
10G005 Thermal Science and Engineering	307
10G007 Introduction to Advanced Fluid Dynamics	308
10G009 Quantum Condensed Matter Physics	309
10G011 Design and Manufacturing Engineering	310
10G013 Dynamic Systems Control Theory	311
10G057 Engineering Ethics and Management of Technology	312
10G203 Micro Process and Material Engineering	313
10G205 Microsystem Engineering	314
10G209 Multi physics Numerical Analysis	315
10B619 Quantum Theory of Condensed Matter	316
10G211 Solid State Physics 1	317
10G223 Basic Seminar on Micro Engineering A	318
10G224 Basic Seminar on Micro Engineering B	319
10G216 Seminar on Micro Engineering A	320
10G217 Seminar on Micro Engineering B	321
10B418 Strength of Advanced Materials	322
10G214 Precision Measurement and Machining	323
10V003 Biomechanics	324
10D450 Biomolecular Dynamics	325
10V201 Introduction to the Design and Implementation of Micro-Systems	326
10G041 Advanced Finite Element Methods	327
10W603 Introduction to Biomedical Engineering	328
10B617 Quantum Theory of Molecular Physics	329
10Q408 Quantum Theory of Chemical Physics	330
10V205 Solid State Physics 2	331
10K013 Advanced Mechanical Engineering	332
10K004 New Engineering Materials, Adv. (English lecture)	333
10G045 Complex Mechanical Systems	334
10V210 Advanced Exercise in Micro Engineering A	335
10V211 Advanced Exercise in Micro Engineering B	336

10V212 Advanced Exercise in Micro Engineering C	337
10V213 Advanced Exercise in Micro Engineering D	338
10V214 Advanced Exercise in Micro Engineering E	339
10V215 Advanced Exercise in Micro Engineering F	340
10G049 Internship M	341
10V019 Internship DS	342
10V020 Internship DL	343
10V025 Seminar of Complex Mechanical Engineering,A	344
10V027 Seminar of Complex Mechanical Engineering,B	345
10V029 Seminar of Complex Mechanical Engineering,C	346
10V031 Seminar of Complex Mechanical Engineering,D	347
10V033 Seminar of Complex Mechanical Engineering,E	348
10V035 Seminar of Complex Mechanical Engineering,F	349
10G228 Experiments on Micro Engineering, Adv. II	350
10G226 Experiments on Micro Engineering, Adv. I	351

Aeronautics and Astronautics

10G001 Applied Numerical Methods	352
10G003 Solid Mechanics, Adv.	353
10G005 Thermal Science and Engineering	354
10G007 Introduction to Advanced Fluid Dynamics	355
10G009 Quantum Condensed Matter Physics	356
10G011 Design and Manufacturing Engineering	357
10G013 Dynamic Systems Control Theory	358
10G057 Engineering Ethics and Management of Technology	359
10G401 Jet Engine Engineering	360
10G405 Propulsion Engineering, Adv.	361
10G408 Hydrodynamic Stability Theory	362
10G409 Aerospace Systems and Control	363
10G411 Fluid Dynamics for Aeronautics and Astronautics	364
10C430 Advanced Flight Dynamics of Aerospace Vehicle	365
10G230 Dynamics of Solids and Structures	366
10G423 Transport Phenomena in Reactive Flows	367
10G041 Advanced Finite Element Methods	368
10V401 Seminar on Engineering Science of Ionized Gases	369
10V411 Seminar on Mathematical Fluid Mechanics	370
10V405 Seminar on Fluid Dynamics for Aeronautics and Astronautics	371
10R410 Seminar on Aerospace systems	372
10R419 Seminar on Systems and Control	373
10V407 Seminar on Optimum System Design Engineering	374
10V409 Thermal Engineering Seminar	375
10V413 Seminar on Mechanics of Functional Solids and Structures	376
10V010 Seminar on Molecular Gas Dynamics	377
10G045 Complex Mechanical Systems	378

10K013 Advanced Mechanical Engineering	379
693431 Dynamical Systems,Advanced	380
693410 Mathematical Analysis,Advanced	381
693320 Topics in Nonlinear Dynamics A	382
693321 Topics in Nonlinear Dynamics B	383
10M226 Meteorology I	384
10M227 Meteorology II	385
10V019 Internship DS	386
10V020 Internship DL	387
10V025 Seminar of Complex Mechanical Engineering,A	388
10V027 Seminar of Complex Mechanical Engineering,B	389
10V029 Seminar of Complex Mechanical Engineering,C	390
10V031 Seminar of Complex Mechanical Engineering,D	391
10V033 Seminar of Complex Mechanical Engineering,E	392
10V035 Seminar of Complex Mechanical Engineering,F	393
10G420 Experiments and Exercises in Aeronautics and Astronautics II	394
10G418 Experiments and Exercises in Aeronautics and Astronautics I	395

Nuclear Engineering

10C070 Introduction to Quantum Science	396
10C072 Introduction to Advanced Nuclear Engineering	397
10C004 Quantum Field Theory	398
10C074 Quantum Science	399
10C013 Nuclear Materials	400
10C014 Nuclear Fuel Cycle 1	401
10C015 Nuclear Fuel Cycle 2	402
10C017 Radiation Physics and Engineering	403
10C018 Neutron Science	404
10C031 Quantum Manipulation Technology	405
10C076 Fundamentals of Magnetohydrodynamics	406
10C034 Nuclear Energy Conversion and Reactor Engineering	407
10C037 Multiphase Flow Engineering and Its Application	408
10C038 Physics of Fusion Plasma	409
10C078 Hybrid Advanced Accelerator Engineering	410
10C080 Nuclear Reactor Safety Engineering	411
10C082 Applied Neutron Engineering	412
10C046 Radiation Biology and Medicine	413
10C047 Radiation Medical Physics	414
10C084 Nuclear Engineering, Adv.	415
10C068 Nuclear Engineering Application Experiments	416
10R001 Quantum Beam Science, Adv.	417
10R004 Quantum Physics, Adv.	418
10R013 Nonlinear Physics in Fusion Plasmas	419
10C086 Introduction to Nuclear Engineering 1	420

10C087 Introduction to Nuclear Engineering 2	421
10W620 Radiation Measurement for Medicine	422
10K001 Introduction to Advanced Material Science and Technology (English lecture)	423
10K004 New Engineering Materials, Adv. (English lecture)	424
10D051 Frontiers in Modern Science & Technology	425
10D040 Exercise in Practical Scientific English	426
10C050 Internship M	427
10C063 Experiments and Exercises on Nuclear Engineering, Adv. I	428
10C064 Experiments and Exercises on Nuclear Engineering, Adv. II	429
10C089 Seminar on Nuclear Engineering A	430
10C090 Seminar on Nuclear Engineering B	431
10R017 Engineering Internship D	432
10R019 Seminar on Nuclear Engineering, Adv. A	433
10R021 Seminar on Nuclear Engineering, Adv. B	434
10R023 Seminar on Nuclear Engineering, Adv. C	435
10R025 Seminar on Nuclear Engineering, Adv. D	436
10R027 Seminar on Nuclear Engineering, Adv. E	437
10R029 Seminar on Nuclear Engineering, Adv. F	438

Materials Science and Engineering

10C259 Random Structure Materials	439
10C205 Thermodynamics for Materials Science, Adv. A	440
10C206 Thermodynamics for Materials Science, Adv. B	441
10C210 Material and Chemical Information Analysis	442
10C287 Nano-Structural Properties of Materials	443
10C213 Physical Properties of Thin Films	444
10C267 Ceramic Materials Science	445
10C263 Physical Properties of Crystals Adv.	446
10C271 Magnetism and magnetic materials	447
10C230 Nanoscopic Assembly and Integration of Materials	448
10C272 Introduction to Composite Materials in Nanoscale	449
10C234 Physics of Mesoscopic Materials	450
10C289 Advanced Structural Metallic Materials	451
10K001 Introduction to Advanced Material Science and Technology (English lecture)	452

Exercise on Project Planning

自主企画プロジェクト

【Code】 10F251 【Course Year】 Master 1st 【Term】 1st+2nd term

【Class day & Period】 1st term: Thu 3rd, 2nd term: Wed 5th 【Location】 C1-192 【Credits】 2

【Restriction】 No Restriction 【Lecture Form(s)】 Exercise 【Language】 Japanese 【Instructor】 Related instructors

【Course Description】 The purpose of this seminar is to bring out the self-initiative, the planning ability, the creativity of students. From project and to practice, the students set up the goals of projects, go ahead with the projects by themselves, and finally make the presentations of project results. Specifically, about the internship activities in enterprises, the training activities in enterprises or universities at home and abroad, the planning and operation of collaborative projects with citizen, the student makes the perfect plans including the purposes, the ways, the results and so on. For a final, the students do practice, they write the reports and make the presentations about the project results.

【Grading】 Planning, implementation of project and reports are comprehensively evaluated.

【Course Goals】 Goals are cultivating ability for self-initiative, planning and creativity.

Seminar on Infrastructure Engineering A

社会基盤工学セミナー A

【Code】 10U055 【Course Year】 Master Course 【Term】 1st+2nd term

【Class day & Period】 1st term: Wed&Fri 5th, 2nd term: Mon&Tue 5th 【Location】 【Credits】 4 【Restriction】

【Lecture Form(s)】 Seminar 【Language】 Japanese 【Instructor】

【Course Description】 This lecture focuses on the movement and content of the most advanced research at home and abroad on Infrastructure Engineering. The students are individually instructed about the planning of study schedule, the way of collecting data, the way of doing the research and summarizing the results of research.

【Grading】 Points are allocated for research activities such as a presentation at laboratory seminars, domestic conferences, international conferences, research paper presentation etc. Students are required to obtain the points in total which are more than predefined points.

Continuum Mechanics

連続体力学

【Code】 10F003 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Mon 2nd

【Location】 C1-192 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 Japanese

【Instructor】 Kunitomo Sugiura, Tomomi Yagi

【Course Description】 Continuum mechanics is a unified basis for solid mechanics and fluid mechanics. The aims of this course are to introduce the continuum mechanics from their basics to the some forms of constitutive law and also to provide students with mathematical way of understanding the continuum mechanics. This course contains the fundamentals of vector and tensor calculus, the basic equations of continuum mechanics, the tensor expressions of elastic problems and further applications.

【Grading】 Assessment will be based on exam, report and attendance.

【Course Goals】 Fundamental theorems on structural mechanics and design will be learned, and ability to judge the proprieties of each computational structural analysis will be acquired.

【Course Topics】

Theme	Class number of times	Description
Introductions	1	
Matrices and tensors	1	
differential and integral calculus of tensors	1	
Kinematics	1	- Material derivative
Deformation and strain	2	- Strain tensors - Compatibility conditions
Stress and equilibrium equation	1	
Conservation law and governing equation	1	
Constitutive equation of idealized material	1	
Elastic-plastic behavior and constitutive equation of construction materials	1	
Boundary value problem	1	
Variational principle	1	
Various kinds of numerical analyses	2	
Confirmation of the attainment level of learning	1	

【Textbook】

【Textbook(supplemental)】

【Prerequisite(s)】 Basic knowledge for structural mechanics, soil mechanics and fluid mechanics are required.

【Instructor】Hiromichi SHIRATO, Kunitomo SUGIURA

【Course Description】Fundamental concept of static and dynamic stability of large-scale structures such as bridges is to be introduced in addition to the way to keep/improve their safety and to evaluate their performance. Basic concept of structural stability and its application and technical subjects to improve safety will be lectured systematically. Furthermore, the practical solutions to the subjects are to be introduced to assure the safety of structures.

【Grading】Grading will be evaluated by written examination, reports and attendance.

【Course Goals】The class aims to cultivate the understanding of static and dynamic stability problems for structural system and make understand the methodology to clarify the limit state. To get knowledge on countermeasures to assure the stability which is applicable to practical design and manufacturing will be also required.

【Course Topics】

Theme	Class number of times	Description
Elastic Stability under Static Loading	7	Stability of Structures and Failures Basis of Structural Stability Elastic Buckling of Columns Elastic Buckling of Beams & Frames Elastic Buckling of Plates Elasto-plastic Buckling Buckling Analysis
Basic theory of dynamic stability and its application	7	The stability around the equilibrium points based on the state equation of motion in which the nonlinearity of external, damping and restraining forces are taken into account. Wind-induced vibration of a square prism (Gallopings) and 1dof system with nonlinear spring will be introduced as practical examples. Chaotic motion of a pendulum subjected to periodic external force is also explained as an introduction of chaos theory.
Achievement Check	1	Summary and Achievement Check.

【Textbook】Not specified.

【Textbook(supplemental)】Introduced in class if necessary.

【Prerequisite(s)】It is desired for participants to master structural mechanics, continuum mechanics, mathematical analysis as well as vibration theory.

Material and Structural System & Management

材料・構造マネジメント論

【Code】 10F068 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Wed 2nd

【Location】 C1-173 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Relay Lecture

【Language】 English 【Instructor】 Toyoaki Miyagawa, Hirotaka Kawano, Atsushi Hattori, Takashi Yamamoto

【Course Description】 With regard to the maintenance of concrete structures, the deterioration prediction procedures in material and structural properties are discussed based on durability and deterioration processes of concrete structures. Repair materials and methods are also introduced. Note: strengthening materials and methods are discussed in Concrete Structural Engineering, provided in the second semester. In the later half of this lecture, structures are focused as groups rather than an individual structure to understand the difference between asset management and maintenance. By taking into consideration the economic aspect and human resources aspect as well as the physical aspect, the flow of the asset management for structures' groups with view points of the life cycle cost and the budget is provided.

【Grading】 Reports ,presentations and other activities are inclusively considered.

【Course Goals】 To understand the maintenance for a single structure and the asset management for structure's group.

【Course Topics】

Theme	Class number of times	Description
1. Outline of maintenance for concrete structures	1	
2. Deterioration mechanisms of concrete structures and deterioration prediction	4	
3. Repair materials and methods for concrete structures	1	
4. Maintenance and asset management	2	
5. Maintenance for structures' group	2	
6. Management for structures' group	2	
7. Presentations and discussions	3	

【Textbook】 Not specified. Some materials may be provided.

【Textbook(supplemental)】 Not specified.

【Prerequisite(s)】 Basic knowledge on Construction Materials and Concrete Engineering.

【Web Sites】

【Additional Information】 Positive presence in the lecture is expected by joining discussions for example.

Infrastructural Structure Engineering

社会基盤構造工学

【Code】 10W001 【Course Year】 Master and Doctor Course 【Term】 2nd term 【Class day & Period】 Thu 2nd

【Location】 C1-172 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Relay Lecture

【Language】 English 【Instructor】 Related Faculty members

【Course Description】 Structural engineering problems related to planning, design, construction and maintenance of the infrastructures are discussed. Topics concerning structural engineering and management are widely taken up including latest advanced knowledge and technology, future view and/or international topics. Special lectures by extramural lecturers are carried out if necessary.

【Grading】 Coursework will be graded based on the reports.

【Course Goals】 To grasp problems related to structural engineering and their specific solutions.
To understand applicability of advanced technologies and development prospects.

【Course Topics】

Theme	Class number of times	Description
Structural Materials, Structural Mechanics	4	Steel materials, Concrete materials, mechanical behavior of structures, Problems related to design, construction and maintenance
Applied Mechanics	1	Numerical analysis for structure performance evaluation
Earthquake and Wind Resistance of Structures	7	Infrastructure and natural disaster, Trends of disaster prevention technology, Problems related to Earthquake and wind resistant design
Maintenance of structure	3	International technology, Scenario design, International technological education and collaboration

【Textbook】 The textbook is not required. Materials will be supplied by instructors.

【Textbook(supplemental)】 Supplemental text books will be introduced by instructors.

【Prerequisite(s)】 Structural Mechanics, Wind Resistant Design, Construction Materials, Dynamics of Structures, etc.

Structural Design

構造デザイン

【Code】 10F009 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Fri 2nd 【Location】 C1-173

【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 English

【Instructor】 Tomoaki Utsunomiya, Yoshikazu Takahashi, Yoshiaki Kubota

【Course Description】 This course provides the knowledge of the structural planning and design for civil infrastructures. Fundamentals of the reliability of structures based on the probability and statistics are given. Emphasis is placed on the reliability index and the calibration of partial safety factors in the LRFD design format. Furthermore, the structural morphology, aesthetics and case studies of structural design that satisfies "utilitas, firmitas and venustas" are given. Then we discuss what the holistic structural design should be.

【Grading】 Assessed by term-end examination, reports and quizzes

【Course Goals】 To understand the structural planning and design for civil infrastructures.

To understand the reliability-based design of structures.

To deepen the understanding of aesthetics of structures.

【Course Topics】

Theme	Class number of times	Description
Structural Planning	2	Structural Planning of civil infrastructures is introduced. The concept, significance of planning, characteristics of civil infrastructures are discussed. Practical planning process of a bridge is explained.
Modern Excellent Designs	1	The excellent examples of modern structural design are introduced from the viewpoint of the structural system and the urban design. Then the importance of integrated design of urban infrastructure as a place of human activities and how the design should be are lectured.
Structure and Form	2	The bridge types, for example, girder, truss, and arch etc. that have been regarded individually, are lectured as an integrated holistic concept from the viewpoint of the acting forces to understand the structural continuity, symmetry and the systems. Furthermore, the methods of the operation of structural form are given.
Structural Design and Performance-based Design	3	Design theory of civil infrastructures is introduced. The allowable stress design method and the limit state design method are explained. The basic of earthquake resistant design is discussed based on the dynamic response of structures. Performance-based design is also introduced.
Random Variables and Functions of Random Variables	1	Fundamentals of random variables, functions of random variables, probability of failure and reliability index in their simplest forms are lectured.
Structural Safety Analysis	3	Limit states, probability of failure, FOSM reliability index, Hasofer-Lind reliability index, Monte Carlo method are lectured.
Design Codes	2	Code format as Load and Resistance Factors Design (LRFD) method, calibration of partial safety factors based on the reliability method are given.
Assessment of the Level of Attainment	1	Assess the level of attainment.

【Textbook】 Reliability of Structures, A. S. Nowak & K. R. Collins, McGraw-Hill, 2000 (for T. Utsunomiya)

【Textbook(supplemental)】 U.Baus, M.Schleich, "Footbridges", Birkhauser, 2008 (Japanese ver.: "Footbridges"(translated by Kubota, et al.), 鹿島出版会, 2011)

久保田善明, 『橋のディテール図鑑』, 鹿島出版会, 2010

Other books will be given in the lectures as necessary.

【Prerequisite(s)】 Fundamental knowledge on Probability and Statistics, and Structural Mechanics

【Web Sites】

【Additional Information】 Structural planning and design will be given by Y. Takahashi, Excellent designs and structure & forms by Y. Kubota, and Structural reliability analysis by T. Utsunomiya.

Bridge Engineering

橋梁工学

【Code】 10F010 【Course Year】 Master and Doctor Course 【Term】 2nd term 【Class day & Period】 Mon 3rd 【Location】 C1-172 【Credits】 2

【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 English

【Instructor】 Hiromichi Shirato, Kunitomo Sugiura, Tomoaki Utsunomiya, Tomomi Yagi

【Course Description】 The subject matter of bridge engineering can be divided into two main parts, which are steel structure and wind loading/wind resistant structure. The aim of this course is to provide details of mechanical behaviors, maintenance and design of bridge structures. The former part of this course contains the static instability of steel structures and the problems of corrosion, fatigue, brittleness, weldability on steel bridges. In the latter part, the basics of wind engineering, bridge aerodynamics and wind-resistant design including current problems to be solved are provided.

【Grading】 Assessment will be based on exam, reports and attendance.

【Course Goals】

Also, the basic knowledge for wind engineering and aerodynamic instabilities, which are necessary for the wind resistant design of bridges, will be acquired.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	- Fundamental knowledge on steel structures - Types of steel structures - Future trend of steel structures
Material behavior, Initial imperfections and Damages	1	- Construction of steel structures - Residual stresses and initial deformations - Damages
Stress-strain relationship, Joints	1	- Yield surfaces - Bauschinger effect - Hardening effect - Welded joint - Bolted joint
Fatigue fracture, fatigue life and fatigue design	1	- S-N design curve - Fatigue crack growth, stress intensity factor - Miner's rule on damage accumulation - Repair of fatigue damage
Structural stability and design for buckling	1	- Structural instability and accident - Theory of Stability - Compressive members, etc.
Corrosion and anti-corrosion of steel structures	1	- Mechanism of corrosion - Micro- and Macro- cells - Anti-corrosion - Life-cycle costs
Wind resistant design of structures	3	- Natural winds due to Typhoon, Tornado and so on - Evaluation and estimation of strong winds - Wind resistant design methods - Various kinds of design codes
Aerodynamic instabilities of structures	3	- Introduction of aerodynamic instabilities (ex. vortex-induced vibration, galloping, flutter, buffeting, cable vibrations) - Mechanisms of aerodynamic instabilities - Evaluation methods and Countermeasures
Wind-induced disaster	1	- Accidents on structures due to strong winds - Disaster prevention
Topics	1	Introduction of current topics on bridge engineering by a visiting lecturer
Confirmation of the attainment level of learning	1	Confirm the attainment level of learning

Structural Dynamics

構造ダイナミクス

【Code】10F227 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Tue 1st
 【Location】C1-172 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese
 【Instructor】Igarashi, Furukawa

【Course Description】 This course deals with dynamics of structural systems and related topics, to provide the theoretical basis to deal with the problems of vibration, safety under dynamic loads and health monitoring associated with infrastructures. The students will study the dynamic response, properties of natural modes and methods of eigenvalue analysis for multi-DOF systems. The topics on the numerical time integration schemes, probabilistic evaluation of structural response to random excitation, and dynamic response control techniques for structures are also studied.

【Grading】 Based on the results of a final examination, plus homework assignments

【Course Goals】 (1) To acquire the knowledge on theories and principles of analysis of MDOF systems (2) Systematic understanding of frequency-domain structural response analysis (3) Concept of analysis of numerical time integration schemes (4) Understanding of fundamentals of the random vibration theory

【Course Topics】

Theme	Class number of times	Description
Introduction	1	Fudamental concepts, harmonic motion
Dynamics of Multi-Degree-Of-Freedom Systems	2	Formulation of Eq. of Motion / Lagrange's method / Normal Modes / Modal Analysis / Modeling of System Damping
Frequency-Domain Analysis of System Response	1	Frequency Response Funcs. / Fourier Transform
Numerical Time Integration	2	Formulation / Stability and Accuracy Analysis of Integration
Random Vibration	6	Overview / Probability Theory / Sequence of i.i.d. Random Variables / Concept of Random Processes / Correlation Funcs. / White Noise / Stochastic Differential Eq. / Lyapunov Eq. / Response to White Noise Excitation / Covariance Matrix Approach / Correlation Funcs. of Random Response / Spectral Representation of Random Processes / Spectral Representation of Structural Response / Application
Structural Response Control	2	Active Control / Semi-Active Control
Achievement Evaluation	1	Students' achievements in understanding of the course material are evaluated.

【Textbook】 Not used; Class hand-outs are distributed when necessary.

【Textbook(supplemental)】

【Prerequisite(s)】 Mechanical vibration (undergraduate level), Complex calculus (integration of analytic functions, Fourier transform, etc.), Probability theory, Linear algebra

Seismic Engineering Exercise

サイスミックシミュレーション

【Code】 10F263 【Course Year】 Master and Doctor Course 【Term】 2nd term 【Class day & Period】 Mon 4th

【Location】 C1-192 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture and Exercise

【Language】 Japanese 【Instructor】 Sawada, Takahashi

【Course Description】 This course provides the knowledge of simulation methods for earthquake engineering.

Small groups of students are exercised in the prediction of ground motion generated by a specified seismic fault and the response analysis of structure selected by themselves considering soil-structure interaction.

【Grading】 Based on the performance during the course (including homework) and the results of presentation and reports.

【Course Goals】 At the end of this course, students will be required to have a good understanding of: - Prediction of ground motion generated by a specified seismic fault - Dynamic response analysis of structures and foundation (linear/nonlinear)

【Course Topics】

Theme	Class number of times	Description
Frequency domain analysis	1	Basics of Fourier transformation is introduced.
Modeling of structure - soil system and time domain analysis	1	Equation of motion of SR model is introduced and the integration method of the equation in time domain is explained.
Exercise of linear seismic response analysis	2	Small groups of students are exercised in elastic modeling of structures and linear response analysis in time domain and frequency domain.
Prediction of ground motion by empirical Green's function method	3	Empirical Green's function method is introduced to predict large earthquakes based on observed small earthquakes.
Seismic analysis method of soil	2	Seismic analysis method of layered half-space based on equivalent linearization method is introduced.
Nonlinear seismic analysis method of structures	2	Nonlinear modeling of structures and the integration and iterative methods of the nonlinear equation of motion in time domain are introduced.
Exercise of nonlinear seismic response analysis	3	Small groups of students are exercised in the prediction of ground motion generated by a specified seismic fault and the nonlinear response analysis of structures and foundation.

 【Instructor】Hirotaka Kawano, Atsushi HATTORI

【Course Description】Lecture on outline of impact of construction materials to environment and influence on materials and structures from environment. Discuss how to use materials sustainably. Keywords are concrete, steel, composite materials, CO₂, durability, recycle and reuse, life-cycle assessment.

【Grading】Attendance(%), Report(%), Presentation(%)

【Course Goals】To understand the limit of resources and effect of material use to environment. and to understand the basic theory to make environmental-friendly infrastructures from the view point of materials use.

【Course Topics】

Theme	<small>Class number of times</small>	Description
Guidance	1	Object of the Course, Grading and Goals
product of materials and impact to environment	1	Product of cement, steel, concrete CO ₂ product and its influence
recycle and reuse of materials	3	Recycle and reuse of steel, metals, concrete, asphalt, plastics Technology development of construction materials
deterioration of concrete structures	1	Mechanism of deterioration of concrete structures: carbonation, salt attack, alkali-aggregate reaction Maintenance and retrofit methods
deterioration of steel structures	1	Mechanism of deterioration of steel structures: corrosion, fatigue Maintenance and retrofit methods
deterioration of composite structures	1	Mechanism of deterioration of composite structures: Maintenance and retrofit methods
life-cycle assessment of structures	1	Life-cycle assessment of structures considering initial cost as well as maintenance cost
topics and discussion	2	Recent topics on construction materials and discussion
presentation by students and discussion	4	Presentation by students on the individual topics Discussion on the topics

【Course Description】 Physical mechanisms of the hydrologic cycle are described from the engineering viewpoint. The rainfall-runoff modeling and its prediction method are emphasized. Physical hydrological processes explored are surface flow, saturated-unsaturated subsurface flow, groundwater flow, streamflow routing, and evapotranspiration. Physical mechanism of each hydrological process and its numerical modeling method are explained. The basic equations and numerical simulation methods are provided. Then, distributed hydrological modeling which incorporate various hydrological processes and a lumping method of distributed hydrological model are explained.

【Grading】 Examination and report

【Course Goals】 The goals of the class are to understand the physical mechanism of hydrological processes, their basic equations, and numerical simulation methods.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	The hydrologic cycle and the hydrological processes are explained.
Surfaceflow	2	The physical process of the surface flow and its numerical modeling method are described. The basic equations of the surface flow and the numerical simulation methods are explained.
Saturated-unsaturated subsurface flow	2	The physical process of the saturated-unsaturated subsurface flow and its numerical modeling method are described. The basic equations of the saturated-unsaturated subsurface flow and the numerical simulation methods are explained.
Groundwater flow	2	The physical process of the groundwater flow and its numerical modeling method are described. The basic equations of the groundwater flow and the numerical simulation methods are explained.
Streamflow routing	2	The physical process of the streamflow routing and its numerical modeling method are described. The basic equations of the streamflow routing and the numerical simulation methods are explained.
Evapotranspiration	2	The physical process of the evapotranspiration and its numerical modeling method are described. The basic equations of the evapotranspiration and the numerical simulation methods are explained.
Channel network and watershed modeling	1	Numerical representations of channel networks and catchments are explained.
Distributed hydrological model	1	A physically-based distributed hydrological model is described, which is constructed with numerical representations of channel networks and catchments.
Lumping of flow, parameter and watershed model	1	Lumping methods of a distributed hydrological model are described, which include lumping of flow, parameter and watershed model.
verification of study achievement	1	Verification of study achievement

【Textbook】 Handouts are distributed at each class.

River Engineering and River Basin Management

河川マネジメント工学

【Code】 10F019 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Wed 1st

【Location】 C1-173 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 Japanese

【Instructor】 Hosoda, Kishida

【Course Description】 It is important to consider about rivers comprehensively in view of the various aspects based on natural science and engineering. The fundamental knowledge to consider rivers and make the plans of river basins is explained with the following contents: various view points to consider rivers, long term environmental changes of rivers and its main factors, river flows and river channel processes, ecological system of rivers and lakes, flood disasters, integrated river basin planning(flood defense, environmental improvement planning, sediment transport system), functions of dam reservoir and management to learn the fundamental knowledge and grounding to consider rivers from the various points of view such as natural science, engineering and social science.

【Grading】 Reports, Attendance

【Course Goals】 The fundamental knowledge which can consider a river with various senses from a viewpoint of natural science, an engineering viewpoint and a social-scientific viewpoint, is mastered.

【Course Topics】

Theme	Class number of times	Description
Various view points on rivers and river basins	1	Various viewpoints and river basins, Various rivers on the earth, Formation processes of river basins, long term environmental changes of rivers and its main factors
Ecological system in rivers	2	Fundamental knowledge on river eco-system
Application of computational methods to environmental problems	2	Numerical analysis of the environmental change in Lake Biwa, Flood flows and river channel processes
Recent flood disasters & Integrated river basin planning	2	Characteristics of recent flood disasters, River law, Fundamental river management plan, River improvement plan, Procedures of flood defense planning, Flood invasion analysis and hazard map
Groundwater and its related field	2	Simulation technology of groundwater, Geo environmental issues, Reservoir Engineering, Contaminant Transport Processes
Sustainable development of dam	2	Needs of dam development and history of dam construction
Water quality of reservoir	1	Environmental fluid behavior on reservoir, Water quality and its maintenance of reservoir
Economic evaluation of environmental improvement projects	1	Evaluation of people's consciousness for river improvement works by means of CVM, Conjoint Analysis, etc.
Dam structure and maintenance	1	Dam structure, foundation, grouting, and maintenance
Special Lecture	1	Expert engineer and/or office on the river Engineering and river basin management will be invited.

【Textbook】 Printed materials regarding the contents of this class are distributed in class.

【Textbook(supplemental)】

【Prerequisite(s)】 Fundamental knowledge of Hydraulics, Hydrology and Ecology

【Web Sites】

Sediment Hydraulics

流砂水理学

【Code】10A040 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Mon 2nd
 【Location】C1-171 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese
 【Instructor】Hitoshi Gotoh and Eiji Harada

【Course Description】Natural flows in river and coast are movable bed phenomena with the interaction of flow and sediment. At a river and a coast, a current and a wave activate a sediment transport and bring the topographical change of a bed such as sedimentation or erosion. This lecture provides an outline about the basics of sediment (or movable bed) hydraulics, and detail of the computational mechanics of sediment transport, which has been developed on the basis of dynamics of flow and sediment by introducing a multiphase flow model and a granular material model. Furthermore, about sediment and water-environment relationship, some of frontier technologies, such as an artificial flood, removal works of dam sedimentation, coastal protection works, and sand upwelling work for covering contaminated sludge on flow bottom etc., are mentioned.

【Grading】Grading is based on student's activities in lectures and written examination.

【Course Goals】Students understand the basics of sediment hydraulics and outline of advanced models for computational sediment hydraulics, such as multiphase flow model and granular material model. Students understand the present conditions of sediment control works.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	The purpose and constitution of the lecture, the method of the scholastic evaluation are explained.
Basics of sediment hydraulics	5	Physical characteristic of a movable bed and a non-equilibrium sediment transport process and its description are explained. Furthermore, the prediction technique of topographical change due to current and waves is outlined.
Computational mechanics of sediment transport: The state of the art	8	Essential parts of numerical models of the movable bed phenomena, which has been developed by introducing dynamic models such as a granular material model to describe a collision of sediment particles and a multiphase flow model to describe a fluid-sediment interaction, are described. In comparison with the conventional movable bed computation, the points on which has been improved to enhance the applicability of the models are concretely mentioned. Some frontier studies of sediment transport mechanics are also introduced.
Achievement confirmation	1	Comprehension check of course contents.

【Textbook】Hitoshi Gotoh: Computational Mechanics of Sediment Transport, Morikita Shuppan Co., Ltd., p.223, 2004 (in Japanese).

【Textbook(supplemental)】Non

Hydrologic Design and Management

水工計画学

【Code】 10F464 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Fri 2nd
 【Location】 C1-191 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 Japanese
 【Instructor】 Michiharu SHIIBA, Yasuto TACHIKAWA and Sunmin KIM

【Course Description】 Methods for hydrologic design and real-time rainfall-runoff predictions are described. The frequency analysis of hydrologic extreme values and the time series analysis of hydrologic variables are described, and then the methods to set the external force for the hydrologic design are explained. Next, a physically based hydrologic model which includes the process of human activities for the hydrologic cycle is described. In addition, the predictive uncertainty for the hydrologic simulation is introduced. A flood control planning and water resources management with the use of innovative hydrologic simulation tools is described. Then, the climate change and the relation to the hydrologic design are discussed. A real-time rainfall runoff prediction method with the use of Kalman filter theory is described.

【Grading】 Examination and report

【Course Goals】 The class aims to understand the statistical analysis and time serried analysis of hydrologic variables to set the external force of hydrologic designs, applications of hydrologic simulations for hydrologic designs, and real-time rainfall and runoff prediction methods for water resources management.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	A flood control planning and water resources planning are introduced.
Frequency analysis and hydrologic design	2	The frequency analysis of hydrologic extreme values is described. The methods to set the external force for the hydrologic design are explained.
Time series analysis and hydrologic design	3	The time series analysis of hydrologic variables is described. The methods to develop time series models, time serried data generation methods, spatiotemporal variation of hydrologic variables and a random field model, disaggregation methods are explained.
Hydrologic modeling and predictive uncertainty	2	Hydrologic models which include the process of human activities for the hydrologic cycle is described. Then, hydrologic predictive uncertainty is explained, which is inevitable coming from model structure uncertainty, parameter identification uncertainty and model input uncertainty. Especially, the relation between spatiotemporal scales of hydrologic modeling and model parameter values is described.
Hydrologic modeling system	1	A hydrologic modeling system which helps to develop complicated hydrologic simulation models and its importance for a flood control planning is also described.
Climate change and hydrologic design	2	Data analysis of the latest GCM simulation is presented and the possible changes of hydrologic extremes and hydrologic design are discussed.
Real-time rainfall runoff prediction	3	A real-time rainfall runoff prediction method with the use of Kalman filter theory is described.
Verification of study achievement	1	Verification of study achievement is conducted.

【Textbook】 Handouts are distributed at each class.

【Textbook(supplemental)】

【Prerequisite(s)】 Basic knowledge of hydrology, probability and statistics are required.

開水路の水理学

【Code】 10F245 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Fri 1st

【Location】 C1-173 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 English

【Instructor】 HOSODA, Takashi

【Course Description】 Fundamental theory of Open Channel Hydraulics used in River Engineering and Urban Fluid Engineering Fields are lectured, showing various applications in Hydraulic Engineering Field. The contents include the following items: Application of singular point theory to water surface profile analysis, Derivation of 2-D depth averaged model, 1-D analysis of unsteady open channel flows, Plane 2-D analysis of steady high velocity flows, Plane 2-D analysis of unsteady flows, Higher order theory, etc.

【Grading】 Regular examination

【Course Goals】 to understand the grounds of Open Channel Hydraulics and to learn how to apply Open Channel Hydraulics to practical problems in hydraulic engineering field.

【Course Topics】

Theme	Class number of times	Description
Guidance	1	The outline of this class is introduced by overviewing the whole framework of Open Channel Hydraulics with various computational results.
Derivation of 2-D depth averaged model	1	Derivation procedures of plane 2-D depth averaged model are explained in detail
Application of singular point theory to water surface profile analysis	1	
1-D analysis of unsteady open channel flows	3	Fundamental characteristics of 1-D unsteady open channel flows, Method of Characteristics, Dam break flow, Computational methods
Fundamentals of numerical simulation	1	Considering the convective equation as an example, fundamental knowledge of numerical simulation is explained by means of finite difference method, finite element method, etc. Applications these method to unsteady open channel flows are also shown with some practical applications.
Plane 2-D analysis of steady high velocity flows	1	Characteristics of steady plane 2-D flow are explained based on the method of characteristics.
Plane 2-D analysis of unsteady flows	3	Propagation of characteristic surface, shear layer instability, application of a generalized curvilinear coordinate to river flow computation, application of a moving coordinate system, etc.
Higher order theory	3	Boussinesq equation with the effect of vertical acceleration, full/partially full pressurized flow observed in sewer network, traffic flow analysis by means of dynamic wave model
Examination of understanding	1	The understanding of the contents is examined through the paper examination.

【Textbook】 Printed materials on the contents of this class are distributed in class.

【Textbook(supplemental)】

【Prerequisite(s)】 Elementary knowledge of fluid dynamics and hydraulics

【Web Sites】

【Additional Information】 Students can contact with Hosoda by sending e-mail to hosoda.takashi.4w@kyoto-u.ac.jp This class is open in 2012.

Coastal Wave Dynamics

海岸波動論

【Code】 10F462 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Fri 1st

【Location】 C1-173 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 English

【Instructor】 Hitoshi Gotoh , Eiji Harada , Khayyer Abbas and Kazuya Oki

【Course Description】 Wave motion, which is the main driving force in coastal zone, is explained focusing on wave transformation theory and computational fluid dynamics, and design for coastal structures of their engineering applications is illustrated. As for the computational fluid dynamics for waves, methodology of free-surface wave based on the Navier-Stokes equation, which has been significantly developed in recent years, is explained in detail.

【Grading】 Grading is based on usual students activities in lectures and reports.

【Course Goals】 Goal of this course is a detailed understanding of fundamental of wave transformation theory and computational fluid dynamics related to wave motion, and is also acquiring a design concept for coastal structures as their engineering applications.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	The purpose and constitution of the lecture the method of the scholastic evaluation are explained.
Conservation laws of fluid	4	Fundamentals of fluid mechanics, liner / non-liner wave theories and numerical mathematics are explained.
Modeling of surf zone dynamics	7	Several methodologies against free-surface wave including breaking waves (i.e. VOF, MPS, SPH) are illustrated. Especially advanced approaches of MPS and SPH are explained in detail.
Introduction of turbulence models	1	Reynolds averaging models and large eddy simulation are outlined.
Modeling of rock mound dynamics	2	Method for tracking of armor blocks under high waves using Distinct Element Method is described.

【Textbook】 Non

【Textbook(supplemental)】 Non

【Prerequisite(s)】 Non. It is desirable to have knowledge about hydraulics, fluid mechanics.

Water Resources Systems

水資源システム論

【Code】 10A222 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Tue 1st
 【Location】 C1-192 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 Japanese
 【Instructor】 Hori, T.(DPTI) and Tanaka, K.(DPRI)

【Course Description】 Systems approach to natural and social phenomena associated to water resources is introduced in terms of planning and design of sustainable water resources systems.

【Grading】 Grading is done based on examination and commitment to classes.

【Course Goals】 Deep understanding of fundamentals for systems modeling of water-related natural and social processes and ability to perform data collection, analyses and design of sustainable water management systems.

【Course Topics】

Theme	<small>Class number of times</small>	Description
Optimum design of water resources systems	3	
decision support for water resources management	3	
Recent topics on water management	1	
Water management practices in the world	3	
Land surface model and its application to water management	4	
achievement check	1	

【Textbook】 Not specified.

【Textbook(supplemental)】 Supplemental documents will be introduced in classes.

【Prerequisite(s)】 Fundamentals of hydrology and water resources engineering.

River basin management of flood and sediment

流域治水砂防学

【Code】10F077 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Mon 1st

【Location】C1-173 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】(DPRI) Nakagawa, H., (DPRI) Sumi, T., (DPRI) Takebayashi, H. and (DPRI) Kawaike, K.

【Course Description】In a river basin, various kinds of disasters such as debris flow, land slide, flood inundation, storm surge, and etc. sometimes happen from the origin to the mouth. This lecture presents occurrence examples, mechanisms, theory and methods of prediction and prevention/mitigation methods against those disasters. Also this lecture mentions comprehensive management in a sediment routing system focusing on sediment management strategy in dam reservoirs.

【Grading】Grading is based on 2 reports out of 4 topics and attendance.

【Course Goals】The goals of the class are to understand phenomena within a river basin and to have wide knowledge of problems of flood and sediment disasters and countermeasures against them.

【Course Topics】

Theme	Class number of times	Description
About Sabo Works	4	About Sabo works, sediment disasters, countermeasures against sediment disasters, Sabo projects.
About Reservoir Sediment Management	3	Reservoir sediment management focusing on reservoir sustainability and comprehensive management in a sediment routing system is overviewed including worldwide perspective and Japanese advanced case studies.
About basin-wide sediment routing	4	About the one dimensional bed deformation analysis and the sediment runoff model are introduced. Furthermore, some examples of the application of those models are introduced.
About basin-wide flood management	4	Flood disasters and countermeasures against them are overviewed along the history of flood management in Japan.

【Textbook】No designation. Printed materials regarding the contents of this class are distributed in class.

【Textbook(supplemental)】Instructed in class

【Prerequisite(s)】Fundamental knowledge of Hydraulics and river engineering

【Location】C1-172 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English

【Instructor】Hiromichi Shirato, Satoru Ushijima

【Course Description】Computational Fluid Dynamics (CFD) is largely developed according to the progress of computer technology in recent years. It is the powerful and effective technique to predict the various fluid phenomena, which show the complicated behaviors due to the non-linearity and other conditions. This course provides the dynamics of fluids and eddies as well as the discretization and numerical techniques, such as finite difference, finite volume and discrete vortex methods.

【Grading】The grading will be based on homework assignments.

【Course Goals】Course goal is to understand the basic theory and numerical techniques for CFD.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	Introduction of recent examples of CFD
computational method for incompressible fluids	7	The course introduces the MAC algorithm, which is generally used for incompressible Newtonian fluids on the basis of finite difference and finite volume methods (FDM and FVM). The outline of numerical methods is also discussed for parabolic, hyperbolic or elliptic partial differential equations, in terms of the numerical stability and accuracy. Homework will be assigned each week.
unsteady viscous flow around bluff body by surface vorticity method	7	The surface vorticity method is introduced as one of the effective method which can solve an unsteady separating flow from an edge and its reattachment to a body. The mesh- and pressure-free concept in this method is introduced, which can be applied various flow phenomena including unsteady separation. Some special treatment such as how to introduce the viscosity (core spreading, random walk) and how to evaluate surface pressure distribution will be explained. Design of airfoil geometry is also introduced as one of application of the method.

【Textbook】No textbook assigned to the course

【Textbook(supplemental)】Recommended books and papers will be introduced in the course.

【Prerequisite(s)】Basic knowledge of fluid dynamics, continuum mechanics and computational technique

【Instructor】Shiiba Michiharu, Hosoda Takashi, Gotoh Hitoshi, Tachikawa Yasuto, Kishida Kiyoshi, Harada Eiji, Sanjou Michio and Kim Sunmin

【Course Description】This lecture picks up various water-related problems and provides their explanation and solution methodology related to hydrodynamic and hydrological infrastructure improvements, maintenance, disaster prevention against flood and damage of water environment, interweaving several leading-edge cases in the real world. Turbulent flow and CFD, sediment transport system and design/planning of hydraulic structure are described on the basis of the integrated management of river-and-coast systems with sediment control and these relationship with infrastructure improvement. Perspective from the viewpoint of public environmental infrastructure on water environment is presented.

【Grading】Grading is based on students activities in lectures and reports.

【Course Goals】Students learn about case-based practical solutions against various problems related to hydraulic engineering, and students acquire academic preparation of how to approach to public environmental infrastructure on water area.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	The purpose and constitution of the lecture, the method of the scholastic evaluation are explained.
Turbulence phenomena in open-channel flows	3	Several problems and exciting topics related to turbulence phenomena in open-channel flows are discussed with advanced practical examples.
River basin management	3	Introduction of flood disasters during a few decades in the world, flood control planning in Japan, Economic evaluation and analysis of people ' s awareness to river improvement projects with dam construction.
Beach erosion	3	Several problems and their solution methodology against sediment transport process in coastal zone are explained. Advanced approaches for sediment control are overviewed.
Rainfall-runoff prediction and hydrologic design	3	Water resources issues related to rainfall-runoff prediction and hydrologic design are discussed with advanced practical examples.
Exercise	2	The exercises to the given subjects are performed.

Applied Hydrology

応用水文学

【Code】10F100 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Wed 4th

【Location】C1-172 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English

【Instructor】Tomoharu Hori, Tetsuya Sumi, Yoshitaka Kido, Yasuhiro Takemon, Kenji Tanaka

【Course Description】Applied and integrated approach to the problems closely related to the water circulation system, such as floods, droughts, water contamination, ecological change, and social change is introduced mainly from the hydrological viewpoint with reference to water quantity, quality, ecological and socio-economic aspects. In the course, several actual water problems are taken up and solving process of each problem which comprises of problem-identification and formulation, impact assessment, countermeasures design and performance evaluation is learned through the lectures' description and also investigation and discussion among the students.

【Grading】Grading is based on student activities in lectures, presentation and reports

【Course Goals】To obtain fundamental Knowledge and skills to perform problem definition, survey and countermeasure design on problems about water use, water hazard mitigation and water environment.

【Course Topics】

Theme	Class number of times	Description
Water Resources Systems	3	Interaction between water resources and socio-economic systems, Distributed flood risk assessment and countermeasures design from human security viewpoint
Reservoir Systems and Sustainability	3	Reservoir system and its environmental impacts, Sustainable management of reservoir system
Land Surface Processes	2	Modelling of land surface processes, Application of land surface model
Water Quality Management	2	Diffuse pollution control, Water quality management of enclosed lake and groundwater
Hydro-eco Systems	2	Ecohydrological management of habitats in river ecosystems, Ecohydrological management of biodiversity in wetland ecosystems
Presentation and Discussion	2	Presentation and Discussion on related topics
Examination	1	

【Textbook】Printed materials on the contents of this class are distributed in class.

【Textbook(supplemental)】None

【Prerequisite(s)】Elementary knowledge of hydrology and water resources engineering.

Case Studies Harmonizing Disaster Management and Environment

Conservation

環境防災生存科学

【Code】 10F103 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Mon 4th

【Location】 C1-172 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Relay Lecture 【Language】 English

【Instructor】 K. TAKARA(DPRI), H. NAKAGAWA(DPRI), E. NAKAKITA(DPRI), H. MASE(DPRI), N. MORI(DPRI), Y. YAMASHIKI(DPRI)

【Course Description】 Environmental impacts by infrastructure for disaster prevention and mitigation are discussed.

Introducing various examples of natural disasters, degradation of the environment, and harmonizing disaster management and environmental conservation in the world, this classroom carries on a dialogue about effective measures for reducing negative environmental impacts and serious disasters.

【Grading】 Considering both the number of attendances and the score of final test at the end of the semester.

【Course Goals】 Conservation of the environment and prevention/mitigation of natural disasters, which are very important for human's survivability, often conflict with each other. This course introduces various examples. Students will learn many examples harmonizing these two issues, and shall consider technical and social countermeasures fitting to the regional characteristics.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	Introduction
Disaster due to heavy rainfall -- utilization of weather radar and global climate change	3	Disaster due to heavy rainfall -- utilization of weather radar and global climate change
Flood disaster prevention and the environment	2	Flood disaster prevention and the environment
River environment and disaster management	2	River environment and disaster management
The environment of closed water areas / Atmosphere-ocean climate interaction	2	The environment of closed water areas / Atmosphere-ocean climate interaction
Coastal disasters due to tsunamis and storm surges	2	Coastal disasters due to tsunamis and storm surges
Projection of climate and coastal environmental change	2	Projection of climate and coastal environmental change

【Textbook】 No particular textbook for this course. Necessary documents and literature introduction are provided in the class room from time to time.

【Textbook(supplemental)】 Some literature would be introduced by professors.

【Prerequisite(s)】 No special knowledge and techniques are necessary, but requires reading, writing and discussing in English in the class.

【Web Sites】

【Additional Information】 Contact Prof. Takara at <takara.kaoru.7v@kyoto-u.ac.jp> if you have any query.

Integrated Disasters and Resources Management in Watersheds

流域管理工学

【Code】10F106 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Mon 1st

【Location】Katsura Campus, Ujigawa Open Laboratory, Shirahama Oceanographic Observatory and Hodaka Sedimentation Observatory

【Credits】2 【Restriction】 【Lecture Form(s)】Lecture and Exercise 【Language】English

【Instructor】Keiichi TODA(DPRI), Masaharu FUJITA(DPRI), Tetsuya HIRAISHI(DPRI), Nozomu YONEYAMA(DPRI), Kenji KAWAIKE(DPRI), Hiroshi TAKEBAYASHI(DPRI), Daizo TSUTSUMI(DPRI)

【Course Description】Mechanism and countermeasures of sediment disasters, flood disasters, urban flood disasters and coastal disasters are explained. An integrated watershed management of these disasters and water/sediment resources is also introduced. This lecture will be open at Katsura Campus, Ujigawa Open Laboratory, Shirahama Oceanographic Observatory and Hodaka Sedimentation Observatory. Students attending this lecture must take one of the intensive experiment/field study courses offered in Ujigawa Open Laboratory and these observatories.

【Grading】Presentation, Discussion and Report

【Course Goals】Learn an integrated basin management system for natural disasters (sediment disasters, food disasters, coastal disasters, urban flood disasters) mitigation and water/sediment resources utilization considering environmental conservation.

【Course Topics】

Theme	Class number of times	Description
Urban flood disaster management	2	We review urban floods from the viewpoint of river basins, flood causes, and features, together with the results of recent studies. Based on these studies, we propose comprehensive measures against urban floods, including underground inundations. In addition, we discuss on prediction methods of the tsunami disaster in urban area.
Flood disaster management	2	Prevention / mitigation measures against flood disasters and flood prediction methods are explained as well as examples of recent flood disasters in Japan.
Sediment disaster management	2	Showing the problems on sediment disasters and sediment resources, I explain an integrated sediment management system both for sediment disasters and sediment resources.
Coastal disaster management	2	Coastal erosion and tsunami hazard become remarkable in these days in Japanese coast. In a lecture, we discuss on characteristics of such coastal disasters.
Exercise on flood disaster at Ujigawa Open Laboratory (Selective)	集中2日間	Experiment and analysis on debris flows, riverbed variation and flooding at Ujigawa Open Laboratory, Fushimi-ku, Kyoto city.
Exercise on sediment related disaster at Hodaka Sedimentation Observatory (Selective)	集中2日間	The Hodaka Sedimentation Observatory is located at Okuhida region, Gifu Prefecture. In the field exercise, observation methods of rainfall-runoff and sediment movement processes will be explained. Field investigations into several types of erosion control facilities, sediment producing sites, debris flow sites and sediment related disaster sites will be carried out.
Exercise on coastal disaster at Shirahama Oceanographic Observatory (Selective)	集中2日間	The Shirahama Maritime Observatory is located in Wakayama Prefecture. In the lecture, observatory, waves, currents and tide levels monitoring system is demonstrated.

【Instructor】Fusao Oka, Sayuri Kimoto

【Course Description】Mechanical behavior of soils and problems of its deformation and failure, based on the multiphase mixture theory and the mechanics of granular materials, will be covered in this lecture.

【Grading】Final examination and several papers

【Course Goals】The objectives of this course are to understand the basics of geomechanics, and the advanced theories.

【Course Topics】

Theme	Class number of times	Description
Deformation of geomaterials	2	Mechanical property of geomaterials, Critical state soil mechanics, Failure criteria, Effective stress, Suction
elasto-plastic constitutive model	3	Constitutive model for geomaterials, Elasto-plastic model, Cam clay model
Theory of viscosity and viscoplasticity	4	Viscoelasticity, viscoplasticity, Elasto-viscoplastic mode, Adachi-Oka model, Microstructure of soils, Temperature dependent behavior, Applications of constitutive models
Consolidation analysis	3	Biot's consolidation theory and its application, Consolidation of embankment
Liquefaction of soils	2	Liquefaction of sandy soil, Damage and failure due to liquefaction, Remedial measures for liquefaction
Confirmation of achievement	1	

【Textbook】Soil mechanics, Fusao Oka, Asakura Publishing (in Japanese)

【Code】 10F237 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Tue 4th
 【Location】 C1-172 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 Japanese
 【Instructor】 Ohtsu, Kishida, Shiotani

【Course Description】 Advanced monitoring and management techniques not only during construction stage but maintenance stage in geo- or rock-infrastructures are lectured systematically.

【Grading】 Attendance(10%), Report(30%), Examination(60%)

【Course Goals】

【Course Topics】

Theme	Class number of times	Description
Guidance	1	Guidance Introduction of Geo-Asset Management
Geotechnical survey	5	Introduction of geotechnical survey, Geophysical exploration, Inversion technique, Practical works of field measurements
Probability theory	4	B/C on project, Project risk management, Basic of probability theory, Introduction of contract and Int'l construction project
Innovative monitoring techniques	4	Applications of geo and rock monitoring, Advanced NDT, Applications of cutting-edge fields

Construction of Geotechnical Infrastructures

ジオコンストラクション

【Code】10F241 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Fri 1st

【Location】C1-171 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】Kimura, Kishida

【Course Description】Advanced construction technology of geo infrastructures, such as tunnel, large underground cavern, foundation, culvert, retaining wall, is introduced and explained. And, the practical projects applied by the advanced construction technology are also introduced.

【Grading】Attendance (20 %), Report, Examination and Presentation (80 %)

【Course Goals】To learn to the advanced construction technology and to propose the project and design through the advanced construction technology.

【Course Topics】

Theme	Class number of times	Description
Guidance, Introduction of construction of geotechnical infrastructures	1	Guidance, Introduction of construction of geotechnical infrastructures
Underground cavern	2	Stability of underground cavern,
Auxiliary methods of mountain tunnel	2	Role of auxiliary methods, Auxiliary method for safety in tunnel construction, Auxiliary methods for preservation of the surrounding environment
Underground space project	2	Introduce two special projects of underground space, namely, nuclear waste disposal, and Carbon Capture and Storage
Field visit or special lecture	1	Visit the construction field or invite special lecture who is the expert engineer on the construction of geotechnical infrastructures.
Foundation	2	Design and construction of piles foundation and steel pipe sheet piles
Culvert	2	Design and construction of box type and arch type culverts
Retaining wall	2	Design and construction of retaining wall
Achievement Confirmation	1	Examination of understanding

Geo-Risk Engineering

ジオリスクエンジニアリング

【Code】 10F242 【Course Year】 Master and Doctor Course 【Term】 2nd term 【Class day & Period】 Mon 3rd

【Location】 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 English

【Instructor】 Ohtsu, Shiotani, Kishida

【Course Description】 This lecture aims to provide interdisciplinary knowledge associated with geo-risk engineering, the topics of risk analysis focusing on geotechnical structures. In detail, the contents of lectures consist of following topics: Introduction of risk analysis, Mathematical background of geo-risk evaluation, Examples of risk evaluation mainly focusing on slopes and Risk management on road slopes.

【Grading】 Participation (10), Presentation (50), Report (40)

【Course Goals】 Acquire the necessary knowledge of risk engineering to construct and maintain infrastructures.

【Course Topics】

Theme	Class number of times	Description
Guidance	1	Guidance & Introduction
		Basic Concept of Geo-Risk Engineering
		Introduction of Risk Analysis
		Mathematical Background of Geo-Risk Evaluation
Geo-risk	9	Basic Concept of Road Infrastructure Risk Evaluation
		Management from Macroscopic Viewpoint
		Management from Microscopic Viewpoint
		Slope failure early warning system
Risk assessment	2	Case studies of Risk Based Assessment
		Management by Means of Risk Assessment
Risk for underground structures	2	Risk Management of underground sequestration of Radioactive waste and anthropogenic CO ₂

Fundamental Geofront Engineering

ジオフロント工学原論

【Code】 10F405 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Mon 2nd
 【Location】 C1-172 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 English
 【Instructor】 M.Mimura, S.Nishiyama, T.Koyama, K.Ando

【Course Description】 This lecture aims to learn a practical knowledge associated with mechanical and hydraulic problems in rock masses to realize environment-friendly development of underground space through exercise in modelling and analytical study of rock mass.

【Grading】 Problem sets will be given almost every week and due one week later in class. You can work together but must turn in your own solutions.

【Course Goals】 This course is designed to give students knowledge and understanding to recognise and apply the fundamental techniques used in engineering rock mechanics for the analysis of underground engineered structures.

【Course Topics】

Theme	Class number of times	Description
Introduction to rock mechanics and rock engineering	1	Introduction to common geophysical investigation methods and field investigation methodology.
Rock mass behaviour around excavations	2	How to apply popular failure criteria to determine the strength of both intact rock and discontinuities. How to assess the geometry of discontinuous rock masses using customary measures and techniques
Rock strength and rock mass classification	2	Rock construction techniques for rock foundation works and also for construction of rock caverns and tunnels. Proposals for support of strength and running of construction works in rocks based on conceptual engineering geological models, assessment of the Q-value and of the mechanical characteristics of the rock mass.
Underground excavations in discontinuous and stratified rock	2	Basic rock geology emphasizing characteristics of rocks, in particular structural features and the importance of discontinuities in rock construction works.
Computer methods in rock mechanics and rock engineering:	3	Introduction to computer programmes for underground space design, rock mechanics, and environmental control.
Hydrogeology and groundwater flow in geotechnical	2	The influence of the groundwater conditions on the characteristics of the rock mass, in particular concerning strength and stability but also rock construction technique and environmental consequences.
Risk assessment and risk management	3	Risk assessment processes in rock engineering and management principles with respect to the environment.

【Textbook】 Handout will be distributed.

【Textbook(supplemental)】 References are indicated in the handout.

【Prerequisite(s)】 Undergraduate courses in geology, geotechnical engineering, and soil mechanics.

Environmental Design in Geo-front Engineering

ジオフロント環境デザイン

【Code】 10F407 【Course Year】 Master and Doctor Course 【Term】 2nd term 【Class day & Period】 Wed 2nd

【Location】 C1-173 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 English

【Instructor】 M.Mimura,S.Nishiyama,T.Koyama,Y.Ijiri

【Course Description】 Practical projects of geo-risk management, advanced measurement method and groundwater environmental-assessment system associated with utilization and environmental conservation of underground space are introduced and explained in this lecture.

【Grading】 Problem sets will be given almost every week and due one week later in class.

You can work together but turn in your own solutions.

【Course Goals】 This course is intended to give students a basic understanding of the theoretical and empirical principles of underground space development.

This course will provide the analytical background for students to understand the design principles used in disposal of radioactive Waste project and subsurface CO₂ disposal project.

【Course Topics】

Theme	Class number of times	Description
Introduction to underground development	1	Introduction to rock mechanics and rock engineering.
Rock mechanics for underground development	2	Fundamental definitions, historical underground development, underground development art and engineering.
Construction of underground structures	3	Influence of rock strength on excavation, influence of underground space size, ground support drilling and blasting, mechanism of rock breakage, tunnelling progress with drill and blast excavation.
Hydraulic engineering in underground development	4	Geologic formation as aquifers, , groundwater flow in unsaturated zones and fractured media, hydro-geologic investigation, 3-D general flow equations and advection diffusion equation, groundwater modeling, etc.
Geo-risk engineering	3	Risk identification, risk qualification analysis, risk response, and topics in risk engineering.
Examples of underground development projects	2	Study on underground-space use and construction case studies.

【Textbook】 Handout will be distributed.

【Textbook(supplemental)】 References are indicated in the handout.

【Prerequisite(s)】 Undergraduate courses in geology, geotechnical engineering, and soil mechanics.

Environmental Geotechnics

環境地盤工学

【Code】 10A055 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Mon 1st
 【Location】 C1-192 / Engineering Bldg.No.8 Kyodo No.1 (Yoshida Campus) 【Credits】 2 【Restriction】 No Restriction
 【Lecture Form(s)】 Lecture 【Language】 Japanese/English 【Instructor】 Takeshi Katsumi, Toru Inui

【Course Description】 Several issues on environmental geotechnics including geoenvironmental contamination and countermeasure, waste containment and reuse are introduced to understand the contribution of geotechnical engineering to global and local environmental issues. Geoenvironmental issues due to the 2011 East Japan Earthquake and Tsunami are also introduced.

【Grading】 Continuous assessment including attendance, some assignments, and final report

【Course Goals】 Students should understand the geotechnics to solve the following geoenvironmental issues; soil & groundwater contamination, waste disposal and waste utilization, and extend this knowledge to the development of concepts and technologies for creating and preserving the geo-environment.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	Introduction to Environmental Geotechnics, including goals, outline and grading policy of the course
Waste geotechnics	3-4	Functions and structures of waste containment facilities Geotechnics on the liner system (Geosynthetics, clay liner, Leachate collection layer) Post-closure utilization of waste landfill
		Behaviors of contaminants in subsurface Mechanisms of soil and groundwater contamination Remediation of soil and groundwater contamination Case histories
Remediation geotechnics	3-4	
Geo-environmental issues related to construction works, global environmental issues, and natural disasters	2-3	Mechanisms and remediation of geoenvironmental problems and geo-disasters caused by construction works Geoenvironmental issues caused by the 2011 East Japan Earthquake and Tsunami
Reuse of wastes in geotechnical applications	3-4	Engineering properties of recycled materials in geotechnical applications (Incineration ashes, coal ash, surplus soils, dredged soils) Geoenvironmental impact assessment and control of waste utilization Case histories
Presentation and discussion	2-3	Student presentation, discussion, and summary on above topics

【Textbook】 Not specified.

Several technical papers related to the course will be distributed.

【Textbook(supplemental)】 Geoenvironmental Engineering (Kyoritsu Shuppan Publishing, ISBN: 9784320074293)

Handbook of Geoenvironmental Engineering (Asakura Publishing, ISBN: 9784254261523)

Introduction to Environmental Geotechnics (Japanese Geotechnical Society, ISBN: 9784886444196)

【Prerequisite(s)】 Having knowledge on soil mechanics and geotechnical engineering at bachelor level is preferable, but not requirement.

Numerical Methods in Geomechanics

地盤数值解析法

【Code】10F023 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Thu 1st

【Location】C1-117 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】Fusao Oka, Sayuri Kimoto

【Course Description】Numerical methods for the problems of geoenvironment, e.g., infiltration, transportation, consolidation, dynamic problems, progressive failure, and excavation, will be introduced in this lecture. Finite element analysis, difference method, boundary element method, and distinct element method, will be covered.

【Grading】Final examination, attendance

【Course Goals】The objectives of this course are to understand the fundamentals of numerical analysis method for geoenvironment and its application.

【Course Topics】

Theme	Class number of times	Description
Numerical methods for differential equations	5	Outlines, Numerical methods for geoenvironment Numerical methods for differential equations, Stability of differential equations Difference method
Finite element method	5	Virtual work theorem Finite element method, Isoparametric element, Stiffness matrix, stress and strain
Numerical methods for multiphase materials	3	Governing equation of two phase mixture material, Finite element method for two phase mixture material, Consolidation analysis, Numerical methods for heat conduction equation
Other numerical methods	1	Boundary element method, Material point method, Distinct element method, Smoothed particle hydrodynamics method

【Location】C1-117 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English

【Instructor】Susumu Iai and Mamoru Mimura

【Course Description】The lecture covers geo-hazards, including settlements due to consolidation of clayey ground and seismic hazards to geotechnical structures. In particular, the lecture covers mechanism, failure modes, and mitigation measure to geo-hazards. The lecture ranges from mechanics of granular materials to numerical simulation.

【Grading】Based on reports to exercises and attendance.

【Course Goals】Successful students will have the ability to initiate their own research work on geo-hazards based on the solid understanding of the mechanics of granular materials and numerical analysis.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	Learn Objective, contents, and grading procedure
Fundamentals of continuum mechanics for geotechnics	1	Learn fundamentals of continuum mechanics for geotechnics, including stress, strain, and equilibrium equations
Elasticity and plasticity	1	Learn plasticity, including constitutive equations, failure function, hardening function, Drucker's postulate, and associated law
Behavior of geo-materials and modeling	1	Learn constitutive equations, including (1) Cam-clay model based on energy relation, (2) visco-plastic model, and (3) model with super- and sub-loading surfaces.
Application to boundary value problems	2	Learn application of the constitutive models in geotechnical engineering.
Fundamentals of dynamics	3	Learn fundamentals of dynamics for numerical analysis of geo-hazards during earthquakes
Mechanics of granular materials	4	Learn granular materials subject to transient and cyclic loads

Governance for Regional and Transportation Planning

地域・交通ガバナンス論

【Code】 10X313 【Course Year】 Master and Doctor Course 【Term】 2nd term 【Class day & Period】 Tue 4th

【Location】 C1-171 【Credits】 2 【Restriction】 【Lecture Form(s)】 Lecture 【Language】 English

【Instructor】 KOBAYASHI Kiyoshi

【Course Description】 This lecture aims to provide interdisciplinary knowledge associated with appropriate governance strategies for regional, urban, transportation planning. In detail, the contents of lectures consist of following topics:

Urban development management based upon PPP, landscape design to support activities, public transportation system for sustainable growth, urban facilities planning considering the variety in behaviors, ITS to support highly-advanced transportation behavior, advanced logistic system, and remote sensing technology for urban and regional planning

【Grading】 Participation (30), Report (70)

【Course Goals】 To achieve the knowledge for urban and regional governance.

【Course Topics】

Theme	Class number of times	Description
Introduction of Urban Infrastructure Management	1	Prof. Kobayashi
New Settlement Systems for Transportation Services	1	Assoc. Prof. Matsushima
Landscape Policy of Kyoto City	1	Assoc. Prof. Kubota
Urban Design Considering Amenity in the River-Front	1	Prof. Kawasaki
Concepts and visions for city logistics	2	Prof. Taniguchi and Assoc. Prof. Yamada
Expectations for ITS and issues	1	Assoc. Prof. Uno
Mobility Management	2	Prof. Fujii
Disaster Risk Governance	1	Assoc. Prof. Yokomatsu
Concepts and visions for city logistics	3	Assoc. Prof. Susaki, Assoc. Prof. Maki, and Dr. Suanpaga (Kasetsart Univ.)
Traffic modeling with Digital Image Processing	1	Dr. Suanpaga (Kasetsart Univ.)
Summary	1	Summarize classes and check whether students could understand them.

City Logistics

シティロジスティクス

【Code】10F213 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Wed 3rd 【Location】 【Credits】2 【Restriction】No Restriction
 【Lecture Form(s)】Lecture 【Language】English 【Instructor】Eiichi Taniguchi, Ali G. Qureshi

【Course Description】The methodologies of city logistics for establishing efficient and environmentally friendly logistics systems in urban areas will be described. Focusing on the truck traffic within road network, the process, models and the evaluation for building urban freight policy will be given. As well logistics systems using recent development of ICT, the effects of e-commerce on freight transport and supply chain management will be discussed.

【Grading】Term examination 80%, Report 10% and Quiz 10%

【Course Goals】The course goals are fully understanding the methodologies for establishing efficient, environmentally friendly and safe logistics systems in urban areas as well as obtaining the basic knowledge on modelling and evaluating city logistics initiatives.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	Introduction to issues on urban freight transport is given and the importance of these issues is discussed in conjunction with urban planning.
What is city logistics?	1	City logistics are presented to totally solve problems on the efficiency of urban freight transport as well as social problems including traffic congestion, traffic environment, traffic safety and energy. The concepts of city logistics and characteristics and implementation methods are given.
Status quo and issues in freight transport---urban freight transport policy	1	The status quo and issues on freight transport is presented and urban freight transport policies are discussed for establishing efficient, environmentally friendly logistics systems in urban areas.
ITS and logistics	1	Logistics systems using ITS (Intelligent Transport Systems) are presented and how to implement city logistics initiatives using ITS is discussed.
Vehicle routing and scheduling	3	Models for optimising the visiting order and allocation of trucks in delivering goods to customers in urban areas are given and solution methodologies and practical applications are discussed. The probabilistic vehicle routing and scheduling problems with the uncertainty of travel times as well as the dynamic vehicle routing and scheduling problems with the real time travel times are also described.
Location of logistics terminals	2	The optimal location models of logistics terminals and the solution methodologies and their application to practical problems are presented. The location routing planning including vehicle routing and scheduling problems are discussed.
Cooperative freight transport systems	1	Cooperative freight transport systems which jointly operate logistics terminals, trucks and information systems are presented. The merits and demerits of cooperative freight transport systems as well as the methods for promoting them are discussed.
Application of ICT and ITS	1	It is shown that ICT (Information and Communication Technology) and ITS (Intelligent Transport Systems) allow us to collect data, transmit and analyse them relating to city logistics. The importance of ICT and ITS is emphasized.
Supply chain management, third party logistics and intermodal freight transport	1	Supply chain management, third party logistics and intermodal freight transport is presented and the innovative management systems which are used in modern logistics are discussed.
New freight transport systems	1	The categorization, characteristics and significance of new freight transport systems including underground freight transport systems are presented. The possibility of realizing new freight transport systems is discussed based on cost benefit analyses.
transport demand management and e-commerce	1	The transport demand management, which is important in city logistics is described and the difference is highlighted with the transport demand management for passenger traffic. Effects of e-commerce on urban freight transport are discussed based on recent behaviour change of consumers.
deregulation and evaluating city logistics	1	The deregulation on freight transport is described and performance indicators for evaluating city logistics initiatives are discussed.

【Instructor】 N. Uno and T. Yamada

【Course Description】 This class provides you with the outlines of engineering methodology with information and communication technology as its core element for improving the safety, efficiency and reliability of traffic and transportation systems and reducing the environmental burden. Concretely, we discuss the applicability of countermeasures, such as Travel Demand Management, modal-mix in transportation systems, traffic safety improvement schemes for relieving contemporary problems in traffic and transportation systems, in addition to brief introduction of innovative approaches to collect high-quality of real-time traffic data. Moreover, the methodology for policy evaluation and the related basic theory are explained.

【Grading】 Final report: 50-60%, Mid-term report: 30-40% and Attendance: 10%

【Course Goals】 Goal of this class is to cultivate basic and critical abilities of students for implementing effective traffic and transportation management using ITS (Intelligent Transportation System).

【Course Topics】

Theme	Class number of times	Description
Basics for Transportation	1	
Network Analysis		
Estimation of OD		
Traffic Volume using Observed Link Traffic Counts	1	
Analytical Approaches Based on Transportation Network Equilibrium	3	
Outlines of ITS	1

Advanced Geoinformatics

空間情報論

【Code】10A806 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Tue 2nd 【Location】C1-172 【Credits】2 【Restriction】No Restriction

【Lecture Form(s)】Lecture & Exercise 【Language】Japanese 【Instructor】Masayuki Tamura, Junichi Susaki

【Course Description】Geoinformatics is the science and technologies dealing with spatially distributed data acquired with remote sensing, digital photogrammetry, global positioning system, etc. to address the problems in natural phenomena or human activities. This lecture particularly focuses on satellite remote sensing and explains the theory and the technologies for analyzing environmental changes or disaster effects. A free software "MultiSpec" is used in exercises to learn the basic techniques of image processing.

【Grading】Grading is based on the achievements in home works given in every lesson.

【Course Goals】To understand the basic theory and to acquire the basic techniques of satellite remote sensing for observation and analysis of environmental changes and disaster effects.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	1. Introduction to remote sensing 2. Applications in environmental and disaster prevention fields
Classification of electromagnetic waves and satellite sensors	1	1. Classification of electromagnetic waves 2. Basic terms on electromagnetic radiation 3. Theory of electromagnetic radiation from objects 4. Classification of satellite sensors by observation wavelengths
Interaction of electromagnetic waves with earth surfaces	1	1. Reflection and scattering of electromagnetic waves by earth surfaces 1.1 Bidirectional reflectance distribution function 1.2 Bidirectional reflectance factor 2. Spectral reflectance properties of earth surfaces and objects
Atmospheric effects on satellite observations	1	1. Absorption and scattering of electromagnetic waves by atmospheric particles 2. Atmospheric radiative transfer of electromagnetic waves 3. Atmospheric effects on satellite observations 4. Correction of atmospheric effects
Optical sensors	1	1. Principles of visible and reflective infrared sensors 2. Examples of visible and reflective infrared sensors 3. Applications of reflective infrared sensors
Thermal infrared sensors	1	1. Principles of thermal infrared sensors 2. Measurements of surface temperature by satellite sensors 3. Examples of thermal infrared sensors 4. Applications of thermal infrared sensors
Image processing 1 (Image correction)	1	1. Image processing procedure 2. Image enhancement 3. Image correction 4. Correction of geometrical distortion
Image processing 2 (Image classification)	1	1. What is image classification? 2. Theory of image classification 3. Classification rules 4. Image classification procedure
Microwave sensors	2	1. Microwave 2. Microwave sensors 3. Real Aperture Radar (RAR) 4. Synthetic Aperture Radar (SAR) 5. Interferometric SAR 6. Differential Interferometric SAR

【Instructor】 Muneta Yokomatsu

【Course Description】 The aim of the class is to provide the basic knowledge of risk management methods for various types of risks such as natural disaster, environment and natural resources in urban and rural areas. Students will learn the decision making principle under risks in Economics and asset pricing methods in Financial Engineering as well as have exercises of application on public project problems.

【Grading】 20% of score is valued on attendance and discussion in classes, and 80% on reports.

【Course Goals】 It is targeted to understand 1) representative concepts of risk and risk management process, 2) expected utility theory and 3) foundation of Financial Engineering, and examine 4) public project problems by applying the above knowledge.

【Course Topics】

Theme	<small>Class number of times</small>	Description
Basic framework of risk management	2	1-1 Representative concept of risk 1-2 Risk management technologies
Decision making theory under risks	3	2-1 The Bayes' theorem 2-2 The Expected utility theory
Financial engineering	6	3-1 The Capital Asset Pricing Model 3-2 Option pricing theory 3-3 The arbitrage theorem 3-4 The Black-Scholes formula
Decision making methods for projects	3	4-1 The decision tree analysis 4-2 The real option approach
Comprehension check	1	5 Comprehension check

【Credits】2 【Restriction】 【Lecture Form(s)】Lecture 【Language】English

【Instructor】TATANO Hirokazu, YOKOMATSU Muneta

【Course Description】Natural disasters have low frequencies but high impacts. It is very important to make an integrated risk management plan that consists of various countermeasures such as prevention, mitigation, transfer, and preparedness. This class will present economic approaches to natural disaster risk management and designing appropriate countermeasures.

【Grading】Evaluate mainly by the presentations in the class as well as end-of-term report, taking active and constructive participation in the class into account.

【Course Goals】Students are expected to understand fundamental ways of economic analyses of disaster prevention such as economic valuation of disaster losses, decision making principle under risks, derivation of benefits of risk management.

【Course Topics】

Theme	Class number of times	Description
Introduction to disaster risk management	1	Introduction and Explanation of Course Outline, The Global Trends of Natural Disasters
1. Decision making theory under uncertainty	1	Bayes' theorem, Expected utility function
Methods of disaster risk management	1	Risk control and risk finance
Economic valuation of catastrophic risk mitigation	1	Cost-Benefit analysis, conventional valuation method, catastrophic risks and economic valuation of disaster mitigation
Risk perception bias, land-use and risk communication	2	Risk perception bias, land-use model, risk communication
Disaster risk finance	2	Recent issues of risk finance market, reinsurance, CAT bond, roles of government, derivatives
Risk curve and risk assessment	1	Fragility curve and risk assessment
General equilibrium analysis under disaster risk	1	General equilibrium model under disaster risk
Macrodynamics under disaster risk	1	GDP, economic growth
Disaster accounting	1	Accounting systems
Exercise and presentation	2	Students' exercise and presentation
Confirmation of the learning achievement degree	1	Confirmation of the learning achievement degree

 【Instructor】 T. Matsuoka, S. Murata

【Course Description】 Development of mineral resources and energy resources is essential to the sustainable development of our society and economy. In this class, the exploration and development process of such the natural resources is overviewed including the environmental conservation and harmony. In addition, petrophysics dealing with the basic physical properties of rocks and its application to the resources exploration, fundamentals and applications reservoir engineering used to evaluate the production behavior and reserves of oil and natural gas are lectured.

【Grading】 Evaluation is evenly made by the score of the report problems presented by each teacher.

【Course Goals】 The goal of this class is to master the fundamentals of petrophysics and reservoir engineering that are needed to evaluate the amount of recoverable oil and natural gas reserves and the behavior of the reservoir fluids in the exploration and development of oil and natural gas

【Course Topics】

Theme	Class number of times	Description
From exploration to development of natural resources	1	The exploration and development process of mineral resources and energy resources, which are essential to the sustainable development of our society and economy, is overviewed including the environmental conservation and harmony.
Petrophysics used in natural resources development	6	To know the elastic properties of sedimentary rocks is essential when we consider the exploration and development of oil and natural gas resources. For the sedimentary rocks, physical variables, a rule of thumb and the pore fluid that affect the elastic wave velocity are mainly lectured. For igneous rocks, in addition, the rule of thumb on the physical properties of the rocks affected by fractures are lectures, because fractures in the rocks defines their physical properties.
Fundamentals of reservoir engineering	4	The properties of reservoir fluids and the material balance method to evaluate the reserve of oil and natural gas are explained.
Fluid flow in the reservoir	2	Basic equations of fluid flow in the reservoir and the analytical solution for the flow of oil and natural gas around a well are explained, and the concept and the method of well test analysis are also explained.
Enhanced oil and natural gas recovery	2	The methods of enhanced oil and natural gas recovery (EOGR) are overviewed. The essentials of each EOGR method are explained.

【Textbook】 Handouts are delivered.

Computational Mechanics and Simulation

計算力学及びシミュレーション

【Code】 10K008 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Tue 2nd

【Location】 C1-173 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture and Exercises

【Language】 English 【Instructor】 Gotoh, Murata, Furukawa, Liang

【Course Description】 The process to obtain numerical solutions for various problems in computational mechanics. Discretization and some solving technique for initial/boundary value problems is to be introduced by the FEM, FDM, VM and PM with programming exercises. Statistical mechanics, molecular dynamics, Monte Carlo method and Multiple scale model will be shortly introduced in order to understand the basic theory of molecular dynamics simulation. Their application to engineering problems are to be also given by showing some up-to-date examples. Theory of the distinct element method (DEM) will be lectured, and its application in the engineering field will also be explained. Current technology of the particle method by is to be explained on the violent flow phenomena with free surface. The particular subjects in PM such as momentum conservation and convection of pressure disturbance by numerical instability, etc. will be introduced. This course will be given in English.

【Grading】 Achievement is evaluated by submitted reports to each topic.

【Course Goals】

【Course Topics】

Theme	Class number of times	Description
Homogenization technique and FEM	4	Homogenization method with FEM will be lectured in this item. It is used for obtaining the equivalent homogenized material constants of an anisotropic composite material to be analyzed. The method to obtain homogenized elastic coefficient tensor will be especially focused on.
Molecular dynamics simulation	4	Statistical mechanics, molecular dynamics, Monte Carlo method and Multiple scale model will be shortly introduced in order to understand the basic theory of molecular dynamics simulation. Their application to engineering problems are to be also given by showing some up-to-date examples.
Distinct element method and its application	4	Theory of the distinct element method (DEM) will be lectured in this item. The DEM is the numerical analysis method for discontinuum. The application of the DEM in the engineering field will also be explained.
Free surface flow analysis by particle method	3	Current technology of the particle method by is to be explained on the violent flow phenomena with free surface. The particular subjects in PM such as momentum conservation and convection of pressure disturbance by numerical instability, etc. will be introduced.

Modelling of Geology

数理地質学

【Code】10F069 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Mon 2nd

【Location】C1-173 【Credits】2

【Restriction】should have unit(s) of an introductory lecture on earth science (i.e. Introduction to Earth Science) and/or earth resources engineering

【Lecture Form(s)】Lecture, exercises, field excursions 【Language】Japanese or English (change every year)

【Instructor】Yasuhiro YAMADA

【Course Description】This lecture is on modelling of a geology phenomenon which becomes indispensable when carrying out underground-resources development. First of all, the lecture tells that geologic phenomena are complicated as a fundamental posture and mathematical analysis is possible only a part of them. Then, various analysis techniques and the analysis example are explained with the basic theory for simplifying the natural phenomena to construct geologic models. Then, field excursions are carried out to see relation between topography and local geology. During the excursions, students learn the conditions and assumptions which are needed to model complicated phenomena in which two or more factors involve. The phenomenon in which modelling is possible is limited to a few part.

【Grading】Based on the reports on the lectures and field excursions.

【Course Goals】Students understand the scope of this lecture, the complexity of natural phenomena and our limited knowledge on them, and can explain the contents to others.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	Theme, lecture / excursion schedule, evaluation etc
modelling theory	2	basic theory on geologic modelling
methods and examples	6	methods of geologic modelling and examples are explained with exercises.
excursion 1	4	excursion to NE Kyoto basin to see the relation between topography and geology, in term of an active fault
excursion 2	2	excursion to SW Kyoto basin to see the relation between topography and geology, in term of a relatively inactive fault

【Textbook】no textbook. appropriate articles will be provided.

【Textbook(supplemental)】appropriate books will be informed, this may include ones on geologic modelling.

【Prerequisite(s)】basic knowledge on earth science, including skills to read geologic and geography maps, required.

【Web Sites】

【Additional Information】this lecture includes field excursions. the dates will be determined during the first class, thus all applicants have to attend this class.

Applied Elasticity for Rock Mechanics

応用弾性学

【Code】10F071 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Fri 3rd
 【Location】C1-172 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese
 【Instructor】S. Murata

【Course Description】Theory of elasticity relating to the deformation and failure of rock and rock mass, design and management of rock structures such as tunnel, underground cavern, and rock slope is explained. More specifically, two-dimensional and three-dimensional analysis of elasticity using the basic elastic equations, constitutive equations, and the complex stress function are explained. Several applications of the elasticity to rock mechanics, rock engineering, and fracture mechanics are also explained by deriving their solution.

【Grading】Evaluation is made by the score of two report problems and semester final exam.

【Course Goals】The goal of this class is to master the theory of elasticity so as to solve the elastic problem in rock mechanics, rock engineering, and fracture mechanics.

【Course Topics】

Theme	Class number of times	Description
Airy ' s stress function and complex stress function	2	Airy ' s stress function used to solve a two-dimensional elastic problem is first explained, and then the complex stress functions that are the representation of Airy ' s stress function by the complex variables are explained.
Two-dimensional elastic analysis using the complex stress function	8	Analytical solutions of the two-dimensional elastic problems in fracture mechanics and rock engineering are derived by using the complex stress functions. The mechanical behavior of rock material is also explained based on the derived solution.
Application of two-dimensional elastic analysis	2	The theory of rock support, ground characteristic curve, theoretical equations used for the evaluation of rock stress, which are derived from the solution of two-dimensional elastic problem, are explained.
Three-dimensional theory of elasticity	3	Stress functions to solve the three-dimensional elastic problem are explained, and some examples of the three-dimensional elasticity solution derived by using the stress functions are explained.

【Textbook】Handouts are delivered.

【Textbook(supplemental)】J.C. Jaeger, N.G.W. Cook, and R.W. Zimmerman: Fundamentals of Rock Mechanics -4th ed., Blackwell Publishing, 2007, ISBN-13: 978-0-632-05759-7

【Prerequisite(s)】It is desirable to have knowledge of calculus, vector analysis and complex analysis.

【Web Sites】Web page of this lecture is not specifically provided. When preparing it by need, the information is shown in the class.

Fundamental Theories in Geophysical Exploration

物理探査の基礎数理

【Code】10F073 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Fri 3rd
 【Location】C1-171 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese
 【Instructor】Hitosih Mikada, Tada-nori Goto

【Course Description】We are outlining various basic mathematical principles used for the analysis of the dynamic and kinematic earth-scientific problems in conjunction with wave propagation, mass transfer, etc. in the crust, and presenting examples of such analysis techniques in the area of earth sciences and earth resources engineering.

【Grading】Rating is performed by the combination of exams (40%) and the attendance to the class (60%).

【Course Goals】The aims of the class is to understand various signal-processing theories, the applied seismology, and the applied geo-electromagnetics with respect to exploration geophysics as application tools in seismology and in geo-electromagnetics.

【Course Topics】

Theme	Class number of times	Description
Introduction to exploration geophysics	1	General introduction to the lecture.
Seismic wave propagation and signal processing	2~3	Acquire knowledge on the propagation phenomena of elastic waves to learn the equivalency of 1D propagation with the theory of system function. The topics included would be, z-transform, Levinson recursion, Hilbert transform, etc.
Fundamentals of geo-electromagnetics and their application to exploration geophysics	5	Learn fundamental theories of magnetotellurics, instantaneous potential, spontaneous potential, and apparent resistivity methods, etc. that deal with geo-electromagnetic phenomena. Case studies are introduced to understand the advantages of geo-electromagnetic exploration schemes.
Wave propagation problem in seismic exploration	2~3	Discussing fundamental theories of elastic wave propagation, used in subsurface structural surveys, in terms of the actual utilization and the theories of wave phenomena.
Attenuation of seismic waves	1~2	The attenuation of seismic waves are discussed in terms of the origin of intrinsic friction, theoretical background satisfying the causality, and the recovery of attenuation effects.
Seismic waves and petrophysical properties	1	Discussing materials composing earth's crust or mantle and porous rocks in which seismic waves travel through, to understand various geophysical exploration methodologies using seismic waves.

【Textbook】

【Textbook(supplemental)】Claerbout, J.F. (1976): Fundamentals of Geophysical Data Processing (Available online URL: <http://sep.stanford.edu/oldreports/fgdp2/>)

【Prerequisite(s)】Students should understand exploration geophysics of undergraduate level.

【Web Sites】Could be specified by the lecturers if any.

Design of Underground Structures

地下空間設計

【Code】10F087 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Tue 3rd

【Location】C1-172 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】Toshihiro Asakura, Tsuyoshi Ishida

【Course Description】Outline of the characteristic of underground, the present state and trend of underground development, historical change of underground utilization are explained.

Especially, design and maintenance technology for tunnels and underground opening, and rock stress problem, are lectured in detail.

【Grading】Attendance(50%), class quiz and report(50%)

【Course Goals】Acquire the fundamental technology of underground structure design and maintenance.

【Course Topics】

Theme	Class number of times	Description
Guidance	1	Course description, Grading and Goals
Historical change	1	Historical change of underground development
Environment and Characteristic	1	Environment and Characteristic of underground
Act of deep underground use	1	Social background of the act and engineering problem
Rock stress	2	Underground stability and rock stress problems
Construction(1)	1	Survey technology for tunnelling
Construction(2)	2	Design technology for tunnelling and feed back system
Construction(3)	2	Construction work for tunnelling
Construction(4)	1	Evaluation and utilization of measurement
Maintenance	2	Maintenance technology, Tunnel deformation, Earthquake disaster of tunnels
Achievement check	1	Check the understanding

【Textbook】No set text

【Textbook(supplemental)】Instructed in class

【Prerequisite(s)】Taking Underground Development Engineering and Rock Engineering (when undergraduate) are desirable.

【Additional Information】

Lecture on Exploration Geophysics

探査工学特論

【Code】 10A420 【Course Year】 Master and Doctor Course 【Term】 2nd term 【Class day & Period】 Wed 4th

【Location】 C1-117 【Credits】 2

【Restriction】 The class of "Fundamental theories of geophysical exploration" is recommended to acquire.

【Lecture Form(s)】 Lecture 【Language】 English 【Instructor】 Hitosih Mikada, Tada-nori Goto

【Course Description】 Applied geophysical exploration technologies in disaster mitigation, civil engineering, and earth resources engineering is discussed in terms of seismological and of electromagnetic theories. Students may be asked to process data or design digital filters in the course.

【Grading】 Attendances to the class and reports are weighted as 60 and 40, respectively.

【Course Goals】 Understanding seismological and electromagnetic theories used in geophysical exploration and subsurface-imaging technologies.

【Course Topics】

Theme	Class number of times	Description
Electromagnetic signal processing	3	Principles of magnetotelluric methods, electromagnetic sources and noise reduction.
Modeling technologies in electromagnetic methods	3	Subsurface structure modeling in EM methods. The effects of surface weathered layers, the identification of spatial dimensions, and modeling methodologies are discussed.
Signal processing in seismics	3~4	Digital filtering in seismic data processing.
Reflection seismology	3	Fundamental theories of reflection seismic data processing. Seismic migration is the one to be briefly discussed.
Petrophysics	1~2	Fundamental petrophysics, and fundamental measurement theories in geophysical logging are discussed.

【Textbook】 Specified in the course.

【Textbook(supplemental)】 J.F.Claerbout, 1976, Fundamentals of Geophysical Data Processing, (OOP:photocopies to be specified)

【Prerequisite(s)】 The credits of "Exploration Geophysics" in undergraduate course and "Fundamental Theories of Geophysical Exploration" in graduate course are requested to obtain before the classes.

【Web Sites】 May be specified by the lecturers.

【Additional Information】

Measurement in the earth's crust environment

地殻環境計測

【Code】10F085 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Wed 3rd 【Location】C1-192

【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English

【Instructor】Tsuyoshi ISHIDA, Toshihiro ASAKURA, Koji YAMAMOTO

【Course Description】Necessity of information on the environment in the upper layer of the earth's crust will be explained, as well as measuring methods for it and applications of the measuring results for various engineering projects. Among them, rock stress measurements and their applications will be focused in the relation to the projects of oil field development, underground disposal of high level radio active waste, geological sequestration of CO₂, construction of underground power houses and hot dry rock geothermal power extraction. The importance of initial stress conditions on planning and maintenance of tunnels and others also will be discussed.

【Grading】Grading will be made from scores of the followings: • Report for classes by Ishida. • Achievement test for classes by Yamamoto. • Report for classes by Asakura. • Number of attendance for the classes.

【Course Goals】Goals of this course are the followings. 1) To understand the important effect of initial rock stress on stability of underground chambers and deep underground tunnels. 2) To understand stress relief methods as one of typical methods to measure initial rock stress condition. 3) To understand the principle of a least square method though learning a procedure to determine an initial rock stress condition from released strains measured on a borehole wall. 4) To understand importance and purpose of rock stress measurement for oil field development through borehole breakout problems and others. 5) To understand hydraulic fracturing stress measurement conducted in drill holes for oil field development. 6) To understand history of tunneling technology in Japan. 7) To understand relations between maintenance of tunnels and underground environment. 8) To understand countermeasures against damages of tunnels induced by earthquakes.

【Course Topics】

Theme	Class number of times	Description
Importance of rock stress condition in underground development (by ISHIDA)	3	Necessity of rock stress measurements and their applications for various engineering projects. Among the projects, underground disposal of high level radio active waste, geological sequestration of CO ₂ , construction of underground power houses and hot dry rock geothermal power extraction will be focused.
Stress relief methods to measure rock stress and applicaiton of least square method (by ISHIDA)	3	Actual field works of stress relief methods to measure initial rock stress condition will be explained. Though learning a procedure to determine an initial rock stress condition from released strains measured on a borehole wall, the principle of a least square method will be explained. The report subject will be shown in the last week.
Rock stress measurement for oil field development (by YAMAMOTO)	4	Estimation of rock stress condition by hydraulic fracturing and logging, which is conducted at various steps for oil field development, will be explained. Importance of rock stress affecting on borehole stability will be explained as well.
Tunneling technology in relation to underground environment (by ASAKURA)	4	Tunneling technology in Japan is historically reviewed. Relations between maintenance of tunnels and underground environment and countermeasures against damages of tunnels induced by earthquakes will be explained.
Check of understanding	1	Your understanding is checked by a written test.

【Textbook】None. Printed materials will be given in classes when needed.

【Textbook(supplemental)】Amadei, B. & Stephansson, O.: Rock Stress and Its Measurements, Capman & Hall, 1977.

【Prerequisite(s)】Elasticity, Linear Algebra (Calculation of Matrices) and Computer Literacy (for example, Excel, Word and so on.)

【Web Sites】

【Additional Information】This class is made by English.

Energy System Management

エネルギー基盤マネジメント工学

【Code】 10F086 【Course Year】 Master and Doctor Course 【Term】 2nd term 【Class day & Period】 Fri 2nd 【Location】 C1-171

【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 English 【Instructor】 Katsuaki Koike

【Course Description】 Securance and development harmonious with natural environments of the mineral and fossil energy resources, and utilization of storage function of geologic strata have become important issues for constructing sustainable society. This subject introduces comprehensively the present situation of uses of mineral and energy resources, crust structure and dynamics, economic geology for the genesis and geologic environments of deposits, physical and chemical exploration methods of marine deposits, mathematical geology for reserve assessment, engineering geology for resource development and geological repository, and problems and promisingness of natural energy such as geothermal, solar, wind, and tide.

【Grading】 Integrated evaluation by attendance to the classes and report grades

【Course Goals】 To find out directionality about the technologies required for constructing sustainable society by yourself with full understandings of genetic mechanism, biased distribution, and the present situation of demand and supply of the mineral and energy resources.

【Course Topics】

Theme	Class number of times	Description
	1	
	1	
	1.5	
Introduction of mineral resources	1.5	Classification of minerals used for resources, recent trend on social demand of mineral resources, industrial uses of each mineral, and sustainability.
Introduction of Energy resources	1	Classification of energy sources, recent trend on social demand of energy, physical characteristics of each energy resources, and sustainability.
Physical and chemical properties of crust	1	Inner structure of the Earth, geodynamics, geologic composition, temperature structure, rock physics, and chemical composition of crust.
Economic geology (1)	1	Classification of ore deposits, distribution of each type of ore deposit, generation mechanism of deposit.
Economic geology (2)	1	General structure and distribution of fuel deposits (coal, petroleum, and natural gas), generation mechanism of deposits, and geological process of formation.
Resource exploration (1)	1	Physical and chemical exploration technologies for natural resources in terrestrial area. Representative methods are remote sensing, electric sounding, electromagnetic survey, and seismic prospecting.
Resource exploration (2)	1	Introduction of marine natural resources such as methane hydrate, cobalt-rich crust, and manganese nodule, and exploration technologies for the deposits in sea area.
Assessment of ore reserves and reservoir characterization	1	Fundamentals of geostatistics, variography for spatial correlation structure, spatial modeling by kriging, geostatistical simulation, integration of hard and soft data, and feasibility study
Resource development (1)	1	Development and management technologies of energy resources related to coal, petroleum, and natural gas.
Resource development (2)	1	Characteristics of natural energy related to geothermal, solar, wind, and tide, assessment of natural energy resources, and development and management technologies of resources.
Resource development (3)	1	Development of uranium deposits, mechanism and characteristics of nuclear power generation, and management technologies of nuclear power.
Engineering geology (1)	1	Groundwater, long-term stability assessment of rock mass, chemical reaction of rocks with groundwater, and hydraulic properties of rocks at multi-scales.
Engineering geology (2)	1	Fundamentals of deep geological repository for high-level nuclear waste, CCS (carbon dioxide capture and storage), and underground storage of petroleum and gas.
Sustainability	2	Co-existence of natural resource development with environment, low-carbon society, and problems for human sustainability.

【Textbook】 Printed materials on the class contents are distributed before each class.

【Textbook(supplemental)】 References on each topic will be instructed in classes.

【Prerequisite(s)】 Elementary knowledge of engineering, mathematics, physics, and geology.

【Web Sites】

【Additional Information】

Infrastructure Creation Engineering

社会基盤工学創生

【Code】 10F081 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Thu 4th 【Location】 C1-192

【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 Japanese 【Instructor】 related teaching staff

【Course Description】 A system of scientific principles and technologies is required which enable to create safe, reliable and vigorous human society with enough world-wide competitiveness. The class of Infrastructure Creation Engineering will lecture ongoing, retrospective and perspective on global environment, fundamental science/engineering, social science, social economics and major scientific principles and technologies on natural environment including ecological system, which are needed to develop infrastructures.

【Grading】 Grading will be based on reports (70%) and evaluation in each class (30%).

【Course Goals】 It is aimed to make understand a system of scientific principles and technologies which is required to create human society with sustainable development and to indicate their concept clearly. Major contents to create infrastructure as well as fundamental knowledge on its retrospective and perspective will be able to be learned.

【Course Topics】

Theme	Class number of times	Description
Role of geotechnics in sustainable infrastructure creation	2	
Role of hydro mechanics and water engineering in infrastructure creation and its evaluation	2	
Planning for infrastructure creation	2	
Subjects in material and structural engineering in rebuilding of infrastructure	2	
Role of earth resources engineering for sustainable development in harmonious with environment	2	
Role of environmental engineering in infrastructure creation	2	
Thermal fluid dynamics for fundamental understanding of global environmental subjects	2	
Confirmation of educational achievement	1	

【Textbook】 None

【Textbook(supplemental)】 To be introduced at any time

【Prerequisite(s)】 It is desired to acquire basic knowledge on civil, environmental, earth resources and mechanical engineering.

【Web Sites】 None

【Additional Information】 To present in every class will be checked.

Urban Infrastructure Management

都市基盤マネジメント論

【Code】 10X311 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Mon 3rd

【Location】 C1-117 【Credits】 2 【Restriction】 【Lecture Form(s)】 Lecture 【Language】 English

【Instructor】 OHTSU Hiroyasu

【Course Description】 This lecture aims to provide interdisciplinary knowledge associated with how urban infrastructure is comprehensively management, from viewpoint of not only economy but also "human security engineering". In detail, the contents of lectures consist of following topics:

Urban Infrastructure Asset Management,
Urban Environment Accounting System,
Urban Energy Supply Management,
Urban Food/Water Supply Management,
Urban Transport/Logistics Management.

【Grading】 Participation(10), Presentation(50), Report(40)

Introduction to Sustainability/ Survivability Science

生存科学概論

【Code】10F112 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Wed 2nd
 【Location】C1-192 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English
 【Instructor】K. Takara (DPRI), H. Ishikawa (DPRI), B. He (DPRI), T. Hosoda (Engineering) and S. Yoden (Science)
 【Course Description】There are many threats for human beings on the earth: medicine/infectious diseases, food, population, energy, water, environment and natural hazards and disasters. This class gives how to cope with these for human beings and societies. If we realized sustainable society, there are still catastrophes that we have to face. This class considers how to survive such catastrophic situations. Especially focused on are frequent and amplified extreme weather due to climatic change (or global warming) and subsequent severe disasters, water and environmental problems. Concepts and technologies for these problems are introduced, discussing the future perspectives of our society, science and technology based on various aspects and examples of climate, culture and ways of life in the world.
 【Grading】Students will be evaluated by the number of attendance and a final written examination.
 【Course Goals】Any graduate students in various disciplines can join this class. Mixture of different graduate students from different disciplines gives good discussions in the classroom in which global issues will be introduced and discussed by the teachers and students together. This is a graduate school level lecture class including presentations by students.

【Course Topics】

Theme	Class number of times	Description
I n t r o d u c t i o n	1	The framework of sustainability/survivability science is given to understand its significance.
Examples	2	Introducing how to cope with various examples of threats that human beings are facing: medicine/infectious diseases, food, population, energy, water, environment and natural hazards and disasters.
Global warming and mitigation	3	A theory of global warming, technical countermeasures of mitigation and political situation in the world are given.
Extreme weather and its prediction	2	Recent water-related disasters and water problems due to extreme weather are introduced.
Adaptation	3	Examples and ideas of adaptation in the world are considered to cope with water-related disasters that are occurring more frequent and getting bigger.
Discussions	3	Giving students an opportunity to express their own ideas, teachers and students discuss his/her ideas.
Summary	1	Conclude this series of lectures.

【Textbook】No textbook specified. Handouts will be distributed if necessary.

【Textbook(supplemental)】Relevant literature would be introduced.

【Prerequisite(s)】The class is given in English with some Japanese language supplement for technical/special words. No background knowledge is necessary. Reading, writing and discussing in English is requirement.

【Web Sites】This lecture is related to a Global COE Program “ Sustainability/survivability science for a resilient society adaptable to extreme weather conditions ” (GCOE-ARS) for a period of 2009 to 2013. See also <http://ars.gcoe.kyoto-u.ac.jp/> for further information.

【Additional Information】This class, which is given as graduate school-level lectures, can be taken by any graduate students from different disciplines including natural science, social science and humanity. Mixture of graduate students from different disciplines encourages exciting and interesting discussions by them to discuss global environmental issues with several professors and PDs.

Emergency Management Systems

危機管理特論

【Code】 693291 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Wed 1st

【Location】 Faculty of Engineering Integrated Research Bldg. 213 【Credits】 2 【Restriction】 No Restriction

【Lecture Form(s)】Lecture 【Language】Japanese 【Instructor】Haruo HAYASHI, Norio MAKI, Shingo SUZUKI

【Course Description】 Damage from disasters is defined by two factors: scale of hazard and social vulnerability. Two strategies exist to reduce damage from disasters — namely, crisis management as a post-event countermeasure and risk management as a pre-event measure. This course introduces students to a system for effective emergency management, consisting of response, recovery, mitigation, and preparedness.

【Grading】 Every after lecture, please submit short report writing following things 1) Three points you could learn in this lecture, and reason 2) What you would like to explain more? Please send your short report to following address by following formats 1.address: disaster.reporti2@drs.dpri.kyoto-u.ac.jp 2.subject: 「 Emergency Management Report “ date ” “ ID ” “ Name ” 3.No attach file

【Course Goals】 Learning about Techniques for Business Continuity Management consisted of Risk Assessment, Strategic Planning, Emergency Response, and Training.

【Course Topics】

Theme	Class number of times	Description
Business Continuity Management	3	What is emergency response, and business continuity management.
Risk Assessment	3	Techniques for Risk Identification, and Risk Assessment
Strategic Planning	3	Techniques for Strategic Planning and Evaluation
Emergency Response	3	Incident Command System, and Design of Emergency Operation Center
Training	3	Learning, drill, Exercises for Emergency Response

【Textbook】 Haruo Hayashi et.al., Soshiki no Kikikanri Nyuumon, Maruzen, 2008// Kyodai, NTT Resilience Kennkyuu Group, Shinayakana Syakai no Souzou, Nikkei BP, 2009

Urban Transport Policy

都市交通政策フロンランナー講座

【Code】 10Z001 【Course Year】 Master and Doctor Course 【Term】 1st term

【Class day & Period】 see the handbook for course registration

【Location】 conference room, UPL karasuma office (see the handbook for course registration) 【Credits】 1

【Restriction】 see the handbook for course registration 【Lecture Form(s)】 Intensive Lecture 【Language】 Japanese

【Instructor】 Dai Nakagawa, Ryoji Matsunaka, JongJin Yoon, and Mitsuya Matsubara

【Course Description】 This class will provide lectures on the new transport policy carried out in domestic and foreign cities and to understand the difference between the conventional transport policy and the new urban transport policy. Also, it will cover a process to realize the new urban transport policy.

【Grading】 evaluation by attendance and class participation

【Course Goals】 to understand the difference between the conventional transport policy and the new urban transport policy

【Course Topics】

Theme	Class number of times	Description
Outline	1	
Front runner of urban transport policy in the world	2	Reallocation of road space, Pedestrianisation
Front runner of urban transport policy in Japan	1	Downtown activation, Strategies of sustainable transport for our cities, Climate change
Front runner of urban transport policy in Kyoto	1	Eco model city, Transport demand management, Public transport network
Discussion	1	
Basic concept and best practices of new urban transport policy	1	Community bus, Compact city
Presentation	1

【Instructor】Dai Nakagawa, Eiichi Taniguchi, Masashi Kawasaki, Yasunaga Wakabayashi, Tsutomu Doi, JongJin Yoon, Mitsuya Matsubara

【Course Description】This class will provide lectures on the contents of policies and the methods to realize a low carbon society. Also, it will cover the knowledge and the technical skill to relate to urban activation, reduction of the environmental load, compact city planning, and so on.

【Grading】evaluation by attendance and class participation

【Course Goals】to understand the knowledge and the technical skill to relate to urban activation, reduction of the environmental load, compact city planning, and so on.

【Course Topics】

Theme	Class number of times	Description
Outline	1	
Direction of urban policy for low-carbon society	1	Compact city, Interaction between land-use and transport
Urban policy management for low-carbon society	1	Eco model city, Guideline for low-carbon city construction
Landscape & environmental planning	1	Landscape design in public space, View structure
Downtown activation & urban policy for low-carbon society	1	Downtown activation, Compact city
Urban policy for low-carbon society and change of urban structure	1	Public transport, Pedestrianisation
City logistics	1	Logistics, Corporate social responsibility, Intelligent transport systems, Freight quality partnership
Discussion	1

Disaster and Health Risk Management for Liveable City

ディザスター・アンド・ヘルスリスクマネジメントフォーリバーブルシティ

【Code】10F381 【Course Year】Master Course 【Term】1st term 【Class day & Period】Intensive course (2 weeks)

【Location】Sugiura Hall, Yoshida Campus 【Credits】2 【Restriction】30 students, priority for DRC course students

【Lecture Form(s)】Relay Lecture 【Language】English

【Instructor】Kiyono, Koyama, Yoshimura, , Seiyama, Mitani, Fujii, Kawasaki,, Taniguchi

【Course Description】Various types of disasters constantly attack to Asian countries, and those countries sometimes are very vulnerable to the natural disasters and health risk. The interdisciplinary approach of engineering and medical science is indispensable to construct disaster-resilient countries. The 2011 Tohoku earthquake was one of the worst disasters in recent Japanese history. However many lessons to mitigate and manage the disaster are learnt from the event. In order to solve the related issues, the course provides selected topics about natural disaster, disaster-induced human casualty, emergency response, urban search and rescue, emergency medical service, principle of behavior based on neuroscience, urban search and rescue, reconstruction and rehabilitation policy, social impact of disaster, transportation management, logistics during earthquake disaster and so on.

【Grading】Course work assignments and reports

【Course Goals】Course aims to foster international leaders who are able to solve and manage problems concerned about natural disaster, disaster mitigation, health and environmental issues, logistics and amenity for constructing liveable city.

【Course Topics】

Theme	Class number of times	Description
ORT	3	
Earthquake disaster and human casualty	1	
Earthquake protection and emergency responses	1	
International/National US&R systems in UN, US, UK and Japan	2	
Multi-disciplinary disaster response operations and training designs		
Human brain function and behavior	1	
Disaster medicine and epidemiology	1	
Resilient society	1	
Transition of the design for amenity in the river-front	1	
Humanitarian logistics	3	
Achievement evaluation	1	

【Textbook】Textbook for the course is provided by the instructor on the first day.

【Textbook(supplemental)】Some literatures would be introduced by professors.

【Prerequisite(s)】No special knowledge and techniques are necessary.

Exercise on Project Planning

自主企画プロジェクト

【Code】10F251 【Course Year】Master 1st 【Term】1st+2nd term

【Class day & Period】1st term: Thu 3rd, 2nd term: Wed 5th 【Location】C1-192 【Credits】2

【Restriction】No Restriction 【Lecture Form(s)】Exercise 【Language】Japanese 【Instructor】Related instructors

【Course Description】The purpose of this seminar is to bring out the self-initiative, the planning ability, the creativity of students. From project and to practice, the students set up the goals of projects, go ahead with the projects by themselves, and finally make the presentations of project results. Specifically, about the internship activities in enterprises, the training activities in enterprises or universities at home and abroad, the planning and operation of collaborative projects with citizen, the student makes the perfect plannings including the purposes, the ways, the results and so on. For a final, the students do practice, they write the reports and make the presentations about the project results.

【Grading】Planning, implementation of project and reports are comprehensively evaluated.

【Course Goals】Goals are cultivating ability for self-initiative, planning and creativity.

【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Exercise 【Language】 Japanese

【Instructor】 Related instructors

【Course Description】 The students make the projects and plannings on various problems in the urban society by widely making use of the basic knowledge which you've gotten in Department or Master Course. Actually, the students simulate the actual problems, and make the collection and analysis of datas. By that, the students evaluate the practice and effect of projects. At the end , the students write the reports about a series of project results and make the presentations about them.

【Grading】 Evaluation for each student is made comprehensively based on both report and presentation about the project, and usual contribution of student to the project.

【Course Goals】 Goals are to cultivate student ' s ability for planning, creativity and communication.

【Class day & Period】 1st term: Mon 4th, 2nd term: Fri 5th 【Location】 1st term:C1-171, 2nd term: C1-172

【Credits】 2 【Restriction】 【Lecture Form(s)】 【Language】 【Instructor】 Related instructors

【Course Description】 In this seminar, the research themes are given to the students, including the advancement of infrastructure by the innovation of urban informational communication technology, the disaster risk management in the advanced communicate society, the maintenance of infrastructure for age of internationalization, and the techniques of social or energy infrastructure for the urban management. The students have to make the reports and presentations about these themes through the discussion with the supervisors.

Continuum Mechanics

連続体力学

【Code】 10F003 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Mon 2nd

【Location】 C1-192 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 Japanese

【Instructor】 Kunitomo Sugiura, Tomomi Yagi

【Course Description】 Continuum mechanics is a unified basis for solid mechanics and fluid mechanics. The aims of this course are to introduce the continuum mechanics from their basics to the some forms of constitutive law and also to provide students with mathematical way of understanding the continuum mechanics. This course contains the fundamentals of vector and tensor calculus, the basic equations of continuum mechanics, the tensor expressions of elastic problems and further applications.

【Grading】 Assessment will be based on exam, report and attendance.

【Course Goals】 Fundamental theorems on structural mechanics and design will be learned, and ability to judge the proprieties of each computational structural analysis will be acquired.

【Course Topics】

Theme	Class number of times	Description
Introductions	1	
Matrices and tensors	1	
differential and integral calculus of tensors	1	
Kinematics	1	- Material derivative
Deformation and strain	2	- Strain tensors - Compatibility conditions
Stress and equilibrium equation	1	
Conservation law and governing equation	1	
Constitutive equation of idealized material	1	
Elastic-plastic behavior and constitutive equation of construction materials	1	
Boundary value problem	1	
Variational principle	1	
Various kinds of numerical analyses	2	
Confirmation of the attainment level of learning	1	

【Textbook】

【Textbook(supplemental)】

【Prerequisite(s)】 Basic knowledge for structural mechanics, soil mechanics and fluid mechanics are required.

Structural Stability

構造安定論

【Code】10F067 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Mon 2nd

【Location】C1-171 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English

【Instructor】Hiromichi SHIRATO, Kunitomo SUGIURA

【Course Description】Fundamental concept of static and dynamic stability of large-scale structures such as bridges is to be introduced in addition to the way to keep/improve their safety and to evaluate their performance. Basic concept of structural stability and its application and technical subjects to improve safety will be lectured systematically. Furthermore, the practical solutions to the subjects are to be introduced to assure the safety of structures.

【Grading】Grading will be evaluated by written examination, reports and attendance.

【Course Goals】The class aims to cultivate the understanding of static and dynamic stability problems for structural system and make understand the methodology to clarify the limit state. To get knowledge on countermeasures to assure the stability which is applicable to practical design and manufacturing will be also required.

【Course Topics】

Theme	Class number of times	Description
Elastic Stability under Static Loading	7	Stability of Structures and Failures Basis of Structural Stability Elastic Buckling of Columns Elastic Buckling of Beams & Frames Elastic Buckling of Plates Elasto-plastic Buckling Buckling Analysis
Basic theory of dynamic stability and its application	7	The stability around the equilibrium points based on the state equation of motion in which the nonlinearity of external, damping and restrig forces are taken into account. Wind-induced vibration of a square prism (Galopping) and 1dof system with nonlinear spring will be introduced as practical examples. Chaotic motion of a pendulum subjected to periodic external force is also explained as an introduction of chaos theory.
Achievement Check	1	Summary and Achievement Check.

【Textbook】Not specified.

【Textbook(supplemental)】Introduced in class if necessary.

【Prerequisite(s)】It is desired for participants to master structural mechanics, continuum mechanics, mathematical analysis as well as vibration theory.

【Web Sites】none

Material and Structural System & Management

材料・構造マネジメント論

【Code】 10F068 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Wed 2nd

【Location】 C1-173 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Relay Lecture

【Language】 English 【Instructor】 Toyoaki Miyagawa, Hirotaka Kawano, Atsushi Hattori, Takashi Yamamoto

【Course Description】 With regard to the maintenance of concrete structures, the deterioration prediction procedures in material and structural properties are discussed based on durability and deterioration processes of concrete structures. Repair materials and methods are also introduced. Note: strengthening materials and methods are discussed in Concrete Structural Engineering, provided in the second semester. In the later half of this lecture, structures are focused as groups rather than an individual structure to understand the difference between asset management and maintenance. By taking into consideration the economic aspect and human resources aspect as well as the physical aspect, the flow of the asset management for structures' groups with view points of the life cycle cost and the budget is provided.

【Grading】 Reports ,presentations and other activities are inclusively considered.

【Course Goals】 To understand the maintenance for a single structure and the asset management for structure's group.

【Course Topics】

Theme	Class number of times	Description
1. Outline of maintenance for concrete structures	1	
2. Deterioration mechanisms of concrete structures and deterioration prediction	4	
3. Repair materials and methods for concrete structures	1	
4. Maintenance and asset management	2	
5. Maintenance for structures' group	2	
6. Management for structures' group	2	
7. Presentations and discussions	3	

【Textbook】 Not specified. Some materials may be provided.

【Textbook(supplemental)】 Not specified.

【Prerequisite(s)】 Basic knowledge on Construction Materials and Concrete Engineering.

【Web Sites】

【Additional Information】 Positive presence in the lecture is expected by joining discussions for example.

Infrastructural Structure Engineering

社会基盤構造工学

【Code】 10W001 【Course Year】 Master and Doctor Course 【Term】 2nd term 【Class day & Period】 Thu 2nd

【Location】 C1-172 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Relay Lecture

【Language】 English 【Instructor】 Related Faculty members

【Course Description】 Structural engineering problems related to planning, design, construction and maintenance of the infrastructures are discussed. Topics concerning structural engineering and management are widely taken up including latest advanced knowledge and technology, future view and/or international topics. Special lectures by extramural lecturers are carried out if necessary.

【Grading】 Coursework will be graded based on the reports.

【Course Goals】 To grasp problems related to structural engineering and their specific solutions.
To understand applicability of advanced technologies and development prospects.

【Course Topics】

Theme	Class number of times	Description
Structural Materials, Structural Mechanics	4	Steel materials, Concrete materials, mechanical behavior of structures, Problems related to design, construction and maintenance
Applied Mechanics	1	Numerical analysis for structure performance evaluation
Earthquake and Wind Resistance of Structures	7	Infrastructure and natural disaster, Trends of disaster prevention technology, Problems related to Earthquake and wind resistant design
Maintenance of structure	3	International technology, Scenario design, International technological education and collaboration

【Textbook】 The textbook is not required. Materials will be supplied by instructors.

【Textbook(supplemental)】 Supplemental text books will be introduced by instructors.

【Prerequisite(s)】 Structural Mechanics, Wind Resistant Design, Construction Materials, Dynamics of Structures, etc.

Structural Design

構造デザイン

【Code】 10F009 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Fri 2nd 【Location】 C1-173

【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 English

【Instructor】 Tomoaki Utsunomiya, Yoshikazu Takahashi, Yoshiaki Kubota

【Course Description】 This course provides the knowledge of the structural planning and design for civil infrastructures. Fundamentals of the reliability of structures based on the probability and statistics are given. Emphasis is placed on the reliability index and the calibration of partial safety factors in the LRFD design format. Furthermore, the structural morphology, aesthetics and case studies of structural design that satisfies “ utilitas, firmitas and venustas ” are given. Then we discuss what the holistic structural design should be.

【Grading】 Assessed by term-end examination, reports and quizzes

【Course Goals】 To understand the structural planning and design for civil infrastructures.

To understand the reliability-based design of structures.

To deepen the understanding of aesthetics of structures.

【Course Topics】

Theme	Class number of times	Description
Structural Planning	2	Structural Planning of civil infrastructures is introduced. The concept, significance of planning, characteristics of civil infrastructures are discussed. Practical planning process of a bridge is explained.
Modern Excellent Designs	1	The excellent examples of modern structural design are introduced from the viewpoint of the structural system and the urban design. Then the importance of integrated design of urban infrastructure as a place of human activities and how the design should be are lectured.
Structure and Form	2	The bridge types, for example, girder, truss, and arch etc. that have been regarded individually, are lectured as an integrated holistic concept from the viewpoint of the acting forces to understand the structural continuity, symmetry and the systems. Furthermore, the methods of the operation of structural form are given.
Structural Design and Performance-based Design	3	Design theory of civil infrastructures is introduced. The allowable stress design method and the limit state design method are explained. The basic of earthquake resistant design is discussed based on the dynamic response of structures. Performance-based design is also introduced.
Random Variables and Functions of Random Variables	1	Fundamentals of random variables, functions of random variables, probability of failure and reliability index in their simplest forms are lectured.
Structural Safety Analysis	3	Limit states, probability of failure, FOSM reliability index, Hasofer-Lind reliability index, Monte Carlo method are lectured.
Design Codes	2	Code format as Load and Resistance Factors Design (LRFD) method, calibration of partial safety factors based on the reliability method are given.
Assessment of the Level of Attainment	1	Assess the level of attainment.

【Textbook】 Reliability of Structures, A. S. Nowak & K. R. Collins, McGraw-Hill, 2000 (for T. Utsunomiya)

【Textbook(supplemental)】 U.Baus, M.Schleich, "Footbridges", Birkhauser, 2008 (Japanese ver.: "Footbridges"(translated by Kubota, et al.), 鹿島出版会, 2011)

久保田善明, 『橋のディテール図鑑』, 鹿島出版会, 2010

Other books will be given in the lectures as necessary.

【Prerequisite(s)】 Fundamental knowledge on Probability and Statistics, and Structural Mechanics

【Web Sites】

【Additional Information】 Structural planning and design will be given by Y. Takahashi, Excellent designs and structure & forms by Y. Kubota, and Structural reliability analysis by T. Utsunomiya.

Bridge Engineering

橋梁工学

【Code】 10F010 【Course Year】 Master and Doctor Course 【Term】 2nd term 【Class day & Period】 Mon 3rd 【Location】 C1-172 【Credits】 2

【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 English

【Instructor】 Hiromichi Shirato, Kunitomo Sugiura, Tomoaki Utsunomiya, Tomomi Yagi

【Course Description】 The subject matter of bridge engineering can be divided into two main parts, which are steel structure and wind loading/wind resistant structure. The aim of this course is to provide details of mechanical behaviors, maintenance and design of bridge structures. The former part of this course contains the static instability of steel structures and the problems of corrosion, fatigue, brittleness, weldability on steel bridges. In the latter part, the basics of wind engineering, bridge aerodynamics and wind-resistant design including current problems to be solved are provided.

【Grading】 Assessment will be based on exam, reports and attendance.

【Course Goals】

Also, the basic knowledge for wind engineering and aerodynamic instabilities, which are necessary for the wind resistant design of bridges, will be acquired.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	- Fundamental knowledge on steel structures - Types of steel structures - Future trend of steel structures
Material behavior, Initial imperfections and Damages	1	- Construction of steel structures - Residual stresses and initial deformations - Damages
Stress-strain relationship, Joints	1	- Yield surfaces - Bauschinger effect - Hardening effect - Welded joint - Bolted joint
Fatigue fracture, fatigue life and fatigue design	1	- S-N design curve - Fatigue crack growth, stress intensity factor - Miner's rule on damage accumulation - Repair of fatigue damage
Structural stability and design for buckling	1	- Structural instability and accident - Theory of Stability - Compressive members, etc.
Corrosion and anti-corrosion of steel structures	1	- Mechanism of corrosion - Micro- and Macro- cells - Anti-corrosion - Life-cycle costs
Wind resistant design of structures	3	- Natural winds due to Typhoon, Tornado and so on - Evaluation and estimation of strong winds - Wind resistant design methods - Various kinds of design codes
Aerodynamic instabilities of structures	3	- Introduction of aerodynamic instabilities (ex. vortex-induced vibration, galloping, flutter, buffeting, cable vibrations) - Mechanisms of aerodynamic instabilities - Evaluation methods and Countermeasures
Wind-induced disaster	1	- Accidents on structures due to strong winds - Disaster prevention
Topics	1	Introduction of current topics on bridge engineering by a visiting lecturer
Confirmation of the attainment level of learning	1	Confirm the attainment level of learning

Structural Dynamics

構造ダイナミクス

【Code】10F227 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Tue 1st
 【Location】C1-172 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese
 【Instructor】Igarashi, Furukawa

【Course Description】 This course deals with dynamics of structural systems and related topics, to provide the theoretical basis to deal with the problems of vibration, safety under dynamic loads and health monitoring associated with infrastructures. The students will study the dynamic response, properties of natural modes and methods of eigenvalue analysis for multi-DOF systems. The topics on the numerical time integration schemes, probabilistic evaluation of structural response to random excitation, and dynamic response control techniques for structures are also studied.

【Grading】 Based on the results of a final examination, plus homework assignments

【Course Goals】 (1) To acquire the knowledge on theories and principles of analysis of MDOF systems (2) Systematic understanding of frequency-domain structural response analysis (3) Concept of analysis of numerical time integration schemes (4) Understanding of fundamentals of the random vibration theory

【Course Topics】

Theme	Class number of times	Description
Introduction	1	Fudamental concepts, harmonic motion
Dynamics of Multi-Degree-Of-Freedom Systems	2	Formulation of Eq. of Motion / Lagrange's method / Normal Modes / Modal Analysis / Modeling of System Damping
Frequency-Domain Analysis of System Response	1	Frequency Response Funcs. / Fourier Transform
Numerical Time Integration	2	Formulation / Stability and Accuracy Analysis of Integration
Random Vibration	6	Overview / Probability Theory / Sequence of i.i.d. Random Variables / Concept of Random Processes / Correlation Funcs. / White Noise / Stochastic Differential Eq. / Lyapunov Eq. / Response to White Noise Excitation / Covariance Matrix Approach / Correlation Funcs. of Random Response / Spectral Representation of Random Processes / Spectral Representation of Structural Response / Application
Structural Response Control	2	Active Control / Semi-Active Control
Achievement Evaluation	1	Students' achievements in understanding of the course material are evaluated.

【Textbook】 Not used; Class hand-outs are distributed when necessary.

【Textbook(supplemental)】

【Prerequisite(s)】 Mechanical vibration (undergraduate level), Complex calculus (integration of analytic functions, Fourier transform, etc.), Probability theory, Linear algebra

Seismic Engineering Exercise

サイスミックシミュレーション

【Code】 10F263 【Course Year】 Master and Doctor Course 【Term】 2nd term 【Class day & Period】 Mon 4th

【Location】 C1-192 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture and Exercise

【Language】 Japanese 【Instructor】 Sawada, Takahashi

【Course Description】 This course provides the knowledge of simulation methods for earthquake engineering. Small groups of students are exercised in the prediction of ground motion generated by a specified seismic fault and the response analysis of structure selected by themselves considering soil-structure interaction.

【Grading】 Based on the performance during the course (including homework) and the results of presentation and reports.

【Course Goals】 At the end of this course, students will be required to have a good understanding of: - Prediction of ground motion generated by a specified seismic fault - Dynamic response analysis of structures and foundation (linear/nonlinear)

【Course Topics】

Theme	Class number of times	Description
Frequency domain analysis	1	Basics of Fourier transformation is introduced.
Modeling of structure - soil system and time domain analysis	1	Equation of motion of SR model is introduced and the integration method of the equation in time domain is explained.
Exercise of linear seismic response analysis	2	Small groups of students are exercised in elastic modeling of structures and linear response analysis in time domain and frequency domain.
Prediction of ground motion by empirical Green's function method	3	Empirical Green's function method is introduced to predict large earthquakes based on observed small earthquakes.
Seismic analysis method of soil	2	Seismic analysis method of layered half-space based on equivalent linearization method is introduced.
Nonlinear seismic analysis method of structures	2	Nonlinear modeling of structures and the integration and iterative methods of the nonlinear equation of motion in time domain are introduced.
Exercise of nonlinear seismic response analysis	3	Small groups of students are exercised in the prediction of ground motion generated by a specified seismic fault and the nonlinear response analysis of structures and foundation.

 【Location】C1-117 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese
 【Instructor】Hirotaka Kawano, Atsushi HATTORI

【Course Description】Lecture on outline of impact of construction materials to environment and influence on materials and structures from environment. Discuss how to use materials sustainably. Keywords are concrete, steel, composite materials, CO₂, durability, recycle and reuse, life-cycle assessment.

【Grading】Attendance(%), Report(%), Presentation(%)

【Course Goals】To understand the limit of resources and effect of material use to environment. and to understand the basic theory to make environmental-friendly infrastructures from the view point of materials use.

【Course Topics】

Theme	Class number of times	Description
Guidance	1	Object of the Course, Grading and Goals
product of materials and impact to environment	1	Product of cement, steel, concrete CO ₂ product and its influence
recycle and reuse of materials	3	Recycle and reuse of steel, metals, concrete, asphalt, plastics Technology development of construction materials
deterioration of concrete structures	1	Mechanism of deterioration of concrete structures: carbonation, salt attack, alkali-aggregate reaction Maintenance and retrofit methods
deterioration of steel structures	1	Mechanism of deterioration of steel structures: corrosion, fatigue Maintenance and retrofit methods
deterioration of composite structures	1	Mechanism of deterioration of composite structures: Maintenance and retrofit methods
life-cycle assessment of structures	1	Life-cycle assessment of structures considering initial cost as well as maintenance cost
topics and discussion	2	Recent topics on construction materials and discussion
presentation by students and discussion	4	Presentation by students on the individual topics Discussion on the topics

【Course Description】 Physical mechanisms of the hydrologic cycle are described from the engineering viewpoint. The rainfall-runoff modeling and its prediction method are emphasized. Physical hydrological processes explored are surface flow, saturated-unsaturated subsurface flow, groundwater flow, streamflow routing, and evapotranspiration. Physical mechanism of each hydrological process and its numerical modeling method are explained. The basic equations and numerical simulation methods are provided. Then, distributed hydrological modeling which incorporate various hydrological processes and a lumping method of distributed hydrological model are explained.

【Grading】 Examination and report

【Course Goals】 The goals of the class are to understand the physical mechanism of hydrological processes, their basic equations, and numerical simulation methods.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	The hydrologic cycle and the hydrological processes are explained.
Surfaceflow	2	The physical process of the surface flow and its numerical modeling method are described. The basic equations of the surface flow and the numerical simulation methods are explained.
Saturated-unsaturated subsurface flow	2	The physical process of the saturated-unsaturated subsurface flow and its numerical modeling method are described. The basic equations of the saturated-unsaturated subsurface flow and the numerical simulation methods are explained.
Groundwater flow	2	The physical process of the groundwater flow and its numerical modeling method are described. The basic equations of the groundwater flow and the numerical simulation methods are explained.
Streamflow routing	2	The physical process of the streamflow routing and its numerical modeling method are described. The basic equations of the streamflow routing and the numerical simulation methods are explained.
Evapotranspiration	2	The physical process of the evapotranspiration and its numerical modeling method are described. The basic equations of the evapotranspiration and the numerical simulation methods are explained.
Channel network and watershed modeling	1	Numerical representations of channel networks and catchments are explained.
Distributed hydrological model	1	A physically-based distributed hydrological model is described, which is constructed with numerical representations of channel networks and catchments.
Lumping of flow, parameter and watershed model	1	Lumping methods of a distributed hydrological model are described, which include lumping of flow, parameter and watershed model.
verification of study achievement	1	Verification of study achievement

【Textbook】 Handouts are distributed at each class.

River Engineering and River Basin Management

河川マネジメント工学

【Code】 10F019 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Wed 1st

【Location】 C1-173 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 Japanese

【Instructor】 Hosoda, Kishida

【Course Description】 It is important to consider about rivers comprehensively in view of the various aspects based on natural science and engineering. The fundamental knowledge to consider rivers and make the plans of river basins is explained with the following contents: various view points to consider rivers, long term environmental changes of rivers and its main factors, river flows and river channel processes, ecological system of rivers and lakes, flood disasters, integrated river basin planning(flood defense, environmental improvement planning, sediment transport system), functions of dam reservoir and management to learn the fundamental knowledge and grounding to consider rivers from the various points of view such as natural science, engineering and social science.

【Grading】 Reports, Attendance

【Course Goals】 The fundamental knowledge which can consider a river with various senses from a viewpoint of natural science, an engineering viewpoint and a social-scientific viewpoint, is mastered.

【Course Topics】

Theme	Class number of times	Description
Various view points on rivers and river basins	1	Various viewpoints and river basins, Various rivers on the earth, Formation processes of river basins, long term environmental changes of rivers and its main factors
Ecological system in rivers	2	Fundamental knowledge on river eco-system
Application of computational methods to environmental problems	2	Numerical analysis of the environmental change in Lake Biwa, Flood flows and river channel processes
Recent flood disasters & Integrated river basin planning	2	Characteristics of recent flood disasters, River law, Fundamental river management plan, River improvement plan, Procedures of flood defense planning, Flood invasion analysis and hazard map
Groundwater and its related field	2	Simulation technology of groundwater, Geo environmental issues, Reservoir Engineering, Contaminant Transport Processes
Sustainable development of dam	2	Needs of dam development and history of dam construction
Water quality of reservoir	1	Environmental fluid behavior on reservoir, Water quality and its maintenance of reservoir
Economic evaluation of environmental improvement projects	1	Evaluation of people's consciousness for river improvement works by means of CVM, Conjoint Analysis, etc.
Dam structure and maintenance	1	Dam structure, foundation, grouting, and maintenance
Special Lecture	1	Expert engineer and/or office on the river Engineering and river basin management will be invited.

【Textbook】 Printed materials regarding the contents of this class are distributed in class.

【Textbook(supplemental)】

【Prerequisite(s)】 Fundamental knowledge of Hydraulics, Hydrology and Ecology

Sediment Hydraulics

流砂水理学

【Code】10A040 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Mon 2nd
 【Location】C1-171 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese
 【Instructor】Hitoshi Gotoh and Eiji Harada

【Course Description】Natural flows in river and coast are movable bed phenomena with the interaction of flow and sediment. At a river and a coast, a current and a wave activate a sediment transport and bring the topographical change of a bed such as sedimentation or erosion. This lecture provides an outline about the basics of sediment (or movable bed) hydraulics, and detail of the computational mechanics of sediment transport, which has been developed on the basis of dynamics of flow and sediment by introducing a multiphase flow model and a granular material model. Furthermore, about sediment and water-environment relationship, some of frontier technologies, such as an artificial flood, removal works of dam sedimentation, coastal protection works, and sand upwelling work for covering contaminated sludge on flow bottom etc., are mentioned.

【Grading】Grading is based on student ' s activities in lectures and written examination.

【Course Goals】Students understand the basics of sediment hydraulics and outline of advanced models for computational sediment hydraulics, such as multiphase flow model and granular material model. Students understand the present conditions of sediment control works.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	The purpose and constitution of the lecture, the method of the scholastic evaluation are explained.
Basics of sediment hydraulics	5	Physical characteristic of a movable bed and a non-equilibrium sediment transport process and its description are explained. Furthermore, the prediction technique of topographical change due to current and waves is outlined.
Computational mechanics of sediment transport: The state of the art	8	Essential parts of numerical models of the movable bed phenomena, which has been developed by introducing dynamic models such as a granular material model to describe a collision of sediment particles and a multiphase flow model to describe a fluid-sediment interaction, are described. In comparison with the conventional movable bed computation, the points on which has been improved to enhance the applicability of the models are concretely mentioned. Some frontier studies of sediment transport mechanics are also introduced.
Achievement confirmation	1	Comprehension check of course contents.

【Textbook】Hitoshi Gotoh: Computational Mechanics of Sediment Transport, Morikita Shuppan Co., Ltd., p.223, 2004 (in Japanese).

Hydrologic Design and Management

水工計画学

【Code】 10F464 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Fri 2nd
 【Location】 C1-191 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 Japanese
 【Instructor】 Michiharu SHIIBA, Yasuto TACHIKAWA and Sunmin KIM

【Course Description】 Methods for hydrologic design and real-time rainfall-runoff predictions are described. The frequency analysis of hydrologic extreme values and the time series analysis of hydrologic variables are described, and then the methods to set the external force for the hydrologic design are explained. Next, a physically based hydrologic model which includes the process of human activities for the hydrologic cycle is described. In addition, the predictive uncertainty for the hydrologic simulation is introduced. A flood control planning and water resources management with the use of innovative hydrologic simulation tools is described. Then, the climate change and the relation to the hydrologic design are discussed. A real-time rainfall runoff prediction method with the use of Kalman filter theory is described.

【Grading】 Examination and report

【Course Goals】 The class aims to understand the statistical analysis and time serried analysis of hydrologic variables to set the external force of hydrologic designs, applications of hydrologic simulations for hydrologic designs, and real-time rainfall and runoff prediction methods for water resources management.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	A flood control planning and water resources planning are introduced.
Frequency analysis and hydrologic design	2	The frequency analysis of hydrologic extreme values is described. The methods to set the external force for the hydrologic design are explained.
Time series analysis and hydrologic design	3	The time series analysis of hydrologic variables is described. The methods to develop time series models, time serried data generation methods, spatiotemporal variation of hydrologic variables and a random field model, disaggregation methods are explained.
Hydrologic modeling and predictive uncertainty	2	Hydrologic models which include the process of human activities for the hydrologic cycle is described. Then, hydrologic predictive uncertainty is explained, which is inevitable coming from model structure uncertainty, parameter identification uncertainty and model input uncertainty. Especially, the relation between spatiotemporal scales of hydrologic modeling and model parameter values is described.
Hydrologic modeling system	1	A hydrologic modeling system which helps to develop complicated hydrologic simulation models and its importance for a flood control planning is also described.
Climate change and hydrologic design	2	Data analysis of the latest GCM simulation is presented and the possible changes of hydrologic extremes and hydrologic design are discussed.
Real-time rainfall runoff prediction	3	A real-time rainfall runoff prediction method with the use of Kalman filter theory is described.
Verification of study achievement	1	Verification of study achievement is conducted.

【Textbook】 Handouts are distributed at each class.

【Textbook(supplemental)】

【Prerequisite(s)】 Basic knowledge of hydrology, probability and statistics are required.

Open Channel Hydraulics

開水路の水理学

【Code】 10F245 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Fri 1st

【Location】 C1-173 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 English

【Instructor】 HOSODA, Takashi

【Course Description】 Fundamental theory of Open Channel Hydraulics used in River Engineering and Urban Fluid Engineering Fields are lectured, showing various applications in Hydraulic Engineering Field. The contents include the following items: Application of singular point theory to water surface profile analysis, Derivation of 2-D depth averaged model, 1-D analysis of unsteady open channel flows, Plane 2-D analysis of steady high velocity flows, Plane 2-D analysis of unsteady flows, Higher order theory, etc.

【Grading】 Regular examination

【Course Goals】 to understand the grounds of Open Channel Hydraulics and to learn how to apply Open Channel Hydraulics to practical problems in hydraulic engineering field.

【Course Topics】

Theme	Class number of times	Description
Guidance	1	The outline of this class is introduced by overviewing the whole framework of Open Channel Hydraulics with various computational results.
Derivation of 2-D depth averaged model	1	Derivation procedures of plane 2-D depth averaged model are explained in detail
Application of singular point theory to water surface profile analysis	1	
1-D analysis of unsteady open channel flows	3	Fundamental characteristics of 1-D unsteady open channel flows, Method of Characteristics, Dam break flow, Computational methods
Fundamentals of numerical simulation	1	Considering the convective equation as an example, fundamental knowledge of numerical simulation is explained by means of finite difference method, finite element method, etc. Applications these method to unsteady open channel flows are also shown with some practical applications.
Plane 2-D analysis of steady high velocity flows	1	Characteristics of steady plane 2-D flow are explained based on the method of characteristics.
Plane 2-D analysis of unsteady flows	3	Propagation of characteristic surface, shear layer instability, application of a generalized curvilinear coordinate to river flow computation, application of a moving coordinate system, etc.
Higher order theory	3	Boussinesq equation with the effect of vertical acceleration, full/partially full pressurized flow observed in sewer network, traffic flow analysis by means of dynamic wave model
Examination of understanding	1	The understanding of the contents is examined through the paper examination.

【Textbook】 Printed materials on the contents of this class are distributed in class.

【Textbook(supplemental)】

【Prerequisite(s)】 Elementary knowledge of fluid dynamics and hydraulics

【Web Sites】

【Additional Information】 Students can contact with Hosoda by sending e-mail to hosoda.takashi.4w@kyoto-u.ac.jp This class is open in 2012.

Coastal Wave Dynamics

海岸波動論

【Code】10F462 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Fri 1st

【Location】C1-173 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English

【Instructor】Hitoshi Gotoh , Eiji Harada , Khayyer Abbas and Kazuya Oki

【Course Description】Wave motion, which is the main driving force in coastal zone, is explained focusing on wave transformation theory and computational fluid dynamics, and design for coastal structures of their engineering applications is illustrated. As for the computational fluid dynamics for waves, methodology of free-surface wave based on the Navier-Stokes equation, which has been significantly developed in recent years, is explained in detail.

【Grading】Grading is based on usual students activities in lectures and reports.

【Course Goals】Goal of this course is a detailed understanding of fundamental of wave transformation theory and computational fluid dynamics related to wave motion, and is also acquiring a design concept for coastal structures as their engineering applications.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	The purpose and constitution of the lecture the method of the scholastic evaluation are explained.
Conservation laws of fluid	4	Fundamentals of fluid mechanics, liner / non-liner wave theories and numerical mathematics are explained.
Modeling of surf zone dynamics	7	Several methodologies against free-surface wave including breaking waves (i.e. VOF, MPS, SPH) are illustrated. Especially advanced approaches of MPS and SPH are explained in detail.
Introduction of turbulence models	1	Reynolds averaging models and large eddy simulation are outlined.
Modeling of rock mound dynamics	2	Method for tracking of armor blocks under high waves using Distinct Element Method is described.

【Textbook】Non

【Textbook(supplemental)】Non

【Prerequisite(s)】Non. It is desirable to have knowledge about hydraulics, fluid mechanics.

Water Resources Systems

水資源システム論

【Code】 10A222 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Tue 1st
 【Location】 C1-192 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 Japanese
 【Instructor】 Hori, T.(DPTI) and Tanaka, K.(DPRI)

【Course Description】 Systems approach to natural and social phenomena associated to water resources is introduced in terms of planning and design of sustainable water resources systems.

【Grading】 Grading is done based on examination and commitment to classes.

【Course Goals】 Deep understanding of fundamentals for systems modeling of water-related natural and social processes and ability to perform data collection, analyses and design of sustainable water management systems.

【Course Topics】

Theme	Class number of times	Description
Optimum design of water resources systems	3	
decision support for water resources management	3	
Recent topics on water management	1	
Water management practices in the world	3	
Land surface model and its application to water management	4	
achievement check	1	

【Textbook】 Not specified.

【Textbook(supplemental)】 Supplemental documents will be introduced in classes.

【Prerequisite(s)】 Fundamentals of hydrology and water resources engineering.

River basin management of flood and sediment

流域治水砂防学

【Code】10F077 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Mon 1st

【Location】C1-173 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】(DPRI) Nakagawa, H., (DPRI) Sumi, T., (DPRI) Takebayashi, H. and (DPRI) Kawaike, K.

【Course Description】In a river basin, various kinds of disasters such as debris flow, land slide, flood inundation, storm surge, and etc. sometimes happen from the origin to the mouth. This lecture presents occurrence examples, mechanisms, theory and methods of prediction and prevention/mitigation methods against those disasters. Also this lecture mentions comprehensive management in a sediment routing system focusing on sediment management strategy in dam reservoirs.

【Grading】Grading is based on 2 reports out of 4 topics and attendance.

【Course Goals】The goals of the class are to understand phenomena within a river basin and to have wide knowledge of problems of flood and sediment disasters and countermeasures against them.

【Course Topics】

Theme	Class number of times	Description
About Sabo Works	4	About Sabo works, sediment disasters, countermeasures against sediment disasters, Sabo projects.
About Reservoir Sediment Management	3	Reservoir sediment management focusing on reservoir sustainability and comprehensive management in a sediment routing system is overviewed including worldwide perspective and Japanese advanced case studies.
About basin-wide sediment routing	4	About the one dimensional bed deformation analysis and the sediment runoff model are introduced. Furthermore, some examples of the application of those models are introduced.
About basin-wide flood management	4	Flood disasters and countermeasures against them are overviewed along the history of flood management in Japan.

【Textbook】No designation. Printed materials regarding the contents of this class are distributed in class.

【Textbook(supplemental)】Instructed in class

【Prerequisite(s)】Fundamental knowledge of Hydraulics and river engineering

【Location】C1-172 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English

【Instructor】Hiromichi Shirato, Satoru Ushijima

【Course Description】Computational Fluid Dynamics (CFD) is largely developed according to the progress of computer technology in recent years. It is the powerful and effective technique to predict the various fluid phenomena, which show the complicated behaviors due to the non-linearity and other conditions. This course provides the dynamics of fluids and eddies as well as the discretization and numerical techniques, such as finite difference, finite volume and discrete vortex methods.

【Grading】The grading will be based on homework assignments.

【Course Goals】Course goal is to understand the basic theory and numerical techniques for CFD.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	Introduction of recent examples of CFD
computational method for incompressible fluids	7	The course introduces the MAC algorithm, which is generally used for incompressible Newtonian fluids on the basis of finite difference and finite volume methods (FDM and FVM). The outline of numerical methods is also discussed for parabolic, hyperbolic or elliptic partial differential equations, in terms of the numerical stability and accuracy. Homework will be assigned each week.
unsteady viscous flow around bluff body by surface vorticity method	7	The surface vorticity method is introduced as one of the effective method which can solve an unsteady separating flow from an edge and its reattachment to a body. The mesh- and pressure-free concept in this method is introduced, which can be applied various flow phenomena including unsteady separation. Some special treatment such as how to introduce the viscosity (core spreading, random walk) and how to evaluate surface pressure distribution will be explained. Design of airfoil geometry is also introduced as one of application of the method.

【Textbook】No textbook assigned to the course

【Textbook(supplemental)】Recommended books and papers will be introduced in the course.

【Prerequisite(s)】Basic knowledge of fluid dynamics, continuum mechanics and computational technique

【Instructor】Shiiba Michiharu, Hosoda Takashi, Gotoh Hitoshi, Tachikawa Yasuto, Kishida Kiyoshi, Harada Eiji, Sanjou Michio and Kim Sunmin

【Course Description】This lecture picks up various water-related problems and provides their explanation and solution methodology related to hydrodynamic and hydrological infrastructure improvements, maintenance, disaster prevention against flood and damage of water environment, interweaving several leading-edge cases in the real world. Turbulent flow and CFD, sediment transport system and design/planning of hydraulic structure are described on the basis of the integrated management of river-and-coast systems with sediment control and these relationship with infrastructure improvement. Perspective from the viewpoint of public environmental infrastructure on water environment is presented.

【Grading】Grading is based on students activities in lectures and reports.

【Course Goals】Students learn about case-based practical solutions against various problems related to hydraulic engineering, and students acquire academic preparation of how to approach to public environmental infrastructure on water area.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	The purpose and constitution of the lecture, the method of the scholastic evaluation are explained.
Turbulence phenomena in open-channel flows	3	Several problems and exciting topics related to turbulence phenomena in open-channel flows are discussed with advanced practical examples.
River basin management	3	Introduction of flood disasters during a few decades in the world, flood control planning in Japan, Economic evaluation and analysis of people ' s awareness to river improvement projects with dam construction.
Beach erosion	3	Several problems and their solution methodology against sediment transport process in coastal zone are explained. Advanced approaches for sediment control are overviewed.
Rainfall-runoff prediction and hydrologic design	3	Water resources issues related to rainfall-runoff prediction and hydrologic design are discussed with advanced practical examples.
Exercise	2	The exercises to the given subjects are performed.

Applied Hydrology

応用水文学

【Code】10F100 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Wed 4th

【Location】C1-172 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English

【Instructor】Tomoharu Hori, Tetsuya Sumi, Yoshitaka Kido, Yasuhiro Takemon, Kenji Tanaka

【Course Description】Applied and integrated approach to the problems closely related to the water circulation system, such as floods, droughts, water contamination, ecological change, and social change is introduced mainly from the hydrological viewpoint with reference to water quantity, quality, ecological and socio-economic aspects. In the course, several actual water problems are taken up and solving process of each problem which comprises of problem-identification and formulation, impact assessment, countermeasures design and performance evaluation is learned through the lectures' description and also investigation and discussion among the students.

【Grading】Grading is based on student activities in lectures, presentation and reports

【Course Goals】To obtain fundamental Knowledge and skills to perform problem definition, survey and countermeasure design on problems about water use, water hazard mitigation and water environment.

【Course Topics】

Theme	Class number of times	Description
Water Resources Systems	3	Interaction between water resources and socio-economic systems, Distributed flood risk assessment and countermeasures design from human security viewpoint
Reservoir Systems and Sustainability	3	Reservoir system and its environmental impacts, Sustainable management of reservoir system
Land Surface Processes	2	Modelling of land surface processes, Application of land surface model
Water Quality Management	2	Diffuse pollution control, Water quality management of enclosed lake and groundwater
Hydro-eco Systems	2	Ecohydrological management of habitats in river ecosystems, Ecohydrological management of biodiversity in wetland ecosystems
Presentation and Discussion	2	Presentation and Discussion on related topics
Examination	1	

【Textbook】Printed materials on the contents of this class are distributed in class.

【Instructor】 K. TAKARA(DPRI), H. NAKAGAWA(DPRI), E. NAKAKITA(DPRI), H. MASE(DPRI), N. MORI(DPRI), Y. YAMASHIKI(DPRI)

【Course Description】 Environmental impacts by infrastructure for disaster prevention and mitigation are discussed.

Introducing various examples of natural disasters, degradation of the environment, and harmonizing disaster management and environmental conservation in the world, this classroom carries on a dialogue about effective measures for reducing negative environmental impacts and serious disasters.

【Grading】 Considering both the number of attendances and the score of final test at the end of the semester.

【Course Goals】 Conservation of the environment and prevention/mitigation of natural disasters, which are very important for human's survivability, often conflict with each other. This course introduces various examples. Students will learn many examples harmonizing these two issues, and shall consider technical and social countermeasures fitting to the regional characteristics.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	Introduction
Disaster due to heavy rainfall -- utilization of weather radar and global climate change	3	Disaster due to heavy rainfall -- utilization of weather radar and global climate change
Flood disaster prevention and the environment	2	Flood disaster prevention and the environment
River environment and disaster management	2	River environment and disaster management
The environment of closed water areas / Atmosphere-ocean climate interaction	2	The environment of closed water areas / Atmosphere-ocean climate interaction
Coastal disasters due to tsunamis and storm surges	2	Coastal disasters due to tsunamis and storm surges
Projection of climate and coastal environmental change	2	Projection of climate and coastal environmental change

【Textbook】 No particular textbook for this course. Necessary documents and literature introduction are provided in the class room from time to time.

【Textbook(supplemental)】 Some literature would be introduced by professors.

【Prerequisite(s)】 No special knowledge and techniques are necessary, but requires reading, writing and discussing in English in the class.

Integrated Disasters and Resources Management in Watersheds

流域管理工学

【Code】10F106 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Mon 1st

【Location】Katsura Campus, Ujigawa Open Laboratory, Shirahama Oceanographic Observatory and Hodaka Sedimentation Observatory

【Credits】2 【Restriction】 【Lecture Form(s)】Lecture and Exercise 【Language】English

【Instructor】Keiichi TODA(DPRI), Masaharu FUJITA(DPRI), Tetsuya HIRAISHI(DPRI), Nozomu YONEYAMA(DPRI), Kenji KAWAIKE(DPRI), Hiroshi TAKEBAYASHI(DPRI), Daizo TSUTSUMI(DPRI)

【Course Description】Mechanism and countermeasures of sediment disasters, flood disasters, urban flood disasters and coastal disasters are explained. An integrated watershed management of these disasters and water/sediment resources is also introduced. This lecture will be open at Katsura Campus, Ujigawa Open Laboratory, Shirahama Oceanographic Observatory and Hodaka Sedimentation Observatory. Students attending this lecture must take one of the intensive experiment/field study courses offered in Ujigawa Open Laboratory and these observatories.

【Grading】Presentation, Discussion and Report

【Course Goals】Learn an integrated basin management system for natural disasters (sediment disasters, food disasters, coastal disasters, urban flood disasters) mitigation and water/sediment resources utilization considering environmental conservation.

【Course Topics】

Theme	Class number of times	Description
Urban flood disaster managemnet	2	We review urban floods from the viewpoint of river basins, flood causes, and features, together with the results of recent studies. Based on these studies, we propose comprehensive measures against urban floods, including underground inundations. In addition, we discuss on prediction methods of the tsunami disaster in urban area.
Flood disaster management	2	Prevention / mitigation measures against flood disasters and flood prediction methods are explained as well as examples of recent flood disasters in Japan.
Sediment disaster management	2	Showing the problems on sediment disasters and sediment resources, I explain an integrated sedimnet management system both for sediment disasters and sediment resources.
Coastal disaster management	2	Coastal erosion and tsunami hazard become remarkable in these days in Japanese coast. In a lecture, we discuss on characteristics of such coastal disasters.
Exercise on flood disaster at Ujigawa Open Laboratory (Selective)	集中 2 日間	Experiment and analysis on debris flows, riverbed variation and flooding at Ujigawa Open Laboratory, Fushimi-ku, Kyoto city.
Exercise on sediment related disaster at Hodaka Sedimentation Observatory (Selective)	集中 2 日間	The Hodaka Sedimentation Observatory is located at Okuhida region, Gifu Prefecture. In the field exercise, observation methods of rainfall-runoff and sediment movement processes will be explained. Field investigations into several types of erosion control facilities, sediment producing sites, debris flow sites and sediment related disaster sites will be carried out.
Exercise on coastal disaster at Shirahama Oceanographic Observatory (Selective)	集中 2 日間	The Sirahama Maritime Observatory is located in Wakayama Prefecture. In the lecture, observatory, waves, currents and tide levels monitoring system is demonstrated.

【Instructor】Fusao Oka, Sayuri Kimoto

【Course Description】Mechanical behavior of soils and problems of its deformation and failure, based on the multiphase mixture theory and the mechanics of granular materials, will be covered in this lecture.

【Grading】Final examination and several papers

【Course Goals】The objectives of this course are to understand the basics of geomechanics, and the advanced theories.

【Course Topics】

Theme	Class number of times	Description
Deformation of geomaterials	2	Mechanical property of geomaterials, Critical state soil mechanics, Failure criteria, Effective stress, Suction
elasto-plastic constitutive model	3	Constitutive model for geomaterials, Elasto-plastic model, Cam clay model
Theory of viscosity and viscoplasticity	4	Viscoelasticity, viscoplasticity, Elasto-viscoplastic mode, Adachi-Oka model, Microstructure of soils, Temperature dependent behavior, Applications of constitutive models
Consolidation analysis	3	Biot's consolidation theory and its application, Consolidation of embankment
Liquefaction of soils	2	Liquefaction of sandy soil, Damage and failure due to liquefaction, Remedial measures for liquefaction
Confirmation of achievement	1	

【Textbook】Soil mechanics, Fusao Oka, Asakura Publishing (in Japanese)

【Location】C1-171 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】Kimura, Kishida

【Course Description】Advanced construction technology of geo infrastructures, such as tunnel, large underground cavern, foundation, culvert, retaining wall, is introduced and explained. And, the practical projects applied by the advanced construction technology are also introduced.

【Grading】Attendance (20 %), Report, Examination and Presentation (80 %)

【Course Goals】To learn to the advanced construction technology and to propose the project and design through the advanced construction technology.

【Course Topics】

Theme	Class number of times	Description
Guidance, Introduction of construction of geotechnical infrastructures	1	Guidance, Introduction of construction of geotechnical infrastructures
Underground cavern	2	Stability of underground cavern,
Auxiliary methods of mountain tunnel	2	Role of auxiliary methods, Auxiliary method for safety in tunnel construction, Auxiliary methods for preservation of the surrounding environment
Underground space project	2	Introduce two special projects of underground space, namely, nuclear waste disposal, and Carbon Capture and Storage
Field visit or special lecture	1	Visit the construction field or invite special lecture who is the expert engineer on the construction of geotechnical infrastructures.
Foundation	2	Design and construction of piles foundation and steel pipe sheet piles
Culvert	2	Design and construction of box type and arch type culverts
Retaining wall	2	Design and construction of retaining wall
Achievement Confirmation	1	Examination of understanding

Geo-Risk Engineering

ジオリスクエンジニアリング

【Code】 10F242 【Course Year】 Master and Doctor Course 【Term】 2nd term 【Class day & Period】 Mon 3rd

【Location】 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 English

【Instructor】 Ohtsu, Shiotani, Kishida

【Course Description】 This lecture aims to provide interdisciplinary knowledge associated with geo-risk engineering, the topics of risk analysis focusing on geotechnical structures. In detail, the contents of lectures consist of following topics: Introduction of risk analysis, Mathematical background of geo-risk evaluation, Examples of risk evaluation mainly focusing on slopes and Risk management on road slopes.

【Grading】 Participation (10), Presentation (50), Report (40)

【Course Goals】 Acquire the necessary knowledge of risk engineering to construct and maintain infrastructures.

【Course Topics】

Theme	Class number of times	Description
Guidance	1	Guidance & Introduction
Geo-risk	9	Basic Concept of Geo-Risk Engineering
		Introduction of Risk Analysis
		Mathematical Background of Geo-Risk Evaluation
		Basic Concept of Road Infrastructure Risk Evaluation
Risk assessment	2	Management from Macroscopic Viewpoint
		Management from Microscopic Viewpoint
		Slope failure early warning system
Risk for underground structures	2	Case studies of Risk Based Assessment
		Management by Means of Risk Assessment
	2	Risk Management of underground sequestration of Radioactive waste and anthropogenic CO ₂

Fundamental Geofront Engineering

ジオフロント工学原論

【Code】 10F405 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Mon 2nd
 【Location】 C1-172 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 English
 【Instructor】 M.Mimura,S.Nishiyama,T.Koyama,K.Ando

【Course Description】 This lecture aims to learn a practical knowledge associated with mechanical and hydraulic problems in rock masses to realize environment-friendly development of underground space through exercise in modelling and analytical study of rock mass.

【Grading】 Problem sets will be given almost every week and due one week later in class. You can work together but must turn in your own solutions.

【Course Goals】 This course is designed to give students knowledge and understanding to recognise and apply the fundamental techniques used in engineering rock mechanics for the analysis of underground engineered structures.

【Course Topics】

Theme	Class number of times	Description
Introduction to rock mechanics and rock engineering	1	Introduction to common geophysical investigation methods and field investigation methodology.
Rock mass behaviour around excavations	2	How to apply popular failure criteria to determine the strength of both intact rock and discontinuities. How to assess the geometry of discontinuous rock masses using customary measures and techniques
Rock strength and rock mass classification	2	Rock construction techniques for rock foundation works and also for construction of rock caverns and tunnels. Proposals for support of strength and running of construction works in rocks based on conceptual engineering geological models, assessment of the Q-value and of the mechanical characteristics of the rock mass.
Underground excavations in discontinuous and stratified rock	2	Basic rock geology emphasizing characteristics of rocks, in particular structural features and the importance of discontinuities in rock construction works.
Computer methods in rock mechanics and rock engineering:	3	Introduction to computer programmes for underground space design, rock mechanics, and environmental control.
Hydrogeology and groundwater flow in geotechnical	2	The influence of the groundwater conditions on the characteristics of the rock mass, in particular concerning strength and stability but also rock construction technique and environmental consequences.
Risk assessment and risk management	3	Risk assessment processes in rock engineering and management principles with respect to the environment.

【Textbook】 Handout will be distributed.

【Textbook(supplemental)】 References are indicated in the handout.

【Prerequisite(s)】 Undergraduate courses in geology, geotechnical engineering, and soil mechanics.

Environmental Design in Geo-front Engineering

ジオフロント環境デザイン

【Code】 10F407 【Course Year】 Master and Doctor Course 【Term】 2nd term 【Class day & Period】 Wed 2nd

【Location】 C1-173 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 English

【Instructor】 M.Mimura,S.Nishiyama,T.Koyama,Y.Ijiri

【Course Description】 Practical projects of geo-risk management, advanced measurement method and groundwater environmental-assessment system associated with utilization and environmental conservation of underground space are introduced and explained in this lecture.

【Grading】 Problem sets will be given almost every week and due one week later in class.

You can work together but turn in your own solutions.

【Course Goals】 This course is intended to give students a basic understanding of the theoretical and empirical principles of underground space development.

This course will provide the analytical background for students to understand the design principles used in disposal of radioactive Waste project and subsurface CO₂ disposal project.

【Course Topics】

Theme	Class number of times	Description
Introduction to underground development	1	Introduction to rock mechanics and rock engineering.
Rock mechanics for underground development	2	Fundamental definitions, historical underground development, underground development art and engineering.
Construction of underground structures	3	Influence of rock strength on excavation, influence of underground space size, ground support drilling and blasting, mechanism of rock breakage, tunnelling progress with drill and blast excavation.
Hydraulic engineering in underground development	4	Geologic formation as aquifers, , groundwater flow in unsaturated zones and fractured media, hydro-geologic investigation, 3-D general flow equations and advection diffusion equation, groundwater modeling, etc.
Geo-risk engineering	3	Risk identification, risk qualification analysis, risk response, and topics in risk engineering.
Examples of underground development projects	2	Study on underground-space use and construction case studies.

【Textbook】 Handout will be distributed.

【Textbook(supplemental)】 References are indicated in the handout.

【Prerequisite(s)】 Undergraduate courses in geology, geotechnical engineering, and soil mechanics.

Environmental Geotechnics

環境地盤工学

【Code】 10A055 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Mon 1st
 【Location】 C1-192 / Engineering Bldg.No.8 Kyodo No.1 (Yoshida Campus) 【Credits】 2 【Restriction】 No Restriction
 【Lecture Form(s)】 Lecture 【Language】 Japanese/English 【Instructor】 Takeshi Katsumi, Toru Inui

【Course Description】 Several issues on environmental geotechnics including geoenvironmental contamination and countermeasure, waste containment and reuse are introduced to understand the contribution of geotechnical engineering to global and local environmental issues. Geoenvironmental issues due to the 2011 East Japan Earthquake and Tsunami are also introduced.

【Grading】 Continuous assessment including attendance, some assignments, and final report

【Course Goals】 Students should understand the geotechnics to solve the following geoenvironmental issues; soil & groundwater contamination, waste disposal and waste utilization, and extend this knowledge to the development of concepts and technologies for creating and preserving the geo-environment.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	Introduction to Environmental Geotechnics, including goals, outline and grading policy of the course
Waste geotechnics	3-4	Functions and structures of waste containment facilities
		Geotechnics on the liner system (Geosynthetics, clay liner, Leachate collection layer) Post-closure utilization of waste landfill
Remediation geotechnics	3-4	Behaviors of contaminants in subsurface
		Mechanisms of soil and groundwater contamination Remediation of soil and groundwater contamination Case histories
Geo-environmental issues related to construction works, global environmental issues, and natural disasters	2-3	Mechanisms and remediation of geoenvironmental problems and geo-disasters caused by construction works Geoenvironmental issues caused by the 2011 East Japan Earthquake and Tsunami
Reuse of wastes in geotechnical applications	3-4	Engineering properties of recycled materials in geotechnical applications (Incineration ashes, coal ash, surplus soils, dredged soils) Geoenvironmental impact assessment and control of waste utilization Case histories
Presentation and discussion	2-3	Student presentation, discussion, and summary on above topics

【Textbook】 Not specified.

Several technical papers related to the course will be distributed.

【Textbook(supplemental)】 Geoenvironmental Engineering (Kyoritsu Shuppan Publishing, ISBN: 9784320074293)

Handbook of Geoenvironmental Engineering (Asakura Publishing, ISBN: 9784254261523)

Introduction to Environmental Geotechnics (Japanese Geotechnical Society, ISBN: 9784886444196)

【Prerequisite(s)】 Having knowledge on soil mechanics and geotechnical engineering at bachelor level is preferable, but not requirement.

Numerical Methods in Geomechanics

地盤数值解析法

【Code】10F023 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Thu 1st

【Location】C1-117 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】Fusao Oka, Sayuri Kimoto

【Course Description】Numerical methods for the problems of geoenineering, e.g., infiltration, transportation, consolidation, dynamic problems, progressive failure, and excavation, will be introduced in this lecture. Finite element analysis, difference method, boundary element method, and distinct element method, will be covered.

【Grading】Final examination, attendance

【Course Goals】The objectives of this course are to understand the fundamentals of numerical analysis method for geoenineering and its application.

【Course Topics】

Theme	Class number of times	Description
Numerical methods for differential equations	5	Outlines, Numerical methods for geoenineering Numerical methods for differential equations, Stability of differential equations Difference method
Finite element method	5	Virtual work theorem Finite element method, Isoparametric element, Stiffness matrix, stress and strain
Numerical methods for multiphase materials	3	Governing equation of two phase mixture material, Finite element method for two phase mixture material, Consolidation analysis, Numerical methods for heat conduction equation
Other numerical methos	1	Boundary element method, Material point method, Distinct element method, Smoothed particle hydrodynamics method

【Location】C1-117 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English

【Instructor】Susumu Iai and Mamoru Mimura

【Course Description】The lecture covers geo-hazards, including settlements due to consolidation of clayey ground and seismic hazards to geotechnical structures. In particular, the lecture covers mechanism, failure modes, and mitigation measure to geo-hazards. The lecture ranges from mechanics of granular materials to numerical simulation.

【Grading】Based on reports to exercises and attendance.

【Course Goals】Successful students will have the ability to initiate their own research work on geo-hazards based on the solid understanding of the mechanics of granular materials and numerical analysis.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	Learn Objective, contents, and grading procedure
Fundamentals of continuum mechanics for geotechnics	1	Learn fundamentals of continuum mechanics for geotechnics, including stress, strain, and equilibrium equations
Elasticity and plasticity	1	Learn plasticity, including constitutive equations, failure function, hardening function, Drucker's postulate, and associated law
Behavior of geo-materials and modeling	1	Learn constitutive equations, including (1) Cam-clay model based on energy relation, (2) visco-plastic model, and (3) model with super- and sub-loading surfaces.
Application to boundary value problems	2	Learn application of the constitutive models in geotechnical engineering.
Fundamentals of dynamics	3	Learn fundamentals of dynamics for numerical analysis of geo-hazards during earthquakes
Mechanics of granular materials	4	Learn granular materials subject to transient and cyclic loads

【Code】 10X313 【Course Year】 Master and Doctor Course 【Term】 2nd term 【Class day & Period】 Tue 4th

【Location】 C1-171 【Credits】 2 【Restriction】 【Lecture Form(s)】 Lecture 【Language】 English

【Instructor】 KOBAYASHI Kiyoshi

【Course Description】 This lecture aims to provide interdisciplinary knowledge associated with appropriate governance strategies for regional, urban, transportation planning. In detail, the contents of lectures consist of following topics:

Urban development management based upon PPP, landscape design to support activities, public transportation system for sustainable growth, urban facilities planning considering the variety in behaviors, ITS to support highly-advanced transportation behavior, advanced logistic system, and remote sensing technology for urban and regional planning

【Grading】 Participation (30), Report (70)

【Course Goals】 To achieve the knowledge for urban and regional governance.

【Course Topics】

Theme	Class number of times	Description
Introduction of Urban Infrastructure Management	1	Prof. Kobayashi
New Settlement Systems for Transportation Services	1	Assoc. Prof. Matsushima
Landscape Policy of Kyoto City	1	Assoc. Prof. Kubota
Urban Design Considering Amenity in the River-Front	1	Prof. Kawasaki
Concepts and visions for city logistics	2	Prof. Taniguchi and Assoc. Prof. Yamada
Expectations for ITS and issues	1	Assoc. Prof. Uno
Mobility Management	2	Prof. Fujii
Disaster Risk Governance	1	Assoc. Prof. Yokomatsu
Concepts and visions for city logistics	3	Assoc. Prof. Susaki, Assoc. Prof. Maki, and Dr. Suanpaga (Kasetsart Univ.)
Traffic modeling with Digital Image Processing	1	Dr. Suanpaga (Kasetsart Univ.)
Summary	1	Summarize classes and check whether students could understand them.

【Instructor】Dai Nakagawa and Ryoji Matsunaka

【Course Description】 This lecture aims to learn urban environmental policy and its fundamental theory and methodology to solve social and environmental problems that occur in urban area as well as to understand the structure of these problems.

【Grading】 evaluation by commitment, tests, reports and examination

【Course Goals】 to understand the structure of social and environmental problems in urban area and urban environmental policy, its fundamental theory and methodology to solve the problems

【Course Topics】

Theme	Class number of times	Description
Outline	1	
Structure of urban problems	3	Expansion of urban areas, Increase of Environmental impact, Making compact cities
Basic theory of transportation and environment	2	Downtown activation, Road space re-allocation, Pedestrianisation
Road traffic and Public transportation	2	Characteristics of traffic modes, Light Rail Transit, Bus Rapid Transit, Mobility Management
Fundamental theory for measurements of environmental values	3	Utility, Equivalent Surplus, Compensating Surplus
Methodology to measure environmental values	3	Travel Cost Method, Hedonic Approach, Contingent Valuation Method, Conjoint Analysis
Summary	1

City Logistics

シティロジスティクス

【Code】10F213 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Wed 3rd 【Location】 【Credits】2 【Restriction】No Restriction
 【Lecture Form(s)】Lecture 【Language】English 【Instructor】Eiichi Taniguchi, Ali G. Qureshi

【Course Description】The methodologies of city logistics for establishing efficient and environmentally friendly logistics systems in urban areas will be described. Focusing on the truck traffic within road network, the process, models and the evaluation for building urban freight policy will be given. As well logistics systems using recent development of ICT, the effects of e-commerce on freight transport and supply chain management will be discussed.

【Grading】Term examination 80%, Report 10% and Quiz 10%

【Course Goals】The course goals are fully understanding the methodologies for establishing efficient, environmentally friendly and safe logistics systems in urban areas as well as obtaining the basic knowledge on modelling and evaluating city logistics initiatives.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	Introduction to issues on urban freight transport is given and the importance of these issues is discussed in conjunction with urban planning.
What is city logistics?	1	City logistics are presented to totally solve problems on the efficiency of urban freight transport as well as social problems including traffic congestion, traffic environment, traffic safety and energy. The concepts of city logistics and characteristics and implementation methods are given.
Status quo and issues in freight transport---urban freight transport policy	1	The status quo and issues on freight transport is presented and urban freight transport policies are discussed for establishing efficient, environmentally friendly logistics systems in urban areas.
ITS and logistics	1	Logistics systems using ITS (Intelligent Transport Systems) are presented and how to implement city logistics initiatives using ITS is discussed.
Vehicle routing and scheduling	3	Models for optimising the visiting order and allocation of trucks in delivering goods to customers in urban areas are given and solution methodologies and practical applications are discussed. The probabilistic vehicle routing and scheduling problems with the uncertainty of travel times as well as the dynamic vehicle routing and scheduling problems with the real time travel times are also described.
Location of logistics terminals	2	The optimal location models of logistics terminals and the solution methodologies and their application to practical problems are presented. The location routing planning including vehicle routing and scheduling problems are discussed.
Cooperative freight transport systems	1	Cooperative freight transport systems which jointly operate logistics terminals, trucks and information systems are presented. The merits and demerits of cooperative freight transport systems as well as the methods for promoting them are discussed.
Application of ICT and ITS	1	It is shown that ICT (Information and Communication Technology) and ITS (Intelligent Transport Systems) allow us to collect data, transmit and analyse them relating to city logistics. The importance of ICT and ITS is emphasized.
Supply chain management, third party logistics and intermodal freight transport	1	Supply chain management, third party logistics and intermodal freight transport is presented and the innovative management systems which are used in modern logistics are discussed.
New freight transport systems	1	The categorization, characteristics and significance of new freight transport systems including underground freight transport systems are presented. The possibility of realizing new freight transport systems is discussed based on cost benefit analyses.
transport demand management and e-commerce	1	The transport demand management, which is important in city logistics is described and the difference is highlighted with the transport demand management for passenger traffic. Effects of e-commerce on urban freight transport are discussed based on recent behaviour change of consumers.
deregulation and evaluating city logistics	1	The deregulation on freight transport is described and performance indicators for evaluating city logistics initiatives are discussed.

【Instructor】 N. Uno and T. Yamada

【Course Description】 This class provides you with the outlines of engineering methodology with information and communication technology as its core element for improving the safety, efficiency and reliability of traffic and transportation systems and reducing the environmental burden. Concretely, we discuss the applicability of countermeasures, such as Travel Demand Management, modal-mix in transportation systems, traffic safety improvement schemes for relieving contemporary problems in traffic and transportation systems, in addition to brief introduction of innovative approaches to collect high-quality of real-time traffic data. Moreover, the methodology for policy evaluation and the related basic theory are explained.

【Grading】 Final report: 50-60%, Mid-term report: 30-40% and Attendance: 10%

【Course Goals】 Goal of this class is to cultivate basic and critical abilities of students for implementing effective traffic and transportation management using ITS (Intelligent Transportation System).

【Course Topics】

Theme	Class number of times	Description
Basics for Transportation	1	
Network Analysis		
Estimation of OD		
Traffic Volume using Observed Link Traffic Counts	1	
Analytical Approaches Based on Transportation Network Equilibrium	3	
Outlines of ITS	1	
Traffic Management for Enhancing Efficiency	2	
Innovative Approaches for Data Collection Using ICT	1	
Application of ITS for Enhancing Traffic safety	1	
Travel Demand Management and Congestion Charging	2

Advanced Geoinformatics

空間情報論

【Code】10A806 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Tue 2nd 【Location】C1-172 【Credits】2 【Restriction】No Restriction

【Lecture Form(s)】Lecture & Exercise 【Language】Japanese 【Instructor】Masayuki Tamura, Junichi Susaki

【Course Description】Geoinformatics is the science and technologies dealing with spatially distributed data acquired with remote sensing, digital photogrammetry, global positioning system, etc. to address the problems in natural phenomena or human activities. This lecture particularly focuses on satellite remote sensing and explains the theory and the technologies for analyzing environmental changes or disaster effects. A free software "MultiSpec" is used in exercises to learn the basic techniques of image processing.

【Grading】Grading is based on the achievements in home works given in every lesson.

【Course Goals】To understand the basic theory and to acquire the basic techniques of satellite remote sensing for observation and analysis of environmental changes and disaster effects.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	1. Introduction to remote sensing 2. Applications in environmental and disaster prevention fields
Classification of electromagnetic waves and satellite sensors	1	1. Classification of electromagnetic waves 2. Basic terms on electromagnetic radiation 3. Theory of electromagnetic radiation from objects 4. Classification of satellite sensors by observation wavelengths
Interaction of electromagnetic waves with earth surfaces	1	1. Reflection and scattering of electromagnetic waves by earth surfaces 1.1 Bidirectional reflectance distribution function 1.2 Bidirectional reflectance factor 2. Spectral reflectance properties of earth surfaces and objects
Atmospheric effects on satellite observations	1	1. Absorption and scattering of electromagnetic waves by atmospheric particles 2. Atmospheric radiative transfer of electromagnetic waves 3. Atmospheric effects on satellite observations 4. Correction of atmospheric effects
Optical sensors	1	1. Principles of visible and reflective infrared sensors 2. Examples of visible and reflective infrared sensors 3. Applications of reflective infrared sensors
Thermal infrared sensors	1	1. Principles of thermal infrared sensors 2. Measurements of surface temperature by satellite sensors 3. Examples of thermal infrared sensors 4. Applications of thermal infrared sensors
Image processing 1 (Image correction)	1	1. Image processing procedure 2. Image enhancement 3. Image correction 4. Correction of geometrical distortion
Image processing 2 (Image classification)	1	1. What is image classification? 2. Theory of image classification 3. Classification rules 4. Image classification procedure
Microwave sensors	2	1. Microwave 2. Microwave sensors 3. Real Aperture Radar (RAR) 4. Synthetic Aperture Radar (SAR) 5. Interferometric SAR 6. Differential Interferometric SAR

【Instructor】 Muneta Yokomatsu

【Course Description】 The aim of the class is to provide the basic knowledge of risk management methods for various types of risks such as natural disaster, environment and natural resources in urban and rural areas. Students will learn the decision making principle under risks in Economics and asset pricing methods in Financial Engineering as well as have exercises of application on public project problems.

【Grading】 20% of score is valued on attendance and discussion in classes, and 80% on reports.

【Course Goals】 It is targeted to understand 1) representative concepts of risk and risk management process, 2) expected utility theory and 3) foundation of Financial Engineering, and examine 4) public project problems by applying the above knowledge.

【Course Topics】

Theme	Class number of times	Description
Basic framework of risk management	2	1-1 Representative concept of risk 1-2 Risk management technologies
Decision making theory under risks	3	2-1 The Bayes' theorem 2-2 The Expected utility theory
Financial engineering	6	3-1 The Capital Asset Pricing Model 3-2 Option pricing theory 3-3 The arbitrage theorem 3-4 The Black-Scholes formula
Decision making methods for projects	3	4-1 The decision tree analysis 4-2 The real option approach
Comprehension check	1	5 Comprehension check

【Instructor】TATANO Hirokazu, YOKOMATSU Muneta

【Course Description】Natural disasters have low frequencies but high impacts. It is very important to make an integrated risk management plan that consists of various countermeasures such as prevention, mitigation, transfer, and preparedness. This class will present economic approaches to natural disaster risk management and designing appropriate countermeasures.

【Grading】Evaluate mainly by the presentations in the class as well as end-of-term report, taking active and constructive participation in the class into account.

【Course Goals】Students are expected to understand fundamental ways of economic analyses of disaster prevention such as economic valuation of disaster losses, decision making principle under risks, derivation of benefits of risk management.

【Course Topics】

Theme	Class number of times	Description
Introduction to disaster risk management	1	Introduction and Explanation of Course Outline, The Global Trends of Natural Disasters
1. Decision making theory under uncertainty	1	Bayes' theorem, Expected utility function
Methods of disaster risk management	1	Risk control and risk finance
Economic valuation of catastrophic risk mitigation	1	Cost-Benefit analysis, conventional valuation method, catastrophic risks and economic valuation of disaster mitigation
Risk perception bias, land-use and risk communication	2	Risk perception bias, land-use model, risk communication
Disaster risk finance	2	Recent issues of risk finance market, reinsurance, CAT bond, roles of government, derivatives
Risk curve and risk assessment	1	Fragility curve and risk assessment
General equilibrium analysis under disaster risk	1	General equilibrium model under disaster risk
Macrodynamics under disaster risk	1	GDP, economic growth
Disaster accounting	1	Accounting systems
Exercise and presentation	2	Students' exercise and presentation
Confirmation of the learning achievement degree	1	Confirmation of the learning achievement degree

【Course Description】 This lecture gives an outline of disaster prevention and reduction countermeasures both inside and outside Japan with special reference to disaster information related topics. Concrete examples of disaster information systems are introduced to show that psychological aspect of information users under critical social conditions is carefully taken into account in such current disaster information systems.

【Grading】 Submit every class reports and end-of-term report Every class reports:

“ Point out 3 discoveries for you and 1 request which you want to know more with reasons in this class.

Submit report via Email by the following rules

1. Address: disaster,nfo@imdr.dpri.kyoto-u.ac.jp
2. subject: “ Disaster Information Report [Date] Student ID, Name ”
3. Don ' t use attached file.
4. Dead line: Next Tuesday

【Course Goals】

【Course Topics】

Theme	Class number of times	Description
What is disaster prevention?	1	
Information system in emergency	2	
Information system in emergency	1	
Case examples on introduction of disaster information system	1	
Information system for evacuation planning,	1	
Information system for rescue activity	1	
Social psychological study of disaster information	2	
Disaster information and evacuation behavior	2	
Gaming approach to disaster risk communication	3	
Test	1

Resources Development Systems

資源開発システム工学

【Code】 10A402 【Course Year】 Master and Doctor Course 【Term】 2nd term 【Class day & Period】 Fri 1st
 【Location】 C1-172 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 Japanese
 【Instructor】 T. Matsuoka, S. Murata

【Course Description】 Development of mineral resources and energy resources is essential to the sustainable development of our society and economy. In this class, the exploration and development process of such the natural resources is overviewed including the environmental conservation and harmony. In addition, petrophysics dealing with the basic physical properties of rocks and its application to the resources exploration, fundamentals and applications reservoir engineering used to evaluate the production behavior and reserves of oil and natural gas are lectured.

【Grading】 Evaluation is evenly made by the score of the report problems presented by each teacher.

【Course Goals】 The goal of this class is to master the fundamentals of petrophysics and reservoir engineering that are needed to evaluate the amount of recoverable oil and natural gas reserves and the behavior of the reservoir fluids in the exploration and development of oil and natural gas

【Course Topics】

Theme	Class number of times	Description
From exploration to development of natural resources	1	The exploration and development process of mineral resources and energy resources, which are essential to the sustainable development of our society and economy, is overviewed including the environmental conservation and harmony.
Petrophysics used in natural resources development	6	To know the elastic properties of sedimentary rocks is essential when we consider the exploration and development of oil and natural gas resources. For the sedimentary rocks, physical variables, a rule of thumb and the pore fluid that affect the elastic wave velocity are mainly lectured. For igneous rocks, in addition, the rule of thumb on the physical properties of the rocks affected by fractures are lectures, because fractures in the rocks defines their physical properties.
Fundamentals of reservoir engineering	4	The properties of reservoir fluids and the material balance method to evaluate the reserve of oil and natural gas are explained.
Fluid flow in the reservoir	2	Basic equations of fluid flow in the reservoir and the analytical solution for the flow of oil and natural gas around a well are explained, and the concept and the method of well test analysis are also explained.
Enhanced oil and natural gas recovery	2	The methods of enhanced oil and natural gas recovery (EOGR) are overviewed. The essentials of each EOGR method are explained.

【Textbook】 Handouts are delivered.

Computational Mechanics and Simulation

計算力学及びシミュレーション

【Code】 10K008 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Tue 2nd

【Location】 C1-173 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture and Exercises

【Language】 English 【Instructor】 Gotoh, Murata, Furukawa, Liang

【Course Description】 The process to obtain numerical solutions for various problems in computational mechanics. Discretization and some solving technique for initial/boundary value problems is to be introduced by the FEM, FDM, VM and PM with programming exercises. Statistical mechanics, molecular dynamics, Monte Carlo method and Multiple scale model will be shortly introduced in order to understand the basic theory of molecular dynamics simulation. Their application to engineering problems are to be also given by showing some up-to-date examples. Theory of the distinct element method (DEM) will be lectured, and its application in the engineering field will also be explained. Current technology of the particle method by is to be explained on the violent flow phenomena with free surface. The particular subjects in PM such as momentum conservation and convection of pressure disturbance by numerical instability, etc. will be introduced. This course will be given in English.

【Grading】 Achievement is evaluated by submitted reports to each topic.

【Course Goals】

【Course Topics】

Theme	Class number of times	Description
Homogenization technique and FEM	4	Homogenization method with FEM will be lectured in this item. It is used for obtaining the equivalent homogenized material constants of an anisotropic composite material to be analyzed. The method to obtain homogenized elastic coefficient tensor will be especially focused on.
Molecular dynamics simulation	4	Statistical mechanics, molecular dynamics, Monte Carlo method and Multiple scale model will be shortly introduced in order to understand the basic theory of molecular dynamics simulation. Their application to engineering problems are to be also given by showing some up-to-date examples.
Distinct element method and its application	4	Theory of the distinct element method (DEM) will be lectured in this item. The DEM is the numerical analysis method for discontinuum. The application of the DEM in the engineering field will also be explained.
Free surface flow analysis by particle method	3	Current technology of the particle method by is to be explained on the violent flow phenomena with free surface. The particular subjects in PM such as momentum conservation and convection of pressure disturbance by numerical instability, etc. will be introduced.

Modelling of Geology

数理地質学

【Code】 10F069 【Course Year】 Master and Doctor Course 【Term】 2nd term 【Class day & Period】 Mon 2nd

【Location】 C1-173 【Credits】 2

【Restriction】 should have unit(s) of an introductory lecture on earth science (i.e. Introduction to Earth Science) and/or earth resources engineering

【Lecture Form(s)】 Lecture, exercises, field excursions 【Language】 Japanese or English (change every year)

【Instructor】 Yasuhiro YAMADA

【Course Description】 This lecture is on modelling of a geology phenomenon which becomes indispensable when carrying out underground-resources development. First of all, the lecture tells that geologic phenomena are complicated as a fundamental posture and mathematical analysis is possible only a part of them. Then, a various analysis techniques and the analysis example are explained with the basic theory for simplifying the natural phenomena to construct geologic models. Then, field excursions are carried out to see relation between topography and local geology. During the excursions, students learn the conditions and assumptions which are needed to model complicated phenomena in which two or more factors involve. The phenomenon in which modelling is possible is limited to a few part.

【Grading】 Based on the reports on the lectures and field excursions.

【Course Goals】 Students understand the scope of this lecture, the complexity of natural phenomena and our limited knowledge on them, and can explain the contents to others.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	Theme, lecture / excursion schedule, evaluation etc
modelling theory	2	basic theory on geologic modelling
methods and examples	6	methods of geologic modelling and examples are explained with exercises.
excursion 1	4	excursion to NE Kyoto basin to see the relation between topography and geology, in term of an active fault
excursion 2	2	excursion to SW Kyoto basin to see the relation between topography and geology, in term of a relatively inactive fault

【Textbook】 no textbook. appropriate articles will be provided.

【Textbook(supplemental)】 appropriate books will be informed, this may include ones on geologic modelling.

【Prerequisite(s)】 basic knowledge on earth science, including skills to read geologic and geography maps, required.

【Web Sites】

【Additional Information】 this lecture includes field excursions. the dates will be determined during the first class, thus all applicants have to attend this class.

Applied Elasticity for Rock Mechanics

応用弾性学

【Code】10F071 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Fri 3rd
 【Location】C1-172 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese
 【Instructor】S. Murata

【Course Description】Theory of elasticity relating to the deformation and failure of rock and rock mass, design and management of rock structures such as tunnel, underground cavern, and rock slope is explained. More specifically, two-dimensional and three-dimensional analysis of elasticity using the basic elastic equations, constitutive equations, and the complex stress function are explained. Several applications of the elasticity to rock mechanics, rock engineering, and fracture mechanics are also explained by deriving their solution.

【Grading】Evaluation is made by the score of two report problems and semester final exam.

【Course Goals】The goal of this class is to master the theory of elasticity so as to solve the elastic problem in rock mechanics, rock engineering, and fracture mechanics.

【Course Topics】

Theme	Class number of times	Description
Airy ' s stress function and complex stress function	2	Airy ' s stress function used to solve a two-dimensional elastic problem is first explained, and then the complex stress functions that are the representation of Airy ' s stress function by the complex variables are explained.
Two-dimensional elastic analysis using the complex stress function	8	Analytical solutions of the two-dimensional elastic problems in fracture mechanics and rock engineering are derived by using the complex stress functions. The mechanical behavior of rock material is also explained based on the derived solution.
Application of two-dimensional elastic analysis	2	The theory of rock support, ground characteristic curve, theoretical equations used for the evaluation of rock stress, which are derived from the solution of two-dimensional elastic problem, are explained.
Three-dimensional theory of elasticity	3	Stress functions to solve the three-dimensional elastic problem are explained, and some examples of the three-dimensional elasticity solution derived by using the stress functions are explained.

【Textbook】Handouts are delivered.

【Textbook(supplemental)】J.C. Jaeger, N.G.W. Cook, and R.W. Zimmerman: Fundamentals of Rock Mechanics -4th ed., Blackwell Publishing, 2007, ISBN-13: 978-0-632-05759-7

【Prerequisite(s)】It is desirable to have knowledge of calculus, vector analysis and complex analysis.

【Web Sites】Web page of this lecture is not specifically provided. When preparing it by need, the information is shown in the class.

【Additional Information】Not specified

Fundamental Theories in Geophysical Exploration

物理探査の基礎数理

【Code】10F073 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Fri 3rd
 【Location】C1-171 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese
 【Instructor】Hitosih Mikada, Tada-nori Goto

【Course Description】We are outlining various basic mathematical principles used for the analysis of the dynamic and kinematic earth-scientific problems in conjunction with wave propagation, mass transfer, etc. in the crust, and presenting examples of such analysis techniques in the area of earth sciences and earth resources engineering.

【Grading】Rating is performed by the combination of exams (40%) and the attendance to the class (60%).

【Course Goals】The aims of the class is to understand various signal-processing theories, the applied seismology, and the applied geo-electromagnetics with respect to exploration geophysics as application tools in seismology and in geo-electromagnetics.

【Course Topics】

Theme	Class number of times	Description
Introduction to exploration geophysics	1	General introduction to the lecture.
Seismic wave propagation and signal processing	2~3	Acquire knowledge on the propagation phenomena of elastic waves to learn the equivalency of 1D propagation with the theory of system function. The topics included would be, z-transform, Levinson recursion, Hilbert transform, etc.
Fundamentals of geo-electromagnetics and their application to exploration geophysics	5	Learn fundamental theories of magnetotellurics, instantaneous potential, spontaneous potential, and apparent resistivity methods, etc. that deal with geo-electromagnetic phenomena. Case studies are introduced to understand the advantages of geo-electromagnetic exploration schemes.
Wave propagation problem in seismic exploration	2~3	Discussing fundamental theories of elastic wave propagation, used in subsurface structural surveys, in terms of the actual utilization and the theories of wave phenomena.
Attenuation of seismic waves	1~2	The attenuation of seismic waves are discussed in terms of the origin of intrinsic friction, theoretical background satisfying the causality, and the recovery of attenuation effects.
Seismic waves and petrophysical properties	1	Discussing materials composing earth's crust or mantle and porous rocks in which seismic waves travel through, to understand various geophysical exploration methodologies using seismic waves.

【Textbook】

【Textbook(supplemental)】Claerbout, J.F. (1976): Fundamentals of Geophysical Data Processing (Available online URL: <http://sep.stanford.edu/oldreports/fgdp2/>)

【Prerequisite(s)】Students should understand exploration geophysics of undergraduate level.

【Web Sites】Could be specified by the lecturers if any.

Design of Underground Structures

地下空間設計

【Code】10F087 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Tue 3rd

【Location】C1-172 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】Toshihiro Asakura, Tsuyoshi Ishida

【Course Description】Outline of the characteristic of underground, the present state and trend of underground development, historical change of underground utilization are explained.

Especially, design and maintenance technology for tunnels and underground opening, and rock stress problem, are lectured in detail.

【Grading】Attendance(50%), class quiz and report(50%)

【Course Goals】Acquire the fundamental technology of underground structure design and maintenance.

【Course Topics】

Theme	Class number of times	Description
Guidance	1	Course description, Grading and Goals
Historical change	1	Historical change of underground development
Environment and Characteristic	1	Environment and Characteristic of underground
Act of deep underground use	1	Social background of the act and engineering problem
Rock stress	2	Underground stability and rock stress problems
Construction(1)	1	Survey technology for tunnelling
Construction(2)	2	Design technology for tunnelling and feed back system
Construction(3)	2	Construction work for tunnelling
Construction(4)	1	Evaluation and utilization of measurement
Maintenance	2	Maintenance technology, Tunnel deformation, Earthquake disaster of tunnels
Achievement check	1	Check the understanding

【Textbook】No set text

【Textbook(supplemental)】Instructed in class

【Prerequisite(s)】Taking Underground Development Engineering and Rock Engineering (when undergraduate) are desirable.

【Additional Information】

Lecture on Exploration Geophysics

探査工学特論

【Code】 10A420 【Course Year】 Master and Doctor Course 【Term】 2nd term 【Class day & Period】 Wed 4th

【Location】 C1-117 【Credits】 2

【Restriction】 The class of "Fundamental theories of geophysical exploration" is recommended to acquire.

【Lecture Form(s)】 Lecture 【Language】 English 【Instructor】 Hitosih Mikada, Tada-nori Goto

【Course Description】 Applied geophysical exploration technologies in disaster mitigation, civil engineering, and earth resources engineering is discussed in terms of seismological and of electromagnetic theories. Students may be asked to process data or design digital filters in the course.

【Grading】 Attendances to the class and reports are weighted as 60 and 40, respectively.

【Course Goals】 Understanding seismological and electromagnetic theories used in geophysical exploration and subsurface-imaging technologies.

【Course Topics】

Theme	Class number of times	Description
Electromagnetic signal processing	3	Principles of magnetotelluric methods, electromagnetic sources and noise reduction.
Modeling technologies in electromagnetic methods	3	Subsurface structure modeling in EM methods. The effects of surface weathered layers, the identification of spatial dimensions, and modeling methodologies are discussed.
Signal processing in seismics	3~4	Digital filtering in seismic data processing.
Reflection seismology	3	Fundamental theories of reflection seismic data processing. Seismic migration is the one to be briefly discussed.
Petrophysics	1~2	Fundamental petrophysics, and fundamental measurement theories in geophysical logging are discussed.

【Textbook】 Specified in the course.

【Textbook(supplemental)】 J.F.Claerbout, 1976, Fundamentals of Geophysical Data Processing, (OOP:photocopies to be specified)

【Prerequisite(s)】 The credits of "Exploration Geophysics" in undergraduate course and "Fundamental Theories of Geophysical Exploration" in graduate course are requested to obtain before the classes.

【Web Sites】 May be specified by the lecturers.

【Additional Information】

Measurement in the earth's crust environment

地殻環境計測

【Code】10F085 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Wed 3rd 【Location】C1-192

【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English

【Instructor】Tsuyoshi ISHIDA, Toshihiro ASAKURA, Koji YAMAMOTO

【Course Description】Necessity of information on the environment in the upper layer of the earth's crust will be explained, as well as measuring methods for it and applications of the measuring results for various engineering projects. Among them, rock stress measurements and their applications will be focused in the relation to the projects of oil field development, underground disposal of high level radio active waste, geological sequestration of CO₂, construction of underground power houses and hot dry rock geothermal power extraction. The importance of initial stress conditions on planning and maintenance of tunnels and others also will be discussed.

【Grading】Grading will be made from scores of the followings: • Report for classes by Ishida. • Achievement test for classes by Yamamoto. • Report for classes by Asakura. • Number of attendance for the classes.

【Course Goals】Goals of this course are the followings. 1) To understand the important effect of initial rock stress on stability of underground chambers and deep underground tunnels. 2) To understand stress relief methods as one of typical methods to measure initial rock stress condition . 3) To understand the principle of a least square method though learning a procedure to determine an initial rock stress condition from released strains measured on a borehole wall. 4) To understand importance and purpose of rock stress measurement for oil field development through borehole breakout problems and others. 5) To understand hydraulic fracturing stress measurement conducted in drill holes for oil field development. 6)To understand history of tunneling technology in Japan. 7) To understand relations between maintenance of tunnels and underground environment. 8) To understand countermeasures against damages of tunnels induced by earthquakes.

【Course Topics】

Theme	Class number of times	Description
Importance of rock stress condition in underground development (by ISHIDA)	3	Necessity of rock stress measurements and their applications for various engineering projects. Among the projects, underground disposal of high level radio active waste, geological sequestration of CO ₂ , construction of underground power houses and hot dry rock geothermal power extraction will be focused.
Stress relief methods to measure rock stress and applicaiton of least square method (by ISHIDA)	3	Actual field works of stress relief methods to measure initial rock stress condition will be explained. Though learning a procedure to determine an initial rock stress condition from released strains measured on a borehole wall, the principle of a least square method will be explained. The report subject will be shown in the last week.
Rock stress measurement for oil field development (by YAMAMOTO)	4	Estimation of rock stress condition by hydraulic fracturing and logging, which is conducted at various steps for oil field development, will be explained. Importance of rock stress affecting on borehole stability will be explained as well.
Tunneling technology in relation to underground environment (by ASAKURA)	4	Tunneling technology in Japan is historically reviewed. Relations between maintenance of tunnels and underground environment and countermeasures against damages of tunnels induced by earthquakes will be explained.
Check of understanding	1	Your understanding is checked by a written test.

【Textbook】None. Printed materials will be given in classes when needed.

【Textbook(supplemental)】Amadei, B. & Stephansson, O.: Rock Stress and Its Measurements, Capman & Hall, 1977.

【Prerequisite(s)】Elasticity, Linear Algebra (Calculation of Matrices) and Computer Literacy (for example, Excel, Word and so on.)

【Web Sites】

【Additional Information】This class is made by English.

Energy System Management

エネルギー基盤マネジメント工学

【Code】 10F086 【Course Year】 Master and Doctor Course 【Term】 2nd term 【Class day & Period】 Fri 2nd 【Location】 C1-171

【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 English 【Instructor】 Katsuaki Koike

【Course Description】 Securance and development harmonious with natural environments of the mineral and fossil energy resources, and utilization of storage function of geologic strata have become important issues for constructing sustainable society. This subject introduces comprehensively the present situation of uses of mineral and energy resources, crust structure and dynamics, economic geology for the genesis and geologic environments of deposits, physical and chemical exploration methods of marine deposits, mathematical geology for reserve assessment, engineering geology for resource development and geological repository, and problems and promisingness of natural energy such as geothermal, solar, wind, and tide.

【Grading】 Integrated evaluation by attendance to the classes and report grades

【Course Goals】 To find out directionality about the technologies required for constructing sustainable society by yourself with full understandings of genetic mechanism, biased distribution, and the present situation of demand and supply of the mineral and energy resources.

【Course Topics】

Theme	Class number of times	Description
	1	
	1	
	1.5	
Introduction of mineral resources	1.5	Classification of minerals used for resources, recent trend on social demand of mineral resources, industrial uses of each mineral, and sustainability.
Introduction of Energy resources	1	Classification of energy sources, recent trend on social demand of energy, physical characteristics of each energy resources, and sustainability.
Physical and chemical properties of crust	1	Inner structure of the Earth, geodynamics, geologic composition, temperature structure, rock physics, and chemical composition of crust.
Economic geology (1)	1	Classification of ore deposits, distribution of each type of ore deposit, generation mechanism of deposit.
Economic geology (2)	1	General structure and distribution of fuel deposits (coal, petroleum, and natural gas), generation mechanism of deposits, and geological process of formation.
Resource exploration (1)	1	Physical and chemical exploration technologies for natural resources in terrestrial area. Representative methods are remote sensing, electric sounding, electromagnetic survey, and seismic prospecting.
Resource exploration (2)	1	Introduction of marine natural resources such as methane hydrate, cobalt-rich crust, and manganese nodule, and exploration technologies for the deposits in sea area.
Assessment of ore reserves and reservoir characterization	1	Fundamentals of geostatistics, variography for spatial correlation structure, spatial modeling by kriging, geostatistical simulation, integration of hard and soft data, and feasibility study
Resource development (1)	1	Development and management technologies of energy resources related to coal, petroleum, and natural gas.
Resource development (2)	1	Characteristics of natural energy related to geothermal, solar, wind, and tide, assessment of natural energy resources, and development and management technologies of resources.
Resource development (3)	1	Development of uranium deposits, mechanism and characteristics of nuclear power generation, and management technologies of nuclear power.
Engineering geology (1)	1	Groundwater, long-term stability assessment of rock mass, chemical reaction of rocks with groundwater, and hydraulic properties of rocks at multi-scales.
Engineering geology (2)	1	Fundamentals of deep geological repository for high-level nuclear waste, CCS (carbon dioxide capture and storage), and underground storage of petroleum and gas.
Sustainability	2	Co-existence of natural resource development with environment, low-carbon society, and problems for human sustainability.

【Textbook】 Printed materials on the class contents are distributed before each class.

【Textbook(supplemental)】 References on each topic will be instructed in classes.

【Prerequisite(s)】 Elementary knowledge of engineering, mathematics, physics, and geology.

【Web Sites】

【Additional Information】

Infrastructure Creation Engineering

社会基盤工学創生

【Code】10F081 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Thu 4th 【Location】C1-192

【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese 【Instructor】related teaching staff

【Course Description】A system of scientific principles and technologies is required which enable to create safe, reliable and vigorous human society with enough world-wide competitiveness. The class of Infrastructure Creation Engineering will lecture ongoing, retrospective and perspective on global environment, fundamental science/engineering, social science, social economics and major scientific principles and technologies on natural environment including ecological system, which are needed to develop infrastructures.

【Grading】Grading will be based on reports (70%) and evaluation in each class (30%).

【Course Goals】It is aimed to make understand a system of scientific principles and technologies which is required to create human society with sustainable development and to indicate their concept clearly. Major contents to create infrastructure as well as fundamental knowledge on its retrospective and perspective will be able to be learned.

【Course Topics】

Theme	Class number of times	Description
Role of geotechnics in sustainable infrastructure creation	2	
Role of hydro mechanics and water engineering in infrastructure creation and its evaluation	2	
Planning for infrastructure creation	2	
Subjects in material and structural engineering in rebuilding of infrastructure	2	
Role of earth resources engineering for sustainable development in harmonious with environment	2	
Role of environmental engineering in infrastructure creation	2	
Thermal fluid dynamics for fundamental understanding of global environmental subjects	2	
Confirmation of educational achievement	1	

【Textbook】None

【Textbook(supplemental)】To be introduced at any time

【Prerequisite(s)】It is desired to acquire basic knowledge on civil, environmental, earth resources and mechanical engineering.

【Web Sites】None

【Additional Information】To present in every class will be checked.

Urban Infrastructure Management

都市基盤マネジメント論

Introduction to Sustainability/ Survivability Science

生存科学概論

【Code】 10F112 【Course Year】 Master and Doctor Course 【Term】 2nd term 【Class day & Period】 Wed 2nd
 【Location】 C1-192 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 English

【Instructor】 K. Takara (DPRI), H. Ishikawa (DPRI), B. He (DPRI), T. Hosoda (Engineering) and S. Yoden (Science)
 【Course Description】 There are many threats for human beings on the earth: medicine/infectious diseases, food, population, energy, water, environment and natural hazards and disasters. This class gives how to cope with these for human beings and societies. If we realized sustainable society, there are still catastrophes that we have to face. This class considers how to survive such catastrophic situations. Especially focused on are frequent and amplified extreme weather due to climatic change (or global warming) and subsequent severe disasters, water and environmental problems.

Concepts and technologies for these problems are introduced, discussing the future perspectives of our society, science and technology based on various aspects and examples of climate, culture and ways of life in the world.

【Grading】 Students will be evaluated by the number of attendance and a final written examination.

【Course Goals】 Any graduate students in various disciplines can join this class. Mixture of different graduate students from different disciplines gives good discussions in the classroom in which global issues will be introduced and discussed by the teachers and students together. This is a graduate school level lecture class including presentations by students.

【Course Topics】

Theme	Class number of times	Description
I n t r o d u c t i o n	1	The framework of sustainability/survivability science is given to understand its significance.
Examples	2	Introducing how to cope with various examples of threats that human beings are facing: medicine/infectious diseases, food, population, energy, water, environment and natural hazards and disasters.
Global warming and mitigation	3	A theory of global warming, technical countermeasures of mitigation and political situation in the world are given.
Extreme weather and its prediction	2	Recent water-related disasters and water problems due to extreme weather are introduced.
Adaptation	3	Examples and ideas of adaptation in the world are considered to cope with water-related disasters that are occurring more frequent and getting bigger.
Discussions	3	Giving students an opportunity to express their own ideas, teachers and students discuss his/her ideas.
Summary	1	Conclude this series of lectures.

【Textbook】 No textbook specified. Handouts will be distributed if necessary.

【Textbook(supplemental)】 Relevant literature would be introduced.

【Prerequisite(s)】 The class is given in English with some Japanese language supplement for technical/special words. No background knowledge is necessary. Reading, writing and discussing in English is requirement.

【Web Sites】 This lecture is related to a Global COE Program “ Sustainability/survivability science for a resilient society adaptable to extreme weather conditions ” (GCOE-ARS) for a period of 2009 to 2013. See also <http://ars.gcoe.kyoto-u.ac.jp/> for further information.

【Additional Information】 This class, which is given as graduate school-level lectures, can be taken by any graduate students from different disciplines including natural science, social science and humanity. Mixture of graduate students from different disciplines encourages exciting and interesting discussions by them to discuss global environmental issues with several professors and PDs.

Emergency Management Systems

危機管理特論

【Code】 693291 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Wed 1st

【Location】 Faculty of Engineering Integrated Research Bldg. 213 【Credits】 2 【Restriction】 No Restriction

【Lecture Form(s)】Lecture 【Language】Japanese 【Instructor】Haruo HAYASHI, Norio MAKI, Shingo SUZUKI

【Course Description】 Damage from disasters is defined by two factors: scale of hazard and social vulnerability. Two strategies exist to reduce damage from disasters — namely, crisis management as a post-event countermeasure and risk management as a pre-event measure. This course introduces students to a system for effective emergency management, consisting of response, recovery, mitigation, and preparedness.

【Grading】 Every after lecture, please submit short report writing following things 1) Three points you could learn in this lecture, and reason 2) What you would like to explain more? Please send your short report to following address by following formats 1.address: disaster.reporti2@drs.dpri.kyoto-u.ac.jp 2.subject: 「 Emergency Management Report “ date ” “ ID ” “ Name ” 3.No attach file

【Course Goals】 Learning about Techniques for Business Continuity Management consisted of Risk Assessment, Strategic Planning, Emergency Response, and Training.

【Course Topics】

Theme	Class number of times	Description
Business Continuity Management	3	What is emergency response, and business continuity management.
Risk Assessment	3	Techniques for Risk Identification, and Risk Assessment
Strategic Planning	3	Techniques for Strategic Planning and Evaluation
Emergency Response	3	Incident Command System, and Design of Emergency Operation Center
Training	3	Learning, drill, Exercises for Emergency Response

【Textbook】 Haruo Hayashi et.al., Soshiki no Kikikanri Nyuumon, Maruzen, 2008// Kyodai, NTT Resilience Kennkyuu Group, Shinayakana Syakai no Souzou, Nikkei BP, 2009

【Textbook(supplemental)】 Tom Demarco et.al, Waltzing With Bears: Managing Risk on Software Projects, Dorset House, 2003// Project Management Institute : A Guide to the Project Management Body of Knowledge 2000 Edition , Project Management Institute, Inc , 2000// R. Urban Transport Policy

都市交通政策フロンランナー講座

【Code】 10Z001 【Course Year】 Master and Doctor Course 【Term】 1st term

【Class day & Period】 see the handbook for course registration

【Location】 conference room, UPL karasuma office (see the handbook for course registration) 【Credits】 1

【Restriction】see the handbook for course registration 【Lecture Form(s)】Intensive Lecture 【Language】Japanese

【Instructor】 Dai Nakagawa, Ryoji Matsunaka, JongJin Yoon, and Mitsuya Matsubara

【Course Description】 This class will provide lectures on the new transport policy carried out in domestic and foreign cities and to understand the difference between the conventional transport policy and the new urban transport policy. Also, it will cover a process to realize the new urban transport policy.

【Grading】 evaluation by attendance and class participation

【Course Goals】 to understand the difference between the conventional transport policy and the new urban transport policy

【Course Topics】

Theme	Class number of times	Description
Outline	1	
Front runner of urban transport policy in the world	2	Reallocation of road space, Pedestrianisation
Front runner of urban transport policy in Japan	1	Downtown activation, Strategies of sustainable transport for our cities, Climate change
Front runner of urban transport policy in Kyoto	1	Eco model city, Transport demand management, Public transport network
Discussion	1	
Basic concept and best practices of new urban transport policy	1	Community bus, Compact city
Presentation	1

Policy for Low-Carbon Society

低炭素都市圏政策論

【Code】 10Z002 【Course Year】 Master and Doctor Course 【Term】 1st term

【Class day & Period】 see the handbook for course registration

【Location】 conference room, UPL karasuma office (see the handbook for course registration) 【Credits】 1

【Restriction】see the handbook for course registration 【Lecture Form(s)】Intensive Lecture 【Language】Japanese

【Instructor】 Dai Nakagawa, Eiichi Taniguchi, Masashi Kawasaki, Yasunaga Wakabayashi, Tsutomu Doi, JongJin Yoon, Mitsuya Matsubara

【Course Description】 This class will provide lectures on the contents of policies and the methods to realize a low carbon society. Also, it will cover the knowledge and the technical skill to relate to urban activation, reduction of the environmental load, compact city planning, and so on.

【Grading】 evaluation by attendance and class participation

【Course Goals】 to understand the knowledge and the technical skill to relate to urban activation, reduction of the environmental load, compact city planning, and so on.

【Course Topics】

Theme	Class number of times	Description
Outline	1	
Direction of urban policy for low-carbon society	1	Compact city, Interaction between land-use and transport
Urban policy management for low-carbon society	1	Eco model city, Guideline for low-carbon city construction
Landscape & environmental planning	1	Landscape design in public space, View structure
Downtown activation & urban policy for low-carbon society	1	Downtown activation, Compact city
Urban policy for low-carbon society and change of urban structure	1	Public transport, Pedestrianisation
City logistics	1	Logistics, Corporate social responsibility, Intelligent transport systems, Freight quality partnership
Discussion	1

Disaster and Health Risk Management for Liveable City

ディザスター・アンド・ヘルスリスクマネジメントフォーリバーブルシティ

【Code】10F381 【Course Year】Master Course 【Term】1st term 【Class day & Period】Intensive course (2 weeks)

【Location】Sugiura Hall, Yoshida Campus 【Credits】2 【Restriction】30 students, priority for DRC course students

【Lecture Form(s)】Relay Lecture 【Language】English

【Instructor】Kiyono, Koyama, Yoshimura, , Seiyama, Mitani, Fujii, Kawasaki,, Taniguchi

【Course Description】Various types of disasters constantly attack to Asian countries, and those countries sometimes are very vulnerable to the natural disasters and health risk. The interdisciplinary approach of engineering and medical science is indispensable to construct disaster-resilient countries. The 2011 Tohoku earthquake was one of the worst disasters in recent Japanese history. However many lessons to mitigate and manage the disaster are learnt from the event. In order to solve the related issues, the course provides selected topics about natural disaster, disaster-induced human casualty, emergency response, urban search and rescue, emergency medical service, principle of behavior based on neuroscience, urban search and rescue, reconstruction and rehabilitation policy, social impact of disaster, transportation management, logistics during earthquake disaster and so on.

【Grading】Course work assignments and reports

【Course Goals】Course aims to foster international leaders who are able to solve and manage problems concerned about natural disaster, disaster mitigation, health and environmental issues, logistics and amenity for constructing liveable city.

【Course Topics】

Theme	Class number of times	Description
ORT	3	
Earthquake disaster and human casualty	1	
Earthquake protection and emergency responses	1	
International/National US&R systems in UN, US, UK and Japan	2	
Multi-disciplinary disaster response operations and training designs		
Human brain function and behavior	1	
Disaster medicine and epidemiology	1	
Resilient society	1	
Transition of the design for amenity in the river-front	1	
Humanitarian logistics	3	
Achievement evaluation	1	

【Textbook】Textbook for the course is provided by the instructor on the first day.

【Textbook(supplemental)】Some literatures would be introduced by professors.

【Prerequisite(s)】No special knowledge and techniques are necessary.

【Course Description】Global warming, ecosystem crisis, and depletion of natural resources are of great concern today. To solve these problems, we have to build the sustainable society where low carbon dioxide emission, low environmental burdens, and the reduction of wastes by recycling are realized. It is possible to utilize municipal wastes, wastewaters, and unused biomass as resources instead of the natural resources used at present. Recycling-oriented technologies that enable sustainable utilization of those wastes and the concept to develop those technologies are introduced.

Lecture on Environmental Management Leader

環境リスク管理リーダー論

【Code】10X321 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Thu 5th 【Location】C1-171 【Credits】2 【Restriction】
 【Lecture Form(s)】Relay Lecture 【Language】English 【Instructor】TANAKA Hiroaki, SHIMIZU Yoshihisa, FUJII Shigeo

【Course Description】In this class, we will give lectures on theory of risk analysis, risk identification, risk assessment, risk evaluation, and risk reduction and avoidance in the field of urban human security including human health risk and ecological risk. The main purpose of this lecture is to provide students basic viewpoint and knowledge required for environmental leaders who can practically solve environmental issues occurring in developing countries, showing several international environmental projects as practical case works.

【Grading】Participation, Oral and Poster Presentation, and Report

【Course Goals】The main purpose of this lecture is to provide students with the basic viewpoint and knowledge required for environmental leaders able to practically solve environmental issues occurring in developing countries, focusing on several international environmental projects as practical case works.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	In this introductory lecture, the current situation and problems of the environment in Asian developing countries are explained, and basic ideas for their improvement measures are given together with fundamental terminologies.
Energy and Environment	1	
View point and commitment to rural environmental issues	1	
Disaster Risk Management and Grass-roots International Cooperation	1	
Environmental Risk Assessment and Risk Communication	1	
Water, Sanitation and Solid Waste Management for Developing Countries	1	
Presentations and Discussions	2	
Japan's Lessons on Economy & Development	1	
Solid Waste Management	1	
Ensuring Sustainability in Water Supply and Sewerage Sector	1	
Water Supply and Human Security	1	
Impending Issues in Lake Biwa-Yodo River Water Management and the Basin Governance	1	
Environment & Sanitary Engineering Research International Session	1	
Poster Presentation in Environment & Sanitary Engineering Research Symposium	1

New Environmental Engineering II, Advanced

新環境工学特論 II

【Code】 10F458 【Course Year】 Master and Doctor Course 【Term】 2nd term 【Class day & Period】 Mon 5th

【Location】 Reserch Bldg.No.5-Lecture Room(2nd floor)/C1-171 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture

【Language】 English 【Instructor】 Prof. Matsuoka, Prof. Shimidzu, Associate Prof. Takaoka, Associate Prof. Kurata, Prof. Fujii

【Course Description】 This course provides various kinds of engineering issues related to atmospheric environment and solid wastes management in English, which cover fundamental knowledge, the latest technologies and regional application examples. These lectures, English presentations by students, and discussions enhance English capability and internationality of students. The course is conducted in simultaneous distance-learning from Kyoto University, or from remote lecture stations in University of Malaya, and Tsinghua University. For the distance-learning, a hybrid system is used, which consists of prerecorded lecture VIDEO, VCS (Video conference system) and SS (slide sharing system). The students are requested to give a short presentation in English in the end of the lecture course. This course may improve students' English skill and international senses through these lectures, presentations, and discussions.

【Grading】 Evaluate by class attendance, Q&A and presentation.

【Course Goals】

【Course Topics】

Theme	Class number of times	Description
Global warming and Low carbon society	1.4	Global warming and Low carbon society (Matsuoka)
Atmospheric diffusion and modeling	1.4	Atmospheric diffusion and modeling (Prof. S Wang, Tsinghua University)
Air Pollution, Its Historical Perspective from Asian Countries (I),China	1.4	Air Pollution, Its Historical Perspective from Asian Countries (I),China (Prof. Hao, Tsinghua University)
Air Pollution, Its Historical Perspective from Asian Countries (II), Malaysia	1.4	Air Pollution, Its Historical Perspective from Asian Countries (II), Malaysia (Prof. Nik, University of Malaya)
Air Pollution, Its Historical Perspective from Asian Countries (III), Japan	1.4	Air Pollution, Its Historical Perspective from Asian Countries (III), Japan (Kurata)
Student Presentations /Discussions I	1.4	Student Presentations /Discussions I (all)
Introduction to Municipal Solid Waste (MSW) Management in Malaysia	1.4	Introduction to Municipal Solid Waste (MSW) Management in Malaysia (Prof. Agamuthu, University of Malaya)
Solid Waste Management, Case Study in China	1.4	Solid Waste Management, Case Study in China (Prof. Wang, Tsinghua University)
Solid Waste Management, Case Study in Japan	1.4	Solid Waste Management, Case Study in Japan (Takaoka)
Solid Waste Management, Case Study in Malaysia	1.4	Solid Waste Management, Case Study in Malaysia (Prof. Agamuthu, University of Malaya)
Student Presentations /Discussions II	1	Student Presentations /Discussions II (all)

【Textbook】 Class handouts

【Textbook(supplemental)】 Introduce in the lecture classes

【Prerequisite(s)】

【Web Sites】

【Additional Information】 Either of this course or “ New Environmental Engineering I, advanced ” can be dealt as “ Asian Environmental Enigneering ” . PowerPoint slides are main teaching materials in the lectures, and their hard copies are distributed to the students. In addition, a list of technical terms and difficult English words is given to the students with their explanation and Japanese translation.

Environmental Organic Micropollutants Analysis Lab.

環境微量分析演習

【Code】 10F468 【Course Year】 Master and Doctor Course 【Term】 Intensive course (25th-27th Sep.)

【Class day & Period】 9:00 am- 6:00 pm

【Location】 Seminar Room, Research Center for Environmental Quality Management 【Credits】 2

【Restriction】 around 10 students 【Lecture Form(s)】 Intensive Lecture 【Language】 Japanese

【Instructor】 Shimizu, Yoshihisa, Matsuda, Tomonari

【Course Description】 This 3 days intensive course, limited to around 10 people, will be held in Research Center for Environmental Quality Management in Otsu City. This course includes both lecture and experiments about analytical strategies of environmental micropollutants.

【Grading】 Reports and attendance

【Course Goals】 Understand about principle and practical techniques of chromatography. Understand about principle of several bioassays.

【Course Topics】

Theme	Class number of times	Description
HPLC -How to separate it-	3	Learn about principle and practice of HPLC separation. How do you choose columns, solvents and detectors? How to improve peak separation?
Fractionation and Purification by using HPLC	3	Learn about practical techniques of fractionation and purification using HPLC.
LC/MS/MS	5	Learn about principle and practice of LC/MS/MS analysis. Understand about 3 different scan modes, full scan, daughter scan and MRM. How to make an analytical method in a refined way for substances of your interest.
Bioassays	4	Lecture about several bioassays which are used for evaluation of environmental toxicity, and discuss about how to identify toxic compounds in environment by using HPLC in combination with bioassays.

【Textbook】

【Textbook(supplemental)】

【Prerequisite(s)】

【Web Sites】

【Additional Information】 This intensive course is useful especially for students who usually use or intend to use HPLC and LC/MS/MS for their research.

Professional Scientific Presentation Exercises (English lecture)

科学技術者のためのプレゼンテーション演習 (英語科目)

【Code】 10i041 【Course Year】 Doctor Course 【Term】 1st term 【Class day & Period】 Wed 5th

【Location】 B-Cluster 2F Seminar Room 【Credits】 1

【Restriction】 The number of students might be limited if too many students will get enrolled.

【Lecture Form(s)】 Seminar 【Language】 English 【Instructor】 Juha Lintuluoto

【Course Description】 It is imperative for future engineers to be able to communicate and deliver effectively scientific information to large variety of audiences. This skill enables engineers to share and absorb information to more extended audiences, and facilitates success in selling ideas and products, publishing and team working. The purpose of this course is to teach the basic rules needed for successful professional scientific presentation, both orally and written. The course also prepares students to deliver scientific information presentations to wide audiences. The course is consisted of excessive exercises, of which the student should complete seven (7) tasks. The course holds 3-4 tasks for oral presentation exercises, and 3-4 tasks for professional scientific writing exercises. The exact number of both exercises is adjusted for each student 's needs. The course is aimed for doctor course (DC) students, both Japanese and Foreign nationals

【Grading】 Reports, class activity, presentation

【Course Goals】 This course is aimed to foster engineering students ' scientific presentation skills. The successfully course completed students will be able to express and present complicated and specific scientific information at more generally understandable level. The students will also be able to pose relevant questions and effectively answer to the wide variety of questions.

【Course Topics】

Theme	Class number of times	Description
		Guidance and Professional presentation rules and etiquette
		Oral presentations & questioning I, Written report I
		Oral presentations & questioning I, Written report I
		Oral presentations & questioning II, Written report II
		Oral presentations & questioning II, Written report II
		Oral presentations & questioning III, Written report III
		Oral presentations & questioning III, Written report III
		Oral presentations & questioning IV, Written report IV
		Oral presentations & questioning IV, Written report IV I
		Course summary and discussion

【Textbook】 Course materials will be provided.

【Textbook(supplemental)】 Will be informed if necessary.

【Prerequisite(s)】 -Fundamental skills about scientific presentation

-Advanced English skills

-Sufficient personal research results

【Web Sites】 The web-site will be opened in the home page of the GL education center.

【Additional Information】 Students are requested to check in advance whether the credit of this course is counted as the unit for graduation requirement at department level. Course starts at April 25th. Students are requested to register on this course before April 20th. The course schedule is irregular. Most classes are biweekly, the detailed schedule is provided at the 1st lecture.

Advanced Engineering and Economy (English lecture)

工学と経済 (上級)(英語科目)

【Code】10i042 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Tue 5th 【Location】B-Cluster 2F Seminar Room

【Credits】2 【Restriction】The number of students might be limited if too many students will get enrolled. 【Lecture Form(s)】Lectures, Seminar

【Language】English 【Instructor】Juha Lintuluoto

【Course Description】Engineering economics plays central role in any industrial engineering project. For an engineer, it is important to apply the engineering know-how with the economic analysis skills to obtain the best available materials, methods, devices, etc. in the most economical way. This course is aimed to teach engineering students the basic economic methods to manage economically an engineering project. In addition, the report writing on various engineering economic issues prepares to write reports in a professional form. The lab sessions are meant for the verbal skills improvement as well as improvement of analytical thinking. The topics are of current relevant topics Small-group brain-storming method is used. The exercise sessions cover the use of Ms-Excel for various quantitative economic analyses.

【Grading】Final test, reports, class activity

【Course Goals】This course is aimed to strengthen engineering students' skills in economics. The course concept is to teach students selectively those subjects which serve as major tools to solve economic tasks in engineering environment. The reports and lab sessions provide students stimulating and analytical thinking requiring tasks, and presentation skills training is an important part of this course.

【Course Topics】

Theme	Class number of times	Description
Student orientation and Introduction to engineering economy	1	
Cost concepts and design economics	1	
Cost estimation techniques	1	
The time value of money	1	
Evaluating a single project	1	
Comparison and selection among alternatives	1	
Depreciation and income taxes	1	
Price changes and exchange rates	1	
Replacement analysis	1	
Evaluating projects with the benefit-cost ratio method	1	
Breakeven and sensitivity analysis	1	
Probabilistic risk analysis	1	
The capital budgeting process	1	
Decision making considering multiattributes	1	
Final test	1	

Additionally, students will submit five reports during the course on given engineering economy subjects. Also, required are the five lab participations (ca.60 min/each) for each student. Additionally, three exercise sessions (ca.60 min/each), where use of Ms-Excel will be practiced for solving various engineering economy tasks, should be completed

【Textbook】Engineering Economy 15th ed. William G. Sullivan (2011)

【Textbook(supplemental)】Will be informed if necessary.

【Prerequisite(s)】-This course is highly recommended for those who attend " Inter-Engineering -Highly interactive lessons (discussion), Small group working method

【Web Sites】The web-site will be opened in the home page of the GL education center.

【Additional Information】Students are requested to check in advance whether the credits of this course are counted as the units for graduation requirement at department level.

Leadership and Communication in Multi-Cultural Project (English lecture)

プロジェクト演習のためのリーダーシップとコミュニケーション (英語科目)

【Code】 10i043 【Course Year】 Doctor Course 【Term】 1st term 【Class day & Period】 Fri 5th

【Location】 B-Cluster 2F Seminar Room 【Credits】 1

【Restriction】 The number of students might be limited if too many students will get enrolled.

【Lecture Form(s)】 Lectures, Seminar 【Language】 English 【Instructor】 Lintuluoto, Nokami, Kojima

【Course Description】 The purpose of this course is to teach the basic skills needed for expressing and initiating ideas, and presenting information in successful international engineering group work. The course provides simulations for students in group managing and decision making in international engineering teams. International teamwork ethics subjects for successful engineering project will be practiced. The course consists of lectures, case studies, the invited lecture from an industry representative and the final examination. Also, a project report exercise is included in this course.

The course is basically designed for doctor course (DC) students, both Japanese and foreign nationals. If place are available they may be given to master course students.

【Grading】 Report, class activity, presentation

【Course Goals】 This course is the prerequisite course for Inter-Engineering Projects which will be held in the second semester. Students will learn project management tool use, apply project strategies and perform qualitative risk analyses. Also students will learn how to carry out projects with group members from various countries and engineering fields.

【Course Topics】

Theme	Class number of times	Description
	1	Introduction of the class (All)
	1	Project Management I (Lintuluoto)
	1	Project Management II (Lintuluoto)
	1	Ethics in group work (Nokami)
	1	Case study I: Ethics in group work (Nokami with assistant)
	1	Case study II: Engineering project communication (Lintuluoto)
	1	Leadership skills in group work (Kojima)
	1	Case study III (Kojima with assistant)
	1	Cultural aspects in project development (Lintuluoto)
	1	Ethics in project development (Nokami)
	1	Case study V: Ethics in project development (Nokami with assistant)
	1	Leadership skills in projects (Kojima)
	1	Case study VI (Kojima with assistant)
	1	Special Lecture from an Industry Representative
	1	Final examination

【Textbook】 Course materials will be provided.

【Textbook(supplemental)】 Will be informed if necessary.

【Prerequisite(s)】 ‘ -This course is a prerequisite for those who later intend to attend “ Inter-Engineering Project ” .
-Highly interactive lessons (discussion), Small group work methodologies.

【Web Sites】 The web-site will be opened in the home page of the GL education center.

【Additional Information】 Students are requested to check in advance whether the credit from this course will be accepted as a graduation requirement for their department.

Inter-Engineering Project (English lecture)

インターエンジニアリングプロジェクト演習 (英語科目)

【Code】 10i044 【Course Year】 Doctor Course 【Term】 2nd term 【Class day & Period】 Fri 5th

【Location】 B-Cluster 2F Seminar Room 【Credits】 1 【Restriction】 Student number will be limited.

【Lecture Form(s)】 Semina r 【Language】 English 【Instructor】 Lintuluoto , Nokami , Kojima , Kim

【Course Description】 In this course, students will apply the engineering know-how and the skills of management, group leadership, and international communication which they learned in the course of "Leadership and Communication in Multi-Cultural Project" to build and carry out a virtual inter-engineering project. This course provides a forum where students' team-plan based on ideas and theories, decision making, and leadership should produce realistic engineering project outcomes. The course consists of intensive group work and a few intermediate discussions. The course will be held 6 weeks for group work, and two (2) intermediate discussions, project presentation to a wide audience, and a written report will be required.

【Grading】 Report, class activity, presentation

【Course Goals】 This course prepares engineering students to work with other engineers within a large international engineering project. In particular this course will focus on leadership and management of projects along with applied engineering skills where the students learn various compromises, co-operation, responsibility, and ethics.

【Course Topics】

Theme	Class number of times	Description
Guidance		
Group work I		
Group work II		
Intermediate discussion I		
Group work III		
Group work IV		
Intermediate discussion II		
Group work V		
Group work VI		
Project presentation and discussion		
		Each project team may freely schedule the group work within the given time frame. In addition to "Intermediate discussion" sessions, the course instructors are available if any such need arises.

【Textbook】 Course materials will be provided.

【Textbook(supplemental)】 Will be informed if necessary.

【Prerequisite(s)】 -Complete the course "Leadership and Communication in Multi-Cultural Project" in the 1st term.

-Attendance at "Advanced Engineering Economics" course is strongly recommended.

-Fundamental skills about group leading and communication, scientific presentation.

【Web Sites】 The web-site will be opened in the home page of the GL education center.

【Additional Information】 Students are requested to check in advance whether the credit from this course will be accepted as a graduation requirement for their department.

Engineering Ethics and Management of Technology

技術者倫理と技術経営

【Code】10G057 【Course Year】Master 1st 【Term】1st term 【Class day & Period】Thu 3rd

【Location】Butsurikei-Kousya 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lectures and Exercise

【Language】Japanese 【Instructor】Sawaragi, Nishiwaki, Tomita, M. Komori, Tsuchiya, Noda, Sato, Iseda

【Course Description】Basic knowledge of Engineering Ethics and Management of Technology needed for future project leaders in companies and society is taught. Students have to make group work after-class hours as well as presentations of wrapping-up the discussions. Engineering ethics is the field of applied ethics and system of moral principles that apply to the practice of engineering. The field examines and sets the obligations by engineers to society, to their clients, and to the profession. Management of Technology is a set of management disciplines that allows organizations to manage their technological fundamentals to create competitive advantage. This course consists of lectures, exercises, discussions and oral presentations under supervision of professional faculties and extramural lecturers.

【Grading】Submission of reports and presentations

【Course Goals】To cultivate a spirit of self-sufficiency needed for engineers

【Course Topics】

Theme	Class number of times	Description
Engineering Ethics	9	1. Introduction to Engineering Ethics (EE) 2. Medical Engineering Ethics 3. EE by Institution of Professional Engineers, Japan and abroad 4. Product Safety and Product Liability 5. Comprehensive Manufacturing and EE (1) 6. Comprehensive Manufacturing and EE (2) 7. Group Discussions 8. History and Philosophy of EE 9. Presentation on exercise of EE
Management of Technology	5	1. Product Portfolio, Strategy for Competition 2. Business Domain and MOT for Marketing 3. Organizational Strategy for Corporates' R & D 4. Management Theory for R & D 5. Presentation on exercise of MOT

Advanced Finite Element Methods

有限要素法特論

【Code】 10G041 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Wed 2nd

【Location】 Engineering Science Depts Bldg.-212 【Credits】 2 【Restriction】 No Restriction

【Lecture Form(s)】 Lecture and Practice 【Language】 English 【Instructor】 Kotera and Nishiwaki

【Course Description】 This course presents the basic concept and mathematical theory of the Finite Element Method (FEM), and explains how the FEM is applied in engineering problems. We also address important topics such as the physical meaning of geometrical non-linearity, material non-linearity, and non-linearity of boundary conditions, and we explore numerical methods to deal with these nonlinearities. Also, we guide students in class in the use of software to solve several numerical problems, to develop practical skill in applying the FEM to engineering problems.

【Grading】 Grading is based the quality of two or three reports and the final exam.

【Course Goals】 The course goals are for students to understand the mathematical theory of the FEM and the numerical methods for analyzing non-linear problems based on the FEM.

【Course Topics】

Theme	Class number of times	Description
Basic knowledge of the FEM	3	What is the FEM? The history of the FEM, classifications of partial differential equations, linear problems and non-linear problems, mathematical descriptions of structural problems (stress and strain, strong form and weak form, the principle of energy).
Mathematical background of the FEM	2	Variational calculus and the norm space, the convergence of the solutions.
FEM formulations	3	FEM approximations for linear problems, formulations of iso-parametric elements, numerical instability problems such as shear locking, formulations of reduced integration elements, non-conforming elements, the mixed approach, and assumed-stress elements.
Classifications of nonlinearities and their formulations	4	Classifications of nonlinearities and numerical methods to deal with these nonlinearities.
Numerical practice	2	Numerical practice using COMSOL.
Evaluation of student achievements	1

Strength of Advanced Materials

先進材料強度論

【Code】 10B418 【Course Year】 Master and Doctor Course 【Term】 2nd term 【Class day & Period】 Thu 2nd

【Location】 Engineering Science Depts Bldg.-212 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture

【Language】 Japanese 【Instructor】 M. Hojo and M. Nishikawa

【Course Description】 The mechanism underlying mechanical and functional properties are lectured for advanced materials used and developed in advanced fields of current engineering. In particular, advanced composite materials, used for aircraft structure etc., are introduced, with a detailed description of the relationship between microscopic constituent materials and macroscopic properties from the perspective of multiscale mechanics; also the anisotropy of their properties, their fatigue and fracture properties are described in the basic discipline for strength of materials. The latest applications are introduced in the field of various transportation systems including airplanes.

【Grading】 Grading is based on the reports. The assignments will be given around three times.

【Course Goals】 The course goal is to understand basic concepts of composite materials and the underlying mechanism of their mechanical properties from multiscale viewpoints, while the physical understanding of composites is developed based on multiple disciplines.

【Course Topics】

Theme	Class number of times	Description
Concept of composite materials	2	The concept and definition of composite materials, their constituent materials and manufacturing methods are illustrated. Their application to aircraft structures etc. are also introduced.
Mechanical properties of microscopic constituent materials	2	Resin for matrix and various fiber types are explained including their structure and mechanical properties. The weakest link model and Weibull distribution are described as a basis of the statistic nature of strength.
Basic mechanical properties	4	The specific strength, the specific stiffness, and the rule of mixture for elastic modulus and strength are lectured. In particular, the detailed explanation is made to the anisotropy of elastic modulus, independent elastic constants in the generalized Hookean law, the anisotropic failure criteria, and laminate theory. The relationship between the mechanical properties of microscopic constituent materials and macroscopic properties of composite materials is also illustrated.
Micromechanics	2	The mechanism of transverse fracture is illustrated. The mechanical models are described for short fiber reinforced composites and particle dispersed composites. The micromechanical analyses based on finite element method is also illustrated for the physical understanding of the strength of composite materials.
Fracture mechanics properties	2	Fracture mechanics of anisotropic materials are described. The interlaminar fracture toughness and interlaminar fatigue crack propagation, the critical issues in the application of composite structures, are explained including their underlying mechanism.
Superconducting materials	1	High-temperature superconducting materials are the composite materials consisting of metals and fibrous superconducting materials made of oxides. The mechanism are explained for understanding that their mechanical properties so much control their electric properties.
Process and mechanical properties of composite materials	1	The molding and machining process of composite materials is explained to relate it to their mechanical properties. Fiber preform, the selection of resin, intermediate materials, machining and assembly and inspection methods are overviewed from the academic viewpoints.
Academic achievement test	1	Academic achievements is assessed.

【Textbook】 Supplementary handouts will be distributed in the class.

【Textbook(supplemental)】 D.Hull and T.W.Clyne, "An Introduction to Composite Materials," Cambridge University Press.

【Prerequisite(s)】 Mechanics of Materials, Continuum Mechanics, Fundamentals of Materials, Solid Mechanics, Adv.

【Course Description】 The important learning objective of this class is to understand the fundamental mechanisms of momentum, heat, and mass transfer phenomena, the knowledge of which will be markedly required for the thermal energy control technologies to further practice conservations of natural resources and energies for sustainable development. Heat and mass transfer processes consisting of conduction and forced/natural convection will be highlighted in detail, referring to the similarity characteristics of flow velocity, fluid temperature, and species concentration. Some topics on Reynolds stress, turbulent heat flux, and phase change will be introduced, expanding to their numerical models, together with some recent trends of high-tech heat and energy devices.

Seminar: Dynamics of Atomic Systems

原子系の動力学セミナー

【Code】 10Q610 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Mon 5th

【Location】 Room 216 + Educational PC Room #1 【Credits】 2 【Restriction】 No Restriction

【Lecture Form(s)】 Lecture + Exercise 【Language】 Japanese

【Instructor】 M. Matsumoto, R. Matsumoto, T. Shimada

【Course Description】 Particle simulations are the tool of analyzing microscopic phenomena, and widely used in various fields of engineering. After providing the basics of particle simulation methods through lectures and exercises, we show various practical applications in thermofluids, solid materials, and quantum systems.

【Grading】 Reports

【Course Goals】

【Course Topics】

Theme	Class number of times	Description
Basics of MD simulations	4-5	- Numerical simulation of equations of motion - Model potentials - Data analysis - Equilibrium vs. non-equilibrium
Application: Thermofluidal systems	2-3	- Lennard-Jones fluids - Interface, phase change, energy transport, etc.
Application: Solid systems	2-3	- Deformation and destruction - Other methods
Application: Quantum systems	2-3	- First principle MD - Mechanical and electronic properties on nanoscale

New Engineering Materials, Adv. (English lecture)

新工業素材特論 (英語科目)

【Code】 10K004 【Course Year】 Master and Doctor Course 【Term】 2nd term 【Class day & Period】 Thu 5th

【Location】 KatsuraA2-308, Yoshida Research Bldg.No4,-Room3(Distance lectures) 【Credits】 2

【Restriction】 No Restriction 【Lecture Form(s)】 Relay Lecture 【Language】 English 【Instructor】

【Course Description】 Outline: New materials are necessary for the advancement of high technologies, but in order to develop these new materials for practical applications, a number of problems must be solved. In this course, the problems encountered in the fields of chemical engineering, electrical / electronic engineering, mechanical engineering and civil engineering are discussed. Discussions are also held on natural resources, and how computers are being used in the development of new materials. Lectures are given in English.

【Grading】 Credit: The evaluation of a student ' s work will be given on a pass / fail basis, based on his / her attendance and reports, not on examinations.(1) Attending the class 10 times or more and submitting at least 5 reports with passing marks is required to receive 2 credits.(2) A report assignment will be given by every lecturer and must be submitted within 2 weeks from the end of the lecture.(3) A student ' s report on any lecture from which he / she is absent will not be accepted.

Seminar of Complex Mechanical Engineering,A

複雑系機械工学セミナー A

【Code】 10V025 【Course Year】 Doctor Course 【Term】 1st term 【Class day & Period】 Fri 1st

【Location】 Engineering Science Depts Bldg.-215 【Credits】 1 【Restriction】 【Lecture Form(s)】 Seminar

【Language】 English 【Instructor】 Matsuno, Ide, Matsumoto, Takata, Suzuki, Ikeda

【Course Description】 This seminar provides doctor-course students an opportunity of face-to-face group discussions to exchange ideas and information with those from other research fields. It is also emphasized in this seminar to give the attendees a chance to boost up the presentation skills necessary to broaden their own expertise across multi-disciplinary research fields. The primal aim is to offer these significant experiences of leadership as a young scientist with broad perspective in the global community.

【Grading】 Based on Group Activity Reports and Personal Report

【Course Goals】

【Course Topics】

Theme	Class number of times	Description
Self introduction	1-2	
Organizing groups	1	
Group activity	10-12	Each group chooses an activity theme, and pursue the goal through discussion in the group. Weekly reports on the activity are required.
Final presentation	1-2	Each group gives presentation of its final results.

Engineering Ethics and Management of Technology

技術者倫理と技術経営

【Code】10G057 【Course Year】Master 1st 【Term】1st term 【Class day & Period】Thu 3rd

【Location】Butsurikei-Kousya 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lectures and Exercise

【Language】Japanese 【Instructor】Sawaragi, Nishiwaki, Tomita, M. Komori, Tsuchiya, Noda, Sato, Iseda

【Course Description】Basic knowledge of Engineering Ethics and Management of Technology needed for future project leaders in companies and society is taught. Students have to make group work after-class hours as well as presentations of wrapping-up the discussions. Engineering ethics is the field of applied ethics and system of moral principles that apply to the practice of engineering. The field examines and sets the obligations by engineers to society, to their clients, and to the profession. Management of Technology is a set of management disciplines that allows organizations to manage their technological fundamentals to create competitive advantage. This course consists of lectures, exercises, discussions and oral presentations under supervision of professional faculties and extramural lecturers.

【Grading】Submission of reports and presentations

【Course Goals】To cultivate a spirit of self-sufficiency needed for engineers

【Course Topics】

Theme	Class number of times	Description
Engineering Ethics	9	1. Introduction to Engineering Ethics (EE) 2. Medical Engineering Ethics 3. EE by Institution of Professional Engineers, Japan and abroad 4. Product Safety and Product Liability 5. Comprehensive Manufacturing and EE (1) 6. Comprehensive Manufacturing and EE (2) 7. Group Discussions 8. History and Philosophy of EE 9. Presentation on exercise of EE
Management of Technology	5	1. Product Portfolio, Strategy for Competition 2. Business Domain and MOT for Marketing 3. Organizational Strategy for Corporates' R & D 4. Management Theory for R & D 5. Presentation on exercise of MOT

Microsystem Engineering

マイクロシステム工学

【Code】 10G205 【Course Year】 Master Course 【Term】 2nd term 【Class day & Period】 Mon 3rd

【Location】 Engineering Science Depts Bldg.-216 【Credits】 2 【Restriction】 【Lecture Form(s)】 Lecture

【Language】 English 【Instructor】 O. Tabata, H. Kotera, T. Tsuchiya, R. Yokokawa

【Course Description】 Microsystem covers not only technologies related to individual physical or chemical phenomenon in micro scale, but also complex phenomena which are evolved from their interaction. In this course, the physics and chemistry in micro and nanoscale will be lectured in contrast to those in macro scale. The various kinds of application devices (ex. physical (pressure, flow, force) sensors, chemical sensors, biosensors, actuators (piezoelectric, electrostatic, and shape memory) and their system are discussed.

【Grading】 The evaluation will be based on the reports given in each lecture.

【Course Goals】 Understand the theory of sensing and actuating in microsystem. Acquire basic knowledge to handle various kinds of phenomena in microscale.

【Course Topics】

Theme	Class number of times	Description
MEMS modeling	2	Multi-physics modeling in microscale. Electro-mechanical coupling analysis.
MEMS simulation	2	System level simulation in MEMS.
Electrostatic microsystem	3	Electrostatic sensors and actuators. Theory and application devices.
Physical sensors	4	Physical sensors as a fundamental application in microsystem. Accelerometer, vibrating gyroscope, pressure sensors.
Micro total analysis system	4	Chemical analysis system and bio-sensing device using microsystem.

【Textbook】 Provided in the lecture.

【Textbook(supplemental)】 Provided in the lecture.

【Prerequisite(s)】 Students are required to take the 10G203 course "Micro Process and Material Engineering".

【Web Sites】

【Additional Information】 The student of this class is strongly recommended to take a course 10V201 "Introduction to the Design and Implementation of Micro-Systems", which is a practice for designing microsystem. Those who wants to take this course, please contact one of the instructors as early as possible.

Strength of Advanced Materials

先進材料強度論

【Code】 10B418 【Course Year】 Master and Doctor Course 【Term】 2nd term 【Class day & Period】 Thu 2nd

【Location】 Engineering Science Depts Bldg.-212 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture

【Language】 Japanese 【Instructor】 M. Hojo and M. Nishikawa

【Course Description】 The mechanism underlying mechanical and functional properties are lectured for advanced materials used and developed in advanced fields of current engineering. In particular, advanced composite materials, used for aircraft structure etc., are introduced, with a detailed description of the relationship between microscopic constituent materials and macroscopic properties from the perspective of multiscale mechanics; also the anisotropy of their properties, their fatigue and fracture properties are described in the basic discipline for strength of materials. The latest applications are introduced in the field of various transportation systems including airplanes.

【Grading】 Grading is based on the reports. The assignments will be given around three times.

【Course Goals】 The course goal is to understand basic concepts of composite materials and the underlying mechanism of their mechanical properties from multiscale viewpoints, while the physical understanding of composites is developed based on multiple disciplines.

【Course Topics】

Theme	Class number of times	Description
Concept of composite materials	2	The concept and definition of composite materials, their constituent materials and manufacturing methods are illustrated. Their application to aircraft structures etc. are also introduced.
Mechanical properties of microscopic constituent materials	2	Resin for matrix and various fiber types are explained including their structure and mechanical properties. The weakest link model and Weibull distribution are described as a basis of the statistic nature of strength.
Basic mechanical properties	4	The specific strength, the specific stiffness, and the rule of mixture for elastic modulus and strength are lectured. In particular, the detailed explanation is made to the anisotropy of elastic modulus, independent elastic constants in the generalized Hookean law, the anisotropic failure criteria, and laminate theory. The relationship between the mechanical properties of microscopic constituent materials and macroscopic properties of composite materials is also illustrated.
Micromechanics	2	The mechanism of transverse fracture is illustrated. The mechanical models are described for short fiber reinforced composites and particle dispersed composites. The micromechanical analyses based on finite element method is also illustrated for the physical understanding of the strength of composite materials.
Fracture mechanics properties	2	Fracture mechanics of anisotropic materials are described. The interlaminar fracture toughness and interlaminar fatigue crack propagation, the critical issues in the application of composite structures, are explained including their underlying mechanism.
Superconducting materials	1	High-temperature superconducting materials are the composite materials consisting of metals and fibrous superconducting materials made of oxides. The mechanism are explained for understanding that their mechanical properties so much control their electric properties.
Process and mechanical properties of composite materials	1	The molding and machining process of composite materials is explained to relate it to their mechanical properties. Fiber preform, the selection of resin, intermediate materials, machining and assembly and inspection methods are overviewed from the academic viewpoints.
Academic achievement test	1	Academic achievements is assessed.

【Textbook】 Supplementary handouts will be distributed in the class.

【Textbook(supplemental)】 D.Hull and T.W.Clyne, "An Introduction to Composite Materials," Cambridge University Press.

【Location】 Engineering Science Depts Bldg.-216 【Credits】 2

【Restriction】 Take class 10G205 "Microsystem Engineering" 【Lecture Form(s)】 Lecture and Practice

【Language】 English 【Instructor】 O. Tabata, H. Kotera, T. Tsuchiya, R. Yokokawa

【Course Description】 This is a joint lecture with Hong Kong University of Science and Technology (HKUST). A team consists of two students from each University work together to fulfill the assignment (design a microsystem) through paper survey, analysis, design, and presentation. A student can acquire not only the basic knowledge of a microsystem, but also comprehensive ability of English such as technical knowledge in English, skill for team work, and communication.

【Grading】 Presentation, Assignments, and Achievement

【Course Goals】 Acquire the knowledge and skill to design and analyze a microsystem.

【Course Topics】

Theme	Class number of times	Description
Tutorial on microsystem CAD software	3	Master CAD program for microsystem design and analysis which will be utilized to accomplish an assignment.
Lecture and Task Introduction	2	Learn basic knowledge necessary to design a microsystem/MEMS(Micro Electromechanical Systems) utilizing microfabrication technology.
Design and analysis work	3	Analyze and design a microsystem by communicating with a team member of HKUST.
Presentation I	2	The designed device and its analyzed results is presented in detail by team in English.
Evaluation of device	3	Evaluate the fabricated microsystem.
Presentation II	2	The measured results and comparison between the analyzed results of the fabricated microsystem is presented by team in English.

【Textbook】

【Textbook(supplemental)】

【Prerequisite(s)】 Students are required to take the 10G203 course "Micro Process and Material Engineering".

【Web Sites】

【Additional Information】 The student of this class is required to take the course 10G205 "Microsystem Engineering", which provide the knowledge about the theory of sensing and actuating in microsystem. Those who wants to take this course have to take training course for CAD in advance. For more detail, please contact one of the instructors as early as possible.

Advanced Finite Element Methods

有限要素法特論

【Code】 10G041 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Wed 2nd

【Location】 Engineering Science Depts Bldg.-212 【Credits】 2 【Restriction】 No Restriction

【Lecture Form(s)】 Lecture and Practice 【Language】 English 【Instructor】 Kotera and Nishiwaki

【Course Description】 This course presents the basic concept and mathematical theory of the Finite Element Method (FEM), and explains how the FEM is applied in engineering problems. We also address important topics such as the physical meaning of geometrical non-linearity, material non-linearity, and non-linearity of boundary conditions, and we explore numerical methods to deal with these nonlinearities. Also, we guide students in class in the use of software to solve several numerical problems, to develop practical skill in applying the FEM to engineering problems.

【Grading】 Grading is based the quality of two or three reports and the final exam.

【Course Goals】 The course goals are for students to understand the mathematical theory of the FEM and the numerical methods for analyzing non-linear problems based on the FEM.

【Course Topics】

Theme	Class number of times	Description
Basic knowledge of the FEM	3	What is the FEM? The history of the FEM, classifications of partial differential equations, linear problems and non-linear problems, mathematical descriptions of structural problems (stress and strain, strong form and weak form, the principle of energy).
Mathematical background of the FEM	2	Variational calculus and the norm space, the convergence of the solutions.
FEM formulations	3	FEM approximations for linear problems, formulations of iso-parametric elements, numerical instability problems such as shear locking, formulations of reduced integration elements, non-conforming elements, the mixed approach, and assumed-stress elements.
Classifications of nonlinearities and their formulations	4	Classifications of nonlinearities and numerical methods to deal with these nonlinearities.
Numerical practice	2	Numerical practice using COMSOL.
Evaluation of student achievements	1

【Course Description】 Outline: New materials are necessary for the advancement of high technologies, but in order to develop these new materials for practical applications, a number of problems must be solved. In this course, the problems encountered in the fields of chemical engineering, electrical / electronic engineering, mechanical engineering and civil engineering are discussed. Discussions are also held on natural resources, and how computers are being used in the development of new materials. Lectures are given in English.

【Grading】 Credit: The evaluation of a student ' s work will be given on a pass / fail basis, based on his / her attendance and reports, not on examinations.(1) Attending the class 10 times or more and submitting at least 5 reports with passing marks is required to receive 2 credits.(2) A report assignment will be given by every lecturer and must be submitted within 2 weeks from the end of the lecture.(3) A student ' s report on any lecture from which he / she is absent will not be accepted.

Seminar of Complex Mechanical Engineering,A

複雑系機械工学セミナー A

【Code】 10V025 【Course Year】 Doctor Course 【Term】 1st term 【Class day & Period】 Fri 1st

【Location】 Engineering Science Depts Bldg.-215 【Credits】 1 【Restriction】 【Lecture Form(s)】 Seminar

【Language】 English 【Instructor】 Matsuno, Ide, Matsumoto, Takata, Suzuki, Ikeda

【Course Description】 This seminar provides doctor-course students an opportunity of face-to-face group discussions to exchange ideas and information with those from other research fields. It is also emphasized in this seminar to give the attendees a chance to boost up the presentation skills necessary to broaden their own expertise across multi-disciplinary research fields. The primal aim is to offer these significant experiences of leadership as a young scientist with broad perspective in the global community.

【Grading】 Based on Group Activity Reports and Personal Report

【Course Goals】

【Course Topics】

Theme	<small>Class number of times</small>	Description
Self introduction	1-2	
Organizing groups	1	
Group activity	10-12	Each group chooses an activity theme, and pursue the goal through discussion in the group. Weekly reports on the activity are required.
Final presentation	1-2	Each group gives presentation of its final results.

Engineering Ethics and Management of Technology

技術者倫理と技術経営

【Code】 10G057 【Course Year】 Master 1st 【Term】 1st term 【Class day & Period】 Thu 3rd

【Location】 Butsurikei-Kousya 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lectures and Exercise

【Language】 Japanese 【Instructor】 Sawaragi, Nishiwaki, Tomita, M. Komori, Tsuchiya, Noda, Sato, Iseda

【Course Description】 Basic knowledge of Engineering Ethics and Management of Technology needed for future project leaders in companies and society is taught. Students have to make group work after-class hours as well as presentations of wrapping-up the discussions. Engineering ethics is the field of applied ethics and system of moral principles that apply to the practice of engineering. The field examines and sets the obligations by engineers to society, to their clients, and to the profession. Management of Technology is a set of management disciplines that allows organizations to manage their technological fundamentals to create competitive advantage. This course consists of lectures, exercises, discussions and oral presentations under supervision of professional faculties and extramural lecturers.

【Grading】 Submission of reports and presentations

【Course Goals】 To cultivate a spirit of self-sufficiency needed for engineers

【Course Topics】

Theme	Class number of times	Description
Engineering Ethics	9	1. Introduction to Engineering Ethics (EE) 2. Medical Engineering Ethics 3. EE by Institution of Professional Engineers, Japan and abroad 4. Product Safety and Product Liability 5. Comprehensive Manufacturing and EE (1) 6. Comprehensive Manufacturing and EE (2) 7. Group Discussions 8. History and Philosophy of EE 9. Presentation on exercise of EE
Management of Technology	5	1. Product Portfolio, Strategy for Competition 2. Business Domain and MOT for Marketing 3. Organizational Strategy for Corporates' R & D 4. Management Theory for R & D 5. Presentation on exercise of MOT

Dynamics of Solids and Structures

動的固体力学

【Code】 10G230 【Course Year】 Master and Doctor Course 【Term】 2nd term 【Class day & Period】 Mon 2nd

【Location】 Bldg.No.11-Aeronautics 1 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture

【Language】 Japanese 【Instructor】 Shiro BIWA

【Course Description】 Fundamental principles for dynamic deformations of solids and structures are examined. In particular, basic characteristics of elastic wave motion in solid media are emphasized, together with the influence of anisotropy, viscosity and nonlinearity. Plastic waves and impact strength of materials and structures are also considered.

【Grading】 Grading will be based on the attendance, homework reports and the final examination (possibly replaced by reports).

【Course Goals】 This course aims to establish the understanding of basic characteristics of dynamic deformations and elastic waves in solid media, as well as to learn about technological applications of ultrasound in a variety of fields extending from micro- to macro-scales. Particular emphasis is put on the mathematical aspects of the physical phenomena involved.

【Course Topics】

Theme	Class number of times	Description
Fundamentals of elastodynamics	2	Expressions of stress and strain; Conservation laws; Hooke's law; Hamilton's principle, Love's theory for longitudinal waves in a bar.
Basics of wave propagation	2	One-dimensional wave equation; D'Alembert's solution; Harmonic waves; Spectral analysis; Waves in structural members; Dispersion; Phase and group velocities.
Waves in isotropic elastic media	1	Voigt notation of Hooke's law; Navier's equations; Longitudinal and transverse waves; Propagation of plane wave.
Waves in anisotropic elastic media	2	Stiffness matrix; Propagation of plane wave; Christoffel's equation; Propagation and polarization directions.
Reflection and transmission	2	Reflection and transmission of normal incident waves; Snell's law; Mode conversion; Reflection and refraction of oblique incident waves.
Guided elastic waves	2	Bulk waves and guided waves; Rayleigh wave; Love wave; Lamb wave.
Elastic waves in real media	2	Effect of viscosity; Effect of nonlinearity; Effect of inhomogeneity; Scattering; Composite materials.
Response of materials and structures to impact loading	1	Plastic waves; Strain-rate dependence in plastic deformations; Impact strength of materials and structures.
Assessment of achievement	1	Assessment of achievement.

【Textbook】 No textbooks are assigned. The lecture is mainly given in a blackboard style. Print-outs are handed in when needed.

【Textbook(supplemental)】

【Prerequisite(s)】 Basic knowledge of mechanics of materials (solid mechanics, continuum mechanics) is expected.

【Web Sites】

【Additional Information】 The time units and weights for each item on the above list are subject to possible changes.

Transport Phenomena in Reactive Flows

Transport Phenomena in Reactive Flows

【Code】 10G423 【Course Year】 Master and Doctor Course 【Term】 2nd term 【Class day & Period】 Wed 1st

【Location】 Bldg.No.11-Aeronautics 2 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture

【Language】 English 【Instructor】 YOSHIDA Hideo, IWAI Hiroshi, SAITO Motohiro

【Course Description】 This lecture is designed for the students who want to gain their knowledge and understanding on transport phenomena associated mainly with convective flows with chemical reactions. It starts with a brief review of undergraduate level subjects followed by more advanced discussion on heat and mass transfer with reactions. The reactions of interest in the lecture include combustion (oxidation), reforming and electrochemical reactions. As the reactions may proceed on catalysts, the discussion covers the catalytic surface reactions, reactions in porous media as well as gas phase reactions. The students are expected to have learned fundamentals of Fluid dynamics, Thermodynamics and Heat transfer during their undergraduate courses.

【Grading】 Grade evaluation is based on attendance, short reports and one's term paper submitted at the end of the semester.

【Course Goals】 Starting from the basic heat and mass transfer, the lecture aims to expand the students' comprehensive understanding on transport phenomena in physicochemical processes including thermochemical and electrochemical reactions.

Advanced Finite Element Methods

有限要素法特論

【Code】 10G041 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Wed 2nd

【Location】 Engineering Science Depts Bldg.-212 【Credits】 2 【Restriction】 No Restriction

【Lecture Form(s)】 Lecture and Practice 【Language】 English 【Instructor】 Kotera and Nishiwaki

【Course Description】 This course presents the basic concept and mathematical theory of the Finite Element Method (FEM), and explains how the FEM is applied in engineering problems. We also address important topics such as the physical meaning of geometrical non-linearity, material non-linearity, and non-linearity of boundary conditions, and we explore numerical methods to deal with these nonlinearities. Also, we guide students in class in the use of software to solve several numerical problems, to develop practical skill in applying the FEM to engineering problems.

【Grading】 Grading is based the quality of two or three reports and the final exam.

【Course Goals】 The course goals are for students to understand the mathematical theory of the FEM and the numerical methods for analyzing non-linear problems based on the FEM.

【Course Topics】

Theme	Class number of times	Description
Basic knowledge of the FEM	3	What is the FEM? The history of the FEM, classifications of partial differential equations, linear problems and non-linear problems, mathematical descriptions of structural problems (stress and strain, strong form and weak form, the principle of energy).
Mathematical background of the FEM	2	Variational calculus and the norm space, the convergence of the solutions.
FEM formulations	3	FEM approximations for linear problems, formulations of iso-parametric elements, numerical instability problems such as shear locking, formulations of reduced integration elements, non-conforming elements, the mixed approach, and assumed-stress elements.
Classifications of nonlinearities and their formulations	4	Classifications of nonlinearities and numerical methods to deal with these nonlinearities.
Numerical practice	2	Numerical practice using COMSOL.
Evaluation of student achievements	1

Seminar on Mechanics of Functional Solids and Structures

機能構造力学セミナー

【Code】 10V413 【Course Year】 Doctor Course 【Term】 2nd term 【Class day & Period】 Wed 4th

【Location】 Bldg.No.11-Aeronautics 2 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Seminar

【Language】 Japanese 【Instructor】 S. Biwa

【Course Description】 This Seminar is to review advanced topics related to materials and structural systems involved in aeronautics and astronautics, as well as to nurture the presentation and discussion skills. Specific topics include the numerical methods for mechanical behavior of thin-walled structures and composite/functional materials, and advanced experimental techniques for structural health monitoring.

【Grading】 Grading is based on the literature survey, presentation, discussion and the final report.

【Course Goals】 The goal is to nurture the skills to survey and discuss advanced topics in the mechanics of functional materials and structures as well as structural health monitoring, and to utilize them in carrying out the research project.

【Course Topics】

Theme	Class number of times	Description
Subject setting	3	Literature survey is to be carried out for advanced topics in the mechanics of functional materials and structures as well as structural health monitoring.
Presentation and discussion	11	The results of literature survey are presented and discussed with the critical evaluations for them.
Assessment	1	The achievement is assessed by the final report.

【Textbook】 No textbooks are assigned. Relevant papers are distributed.

【Textbook(supplemental)】

【Prerequisite(s)】 Fundamental knowledge of solid mechanics is preferable.

【Web Sites】

【Additional Information】 The time units of each stage are subject to change depending on each year's conditions.

Seminar of Complex Mechanical Engineering,A

複雑系機械工学セミナー A

【Code】 10V025 【Course Year】 Doctor Course 【Term】 1st term 【Class day & Period】 Fri 1st

【Location】 Engineering Science Depts Bldg.-215 【Credits】 1 【Restriction】 【Lecture Form(s)】 Seminar

【Language】 English 【Instructor】 Matsuno, Ide, Matsumoto, Takata, Suzuki, Ikeda

【Course Description】 This seminar provides doctor-course students an opportunity of face-to-face group discussions to exchange ideas and information with those from other research fields. It is also emphasized in this seminar to give the attendees a chance to boost up the presentation skills necessary to broaden their own expertise across multi-disciplinary research fields. The primal aim is to offer these significant experiences of leadership as a young scientist with broad perspective in the global community.

【Grading】 Based on Group Activity Reports and Personal Report

【Course Goals】

【Course Topics】

Theme	<small>Class number of times</small>	Description
Self introduction	1-2	
Organizing groups	1	
Group activity	10-12	Each group chooses an activity theme, and pursue the goal through discussion in the group. Weekly reports on the activity are required.
Final presentation	1-2	Each group gives presentation of its final results.

【Textbook】

【Textbook(supplemental)】

【Prerequisite(s)】

【Code】 10C004 【Course Year】 Master and Doctor Course 【Term】 2nd term 【Class day & Period】 Thu 2nd

【Location】 Bldg.No.1-Nuclear Engineering Sminar Room 1 【Credits】 2 【Restriction】 No Restriction

【Lecture Form(s)】 Lecture 【Language】 Japanese 【Instructor】

【Course Description】 We study basics of quantum field theories as introduction to particle physics, condensed matter and quantum optics.

【Grading】 examination

【Course Goals】 We aim to understand that the dual feature of wave and particle in the microscopic physical world is described systematically in terms of the quantization of fields.

【Course Topics】

Theme	Class number of times	Description
Quantization of free fields	8	We present a detailed description for the quantization of free fields.
Interactions among quantized fields	6	We introduce interaction among fields, and describe the elementary processes for particles such as electron and phonon. Then, we consider transtion pprocesses in terms of perturbative expansion, providing the Feynman propagaters and diagrams.
Confirmation of achievement in study	1

【Course Description】 This course involves fundamental interactions of electrons, ions and photons to atoms, molecules and condensed matters, and practical applications for nanotechnology. Great emphases are on fundamental mechanisms of beam-solid interactions, characterization techniques, material synthesis and processing for quantum devices with quantum beam. Recent progress of related area of quantum beam will be also introduced in this course.

【Grading】 Coursework will be evaluated with attendance and report on subjects.

【Course Goals】 To provide students to understand fundamental interactions in quantum science.

【Course Topics】

Theme	Class number of times	Description
Interactions between quantum beams and solids	7	Interactions between quantum beams and solids are described with various formulas. Collisions with nucleus, electronic excitation, defect formation and energy loss will be discussed and related scientific topics, such as discovery of electron will be introduced.
Applications of quantum beams	7	The interactions of quantum beam are widely used for various applications. Material processing and analysis with quantum beams are essential in nanotechnology and quantum beams are also important for diagnostics of diseases and cancer therapy in medical field. Practical applications will be presented with recent progress and challenges.
Final examination and report	1	Evaluation will be given by the contents of the reports and quizzes of the subjects leaned in this course.

【Course Description】 The reliable nuclear fuel cycle is essential to realize the long-range utilization of the nuclear energy. The scope of this course is to understand concepts, engineering schemes, and chemical principles of the nuclear fuel cycle, that is, recycling system for fast breeder reactor, nuclear reprocessing, partitioning and transmutation, especially, chemical separation, isotope enrichment, recycling methods of plutonium and thorium, environmental problems, and so on.

【Grading】 Reports for subjects asked in the course.

【Course Goals】 To gain the fundamental knowledge of the nuclear fuel cycle and deepen understanding of the nuclear science.

【Course Topics】

Theme	Class number of times	Description
General	2-3	Nuclear energy use and nuclear fuel cycle
Radiochemistry	3	*Formation of radionuclides in nuclear fuel *Radiochemical properties of nuclides focused in nuclear fuel cycle *Chemistry of actinide elements (f-elements)
Reprocessing	2	Methods and characteristics of nuclear fuel reprocessing
Concepts of reprocessing	2	Recycling of plutonium in light water reactor system (pluthermal), Thorium fuel cycle
Solution chemistry 1	2	Wet reprocessing of nuclear fuel (dissolution and extraction processes)
Solution chemistry 2	2	Pyro-reprocessing (chemistry of molten salts)
Isotope separation	1	Isotope enrichment of uranium
Environmental impact	1	Environmental impact via nuclear fuel cycle

【Textbook】 Not specified. According to need, documents may be distributed.

【Lecture Form(s)】 English Lecture 【Language】 English 【Instructor】 Tomoaki Kunugi, Atsushi Fukuyama

【Course Description】 This course provides fundamentals of magnetohydrodynamics which describes the dynamics of electrically conducting fluids, such as plasmas and liquid metals. The course covers the fundamental equations in magnetohydrodynamics, dynamics and heat transfer of magnetofluid in a magnetic field, equilibrium and stability of magnetized plasmas, as well as illustrative examples.

【Grading】 Attendance and two reports

【Course Goals】 The students can understand fundamentals of magnetohydrodynamics which describes the dynamics of electrically conducting fluids, such as plasmas and liquid metals. Moreover, the students will figure out the applications of magnetohydrodynamics to the various science and engineering fields.

【Course Topics】

Theme	Class number of times	Description
Liquid Metal MHD	7	<ol style="list-style-type: none"> 1. Introduction and Overview of Magnetohydrodynamics 2. Governing Equations of Electrodynamics and Fluid Dynamics 3. Turbulence and Its Modeling 4. Dynamics at Low Magnetic Reynolds Numbers 5. Glimpse at MHD Turbulence & Natural Convection under B field 6. Boundary Layers of MHD Duct Flows 7. MHD Turbulence at Low and High Magnetic Reynolds Numbers
Plasma MHD	8	<ol style="list-style-type: none"> 1. Introduction to Plasma MHD 2. Basic Equation of Plasma MHD 3. MHD Equilibrium 4. Axisymmetric MHD Equilibrium 5. Ideal MHD Instabilities 6. Resistive MHD Instabilities 7. MHD Waves in Plasmas 8. Student Assessment

【Textbook】 Handout of the presentation will be provided at the lecture

【Textbook(supplemental)】 P. A. Davidson, " An Introduction to Magnetohydrodynamics, " Cambridge texts in applied mathematics, Cambridge University Press, 2001

【Prerequisite(s)】 Fundamentals of fluid mechanics and electromagnetism

Multiphase Flow Engineering and Its Application

混相流工学

【Code】 10C037 【Course Year】 Master and Doctor Course 【Term】 2nd term 【Class day & Period】 Wed 2nd

【Location】 Bldg.No.1-Nuclear Engineering 2 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture

【Language】 Japanese 【Instructor】 KUNUGI, Tomoaki, YOKOMINE, Takehiko

【Course Description】 Reviewing of the fundamental definition and characteristics of multiphase flows, and to learn the governmental equations and some modelings of the constitutive equations and the current status of the multiphase flows. Moreover, to review and learn the fundamental definition and characteristics of particle flows, and to learn the numerical methods to track the particle laden flows and the particle measurement method.

【Grading】 Present a summary of some papers regarding multiphase flows research by using a power point, and then answer several questions made by lecturers. The quality of your presentation and how deep understand your subject are the grading point.

【Course Goals】 As for the multiphase flows, to learn its fluid dynamics behaviors, governing equations and numerical methods, and finally to discuss its applications to many engineering fields.

【Course Topics】

Theme	Class number of times	Description
What's the multiphase flows?	1	To review the definitions and fundamental characteristics of multiphase flows.
Governing equation of gas-liquid two phase flows	2	To learn the governing equation of gas-liquid two phase flows
Modeling of gas-liquid two phase flows	2	To learn modeling of gas-liquid two phase flows and its constitutive equations
Numerical methods	3	To learn the numerical methods to solve the single-phase and two-phase flows
Examples of gas-liquid two phase flow analysis	1	To show some examples of gas-liquid two phase flow analysis
Characteristics of particle flows	1	Review characteristics of particle flows
Fundamental aspect of particle flows	1	Explain variables and parameters subjected to interaction between particle and particle and/or particle and flow. Moreover, momentum and heat exchange between phases, i.e., to explain One-way, Two-way and Four-way coupling numerical methods.
Particle methods	2	Explain numerical method for thermofluid including static particles like a packed bed. Moreover, numerical methods for macroscopic and microscopic particles such as Discrete Element Method.
Measurements of particle characteristics	2	Review several measuring methods of particle characteristics and thermofluid behaviors

【Location】Bldg.No.1-Nuclear Engineering Sminar Room 1 【Credits】2 【Restriction】No Restriction

【Lecture Form(s)】Lecture 【Language】Japanese 【Instructor】Yoshinori Sakurai, Tooru Kobayashi, Hiroki Tanaka

【Course Description】Medical physics is the general term for the physics and technology which are supporting radiation diagnosis and therapy, and particle therapy. As it covers many different fields, the important subjects are “ promotion for the advance of radiation therapy ” and “ quality assurance for radiation therapy ” . The scope of this course is to learn the fundamental knowledge for radiation medical physics. Especially, the focus is put on the understanding for (1) the bases of physics, biology and so on for radiation, (2) the physics for the radiations applied to diagnosis, (3) the characteristics of radiations and particle beams applied to therapy, and (4) the radiation protection, quality assurance and so on for radiation diagnosis and therapy.

【Grading】Attendance and reports

【Course Goals】To learn the fundamental knowledge of medical physics, mainly for radiation physics in diagnosis and therapy

【Course Topics】

Theme	Class number of times	Description
Fundamental physics for radiation	1-2	
Fundamental biology for radiation	1-2	
Radiation measurement and evaluation	1-2	
Physics in radiation diagnosis	2-3	
Physics in radiation therapy	2-3	
Quality assurance and standard dosimetry	1	
Radiation protection	1	
Achievement Assessment	1	

【Textbook】Not specified. Handouts will be given for each topic.

【Textbook(supplemental)】F.M.Khan, “ The Physics of Radiation Therapy: Mechanisms, Diagnosis, and Management ” (Lippincott Williams & Wilkins, Baltimore, 2003)

【Prerequisite(s)】It is recommended to attend the course, “ Radiation Measurement for Medicine ” , concurrently.

Introduction to Advanced Material Science and Technology (English lecture)

先端マテリアルサイエンス通論 (英語科目)

【Code】 10K001 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Friday,4th-5th

【Location】 KatsuraA2-308,Yoshida Research Bldg.No4,-Room3(Distance lectures) 【Credits】 2

【Restriction】 No Restriction 【Lecture Form(s)】 Relay Lecture 【Language】 English 【Instructor】

【Course Description】 The various technologies used in the field of material science serve as bases for so-called "high technologies", and, in turn, the high technologies develop material science. These relate to each other very closely and contribute to the development of modern industries. In this class, recent progresses in material science are briefly introduced, along with selected current topics on new biomaterials, nuclear engineering materials, new metal materials and natural raw materials. The methods of material analysis and future developments in material science are also discussed.

【Grading】 In order to obtain two credits, students must attend at least ten lectures, and at least five of the submitted reports must be evaluated as " passed " by each lecturer. Each report should be submitted to the lecturer within two weeks after his/her lecture. NOTE: Reports are NOT acceptable from those who do not attend the lecture.

【Course Goals】

【Course Topics】

Theme	Class number of times	Description
	2	Hyperthermophiles and their thermostable biomolecules H. Atomi
	1	Microreactor Technology for Production of High Functional Chemical Materials K.Mae
	2	Advanced Beam Processes and Characterization Technique for Nanotechnology J.Matsuo
	2	Chemical vapor deposition - Synthesis of advanced materials from gas phase M.Kawase
	1	Nanostructure Control in Structural Metallic Materials N.Tsuji
	1	Nano-optical Spectroscopy/Microscopy:Applications in Material Science H.Aoki
	1	Photonic Materials K.Hirao
	1	ISO Standards in Analytical Chemistry J. Kawai
	1	Electrodeposition and Electroless Deposition for Materials Processing K. Murase
	2	Bio-inspired Biomaterials H.Akiyoshi

New Engineering Materials, Adv. (English lecture)

新工業素材特論 (英語科目)

【Code】 10K004 【Course Year】 Master and Doctor Course 【Term】 2nd term 【Class day & Period】 Thu 5th

【Location】 KatsuraA2-308, Yoshida Research Bldg.No4,-Room3(Distance lectures) 【Credits】 2

【Restriction】 No Restriction 【Lecture Form(s)】 Relay Lecture 【Language】 English 【Instructor】

【Course Description】 Outline: New materials are necessary for the advancement of high technologies, but in order to develop these new materials for practical applications, a number of problems must be solved. In this course, the problems encountered in the fields of chemical engineering, electrical / electronic engineering, mechanical engineering and civil engineering are discussed. Discussions are also held on natural resources, and how computers are being used in the development of new materials. Lectures are given in English.

【Grading】 Credit: The evaluation of a student ' s work will be given on a pass / fail basis, based on his / her attendance and reports, not on examinations.(1) Attending the class 10 times or more and submitting at least 5 reports with passing marks is required to receive 2 credits.(2) A report assignment will be given by every lecturer and must be submitted within 2 weeks from the end of the lecture.(3) A student ' s report on any lecture from which he / she is absent will not be accepted.

Physical Properties of Thin Films

マイクロ材料機能学

【Code】 10C213 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Tue 3rd

【Location】 Engineering Science Depts Bldg.-312 【Credits】 2 【Restriction】 No Restriction

【Lecture Form(s)】 Lecture 【Language】 Japanese 【Instructor】 Kazuhiro ITO

【Course Description】 Thin films are common in electric and magnetic devices and formed on substrates. Thin film materials are usually different from substrate materials, and thus controlling the interface such as adherence, chemical reaction, and so on is essential for making reliable devices. In this course, deposition methods, characterization of film properties and microstructures, and the latest research topics are interpreted.

【Grading】 Reports

【Course Goals】 General deposition methods, and characterization of film properties and microstructures are learned. The latest research topics concerned with metallurgy in the thin film devices are understood.

【Course Topics】

Theme	Class number of times	Description
Review of deposition methods	3	Deposition methods of thin films is basically interpreted.
Thin film properties	4	Nucleation and growth of thin films and film properties such as electric and mechanical properties are basically interpreted.
Characterization of film microstructures	3	Characterization of thin films using XRD, SEM and TEM is interpreted.
The latest research topics in thin film devices	4	

【Textbook】

【Textbook(supplemental)】

【Prerequisite(s)】 Attending Thin Film Materials is necessary when you are an undergraduate

Ceramic Materials Science

セラミックス材料学

【Code】 10C267 【Course Year】 Master and Doctor Course 【Term】 2nd term 【Class day & Period】 Thu 2nd

【Location】 Engineering Science Depts Bldg.-112 【Credits】 2 【Restriction】 No Restriction

【Lecture Form(s)】 Lecture 【Language】 Japanese 【Instructor】 I. Tanaka and F. Oba

【Course Description】 This lecture covers the mechanical, optical, and electronic properties of ceramics, their microscopic mechanisms, and fundamental knowledge required for the design of ceramics. Advanced experimental and theoretical approaches and their applications to ceramic research are also discussed.

【Grading】 Evaluations are made based on the examination or reports.

【Course Goals】 Systematic understanding of the properties of ceramics on macroscopic and microscopic scales and learning approaches to the issues in ceramic research.

【Course Topics】

Theme	Class number of times	Description
Introduction to ceramics	2	Overview of the history and commercial applications of ceramics.
Fundamentals of ceramics	3	Fundamentals of ceramics such as crystal structure, electronic structure, and thermodynamical properties. The atomic and electronic structure of point defects, surfaces, grain boundaries, and heterointerfaces, and their impacts on the properties of ceramics.
Characterization of ceramics	2	Characterization of ceramics using advanced experimental and theoretical approaches.
Structural ceramics	2	Mechanical properties of ceramics.
Energy ceramics	2	Ceramics for energy applications and their understanding from the viewpoint of the atomic and electronic structure.
Optical and electronic ceramics	3	Optical and electronic properties of ceramics for laser and electronic device applications and their understanding from the viewpoint of the atomic and electronic structure.
Assessment of mastery of the course content	1	The mastery of the course content is assessed.

Physics of Mesoscopic Materials

メゾ材料物性学

【Code】 10C234 【Course Year】 Master and Doctor Course 【Term】 2nd term 【Class day & Period】 Mon 2nd

【Location】 Engineering Science Depts Bldg.-112 【Credits】 2 【Restriction】 No Restriction

【Lecture Form(s)】 Lecture 【Language】 Japanese 【Instructor】 Akira Sakai, Shu Kurokawa

【Course Description】 The first half of the lecture explains the mesoscopic phenomena, a variety of electronic transport phenomena observed in a nano- or atomic-scale specimen that is smaller in size than the mean free path of electrons. The second half covers scanning probe microscopy (SPM), a powerful observation tool widely exploited in nanotechnology. Principles of various types of SPM and their applications in materials science are exposted with many illustrative examples.

【Grading】 Grading will be made based on the report on the assigned problems.

【Course Goals】 The final goal of this lecture is to make students acquire basic understanding on the mesoscopic phenomena and the characterization of materials with SPM.

【Course Topics】

Theme	Class number of times	Description
Mesoscopic electron transport phenomena	7	1. Introduction to electronic conduction 2. Quantum interference between electrons and its influence on electronic conduction 3. Ballistic conduction 4. Single-electron tunneling 5. Electron transport through atom-sized contacts of metals 6. Electron transport through single molecules 7. Newest topics of mesoscopic electronic conduction
Materials characterization with SPM	8	1. Atomic and electronic structures of surfaces 2. Properties of tunneling electrons 4. Forces acting across ultrasml junctions 5. Materials characterization with SPM (1) 6. Materials characterization with SPM (2) 7. Materials characterization with SPM (3) 8. Cutting-edge SPM researches

【Textbook】 Lacture notes in a paper form will be distributed.

Introduction to Advanced Material Science and Technology (English lecture)

先端マテリアルサイエンス通論 (英語科目)

【Code】 10K001 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Friday,4th-5th

【Location】 KatsuraA2-308,Yoshida Research Bldg.No4,-Room3(Distance lectures) 【Credits】 2

【Restriction】 No Restriction 【Lecture Form(s)】 Relay Lecture 【Language】 English 【Instructor】

【Course Description】 The various technologies used in the field of material science serve as bases for so-called "high technologies", and, in turn, the high technologies develop material science. These relate to each other very closely and contribute to the development of modern industries. In this class, recent progresses in material science are briefly introduced, along with selected current topics on new biomaterials, nuclear engineering materials, new metal materials and natural raw materials. The methods of material analysis and future developments in material science are also discussed.

【Grading】 In order to obtain two credits, students must attend at least ten lectures, and at least five of the submitted reports must be evaluated as " passed " by each lecturer. Each report should be submitted to the lecturer within two weeks after his/her lecture. NOTE: Reports are NOT acceptable from those who do not attend the lecture.

【Course Goals】

New Engineering Materials, Adv. (English lecture)

新工業素材特論 (英語科目)

【Code】 10K004 【Course Year】 Master and Doctor Course 【Term】 2nd term 【Class day & Period】 Thu 5th

【Location】 KatsuraA2-308, Yoshida Research Bldg.No4,-Room3(Distance lectures) 【Credits】 2

【Restriction】 No Restriction 【Lecture Form(s)】 Relay Lecture 【Language】 English 【Instructor】

【Course Description】 Outline: New materials are necessary for the advancement of high technologies, but in order to develop these new materials for practical applications, a number of problems must be solved. In this course, the problems encountered in the fields of chemical engineering, electrical / electronic engineering, mechanical engineering and civil engineering are discussed. Discussions are also held on natural resources, and how computers are being used in the development of new materials. Lectures are given in English.

【Grading】 Credit: The evaluation of a student ' s work will be given on a pass / fail basis, based on his / her attendance and reports, not on examinations.(1) Attending the class 10 times or more and submitting at least 5 reports with passing marks is required to receive 2 credits.(2) A report assignment will be given by every lecturer and must be submitted within 2 weeks from the end of the lecture.(3) A student ' s report on any lecture from which he / she is absent will not be accepted.

State Space Theory of Dynamical Systems

状態方程式論

【Code】10C628 【Course Year】Master Course 【Term】1st term 【Class day & Period】Wed 3rd 【Location】

【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】T. Hagiwara, Y. Ebihara

【Course Description】The course deals with the dynamical system theory based on linear time-invariant state equations. It covers such topics as state equations, controllability and observability, mode decomposition and its relevance to controllability/observability, stability of dynamical systems, and the Kalman canonical decomposition.

【Grading】The grading will be based on the exam.

【Course Goals】To acquire the knowledge on the basic theory for linear system analysis by means of state equations.

【Course Topics】

Theme	Class number of times	Description
feedback systems and state equations	3 ~ 4	fundamentals of state equations, their relationship to transfer functions and block diagram representations
responses of linear systems	5 ~ 6	state transition matrices, equivalence transformation of systems, mode decomposition and Lyapunov stability
controllability and observability	5 ~ 6	controllability and observability, mode decomposition and its relevance to controllability/observability, controllable subspace and unobservable subspace, and the Kalman canonical decomposition

【Textbook】

【Textbook(supplemental)】

【Prerequisite(s)】classical control theory (in terms of transfer functions), linear algebra and calculus

【Location】 A1-001 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 Japanese

【Instructor】 E. Furutani

【Course Description】 The course deals with mathematical methods of system optimization mainly for combinatorial optimization problems. It covers such topics as the integer optimization and its typical problems, exact solution methods including the dynamic programming and the branch and bound method, approximate solution methods including the greedy method, meta-heuristics including the genetic algorithms, the simulated annealing method, and the tabu search.

【Grading】 The grading will be based on an exam and the evaluation of the reports on the subjects given in the class.

【Course Goals】 To acquire the knowledge on formulation of combinatorial optimization problems into integer programming problems, basic concepts, algorithms, characteristics, and application procedures of exact solution methods, approximate solution methods, and meta-heuristics.

【Course Topics】

Theme	Class number of times	Description
combinatorial optimization	1	necessity and importance of combinatorial optimization, and typical problems
exact solution methods	3	principle of optimality, dynamic programming, branch and bound method, and their applications
integer programming	2-3	formulation into integer programming problem, relaxation problem, and cutting plane algorithm
complexity	1	complexity, classes P and NP, complexity of combinatorial optimization problems, necessity of approximate solution methods and meta-heuristics
approximate solution methods	1-2	greedy method, relaxation method, partial enumeration method, etc.
meta-heuristics	5-6	local search, basic ideas of meta-heuristics, genetic algorithms, simulated annealing method, tabu search, etc. The level of understanding will be confirmed.

Applied Mathematics for Electrical Engineering

電気数学特論

【Code】 10C601 【Course Year】 Master Course 【Term】 1st term 【Class day & Period】 Wed 1st 【Location】

【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 Japanese

【Instructor】 T. Hikihara & S. Doi

【Course Description】 In the class, fundamental mathematics is lectured for electrical engineering, electronics, system engineering, and material science. In particular, system theory, nonlinear dynamics, and particle dynamics in force field can be discussed with mathematical clear image.

【Grading】 Students are requested to reply to report assignments. The grading is based on the evaluation of the reports.

【Course Goals】 Professors expect students to model their system and analyze the models theoretically. Students will be requested to understand their system in principle mechanics and control them based on system theory.

【Course Topics】

Theme	Class number of times	Description
	1	
	3	
	3	
Introduction 2	1	Relationship between the previous classes and further will be explained. The introduction to nonlinear dynamics will be explained based on oscillation theory.
Hamiltonian mechanics	4	Hamiltonian mechanics on linear symplectic space is lectured.
Manifold and vector field	3	Manifold is discussed in nonlinear system with relation to vector field analysis.

【Instructor】 T. Matsuo

【Course Description】 The first half: computational electromagnetics

The latter half: the special theory of relativity and the covariance of Maxwell's equations

【Grading】 Submission of reports (twice)

【Course Goals】 1. Understanding of computational methods for electromagnetic field analysis

2. Understanding of the basic concepts of special theory of relativity and the covariant formulation of Maxwell's equations

【Course Topics】

Theme	Class number of times	Description
Finite integration method for electromagnetic field analysis	4	- Introduction to finite integration method - Application to electromagnetic field analysis
Finite element method for magnetic field analysis	2-3	- Introduction to finite element analysis for magnetic field analysis - Edge element for three-dimensional magnetic field analysis
Introduction to special theory of relativity	2-3	- Galilean relativity and special relativity - Lorentz transformation
Tensor representation and relativistic dynamics	2-3	- Introduction to tensor representation - Relativistic dynamics
Covariant formulation of Maxwell ' s equations	2-3	- Electromagnetic field tensor - Lorentz covariance of Maxwell ' s equations

Applied Hybrid System Engineering

応用ハイブリッドシステム工学

【Code】10C621 【Course Year】Master Course 【Term】1st term 【Class day & Period】Wed 1st

【Location】A1-001 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】Takashi Hikihara, Shinji Doi, Yoshihiko Susuki, Syun'ichi Azuma

【Course Description】Many engineering systems show hybrid dynamical structure, which is accompanied with discrete change of vector flow by control and regulate the trajectory to target dynamically. In the course, the fundamental characteristics and theorems are lectured. The framework of hybrid system, automaton model, and singular perturbation theorem are explain. Dynamic quantizer, power system, and network are picked up as examples.

【Grading】Exercise and repots are evaluated.

【Course Goals】Students are requested to understand the characteristics of hybrid system, approaching method, and control methods.

【Course Topics】

Theme	Class number of times	Description
Fundamentals of hybrid system	4	As fundamentals, the definition of hybrid system and the method of modeling is explained.
Singular perturbation and asymptotic expansion	3	Singular perturbation theorema and asymptotic expansion are explained. For the global oscillation of singular perturbed system, analytical and geometrical singular perturbation methods are introduced.
Application of hybrid system-1: power system	3	The application to power system is explained. The outline of power system, then safety and examination, the stability analysis, and the modeling towards control are given.
Application of hybrid system-2: dynamic quantizer	2	As an application, dynamic quantizer is adopted. The outline of the dynamic quantizer, the analysis, and the design of the system are given.
Application of hybrid system-3: networking	3	As an application, the communication network is adopted. The internet network is also explained as an example of modeling and control.

Design of Control Systems

制御系設計理論

【Code】10C631 【Course Year】Master Course 【Term】2nd term 【Class day & Period】Tue 2nd 【Location】

【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】T. Hagiwara, Y. Ebihara

【Course Description】The course is based on State Space Theory of Dynamical Systems, and provides the applications of the concepts given therein to systematic control system design. The course covers such topics as state feedback and pole assignment, observers, synthesis of feedback control systems, servo conditions and feedforward, and optimal control under quadratic performance indices.

【Grading】In principle, the grading will be based on the absolute and comprehensive evaluation of the reports on the subjects given in the class. Should this change due to inadequate efforts on the submitted reports, an exam might be also imposed, in which case the details will be announced at the class at least two weeks before the exam term.

【Course Goals】To understand the basic ideas of control system design based on state space representations, and acquire fundamental knowledge and skills on practical control system design through simulated experiences with the report subjects.

【Course Topics】

Theme	Class number of times	Description
pole assignment by state feedback	4 ~ 5	state feedback, controllable canonical forms and pole assignment of scalar/multivariable systems, computation of the state feedback gains for pole assignment, transient responses, uncontrollable poles and stabilizability
observers	3 ~ 4	observable canonical forms and observability conditions, full-order observer, minimal-order observer, conditions for observers and observer-based feedback
synthesis of feedback systems	2 ~ 3	feedback systems with integral compensation, servo systems, internal model principle, synthesis of servo systems
optimal control under quadratic performance index	3 ~ 4	optimal regulators and their closed-loop poles, Riccati equations and their solutions, relationship with the pole assignment problem

【Textbook】Handouts will be given at the class.

【Textbook(supplemental)】

【Prerequisite(s)】The contents given in State Space Theory of Dynamical Systems, and linear algebra.

【Instructor】 Hiroshi Yamakawa, Hirotsugu Kojima

【Course Description】 The present lecture provides the guideline how the technology on the electronics and propulsion system is used for the development of spacecraft and space systems. Furthermore, in order to understand the environment in space, we also give a lecture on the space plasma physics.

【Grading】 attendance and reports

【Course Goals】 Mastery of the way how we can make use of the knowledges of the physics and technology to the space engineering.

【Course Topics】

Theme	Class number of times	Description
Space environment	2	The space environment in the view point of spacecraft desing such as thermal condition, plasmas, and charging.
Spacecraft system and its related technology	6	The spacecraft system and its technology related to power system, communication system, EMC, and payload desings.
Spacecraft dynamics	3	Spacecraft orbit design and its attitude control
System engineering of spacecraft	4	Spacecraft propulsion system including the advanced systems which make use of solar power, GPS navigation system, and space debris

【Lecture Form(s)】 Lecture 【Language】 Japanese 【Instructor】 (RISH) Shinohara

【Course Description】 This lecture picks up microwave power transmission (MPT) technology, rectifying antenna (rectenna), antenna and propagation for the MPT, microwave transmitters, and some MPT applications like the Space Solar Power Satellite/Station. This lecture also picks up the other wireless power transmission technologies like resonance coupling, energy harvesting, and applied microwave technologies of microwave processing, wireless communications, and radar.

【Grading】 Reports

【Course Goals】 Students learn about applied microwave engineering, mainly microwave power transmission.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	The purpose and constitution of the lecture, and review of microwave engineering are explained.
Applications of Wireless Power Transmission	3-4	Space Solar Power Satellite/Station and Ubiquitous power source as applications of microwave power transmission, the resonance coupling and energy harvesting as the other battery-less technologies are explained.
rectifying antenna (rectenna)	1-2	rectifying antenna (rectenna) for the MPT are explained.
antenna and propagation for the MPT	5-6	Calculation of beam collection efficiency and beam propagation with FDTD method are explained. Phased array technologies, beam targetting method, non linear physics of microwave-plasma interation are overvied.
Microwave transmitters	2	High efficient semi-conductor amplifiers and microwave tubes are explained.
microwave processing, wireless communications, and radar	1	Microwave processing, wireless communications, and radar texhnologies are explained.

【Textbook】 Non. Hand out will be distributed.

Recent Advances in Electrical and Electronic Engineering

先端電気電子工学通論

【Code】 10K010 【Course Year】 Master and Doctor Course 【Term】 2nd term

【Class day & Period】 Tuesday, 5 【Location】 Laboratories 【Credits】 2 【Restriction】 Foreign students

【Lecture Form(s)】 Seminar 【Language】 English 【Instructor】

【Course Description】 The class consists of a series of seminars at 3 laboratories related to Department of Electrical and Electronic Engineering (energy and electrical machinery, computers, control and systems, communications and radio engineering, and electronic devices and applied physics). Each seminar intends to give a brief introduction into a specific research field so that students can get a feel for the state-of-the-art in each topic and broaden their scope beyond their majors.

【Grading】 The evaluation of a student ' s work is given based on his/her attendance, reports and discussions, not on examinations.

Introduction to Advanced Material Science and Technology (English lecture)

先端マテリアルサイエンス通論 (英語科目)

【Code】 10K001 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Friday,4th-5th

【Location】 KatsuraA2-308,Yoshida Research Bldg.No4,-Room3(Distance lectures) 【Credits】 2

【Restriction】 No Restriction 【Lecture Form(s)】 Relay Lecture 【Language】 English 【Instructor】

【Course Description】 The various technologies used in the field of material science serve as bases for so-called "high technologies", and, in turn, the high technologies develop material science. These relate to each other very closely and contribute to the development of modern industries. In this class, recent progresses in material science are briefly introduced, along with selected current topics on new biomaterials, nuclear engineering materials, new metal materials and natural raw materials. The methods of material analysis and future developments in material science are also discussed.

【Grading】 In order to obtain two credits, students must attend at least ten lectures, and at least five of the submitted reports must be evaluated as " passed " by each lecturer. Each report should be submitted to the lecturer within two weeks after his/her lecture. NOTE: Reports are NOT acceptable from those who do not attend the lecture.

【Course Goals】

【Course Topics】

Theme	Class number of times	Description
	2	Hyperthermophiles and their thermostable biomolecules H. Atomi
	1	Microreactor Technology for Production of High Functional Chemical Materials K.Mae
	2	Advanced Beam Processes and Characterization Technique for Nanotechnology J.Matsuo
	2	Chemical vapor deposition - Synthesis of advanced materials from gas phase M.Kawase
	1	Nanostructure Control in Structural Metallic Materials N.Tsuji
	1	Nano-optical Spectroscopy/Microscopy:Applications in Material Science H.Aoki
	1	Photonic Materials K.Hirao
	1	ISO Standards in Analytical Chemistry J. Kawai
	1	Electrodeposition and Electroless Deposition for Materials Processing K. Murase

Charged Particle Beam Apparatus

電子装置特論

【Code】10C801 【Course Year】Master Course 【Term】2nd term 【Class day & Period】Wed 4th 【Location】

【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】Yasuhito Gotoh

【Course Description】Fundamental technologies of an ion beam apparatus, such as ion source, formation and evaluation of ion beam, transport of ion beam, and ion-solid interaction will be presented. Taking ion implantation as one of the example of the ion application, the relationship between the incident ion energy and implantation depth will be presented. Each element of a typical ion beam apparatus is explained in detail.

【Grading】Evaluation will be made with the results of final examination. Achievements of exercises in the class are also taken into consideration.

【Course Goals】To understand the details of an ion beam apparatus: generation, transport and evaluation of an ion beam. Understanding of the entire ion beam apparatus as a system is also purpose of the class.

【Course Topics】

Theme	Class number of times	Description
Ion beam systems and their applications	1	Outline of the class is presented. Physical properties of ions in vacuum are given, and ion beam apparatuses and their application will be introduced with some typical examples.
Ion-solid interaction	3	Interaction between high energy ion and solid atoms are given. Major topics are: how the ions transfer their energy to the target atoms, i.e., how the ions are decelerated in the solid, and relationship between incident ion energy and implantation depth is given.
Generation and transport of ion beam	4	Methods of ion generation for various elements are explained. Important equations of beam extraction and beam transport are given. Starting with the paraxial ray equation, concept of transfer matrix is given. Finally, some important physical parameters of ion beams are given.
Mass separators and energy analyzers	4	Details of magnetic sector as mass separator are given. Transfer matrix of the mass separator are presented and focusing effect is described. An important parameter of mass resolution is given. Some different kinds of energy analyzers are also introduced.
Design of ion beam system	2	As a summary of the course, design of the simple ion beam system is given. Prior to the design, some important knowledges about vacuum pumps and components are shown.

【Textbook】Yasuhito Gotoh, Charged Particle Beam Apparatus, 2011 version (Will be sold at CO-OP shop)

プラズマ工学特論

【Code】10C807 【Course Year】Master Course 【Term】1st term 【Class day & Period】Mon 3rd 【Location】

【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】Osamu SAKAI

【Course Description】 Main regimes of plasma generation such as capacitive-coupled discharges, inductive-coupled discharges, and wave-propagation discharges are investigated and categorized with discussion of wave-heating mechanisms and particle/energy balance equations. These discussions are based on elementary process of atoms and molecules and wave dispersions in a plasma. In addition, various wave modes emerging in a spatiotemporal structure of plasmas are addressed.

【Grading】 Judged by regular examination and submitted report sheet. (In some years, regular examination is replaced by a set of report sheets.)

【Course Goals】 Reviewing fundamentals of plasma engineering, understandings of industrially-available plasma sources and electromagnetic-wave propagation in a plasma are required.

【Course Topics】

Theme	Class number of times	Description
Fundamentals	2-3	Reviewing fundamentals of plasma engineering, basic phenomena including elementary processes in a plasma are addressed.
Plasma sources	6-7	Based on wave propagation in a plasma, regimes of plasma generation such as capacitive-coupled discharges, inductive-coupled discharges, and wave-propagation discharges are investigated and categorized with discussion of wave-heating mechanisms and particle/energy balance equations.
Electromagnetic wave propagation	5-6	Various wave modes emerging in a spatiotemporal structure of plasmas are addressed; not only gaseous plasmas but also plasmas in solids are discussed.

【Textbook】

【Textbook(supplemental)】 F. F. Chen and J. P. Chang, Lecture Notes on Principles of Plasma Processing (Kluwar Academic/Plenum Publishing, New York, 2003)

【Prerequisite(s)】 Knowledge addressed in plasma science and engineering in the bachelor course, or similar one corresponding to this subject.

【Code】10C830 【Course Year】Master Course 【Term】2nd term 【Class day & Period】Mon 4th 【Location】

【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese 【Instructor】

【Course Description】As an example of high precision measurements using quantum phenomena, frequency standards, which is realized with the smallest uncertainty in all measurement quantities at present, are discussed. The principle and evaluation of frequency standards are explained.

【Grading】Report(two times, at the first lecture and the after all lectures)

【Course Goals】The goal of this lecture is to understand that precision measurements are realized with combination of the best technologies and is based on physics.

【Course Topics】

Theme	Class number of times	Description
Introduction and principle of time measurement	1.5	Two principles of time measurement: Reproducibility postulate and dynamic model
Time and relativistic theory	3	Impact of special and general relativistic theory on time measurement
Fundamentals of atomic frequency standards	2.5	Atomic states, its energy shifts, high-resolution spectroscopy and high-sensitive detection
Cesium frequency standard and atom interferometer	2.5	Principle of Ramsey resonance and its interpretation as atom interferometer
Specification of frequency standards: evaluation methods and theoretical limit	2	Fundamentals of evaluation of frequency stability with Allan variance, and theoretical limit of frequency stability
Noise	2.5	Incoherent signals and shot noise
Evaluation of understanding	1	

【Textbook】

【Textbook(supplemental)】C. Audoin and B. Guinot, The Measurement of Time, (Cambridge University Press, 2001). M. Kitano, Fundamentals of electronic circuits (Reimei publishing, 2009) in Japanese.

【Prerequisite(s)】Fundamentals of physics (quantum physics, in particular) and electric circuits including linear system.

The level which average graduate students of electric and electronic science and technology acquire is sufficient.

先端電気電子工学通論

【Code】 10K010 【Course Year】 Master and Doctor Course 【Term】 2nd term

【Class day & Period】 Tuesday, 5 【Location】 Laboratories 【Credits】 2 【Restriction】 Foreign students

【Lecture Form(s)】 Seminar 【Language】 English 【Instructor】

【Course Description】 The class consists of a series of seminars at 3 laboratories related to Department of Electrical and Electronic Engineering (energy and electrical machinery, computers, control and systems, communications and radio engineering, and electronic devices and applied physics). Each seminar intends to give a brief introduction into a specific research field so that students can get a feel for the state-of-the-art in each topic and broaden their scope beyond their majors.

【Grading】 The evaluation of a student ' s work is given based on his/her attendance, reports and discussions, not on examinations.

Introduction to Advanced Material Science and Technology (English lecture)

先端マテリアルサイエンス通論 (英語科目)

【Code】 10K001 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Friday,4th-5th

【Location】 KatsuraA2-308,Yoshida Research Bldg.No4,-Room3(Distance lectures) 【Credits】 2

【Restriction】 No Restriction 【Lecture Form(s)】 Relay Lecture 【Language】 English 【Instructor】

【Course Description】 The various technologies used in the field of material science serve as bases for so-called "high technologies", and, in turn, the high technologies develop material science. These relate to each other very closely and contribute to the development of modern industries. In this class, recent progresses in material science are briefly introduced, along with selected current topics on new biomaterials, nuclear engineering materials, new metal materials and natural raw materials. The methods of material analysis and future developments in material science are also discussed.

【Grading】 In order to obtain two credits, students must attend at least ten lectures, and at least five of the submitted reports must be evaluated as " passed " by each lecturer. Each report should be submitted to the lecturer within two weeks after his/her lecture. NOTE: Reports are NOT acceptable from those who do not attend the lecture.

【Course Goals】

【Course Description】Outline: New materials are necessary for the advancement of high technologies, but in order to develop these new materials for practical applications, a number of problems must be solved. In this course, the problems encountered in the fields of chemical engineering, electrical / electronic engineering, mechanical engineering and civil engineering are discussed. Discussions are also held on natural resources, and how computers are being used in the development of new materials. Lectures are given in English.

【Grading】Credit: The evaluation of a student ' s work will be given on a pass / fail basis, based on his / her attendance and reports, not on examinations.(1) Attending the class 10 times or more and submitting at least 5 reports with passing marks is required to receive 2 credits.(2) A report assignment will be given by every lecturer and must be submitted within 2 weeks from the end of the lecture.(3) A student ' s report on any lecture from which he / she is absent will not be accepted.

【Code】10D040 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】 【Location】

【Credits】1 【Restriction】 【Lecture Form(s)】Seminar 【Language】English

【Instructor】Kim Sunmin, Kenji Wada. etc

【Course Description】 This course is designed to develop high-level communication and presentation skills in English required for top level scientific and industrial career prospects.

【Grading】 Attendance 60%, midterm reports 20%, final report 20%. The final report must be submitted by the deadline date.

【Course Goals】 This course is designed to develop high-level communication and presentation skills in English required for top level scientific and industrial career prospects.

【Course Topics】

Theme	Class number of times	Description
Introduction	2	Course Guidance, etc.
Exercise-1	1	Definition of technical writing 3C in technical writing Weaknesses of Japanese writers Good examples and bad examples
Exercise-2	1	Punctuation Presentation skills 1 -organization
Exercise-3	1	Organizing your thoughts for the title and abstract Presentation skills 2 ?Visual aspects
Exercise-4	1	Presenting the background of your research Presentation skills 3 ?Oral Aspects
Exercise-5	1	Describing how you did your research Presentation skills 4 ?Physical Aspects
Exercise-6	1	Presenting what you observed Presentation Practice
Exercise-7	1	Placing your findings in the field Presentation Practice
Exercise-8	1	Expressing thanks and listing references Presentation practice
Exercise-9	1	Writing your proposal Presentation practice
Exercise-10	1	Presentation practice Reviews & Feedbacks Evaluation
Presentation	2	Current situation of studying abroad, etc.
Wrap-up lecture	1	Achievement Assessment

【Textbook】 No textbook is required.

Professional Scientific Presentation Exercises (English lecture)

科学技術者のためのプレゼンテーション演習 (英語科目)

【Code】 10i041 【Course Year】 Doctor Course 【Term】 1st term 【Class day & Period】 Wed 5th

【Location】 B-Cluster 2F Seminar Room 【Credits】 1

【Restriction】 The number of students might be limited if too many students will get enrolled.

【Lecture Form(s)】 Seminar 【Language】 English 【Instructor】 Juha Lintuluoto

【Course Description】 It is imperative for future engineers to be able to communicate and deliver effectively scientific information to large variety of audiences. This skill enables engineers to share and absorb information to more extended audiences, and facilitates success in selling ideas and products, publishing and team working. The purpose of this course is to teach the basic rules needed for successful professional scientific presentation, both orally and written. The course also prepares students to deliver scientific information presentations to wide audiences. The course is consisted of excessive exercises, of which the student should complete seven (7) tasks. The course holds 3-4 tasks for oral presentation exercises, and 3-4 tasks for professional scientific writing exercises. The exact number of both exercises is adjusted for each student ' s needs. The course is aimed for doctor course (DC) students, both Japanese and Foreign nationals

【Grading】 Reports, class activity, presentation

【Course Goals】 This course is aimed to foster engineering students ' scientific presentation skills. The successfully course completed students will be able to express and present complicated and specific scientific information at more generally understandable level. The students will also be able to pose relevant questions and effectively answer to the wide variety of questions.

【Course Topics】

Theme	Class number of times	Description
		Guidance and Professional presentation rules and etiquette
		Oral presentations & questioning I, Written report I
		Oral presentations & questioning I, Written report I
		Oral presentations & questioning II, Written report II
		Oral presentations & questioning II, Written report II
		Oral presentations & questioning III, Written report III
		Oral presentations & questioning III, Written report III
		Oral presentations & questioning IV, Written report IV
		Oral presentations & questioning IV, Written report IV I
		Course summary and discussion

【Textbook】 Course materials will be provided.

【Textbook(supplemental)】 Will be informed if necessary.

【Prerequisite(s)】 -Fundamental skills about scientific presentation

-Advanced English skills

-Sufficient personal research results

【Web Sites】 The web-site will be opened in the home page of the GL education center.

【Additional Information】 Students are requested to check in advance whether the credit of this course is counted as the unit for graduation requirement at department level. Course starts at April 25th. Students are requested to register on this course before April 20th. The course schedule is irregular. Most classes are biweekly, the detailed schedule is provided at the 1st lecture.

Advanced Engineering and Economy (English lecture)

工学と経済 (上級)(英語科目)

【Code】10i042 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Tue 5th 【Location】B-Cluster 2F Seminar Room

【Credits】2 【Restriction】The number of students might be limited if too many students will get enrolled. 【Lecture Form(s)】Lectures, Seminar

【Language】English 【Instructor】Juha Lintuluoto

【Course Description】Engineering economics plays central role in any industrial engineering project. For an engineer, it is important to apply the engineering know-how with the economic analysis skills to obtain the best available materials, methods, devices, etc. in the most economical way. This course is aimed to teach engineering students the basic economic methods to manage economically an engineering project. In addition, the report writing on various engineering economic issues prepares to write reports in a professional form. The lab sessions are meant for the verbal skills improvement as well as improvement of analytical thinking. The topics are of current relevant topics Small-group brain-storming method is used. The exercise sessions cover the use of Ms-Excel for various quantitative economic analyses.

【Grading】Final test, reports, class activity

【Course Goals】This course is aimed to strengthen engineering students' skills in economics. The course concept is to teach students selectively those subjects which serve as major tools to solve economic tasks in engineering environment. The reports and lab sessions provide students stimulating and analytical thinking requiring tasks, and presentation skills training is an important part of this course.

【Course Topics】

Theme	Class number of times	Description
Student orientation and Introduction to engineering economy	1	
Cost concepts and design economics	1	
Cost estimation techniques	1	
The time value of money	1	
Evaluating a single project	1	
Comparison and selection among alternatives	1	
Depreciation and income taxes	1	
Price changes and exchange rates	1	
Replacement analysis	1	
Evaluating projects with the benefit-cost ratio method	1	
Breakeven and sensitivity analysis	1	
Probabilistic risk analysis	1	
The capital budgeting process	1	
Decision making considering multiattributes	1	
Final test	1	

Additionally, students will submit five reports during the course on given engineering economy subjects. Also, required are the five lab participations (ca.60 min/each) for each student. Additionally, three exercise sessions (ca.60 min/each), where use of Ms-Excel will be practiced for solving various engineering economy tasks, should be completed

【Textbook】Engineering Economy 15th ed. William G. Sullivan (2011)

【Textbook(supplemental)】Will be informed if necessary.

【Prerequisite(s)】-This course is highly recommended for those who attend " Inter-Engineering -Highly interactive lessons (discussion), Small group working method

【Web Sites】The web-site will be opened in the home page of the GL education center.

【Additional Information】Students are requested to check in advance whether the credits of this course are counted as the units for graduation requirement at department level.

Leadership and Communication in Multi-Cultural Project (English lecture)

プロジェクト演習のためのリーダーシップとコミュニケーション (英語科目)

【Code】 10i043 【Course Year】 Doctor Course 【Term】 1st term 【Class day & Period】 Fri 5th

【Location】 B-Cluster 2F Seminar Room 【Credits】 1

【Restriction】 The number of students might be limited if too many students will get enrolled.

【Lecture Form(s)】 Lectures, Seminar 【Language】 English 【Instructor】 Lintuluoto, Nokami, Kojima

【Course Description】 The purpose of this course is to teach the basic skills needed for expressing and initiating ideas, and presenting information in successful international engineering group work. The course provides simulations for students in group managing and decision making in international engineering teams. International teamwork ethics subjects for successful engineering project will be practiced. The course consists of lectures, case studies, the invited lecture from an industry representative and the final examination. Also, a project report exercise is included in this course.

The course is basically designed for doctor course (DC) students, both Japanese and foreign nationals. If place are available they may be given to master course students.

【Grading】 Report, class activity, presentation

【Course Goals】 This course is the prerequisite course for Inter-Engineering Projects which will be held in the second semester. Students will learn project management tool use, apply project strategies and perform qualitative risk analyses. Also students will learn how to carry out projects with group members from various countries and engineering fields.

【Course Topics】

Theme	Class number of times	Description
	1	Introduction of the class (All)
	1	Project Management I (Lintuluoto)
	1	Project Management II (Lintuluoto)
	1	Ethics in group work (Nokami)
	1	Case study I: Ethics in group work (Nokami with assistant)
	1	Case study II: Engineering project communication (Lintuluoto)
	1	Leadership skills in group work (Kojima)
	1	Case study III (Kojima with assistant)
	1	Cultural aspects in project development (Lintuluoto)
	1	Ethics in project development (Nokami)
	1	Case study V: Ethics in project development (Nokami with assistant)
	1	Leadership skills in projects (Kojima)
	1	Case study VI (Kojima with assistant)
	1	Special Lecture from an Industry Representative
	1	Final examination

【Textbook】 Course materials will be provided.

【Textbook(supplemental)】 Will be informed if necessary.

【Prerequisite(s)】 ‘ -This course is a prerequisite for those who later intend to attend “ Inter-Engineering Project ” .
-Highly interactive lessons (discussion), Small group work methodologies.

【Web Sites】 The web-site will be opened in the home page of the GL education center.

【Additional Information】 Students are requested to check in advance whether the credit from this course will be accepted as a graduation requirement for their department.

Inter-Engineering Project (English lecture)

インターエンジニアリングプロジェクト演習 (英語科目)

【Code】 10i044 【Course Year】 Doctor Course 【Term】 2nd term 【Class day & Period】 Fri 5th

【Location】 B-Cluster 2F Seminar Room 【Credits】 1 【Restriction】 Student number will be limited.

【Lecture Form(s)】 Semina r 【Language】 English 【Instructor】 Lintuluoto , Nokami , Kojima , Kim

【Course Description】 In this course, students will apply the engineering know-how and the skills of management, group leadership, and international communication which they learned in the course of "Leadership and Communication in Multi-Cultural Project" to build and carry out a virtual inter-engineering project. This course provides a forum where students' team-plan based on ideas and theories, decision making, and leadership should produce realistic engineering project outcomes. The course consists of intensive group work and a few intermediate discussions. The course will be held 6 weeks for group work, and two (2) intermediate discussions, project presentation to a wide audience, and a written report will be required.

【Grading】 Report, class activity, presentation

【Course Goals】 This course prepares engineering students to work with other engineers within a large international engineering project. In particular this course will focus on leadership and management of projects along with applied engineering skills where the students learn various compromises, co-operation, responsibility, and ethics.

【Course Topics】

Theme	Class number of times	Description
Guidance		
Group work I		
Group work II		
Intermediate discussion I		
Group work III		
Group work IV		
Intermediate discussion II		
Group work V		
Group work VI		
Project presentation and discussion		
		Each project team may freely schedule the group work within the given time frame. In addition to " Intermediate discussion " sessions, the course instructors are available if any such need arises.

【Textbook】 Course materials will be provided.

【Textbook(supplemental)】 Will be informed if necessary.

【Prerequisite(s)】 -Complete the course " Leadership and Communication in Multi-Cultural Project " in the 1st term.

-Attendance at " Advanced Engineering Economics " course is strongly recommended.

-Fundamental skills about group leading and communication, scientific presentation.

【Web Sites】 The web-site will be opened in the home page of the GL education center.

【Additional Information】 Students are requested to check in advance whether the credit from this course will be accepted as a graduation requirement for their department.

Chemistry of Organometallic Complexes

有機錯体化学

【Code】10D210 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Mon 2nd 【Location】A2-303 【Credits】2 【Restriction】No Restriction

【Lecture Form(s)】 【Language】Japanese 【Instructor】Tsuji, Terao

【Course Description】Basic organometallic chemistry including history, structure, bonding, reactions, and survey of various metal complexes is lectured. Several typical catalytic reactions are explicated on the basis of elementary steps in organometallic chemistry such as ligand substitution, oxidative addition, reductive elimination, and insertion reactions.

【Grading】Graded by written examination

【Course Goals】Acquirement of basic idea of:

1. General properties of transition metal organometallic complexes
2. Reactivity of transition metal organometallic compounds
3. Homogeneous catalysis of practical importance
4. Recent research trends in homogeneous catalysis

【Course Topics】

Theme	Class number of times	Description
Introduction	1	History
		Application
		Research trends
		Zaise salt
		Grignard reagent
		Alkyl lithium
General properties of transition metal organometallic complexes (1)	1	Ferrocene
		Ziegler catalyst
		Hydroboration
		Wittig reaction
		Serendipity
General properties of transition metal organometallic complexes (2)	1	Bonding
		Structure in general
		Coordination number
		-Structure
		μ -Structure
General properties of transition metal organometallic complexes (3)	1	Number of d- and s-electrons
		Classification and the nature of ligands
		Effect of complexation
		Formal charge
		Electron counting
		18-electron rule
Reactivity of transition metal organometallic compounds (1)	1	Oxidative addition
		Reductive elimination
Reactivity of transition metal organometallic compounds (2)	1	Insertion reaction
		Direct attack to the ligand
		Other reactivities
Homogeneous catalysis (1)	1	Monsanto's acetic acid process
		Hydroformylation
		Hydrosilylation
		Hydrocyanation
Homogeneous catalysis (2)	1	Polymerization
		Wacker process
		Various cross-coupling reaction
Recent research trends in homogeneous catalysis (1)	1	Mizoroki-Heck reaction
		C-H and C-C bond activation
Recent research trends in homogeneous catalysis (2)	2	Asymmetric catalysis
Organometallics in materials science (1)	2	Structural materials
Organometallics in materials science (2)	1	Electronic and optoelectronic applications
	1	

【Textbook】No textbooks are used.

【Textbook(supplemental)】R.H.Crabtree, The Organometallic Chemistry of the Transition Metals Fourth Edition; Wiley-Interscience; Hoboken, 2005.

【Prerequisite(s)】Basic knowledge in organic chemistry, physical chemistry, and inorganic chemistry is requisite.

【Instructor】 Nishimoto and Tanabe

【Course Description】 A number of challenges have been made on development of modified DNA, RNA and proteins, chemical or physical properties of which are controlled by several triggers. These intelligent materials are promising for next generation gene diagnostics and therapy. In this lecture, we discuss the molecular design of these artificial biological materials and their application.

【Grading】 attendance and report

【Course Goals】 Synthetic chemistry of DNA, RNA and protein//Chemical structure and basic function of biological materials//Regulation of biological function//Medical applications of artificial DNA, RNA and protein

【Course Topics】

Theme	Class number of times	Description
Chemical structure and synthesis	2	Synthetic chemistry of nucleic acids
Gene manipulation	2	Synthesis of protein Gene Sequencing
Functions of intelligent molecules	2	Function of artificial peptides Functions of artificial nucleic acids
Drugs related to DNA	2	DNA cleavage by drugs Crosslinking by artificial nucleic acids Alkylation by drugs
Expansion of genetic code	2	Artificial nucleobases Synthesis of modified protein in cells
Medical application	2	Molecular targeting Molecular imaging
Recent topics	3

Introduction to Advanced Material Science and Technology (English lecture)

先端マテリアルサイエンス通論 (英語科目)

【Code】 10K001 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Friday,4th-5th

【Location】 KatsuraA2-308,Yoshida Research Bldg.No4,-Room3(Distance lectures) 【Credits】 2

【Restriction】 No Restriction 【Lecture Form(s)】 Relay Lecture 【Language】 English 【Instructor】

【Course Description】 The various technologies used in the field of material science serve as bases for so-called "high technologies", and, in turn, the high technologies develop material science. These relate to each other very closely and contribute to the development of modern industries. In this class, recent progresses in material science are briefly introduced, along with selected current topics on new biomaterials, nuclear engineering materials, new metal materials and natural raw materials. The methods of material analysis and future developments in material science are also discussed.

【Grading】 In order to obtain two credits, students must attend at least ten lectures, and at least five of the submitted reports must be evaluated as " passed " by each lecturer. Each report should be submitted to the lecturer within two weeks after his/her lecture. NOTE: Reports are NOT acceptable from those who do not attend the lecture.

【Course Goals】

【Course Topics】

Theme	Class number of times	Description
	2	Hyperthermophiles and their thermostable biomolecules H. Atomi
	1	Microreactor Technology for Production of High Functional Chemical Materials K.Mae
	2	Advanced Beam Processes and Characterization Technique for Nanotechnology J.Matsuo
	2	Chemical vapor deposition - Synthesis of advanced materials from gas phase M.Kawase
	1	Nanostructure Control in Structural Metallic Materials N.Tsuji
	1	Nano-optical Spectroscopy/Microscopy:Applications in Material Science H.Aoki
	1	Photonic Materials K.Hirao
	1	ISO Standards in Analytical Chemistry J. Kawai
	1	Electrodeposition and Electroless Deposition for Materials Processing K. Murase
	2	Bio-inspired Biomaterials H.Akiyoshi
		Confirmation of study achievement

New Engineering Materials, Adv. (English lecture)

新工業素材特論 (英語科目)

【Code】 10K004 【Course Year】 Master and Doctor Course 【Term】 2nd term 【Class day & Period】 Thu 5th

【Location】 KatsuraA2-308, Yoshida Research Bldg.No4,-Room3(Distance lectures) 【Credits】 2

【Restriction】 No Restriction 【Lecture Form(s)】 Relay Lecture 【Language】 English 【Instructor】

【Course Description】 Outline: New materials are necessary for the advancement of high technologies, but in order to develop these new materials for practical applications, a number of problems must be solved. In this course, the problems encountered in the fields of chemical engineering, electrical / electronic engineering, mechanical engineering and civil engineering are discussed. Discussions are also held on natural resources, and how computers are being used in the development of new materials. Lectures are given in English.

【Grading】 Credit: The evaluation of a student ' s work will be given on a pass / fail basis, based on his / her attendance and reports, not on examinations.(1) Attending the class 10 times or more and submitting at least 5 reports with passing marks is required to receive 2 credits.(2) A report assignment will be given by every lecturer and must be submitted within 2 weeks from the end of the lecture.(3) A student ' s report on any lecture from which he / she is absent will not be accepted.

【Instructor】Kim Sunmin, Kenji Wada. etc

【Course Description】 This course is designed to develop high-level communication and presentation skills in English required for top level scientific and industrial career prospects.

【Grading】 Attendance 60%, midterm reports 20%, final report 20%. The final report must be submitted by the deadline date.

【Course Goals】 This course is designed to develop high-level communication and presentation skills in English required for top level scientific and industrial career prospects.

【Course Topics】

Theme	Class number of times	Description
Introduction	2	Course Guidance, etc.
Exercise-1	1	Definition of technical writing 3C in technical writing Weaknesses of Japanese writers Good examples and bad examples
Exercise-2	1	Punctuation Presentation skills 1 -organization
Exercise-3	1	Organizing your thoughts for the title and abstract Presentation skills 2 ?Visual aspects
Exercise-4	1	Presenting the background of your research Presentation skills 3 ?Oral Aspects
Exercise-5	1	Describing how you did your research Presentation skills 4 ?Physical Aspects
Exercise-6	1	Presenting what you observed Presentation Practice
Exercise-7	1	Placing your findings in the field Presentation Practice
Exercise-8	1	Expressing thanks and listing references Presentation practice
Exercise-9	1	Writing your proposal Presentation practice
Exercise-10	1	Presentation practice Reviews & Feedbacks Evaluation
Presentation	2	Current situation of studying abroad, etc.
Wrap-up lecture	1	Achievement Assessment

【Course Description】 Lecture is given for the rheology and dynamics of polymeric liquids and their molecular basis.

【Grading】 Mainly with report

【Course Goals】 Understanding molecular dynamics and rheology of polymers

【Course Topics】

Theme	Class number of times	Description
Rheology basics	2	Rheology and its role in science and engineering, flow / deformation/ stress, viscosity, modulus
Rheological behavior of matter	2	Rheological behavior of matter and classification, viscoelasticity, non-Newtonian flow, plastic flow
Viscoelastic relaxations	2	Boltzmann's principle, relaxation functions, relaxation time, conversion among response functions, complex modulus
Viscoelasticity and temperature	1	Glass transition, time-temperature superposition rule, WLF equation
Stress expression of polymers	2	Stress expression, tension / free-energy / distribution-function of subchains
Rouse model	1	Model description, model equation, derivation of stress and relaxation modulus, discussion on the relaxation behavior
Zimm model	1	Model description, model equation, derivation of stress and relaxation modulus, discussion on the relaxation behavior, comparison to Rouse dynamics
reptation model	2	Model description, model equation, derivation of stress and relaxation modulus, discussion on the relaxation behavior, comparison to Rouse dynamics
advanced reptation models	2	Contour Length Fluctuation, Constraint Release, Convective Constraint Release, slip-link model, pom-pom model

Introduction to Advanced Material Science and Technology (English lecture)

先端マテリアルサイエンス通論 (英語科目)

【Code】 10K001 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Friday,4th-5th

【Location】 KatsuraA2-308,Yoshida Research Bldg.No4,-Room3(Distance lectures) 【Credits】 2

【Restriction】 No Restriction 【Lecture Form(s)】 Relay Lecture 【Language】 English 【Instructor】

【Course Description】 The various technologies used in the field of material science serve as bases for so-called "high technologies", and, in turn, the high technologies develop material science. These relate to each other very closely and contribute to the development of modern industries. In this class, recent progresses in material science are briefly introduced, along with selected current topics on new biomaterials, nuclear engineering materials, new metal materials and natural raw materials. The methods of material analysis and future developments in material science are also discussed.

【Grading】 In order to obtain two credits, students must attend at least ten lectures, and at least five of the submitted reports must be evaluated as " passed " by each lecturer. Each report should be submitted to the lecturer within two weeks after his/her lecture. NOTE: Reports are NOT acceptable from those who do not attend the lecture.

【Course Goals】

【Course Topics】

Theme	Class number of times	Description
	2	Hyperthermophiles and their thermostable biomolecules H. Atomi
	1	Microreactor Technology for Production of High Functional Chemical Materials K.Mae
	2	Advanced Beam Processes and Characterization Technique for Nanotechnology J.Matsuo
	2	Chemical vapor deposition - Synthesis of advanced materials from gas phase M.Kawase
	1	Nanostructure Control in Structural Metallic Materials N.Tsuji
	1	Nano-optical Spectroscopy/Microscopy:Applications in Material Science H.Aoki
	1	Photonic Materials K.Hirao
	1	ISO Standards in Analytical Chemistry J. Kawai
	1	Electrodeposition and Electroless Deposition for Materials Processing K. Murase
	2	Bio-inspired Biomaterials H.Akiyoshi
		Confirmation of study achievement

New Engineering Materials, Adv. (English lecture)

新工業素材特論 (英語科目)

【Code】 10K004 【Course Year】 Master and Doctor Course 【Term】 2nd term 【Class day & Period】 Thu 5th

【Location】 KatsuraA2-308, Yoshida Research Bldg.No4,-Room3(Distance lectures) 【Credits】 2

【Restriction】 No Restriction 【Lecture Form(s)】 Relay Lecture 【Language】 English 【Instructor】

【Course Description】 Outline: New materials are necessary for the advancement of high technologies, but in order to develop these new materials for practical applications, a number of problems must be solved. In this course, the problems encountered in the fields of chemical engineering, electrical / electronic engineering, mechanical engineering and civil engineering are discussed. Discussions are also held on natural resources, and how computers are being used in the development of new materials. Lectures are given in English.

【Grading】 Credit: The evaluation of a student ' s work will be given on a pass / fail basis, based on his / her attendance and reports, not on examinations.(1) Attending the class 10 times or more and submitting at least 5 reports with passing marks is required to receive 2 credits.(2) A report assignment will be given by every lecturer and must be submitted within 2 weeks from the end of the lecture.(3) A student ' s report on any lecture from which he / she is absent will not be accepted.

Polymer Physical Properties

高分子物性

【Code】10D651 【Course Year】Master Course 【Term】1st term 【Class day & Period】Thu 2nd

【Location】A2-307 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】Hirokazu Hasegawa, Takenao Yoshizaki, Tsuyoshi Koga, Mikihiro Takenaka, Hiroyuki Aoki

【Course Description】A concise explanation is given of physical properties of polymer solutions and polymeric solids along with relevant basic theories.

【Grading】Final grades will be evaluated in a comprehensive manner on the basis of attendance, reports, and examinations.

【Course Goals】Fundamental knowledge of physical properties of polymer materials.

【Course Topics】

Theme	Class number of times	Description
Polymer Chain Conformation in Dilute Solutions	3	After a clarification of basic factors which determine the conformations of real polymer chains in dilute solutions, some polymer chain models are introduced to describe the equilibrium conformational behavior of the real chains. Further, behavior of average chain dimensions as a functions of molecular weight is considered based on the chain models.
Thermodynamics and Phase Behavior of Polymer Solutions	3	Various phase transition phenomena in polymer solutions (phase separation, hydration, association, gelation, etc.) are systematically explained from thermodynamic and statistical-mechanical viewpoints. "Phase separation of polymer solutions", "Aqueous polymer solutions", and "Association and gelation of polymers" are discussed in the lectures.
Exercise	1	Exercise in polymer solutions.
Structure and Mechanical Properties of Polymeric Solids	4	Polymeric solids such as rubber and plastics, especially thermodynamics of rubber elasticity, polymer crystallization and crystalline/amorphous higher-order structures, are discussed. Moreover, fundamentals of viscoelastic properties of polymers are introduced to provide the understandings of relaxation phenomena such as glass transition.
Electronic and Optical Properties of Polymeric Solids	3	The electronic and optical properties of polymers is reviewed. The application of polymer materials in the opto-electronics and display devices is also presented.
Exercise	1	Exercise in polymeric solids.

【Course Description】Polymers are indispensable in our modern society, fundamental in industry, and functional for chemistry, medicine, electronics, and many other advanced and emerging technologies. In this class, photo- and electric functions of polymeric materials are discussed on the basis of photochemistry and photophysics. In particular, the importance of designing nanostructures of polymer assembly is highlighted by explaining examples of state-of-the-art real systems.

【Grading】Evaluated with the grade on the final test or the quality of report submitted after the final class.

【Course Goals】

高分子集合体構造

【Code】10D616 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】 【Location】

【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】Hirokazu Hasegawa, Mikihiro Takenaka

【Course Description】Polymers self-assemble or self-organize by intra- and/or intermolecular interaction to form assembled structures of polymer molecules. Such structures are closely related to the properties of the polymeric materials, it is necessary to control the assembled structures of the constituent polymer molecules in order to control the properties of polymeric materials, especially solid materials. In this lecture particularly, formation mechanisms, analytical techniques, and elucidated structures of crystalline polymers, phase-separated structures of polymer mixtures, microphase-separated structures of block and graft copolymers will be discussed.

【Grading】The grading is based on the short tests and report assignments.

【Course Goals】This course aims for the development of the faculty to infer the properties of polymeric materials from their morphology based on the knowledge of structure-property relationships of higher-order structures of crystalline polymers, phase-separated structures of polymer mixtures (blends), microdomain structures of block copolymers, etc.

【Course Topics】

Theme	Class number of times	Description
Self-assembly and Self-organization	1	The differences between self-assembly and self-organization will be discussed by referring the examples in natural phenomena and polymeric systems.
Crystalline Polymers	3	In the lectures, unit cell structures and hierarchical higher-order structures of polymer crystals such as folded-chain lamellar crystals and spherulites, as well as deformation and thermal behavior of polymer crystals will be discussed.
Polymer Blends	5	Miscibility, phase-diagrams, mechanisms and dynamics of phase transitions, relationships between phase-separated structures and properties, methods to control the phase-separated structures will be discussed.
Block and Graft Copolymers	5	The lectures include nano-scale domain formation of block copolymers by microphase-separation, miscibility and phase diagrams, order-disorder and order-order transitions, bicontinuous structures, structure formation in thin films, blends with homopolymers or other block copolymers, multi-component multi-block copolymers, miktoarm star block copolymers, and more.
Evaluation of Degree of Understandings	1	Degree of understandings of the lectures will be evaluated by means of a short test and group discussions.

【Textbook】Not used.

【Course Description】Effects of stiffness and local conformations of polymer chains on polymer solution properties observed in the light scattering and viscosity experiments are considered based on appropriate polymer chain models.

【Grading】Term-end examination.

【Course Goals】

【Course Topics】

Theme	Class number of times	Description
Review	1	Definitions of physical quantities determined from the light scattering and viscosity measurements and the theoretical formulations of those quantities.
Experiments in dilute polymer solutions	4	Principles of the light scattering and viscosity experiments.
Polymer chain models and their statistics	4	Static models for polymer chains: the Gaussian chain, the wormlike chain, and the helical wormlike chain. A comparison of experimental data for the mean-square radius of gyration with relevant theories.
Excluded-volume effects	2	Intra- and intermolecular excluded-volume effects represented by the expansion factors and the second virial coefficient, respectively.
Steady-state transport properties	2	A comparison of experimental data for the intrinsic viscosity and diffusion coefficient with relevant theories.
Dynamic properties	2	Dynamic models for polymer chains: the Rouse-Zimm spring-bead model and the dynamic helical wormlike chain. A comparison of experimental data for the first cumulant of the dynamic structure factor with relevant theories.

New Engineering Materials, Adv. (English lecture)

新工業素材特論 (英語科目)

【Code】 10K004 【Course Year】 Master and Doctor Course 【Term】 2nd term 【Class day & Period】 Thu 5th

【Location】 KatsuraA2-308, Yoshida Research Bldg.No4,-Room3(Distance lectures) 【Credits】 2

【Restriction】 No Restriction 【Lecture Form(s)】 Relay Lecture 【Language】 English 【Instructor】

【Course Description】 Outline: New materials are necessary for the advancement of high technologies, but in order to develop these new materials for practical applications, a number of problems must be solved. In this course, the problems encountered in the fields of chemical engineering, electrical / electronic engineering, mechanical engineering and civil engineering are discussed. Discussions are also held on natural resources, and how computers are being used in the development of new materials. Lectures are given in English.

【Grading】 Credit: The evaluation of a student ' s work will be given on a pass / fail basis, based on his / her attendance and reports, not on examinations.(1) Attending the class 10 times or more and submitting at least 5 reports with passing marks is required to receive 2 credits.(2) A report assignment will be given by every lecturer and must be submitted within 2 weeks from the end of the lecture.(3) A student ' s report on any lecture from which he / she is absent will not be accepted.

Exercise in Practical Scientific English

実践的科学英語演習「留学ノススメ」

【Code】10D040 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】 【Location】

【Credits】1 【Restriction】 【Lecture Form(s)】Seminar 【Language】English

【Instructor】Kim Sunmin, Kenji Wada. etc

【Course Description】 This course is designed to develop high-level communication and presentation skills in English required for top level scientific and industrial career prospects.

【Grading】 Attendance 60%, midterm reports 20%, final report 20%. The final report must be submitted by the deadline date.

【Course Goals】 This course is designed to develop high-level communication and presentation skills in English required for top level scientific and industrial career prospects.

【Course Topics】

Theme	Class number of times	Description
Introduction	2	Course Guidance, etc.
Exercise-1	1	Definition of technical writing 3C in technical writing Weaknesses of Japanese writers Good examples and bad examples
Exercise-2	1	Punctuation Presentation skills 1 -organization
Exercise-3	1	Organizing your thoughts for the title and abstract Presentation skills 2 ?Visual aspects
Exercise-4	1	Presenting the background of your research Presentation skills 3 ?Oral Aspects
Exercise-5	1	Describing how you did your research Presentation skills 4 ?Physical Aspects
Exercise-6	1	Presenting what you observed Presentation Practice
Exercise-7	1	Placing your findings in the field Presentation Practice
Exercise-8	1	Expressing thanks and listing references Presentation practice
Exercise-9	1	Writing your proposal Presentation practice
Exercise-10	1	Presentation practice Reviews & Feedbacks Evaluation
Presentation	2	Current situation of studying abroad, etc.
Wrap-up lecture	1	Achievement Assessment

【Textbook】 No textbook is required.

Professional Scientific Presentation Exercises (English lecture)

科学技術者のためのプレゼンテーション演習 (英語科目)

【Code】 10i041 【Course Year】 Doctor Course 【Term】 1st term 【Class day & Period】 Wed 5th

【Location】 B-Cluster 2F Seminar Room 【Credits】 1

【Restriction】 The number of students might be limited if too many students will get enrolled.

【Lecture Form(s)】 Seminar 【Language】 English 【Instructor】 Juha Lintuluoto

【Course Description】 It is imperative for future engineers to be able to communicate and deliver effectively scientific information to large variety of audiences. This skill enables engineers to share and absorb information to more extended audiences, and facilitates success in selling ideas and products, publishing and team working. The purpose of this course is to teach the basic rules needed for successful professional scientific presentation, both orally and written. The course also prepares students to deliver scientific information presentations to wide audiences. The course is consisted of excessive exercises, of which the student should complete seven (7) tasks. The course holds 3-4 tasks for oral presentation exercises, and 3-4 tasks for professional scientific writing exercises. The exact number of both exercises is adjusted for each student ' s needs. The course is aimed for doctor course (DC) students, both Japanese and Foreign nationals

【Grading】 Reports, class activity, presentation

【Course Goals】 This course is aimed to foster engineering students ' scientific presentation skills. The successfully course completed students will be able to express and present complicated and specific scientific information at more generally understandable level. The students will also be able to pose relevant questions and effectively answer to the wide variety of questions.

【Course Topics】

Theme	Class number of times	Description
		Guidance and Professional presentation rules and etiquette
		Oral presentations & questioning I, Written report I
		Oral presentations & questioning I, Written report I
		Oral presentations & questioning II, Written report II
		Oral presentations & questioning II, Written report II
		Oral presentations & questioning III, Written report III
		Oral presentations & questioning III, Written report III
		Oral presentations & questioning IV, Written report IV
		Oral presentations & questioning IV, Written report IV I
		Course summary and discussion

【Textbook】 Course materials will be provided.

【Textbook(supplemental)】 Will be informed if necessary.

【Prerequisite(s)】 -Fundamental skills about scientific presentation

-Advanced English skills

-Sufficient personal research results

【Web Sites】 The web-site will be opened in the home page of the GL education center.

【Additional Information】 Students are requested to check in advance whether the credit of this course is counted as the unit for graduation requirement at department level. Course starts at April 25th. Students are requested to register on this course before April 20th. The course schedule is irregular. Most classes are biweekly, the detailed schedule is provided at the 1st lecture.

Introduction to Advanced Material Science and Technology (English lecture)

先端マテリアルサイエンス通論 (英語科目)

【Code】 10K001 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Friday,4th-5th

【Location】 KatsuraA2-308,Yoshida Research Bldg.No4,-Room3(Distance lectures) 【Credits】 2

【Restriction】 No Restriction 【Lecture Form(s)】 Relay Lecture 【Language】 English 【Instructor】

【Course Description】 The various technologies used in the field of material science serve as bases for so-called "high technologies", and, in turn, the high technologies develop material science. These relate to each other very closely and contribute to the development of modern industries. In this class, recent progresses in material science are briefly introduced, along with selected current topics on new biomaterials, nuclear engineering materials, new metal materials and natural raw materials. The methods of material analysis and future developments in material science are also discussed.

【Grading】 In order to obtain two credits, students must attend at least ten lectures, and at least five of the submitted reports must be evaluated as " passed " by each lecturer. Each report should be submitted to the lecturer within two weeks after his/her lecture. NOTE: Reports are NOT acceptable from those who do not attend the lecture.

【Course Description】 Outline: New materials are necessary for the advancement of high technologies, but in order to develop these new materials for practical applications, a number of problems must be solved. In this course, the problems encountered in the fields of chemical engineering, electrical / electronic engineering, mechanical engineering and civil engineering are discussed. Discussions are also held on natural resources, and how computers are being used in the development of new materials. Lectures are given in English.

【Grading】 Credit: The evaluation of a student ' s work will be given on a pass / fail basis, based on his / her attendance and reports, not on examinations.(1) Attending the class 10 times or more and submitting at least 5 reports with passing marks is required to receive 2 credits.(2) A report assignment will be given by every lecturer and must be submitted within 2 weeks from the end of the lecture.(3) A student ' s report on any lecture from which he / she is absent will not be accepted.

Exercise in Practical Scientific English

実践的科学英語演習「留学ノススメ」

【Code】10D040 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】 【Location】

【Credits】1 【Restriction】 【Lecture Form(s)】Seminar 【Language】English

【Instructor】Kim Sunmin, Kenji Wada. etc

【Course Description】 This course is designed to develop high-level communication and presentation skills in English required for top level scientific and industrial career prospects.

【Grading】 Attendance 60%, midterm reports 20%, final report 20%. The final report must be submitted by the deadline date.

【Course Goals】 This course is designed to develop high-level communication and presentation skills in English required for top level scientific and industrial career prospects.

【Course Topics】

Theme	Class number of times	Description
Introduction	2	Course Guidance, etc.
Exercise-1	1	Definition of technical writing 3C in technical writing Weaknesses of Japanese writers Good examples and bad examples
Exercise-2	1	Punctuation Presentation skills 1 -organization
Exercise-3	1	Organizing your thoughts for the title and abstract Presentation skills 2 ?Visual aspects
Exercise-4	1	Presenting the background of your research Presentation skills 3 ?Oral Aspects
Exercise-5	1	Describing how you did your research Presentation skills 4 ?Physical Aspects
Exercise-6	1	Presenting what you observed Presentation Practice
Exercise-7	1	Placing your findings in the field Presentation Practice
Exercise-8	1	Expressing thanks and listing references Presentation practice
Exercise-9	1	Writing your proposal Presentation practice
Exercise-10	1	Presentation practice Reviews & Feedbacks Evaluation
Presentation	2	Current situation of studying abroad, etc.
Wrap-up lecture	1	Achievement Assessment

【Textbook】 No textbook is required.

 【Instructor】Miura, Kawase

【Course Description】Kinetic analysis of gas-solid-catalyst reaction and gas-solid reaction
 Operation and design of reactors for gas-solid-catalyst and gas-solid reactions
 Industrial reactors including fixed bed, fluidized bed, moving bed, simulated moving bed, and stirred tank types

【Grading】Based on the result of examination at the end of term and the results of quizzes and reports imposed every week

【Course Goals】

【Course Topics】

Theme	Class number of times	Description
Gas-solid reaction I. Industrial gas-solid reactions	2	As examples of industrial gas-solid reactions, the pyrolysis (carbonization) and gasification of coal as well as reactors for these reactions are explained.
Gas-solid reaction II. Kinetic analysis of gas-solid reaction	3.5	Kinetic measurement and analysis of complicated reactions, particularly coal pyrolysis, are explained from the first-order reaction model to the distributed activation energy model (DAEM).
Gas-solid reaction III. Models of gas-solid reactions	2.5	Concepts and derivation of the reaction models including the grain model and the random-pore model are explained. Application of the models to coal gasification is overviewed.
Gas-solid-catalyst reaction I. Effectiveness factor and selectivity	2	Commercial catalysts and industrial gas-solid-catalyst reactions are overviewed. The generalized effectiveness factor and the selectivity affected by mass transfer are explained.
Gas-solid-catalyst reaction II. Industrial catalytic reactors	2	Industrial catalytic reactors including fixed-bed and fluidized-bed reactors are overviewed. Design and operation of these reactors including thermal stability are explained.
Gas-solid-catalyst reaction III. Deactivation and regeneration of catalyst	3	Deactivation mechanisms of solid catalysts are overviewed. The deactivation and consequent change in selectivity are explained in terms of the decay function and specific activity.

【Textbook】Prints are distributed.

【Textbook(supplemental)】

【Prerequisite(s)】Needs knowledge of chemical reaction engineering including heterogeneous reactions.

Process Data Analysis

プロセスデータ解析学

【Code】 10E053 【Course Year】 Master and Doctor Course 【Term】 2nd term 【Class day & Period】 Wed 3rd

【Location】 A2-305 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 Japanese

【Instructor】 M. Kano and S. Hasebe

【Course Description】 Process data analysis methods for product quality prediction, fault detection and diagnosis, and product yield improvement is explained together with their industrial applications. The basics and methods covered in this lecture are: basics of probability and statistics, correlation analysis, regression analysis, multivariate analysis such as principal component analysis, discriminant analysis, and partial least squares. In addition, soft-sensor design and multivariate statistical process control are explained.

【Grading】 Based on both the examination result and reports.

【Course Goals】 To understand the basics of probability and statistics.

To understand multivariate analysis.

To be able to apply process data analysis to practical problems.

【Course Topics】

Theme	Class number of times	Description
what is process data analysis	1	
preparation for data analysis	1	
point estimation and interval estimation	2-3	
regression analysis	2-3	
multivariate analysis	3-5	
soft-sensor design	1-2	
multivariate statistical process control	1-2

【Code】10E016 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Mon 2nd
 【Location】A2-302 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese
 【Instructor】Shuji Matsusaka

【Course Description】Analyses of particle behavior in gases, Particle handling operations, and measurement methods are lectured. Also, particle charging that affect particle behavior in gases are theoretically explained. Furthermore, the control of the particle charging and its applications are lectured.

【Grading】Examination

【Course Goals】Understand the analysis and modeling of dynamic behavior of particles. Furthermore develop the ability to apply the knowledge for particle handling and processing.

【Course Topics】

Theme	Class number of times	Description
Particle properties and measurements	3	Mathematical description of particle diameter distribution, properties of fine particles, and their measurement methods are explained.
Particle adhesion and dynamical analysis	4	Measurement methods for adhesion forces of particles and dynamical analysis method for particle collision and elastic deformation are lectured. Furthermore, distinct element method is explained.
Behavior of particles in airflow	4	Temporal and spatial distribution of deposition and reentrainment of fine particles in gas-solid flow are explained using physical models and probability theory. In addition, complicated reentrainment phenomena during particle collision are discussed.
Particle charging and control	3	Concept of particle charging and quantitative analysis methods of charging process are explained; also, charge distribution of particles is analyzed. Furthermore, new methods to control particle charge are introduced.
Particle sampling	1	Sampling of fine particles and statistical evaluation methods are explained.

 【Instructor】K.Mae,S.Maki,O.Ohkuma

【Course Description】First, we overview the concept of environmentally benign chemical processing based on the causal relation between energy and environmental issues. Then, we discuss various new technologies for energy production and environmentally harmonized processes from the viewpoint of chemical engineering.

【Grading】Coursework will be graded based on the reports.

【Course Goals】To learn methodology for system-up of environmentally benign process based on energy and exergy. To consider perspective of biomass and hydrogen utilization. To understand several environmental evaluation methods.

【Course Topics】

Theme	Class number of times	Description
Overview of energy and environmental issues	1	Present situation of environmental issue and perspective of sustainable society. Summary of concept for future technology.
Concept of environmentally benign system based on exergy	3	Basic of exergy and calculation of exergy for various conversion process
Biomass conversion	3	Introduction of various conversion processes for biomass and wastes from the view point of kinetics
On-site environmental technology	2	Explanation of concept of on-site environmental technology with illustrating several new technologies such as CO removal, hydrogen production, fuel cell.
Environmental evaluation method (1)	2	Introduction of various environmental evaluation methods Calculation of LCA analysis
Environmental evaluation method (2)	2	Calculation of E-factor and environmental efficiency for several chemical processes
Estimation of environmentally benign system	1	Discussion for direction of future environmentally benign system
Confirmation of study achievement	1	

【Textbook】The textbook is not required. Materials will be supplied by instructors.

【Textbook(supplemental)】Physical chemistry, Thermodynamics

【Prerequisite(s)】Basic knowledge for chemical engineering thermodynamics is required.

Chemical Engineering for Advanced Materials

先端物質化学工学

【Code】 10i027 【Course Year】 Master Course 【Term】 1st+2nd term 【Class day & Period】 Oct. 14, 21, 28, Nov. 4 10:30-18:00

【Location】 A2-305 【Credits】 2 【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 English

【Instructor】 Prof. Wiwut Tanthapanichakoon, PhD, Department of Chemical Engineering, Graduate School of Science & Engineering, Tokyo Institute of Technology

【Course Description】 The main objective of this 2-credit graduate course is to explain how (selected) advanced materials are designed, synthesized and/or processed (manufactured) in the research labs and certain high-tech industries, whilst pointing out the key roles played by Chemical Engineering in the relevant stages of developments.

【Grading】 Class attendance: 20 points Individual Presentation of Assigned Projects & Presentation Files: 40 points Full Individual Project Report: 40 points Total: 100 points There will be no examination. Individual topic assignment as well as the Format of oral presentation and report will be given on the first day of lectures.

【Course Goals】

【Course Topics】

Theme	Class number of times	Description
1. Chemistry of advanced materials		
2. Nanotechnology, nanomaterials, and nanoparticles		
3. The nanostructure of aerogels: Preparation, investigations, modifications, and utilizations		
4. Dispersion of fine silica particles using alkoxy silane and industrialization		
5. Carbon nanotubes in multifunctional polymer nanocomposites		
6. Development of polymer-clay nanocomposites by dispersion of particles into polymer materials		
7. Ceramic filter for trapping diesel particles		
8. Zeolite membrane		
9. Development of new cosmetics based on nanoparticles		
10. Development of functional skincare cosmetics using biodegradable PLGA nanospheres

Introduction to Advanced Material Science and Technology (English lecture)

先端マテリアルサイエンス通論 (英語科目)

【Code】 10K001 【Course Year】 Master and Doctor Course 【Term】 1st term 【Class day & Period】 Friday,4th-5th

【Location】 KatsuraA2-308,Yoshida Research Bldg.No4,-Room3(Distance lectures) 【Credits】 2

【Restriction】 No Restriction 【Lecture Form(s)】 Relay Lecture 【Language】 English 【Instructor】

【Course Description】 The various technologies used in the field of material science serve as bases for so-called "high technologies", and, in turn, the high technologies develop material science. These relate to each other very closely and contribute to the development of modern industries. In this class, recent progresses in material science are briefly introduced, along with selected current topics on new biomaterials, nuclear engineering materials, new metal materials and natural raw materials. The methods of material analysis and future developments in material science are also discussed.

【Grading】 In order to obtain two credits, students must attend at least ten lectures, and at least five of the submitted reports must be evaluated as " passed " by each lecturer. Each report should be submitted to the lecturer within two weeks after his/her lecture. NOTE: Reports are NOT acceptable from those who do not attend the lecture.

【Course Goals】

【Course Topics】

Theme	Class number of times	Description
	2	Hyperthermophiles and their thermostable biomolecules H. Atomi
	1	Microreactor Technology for Production of High Functional Chemical Materials K.Mae
	2	Advanced Beam Processes and Characterization Technique for Nanotechnology J.Matsuo
	2	Chemical vapor deposition - Synthesis of advanced materials from gas phase M.Kawase
	1	Nanostructure Control in Structural Metallic Materials N.Tsuji
	1	Nano-optical Spectroscopy/Microscopy:Applications in Material Science H.Aoki
	1	Photonic Materials K.Hirao
	1	ISO Standards in Analytical Chemistry J. Kawai
	1	Electrodeposition and Electroless Deposition for Materials Processing K. Murase
	2	Bio-inspired Biomaterials H.Akiyoshi

New Engineering Materials, Adv. (English lecture)

新工業素材特論 (英語科目)

【Code】 10K004 【Course Year】 Master and Doctor Course 【Term】 2nd term 【Class day & Period】 Thu 5th

【Location】 KatsuraA2-308, Yoshida Research Bldg.No4,-Room3(Distance lectures) 【Credits】 2

【Restriction】 No Restriction 【Lecture Form(s)】 Relay Lecture 【Language】 English 【Instructor】

【Course Description】 Outline: New materials are necessary for the advancement of high technologies, but in order to develop these new materials for practical applications, a number of problems must be solved. In this course, the problems encountered in the fields of chemical engineering, electrical / electronic engineering, mechanical engineering and civil engineering are discussed. Discussions are also held on natural resources, and how computers are being used in the development of new materials. Lectures are given in English.

【Grading】 Credit: The evaluation of a student ' s work will be given on a pass / fail basis, based on his / her attendance and reports, not on examinations.(1) Attending the class 10 times or more and submitting at least 5 reports with passing marks is required to receive 2 credits.(2) A report assignment will be given by every lecturer and must be submitted within 2 weeks from the end of the lecture.(3) A student ' s report on any lecture from which he / she is absent will not be accepted.

Exercise in Practical Scientific English

実践的科学英語演習「留学ノススメ」

【Code】10D040 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】 【Location】

【Credits】1 【Restriction】 【Lecture Form(s)】Seminar 【Language】English

【Instructor】Kim Sunmin, Kenji Wada. etc

【Course Description】 This course is designed to develop high-level communication and presentation skills in English required for top level scientific and industrial career prospects.

【Grading】 Attendance 60%, midterm reports 20%, final report 20%. The final report must be submitted by the deadline date.

【Course Goals】 This course is designed to develop high-level communication and presentation skills in English required for top level scientific and industrial career prospects.

【Course Topics】

Theme	Class number of times	Description
Introduction	2	Course Guidance, etc.
Exercise-1	1	Definition of technical writing 3C in technical writing Weaknesses of Japanese writers Good examples and bad examples
Exercise-2	1	Punctuation Presentation skills 1 -organization
Exercise-3	1	Organizing your thoughts for the title and abstract Presentation skills 2 ?Visual aspects
Exercise-4	1	Presenting the background of your research Presentation skills 3 ?Oral Aspects
Exercise-5	1	Describing how you did your research Presentation skills 4 ?Physical Aspects
Exercise-6	1	Presenting what you observed Presentation Practice
Exercise-7	1	Placing your findings in the field Presentation Practice
Exercise-8	1	Expressing thanks and listing references Presentation practice
Exercise-9	1	Writing your proposal Presentation practice
Exercise-10	1	Presentation practice Reviews & Feedbacks Evaluation
Presentation	2	Current situation of studying abroad, etc.
Wrap-up lecture	1	Achievement Assessment

【Textbook】 No textbook is required.

【Textbook(supplemental)】

【Prerequisite(s)】

【Web Sites】 <http://www.ehcc.kyoto-u.ac.jp/alc/> (needs passwords).

【Additional Information】 For details, contact Dr. Wada (wadaken@scl.kyoto-u.ac.jp).
