10F251

Exercise on Project Planning
自主企画プロジェクト

【Code】10F251 【Course Year】Master 1st 【Term】1st+2nd term

【Class day & Period】1st term: Thu 3rd, 2nd term: Wed 5th 【Location】C1-192 【Credits】2

【Restriction】No Restriction 【Lecture Form(s)】Exercise 【Language】Japanese 【Instructor】Related instructors

【Course Description】The purpose of this seminar is to bring out the self-initiative, the planning ability, the creativity of students. From project and to practice, the students set up the goals of projects, go ahead with the projects by themselves, and finally make the presentations of project results. Specifically, about the internship activities in enterprises, the training activities in enterprises or universities at home and abroad, the planning and operation of collaborative projects with citizen, the student makes the perfect plannings including the purposes, the ways, the results and so on. For a final, the students do practice, they write the reports and make the presentations about the project results.

【Grading】Planning, implementation of project and reports are comprehensively evaluated.

【Course Goals】Goals are cultivating ability for self-initiative, planning and creativity.

10U055

Seminar on Infrastructure Engineering A

社会基盤工学セミナー A

【Code】10U055 【Course Year】Master Course 【Term】1st+2nd term

【Class day & Period】1st term: Wed&Fri 5th, 2nd term: Mon&Tue 5th 【Location】 【Credits】4 【Restriction】

【Lecture Form(s)】Seminar 【Language】Japanese 【Instructor】

【Course Description】This lecture focuses on the movement and content of the most advanced research at home and abroad on Infrastructure Engineering. The students are individually instructed about the planning of study schedule , the way of collecting datas, the way of doing the research and summarizing the results of research.

【Grading】Points are allocated for research activities such as a presentation at laboratory seminars, domestic conferences, international conferences, research paper presentation etc. Students are required to obtain the points in total which are more than predefined points.

Continuum Mechanics

連続体力学

【Code】10F003 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Mon 2nd

【Location】C1-192 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】Kunitomo Sugiura, Tomomi Yagi

【Course Description】Continuum mechanics is a unified basis for solid mechanics and fluid mechanics. The aims of this course are to introduce the continuum mechanics from their basics to the some forms of constitutive law and also to provide students with mathematical way of understanding the continuum mechanics. This course contains the fundamentals of vector and tensor calculus, the basic equations of continuum mechanics, the tensor expressions of elastic problems and further applications.

【Grading】Assessment will be based on exam, report and attendance.

【Course Goals】Fundamental theorems on structural mechanics and design will be learned, and ability to judge the proprieties of each computational structural analysis will be acquired.

【Course Topics】

Theme	Class number of times	Description
Introductions	1	
Matrices and tensors	1	
differential and integral calculus of tensors	1	
Kinematics	1	- Material derivative
Deformation and strain	2	- Strain tensors - Compatibility conditions
Stress and equilibrium equation	1	
Conservation law and governing equation	1	
Constitutive equation of idealized material	1	
Elastic-plastic behavior and constitutive equation of construction materials	1	
Boundary value problem	1	
Variational principle	1	
Various kinds of numerical analyses	2	
Confirmation of the attainment level of learning	1	

【Textbook】

【Textbook(supplemental)】

【Prerequisite(s)】Basic knowledge for structural mechanics, soil mechanics and fluid mechanics are required.

【Additional Information】

10F067

Structural Stability
構造安定論

【Code】10F067 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Mon 2nd

【Location】C1-171 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English

【Instructor】Hiromichi SHIRATO, Kunitomo SUGIURA

【Course Description】Fundamental concept of static and dynamic stability of large-scale structures such as bridges is to be introduced in addition to the way to keep/improve their safety and to evaluate their performance. Basic concept of structural stability and its application and technical subjects to improve safety will be lectured systematically. Furthermore, the practical solutions to the subjects are to be introduced to assure the safety of structures.

【Grading】Grading will be evaluated by written examination, reports and attendance.

【Course Goals】The class aims to cultivate the understanding of static and dynamic stability problems for structural system and make understand the methodology to clarify the limit state. To get knowledge on countermeasures to assure the stability which is applicable to practical design and manufacturing will be also required.

【Course Topics】

Theme	Class number of times	Description
Elastic Stability under Static Loading	7	Stability of Structures and Failures Basis of Structural Stability Elastic Buckling of Columns Elastic Buckling of Beams & Frames Elastic Buckling of Plates Elasto-plastic Buckling Buckling Analysis
Basic theory of dynamic stability and its application	7	The stability around the equilibrium points based on the state equation of motion in which the nonlinearity of external, damping and restring forces are taken into account. Wind-induced vibration of a square prism (Galloping) and 1dof system with nonlinear spring will be introduced as practical examples. Chaotic motion of a pendulum subjected to periodic external force is also explained as an introduction of chaos theory.
Achievement Check	1	Summary and Achievement Check.

【Textbook】Not specified.

【Textbook(supplemental)】Introduced in class if necessary.

【Prerequisite(s)】It is desired for participants to master structural mechanics, continuum mechanics, mathematical analysis as well as vibration theory.

【Web Sites】none

【Additional Information】none

10F068

Material and Structural System & Management

材料・構造マネジメント論

【Code】10F068 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Wed 2nd 【Location】C1-173 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Relay Lecture 【Language】English 【Instructor】Toyoaki Miyagawa, Hirotaka Kawano, Atsushi Hattori, Takashi Yamamoto

【Course Description】With regard to the maintenance of concrete structures, the deterioration prediction procedures in material and structural properties are discussed based on durability and deterioration processes of concrete structures. Repair materials and methods are also introduced. Note: strengthening materials and methods are discussed in Concrete Structural Engineering, provided in the second semester. In the later half of this lecture, structures are focused as groups rather than an individual structure to understand the difference between asset management and maintenance. By taking into consideration the economic aspect and human resources aspect as well as the physical aspect, the flow of the asset management for structures' groups with view points of the life cycle cost and the budget is provided.

【Grading】Reports ,presentations and other activities are inclusively considered.

【Course Goals】To understand the maintenance for a single structure and the asset management for structure's group.

【Course Topics】

Theme	Class number of times	Description
1. Outline of maintenance for concrete structures	1	
2. Deterioration mechanisms of concrete structures and deterioration prediction	4	
3. Repair materials and methods for concrete structures	1	
4. Maintenance and asset management	2	
5. Maintenance for structures' group	2	
6. Management for structures' group	2	
7. Presentations and discussions	3	

【Textbook】Not specified. Some materials may be provided.

【Textbook(supplemental)】Not specified.

【Prerequisite(s)】Basic knowledge on Construction Materials and Concrete Engineering.

【Web Sites】

【Additional Information】Positive presence in the lecture is expected by joining discussions for example.

【Location】C1-172 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Relay Lecture

【Language】English 【Instructor】Related Faculty members

【Course Description】Structural engineering problems related to planning, design, construction and maintenance of the infrastructures are discussed. Topics concerning structural engineering and management are widelly taken up including latest advanced knowledge and technology, future view and/or international topics. Special lectures by extramural lecturers are carried out if necessary.

【Grading】Coursework will be graded based on the reports.

【Course Goals】To grasp problems related to structural engineering and their specific solutions.
To understand applicability of advanced technologies and development prospects.

【Course Topics】

Theme	Class number of times	Description
Structural Materials, Structural Mechanics	4	Steel materials, Concrete materials, mechanical behavior of structures, Problems related to design, construction and maintenance
Applied Mechanics	1	Numerical analysis for structure performance evaluation
Earthquake and Wind Resistance of Structures	7	Infrastructure and natural disaster, Trends of disaster prevention technology, Problems related to Earthquake and wind resistant design
Maintenance of structure	3	International technology, Scenario design, International technological education and collaboration

【Textbook】The textbook is not required. Materials will be supplied by instructors.

【Textbook(supplemental)】Supplemental text books will be introduced by instructors.

【Prerequisite(s)】Structural Mechanics, Wind Resistant Design, Construction Materials, Dynamics of Structures, etc.

【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English

【Instructor】Tomoaki Utsunomiya, Yoshikazu Takahashi, Yoshiaki Kubota

【Course Description】This course provides the knowledge of the structural planning and design for civil infrastructures. Fundamentals of the reliability of structures based on the probability and statistics are given. Emphasis is placed on the reliability index and the calibration of partial safety factors in the LRFD design format. Furthermore, the structural morphology, aesthetics and case studies of structural design that satisfies “ utilitas, firmitas and venustas ” are given. Then we discuss what the holistic structural design should be.

【Grading】Assessed by term-end examination, reports and quizes

【Course Goals】To understand the structural planning and design for civil infrastructures.
To understand the reliability-based design of structures.
To deepen the understanding of aesthetics of structures.

【Course Topics】

Theme	Class number of times	Description
Structural Planning	2	Structural Planning of civil infrastructures is introduced. The concept, significance of planning, characteristics of civil infrastructures are discussed. Practical planning process of a bridge is explained.
Modern Excellent Designs	1	The excellent examples of modern structural design are introduced from the viewpoint of the structural system and the urban design. Then the importance of integrated design of urban infrastructure as a place of human activities and how the design should be are lectured.
Structure and Form	2	The bridge types, for example, girder, truss, and arch etc. that have been regarded individually, are lectured as an integrated holistic concept from the viewpoint of the acting forces to understand the structural continuity, symmetry and the systems. Furthermore, the methods of the operation of structural form are given.
Structural Design and Performance-based Design	3	Design theory of civil infrastructures is introduced. The allowable stress design method and the limit state design method are explained. The basic of earthquake resistant design is discussed based on the dynamic response of structures. Performance-based design is also introduced.
Random Variables and Functions of Random Variables	1	Fundamentals of random variables, functions of random variables, probability of failure and reliability index in their simplest forms are lectured.
Structural Safety Analysis	3	Limit states, probability of failure, FOSM reliability index, Hasofer-Lind reliability index, Monte Carlo method are lectured.
Design Codes	2	Code format as Load and Resistance Factors Design (LRFD) method, calibration of partial safety factors based on the reliability method are given.
Assessment of the Level of Attainment	1	Assess the level of attainment.

【Textbook】Reliability of Structures, A. S. Nowak & K. R. Collins, McGraw-Hill, 2000 (for T. Utsunomiya)

【Textbook(supplemental)】U.Baus, M.Schleich, "Footbridges", Birkhauser, 2008（Japanese ver.: "Footbridges"(translated by Kubota, et al.), 鹿島出版会 , 2011）
久保田善明 , 『橋のディテール図鑑』, 鹿島出版会 , 2010
Other books will be given in the lectures as necessary.

【Prerequisite(s)】Fundamental knowledge on Probability and Statistics, and Structural Mechanics

【Web Sites】

【Additional Information】Structural planning and design will be given by Y. Takahashi, Excellent designs and structure & forms by Y. Kubota, and Structural reliability analysis by T. Utsunomiya.

10F010

Bridge Engineering
橋梁工学

【Code】10F010 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Mon 3rd 【Location】C1-172 【Credits】2
【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English
【Instructor】Hiromichi Shirato, Kunitomo Sugiura, Tomoaki Utsunomiya, Tomomi Yagi
【Course Description】The subject matter of bridge engineering can be divided into two main parts, which are steel structure and wind loading/wind resistant structure. The aim of this course is to provide details of mechanical behaviors, maintenance and design of bridge structures. The former part of this course contains the static instability of steel structures and the problems of corrosion、fatigue、brittleness、weldability on steel bridges. In the latter part, the basics of wind engineering, bridge aerodynamics and wind-resistant design including current problems to be solved are provided are provided.
【Grading】Assessment will be based on exam, reports and attendance.
【Course Goals】
Also, the basic knowledge for wind engineering and aerodynamic instabilities, which are necessary for the wind resistant design of bridges, will be acquired.
【Course Topics】

Theme	Class number of times	Description
Introduction	1	- Fundamental knowledge on steel structures - Types of steel structures - Future trend of steel structures
Material behavior, Initial imperfections and Damages	1	- Construction of steel structures - Residual stresses and initial deformations - Damages
Stress-strain relationship, Joints	1	- Yield surfaces - Bauschinger effect - Hardening effect - Welded joint - Bolted joint
Fatigue fracture, fatigue life and fatigue design	1	- S-N design curve - Fatigue crack growth, stress intensity factor - Miner's rule on damage accumulation - Repair of fatigue damage
Structural stability and design for buckling	1	- Structural instability and accident - Theory of Stability - Compressive members, etc.
Corrosion and anti-corrosion of steel structures	1	- Mechanism of corrosion - Micro- and Macro- cells - Anti-corrsion - Life-cycle costs
Wind resistant design of structures	3	- Natural winds due to Typhoon, Tornado and so on - Evaluation and estimation of strong winds - Wind resistant design methods - Various kinds of design codes
Aerodynamic instabilities of structures	3	- Introduction of aerodynamic instabilities (ex. vortex-induced vibration, galloping, flutter, buffeting, cable vibrations) - Mechanisms of aerodynamic instabilities - Evaluation methods and Countermeasures
Wind-induced disaster	1	- Accidents on structures due to strong winds - Disaster prevention
Topics	1	Introduction of current topics on bridge engineering by a visiting lecturer
Confirmation of the attainment level of learning	1	Confirm the attainment level of learning

Structural Dynamics

構造ダイナミクス

【Code】10F227 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Tue 1st 【Location】C1-172 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese 【Instructor】Igarashi, Furukawa

【Course Description】This course deals with dynamics of structural systems and related topics, to provide the theoretical basis to deal with the problems of vibration, safety under dynamic loads and health monitoring associated with infrastructures. The students will study the dynamic response, properties of natural modes and methods of eigenvalue analysis for multi-DOF systems. The topics on the numerical time integration schemes, probabilistic evaluation of structural response to random excitation, and dynamic response control techniques for structures are also studied.

【Grading】Based on the results of a final examination, plus homework assignments

【Course Goals】(1) To aquire the knowledge on theories and principles of analysis of MDOF systems (2) Systematic understanding of frequency-domain structural response analysis (3) Concept of analysis of numerical time integration schemes (4) Understanding of fundamentals of the random vibration theory

【Course Topics】

Theme	Class number of times	Description
Introduction	1	Fudamental concepts, harmonic motion
Dynamics of Multi-Degree-Of-Freedom Systems	2	Formulation of Eq. of Motion / Lagrange's method / Normal Modes / Modal Analysis / Modeling of System Damping
Frequency-Domain Analysis of System Response	1	Frequency Response Funcs. / Fourier Transform
Numerical Time Integration	2	Formulation / Stability and Accuracy Analysis of Integration
Random Vibration	6	Overview / Probability Theory / Sequence of i.i.d. Random Variables / Concept of Random Processes / Correlation Funcs. / White Noise / Stochastic Differential Eq. / Lyapunov Eq. / Response to White Noise Excitation / Covariance Matrix Approach / Correlation Funcs. of Random Response / Spectral Representation of Random Processes / Spectral Representation of Structural Response / Application
Structural Response Control	2	Active Control / Semi-Active Control
Achievement Evaluation	1	Students' achievements in understanding of the course material are evaluated.

【Textbook】Not used; Class hand-outs are distributed when necessary.

【Textbook(supplemental)】

【Prerequisite(s)】Mechanical vibration (undergraduate level), Complex calculus (integration of analytic functions, Fourier transform, etc.), Probability theory, Linear algebra

Seismic Engineering Exercise

サイスミックシミュレーション

【Code】10F263 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Mon 4th 【Location】C1-192 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture and Exercise 【Language】Japanese 【Instructor】Sawada, Takahashi

【Course Description】This course provides the knowledge of simulation methods for earthquake engineering. Small groups of students are exercised in the prediction of ground motion generated by a specified seismic fault and the response analysis of structure selected by themselves considering soil-structure interaction.

【Grading】Based on the performance during the course (including homework) and the results of presentation and reports.

【Course Goals】At the end of this course, students will be required to have a good understanding of: - Prediction of ground motion generated by a specified seismic fault - Dynamic response analysis of structures and foundation (linear/nonlinear)

【Course Topics】

Theme	Class number of times	Description
Frequency domain analysis	1	Basics of Fourier transformation is introduced.
Modeling of structure - soil system and time domain analysis	1	Equation of motion of SR model is introduced and the integration method of the equation in time domain is explained.
Exercise of linear seismic response analysis	2	Small groups of students are exercised in elastic modeling of structures and linear response analysis in time domain and frequency domain.
Prediction of ground motion by empirical Green's function method	3	Empirical Green's function method is introduced to predict large earthquakes based on observed small earthquakes.
Seismic analysis method of soil	2	Seismic analysis method of layered half-space based on equivalent linearization method is introduced.
Nonlinear seismic analysis method of structures	2	Nonlinear modeling of structures and the integration and iterative methods of the nonlinear equation of motion in time domain are introduced.
Exercise of nonlinear seismic response analysis	3	Small groups of students are exercised in the prediction of ground motion generated by a specified seismic fault and the nonlinear response analysis of structures and foundation.

【Instructor】Hirotaka Kawano, Atsushi HATTORI

【Course Description】Lecture on outline of impact of construntion materials to environment and influence on materials and structures from environment. Discuss how to use materials sustainably. Keywords are concrete, steel, composite materials, CO2, durability, recycle and reuse, life-cycle assessment.

【Grading】Attendance(%), Report(%),Presentation(%)

【Course Goals】To understand the limit of resources and effect of material use to environment. and to understand the basic theory to make environmental-friendly infrastructures from the view point of materials use.

【Course Topics】

Theme	Class number of times	Description
Guidance	1	Object of the Course, Grading and Goals
product of materials and impact to environment	1	Product of cement, steel, concrete CO2 product and its influence
recycle and reuse of materials	3	Recycle and reuse of steel, metals, concrete, asphalt, plastics Technology development of construction materials
deterioration of concrete structures	1	Mechanism of deterioration of concrete structures: carbonation, salt attack, alkali-aggregate reaction Maintenance and retrofit methods
deterioration of steel structures	1	Mechanism of deterioration of steel structures: corrosion, fatigue Maintenance and retrofit methods
deterioration of composite structures	1	Mechanism of deterioration of composite structures: Maintenance and retrofit methods
life-cycle assessment of structures	1	Life-cycle assessment of structures considering initial cost as well as maintenance cost
topics and discussion	2	Recent topics on construction materials and discussion
presentation by students and discussion	4	Presentation by students on the individual topics Discussion on the topics

【Instructor】Tomoyasu Sugiyama, Yoshinobu Oshima

【Course Description】The issues concerning the safety and reliability of infrastructures such as tunnels and bridges and also the issues on natural disaster are reviewed in the lecture.

【Grading】This lecture involves reports (70%) and attendance(30%)

【Course Goals】To understand the basic technologies to enhance the safety of structures and also the fundamentals on disaster prevention.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	Introduction on the safety of infrastructures
Reliability engineering and safety	3	Evaluation of safety based on reliability analysis and risk analysis
Maintenance of railway structures	1	Planning, investigation, evaluation and repair in maintenance for mainly railway structures is generally explained
Disaster prevention in railway structures	1	To sustain the users' safety in railway system, it is necessary to maintain the structures properly but also to consider the prevention against disaster. Thus herein disasters in railway structures and its counteractions are explained
Regulation and counteraction against rainfall	1	The need for regulation in railway operation at rainfall is explained
Risk assessment for rainfall disaster	1	Risk assessment for rainfall disaster is described and also some practical cases are introduced
Technical tour	2	Prevention technologies against natural disaster
Disaster prevention for structures in soil	1	Counteractions for railway structures against slope sliding are explained
Counteraction for strong wind	1	Practical actions against strong wind in railway operation is explained
Earthquake and its early detection	1	Warning system for earthquake and the algorithm of earthquake early detection, which is one of the regulations for Super expressway in earthquake, is explained
Report	1	Report

【Instructor】Yasuto TACHIKAWA
【Course Description】Physical mechanisms of the hydrologic cycle are described from the engineering viewpoint. The rainfall-runoff modeling and its prediction method are emphasized. Physical hydrological processes explored are surface flow, saturated-unsaturated subsurface flow, groundwater flow, streamflow routing, and evapotranspiration. Physical mechanism of each hydrological process and its numerical modeling method are explained. The basic equations and numerical simulation methods are provided. Then, distributed hydrological modeling which incorporate various hydrological processes and a lumping method of distributed hydrological model are explained.
【Grading】Examination and report
【Course Goals】The goals of the class are to understand the physical mechanism of hydrological processes, their basic equations, and numerical simulation methods.
【Course Topics】

Theme	Class number of times	Description
Introduction	1	The hydrologic cycle and the hydrological processes are explained.
Surfaceflow	2	The physical process of the surface flow and its numerical modeling method are described. The basic equations of the surface flow and the numerical simulation methods are explained.
Saturated-unsaturated subsurface flow	2	The physical process of the saturated-unsaturated subsurface flow and its numerical modeling method are described. The basic equations of the saturated-unsaturated subsurface flow and the numerical simulation methods are explained.
Groundwater flow	2	The physical process of the groundwater flow and its numerical modeling method are described. The basic equations of the groundwater flow and the numerical simulation methods are explained.
Streamflow routing	2	The physical process of the streamflow routing and its numerical modeling method are described. The basic equations of the streamflow routing and the numerical simulation methods are explained.
Evapotranspiration	2	The physical process of the evapotranspiration and its numerical modeling method are described. The basic equations of the evapotranspiration and the numerical simulation methods are explained.
Channel network and watershed modeling	1	Numerical representations of channel networks and catchments are explained.
Distributed hydrological model	1	A physically-based distributed hydrological model is described, which is constructed with numerical representations of channel networks and catchments.
Lumping of flow, parameter and watershed model	1	Lumping methods of a distributed hydrological model are described, which include lumping of flow, parameter and watershed model.
verification of study achievement	1	Verification of study achievement

【Textbook】Handouts are distributed at each class.
【Textbook(supplemental)】
【Prerequisite(s)】Basic knowledge of hydraulics and hydrology

【Additional Information】This course is open every other year. In 2013, not open.

10F019

River Engineering and River Basin Management

河川マネジメント工学

【Code】10F019 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Wed 1st

【Location】C1-173 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】Hosoda, Kishida

【Course Description】It is important to consider about rivers comprehensively in view of the various aspects based on natural science and engineering. The fundamental knowledge to consider rivers and make the plans of river basins is explained with the following contents: various view points to consider rivers, long term environmental changes of rivers and its main factors, river flows and river channel processes, ecological system of rivers and lakes, flood disasters, integrated river basin planning(flood defense, environmental improvement planning, sediment transport system), functions of dam reservoir and managementto learn the fundamental knowledge and grounding to consider rivers from the various points of view such as natural science, engineering and social science.

【Grading】Reports, Attendance

【Course Goals】The fundamental knowledge which can consider a river with various senses from a viewpoint of natural science, an engineering viewpoint and a social-scientific viewpoint, is mastered.

【Course Topics】

Theme	Class number of times	Description
Various view points on rivers and river basins	1	Various viewpoints and river basins, Various rivers on the earth, Formation processes of river basins, long term environmental changes of rivers and its main factors
Ecological system in rivers	2	Fundamental knowledge on river eco-system
Application of computational methods to environmental problems	2	Numerical analysis of the environmental change in Lake Biwa, Flood flows and river channel processes
Recent flood disasters & Integrated river basin planning	2	Characteristics of recent flood disasters, River law, Fundamental river management plan, River improvement plan, Procedures of flood defense planning, Flood invasion analysis and hazard map
Groundwater and its related field	2	Simulation technology of groundwater, Geo environmental issues, Reservoir Engineering, Contaminant Transport Processes
Sustainable development of dam	2	Needs of dam development and history of dam construction. Maintenace of Dam reservoir
Economic evaluation of environmental improvement projects	1	Evaluation of people's consciousness for river improvement works by means of CVM, Conjoint Analysis, etc.
Dam structure and maintenance	2	Dam structure, foundation, grouting. Desighn of Arch Dam and Graviety Dam.
Achievement Confirmation	1	Comprehension check of course contents (Report)

【Textbook】Printed materials regarding the contents of this class are distributed in class.

【Textbook(supplemental)】

【Prerequisite(s)】Fundamental knowledge of Hydraulics, Hydrology and Ecology

【Web Sites】

【Additional Information】Students can contact with professors by visiting their rooms and sending e-mail.

10A040

Sediment Hydraulics

流砂水理学

【Code】10A040 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Mon 2nd 【Location】C1-171 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese 【Instructor】Hitoshi Gotoh and Eiji Harada

【Course Description】Natural flows in river and coast are movable bed phenomena with the interaction of flow and sediment. At a river and a coast, a current and a wave activate a sediment transport and bring the topographical change of a bed such as sedimentation or erosion. This lecture provides an outline about the basics of sediment (or movable bed) hydraulics, and detail of the computational mechanics of sediment transport, which has been developed on the basis of dynamics of flow and sediment by introducing a multiphase flow model and a granular material model. Furthermore, about sediment and water-environment relationship, some of frontier technologies, such as an artificial flood, removal works of dam sedimentation, coastal protection works, and sand upwelling work for covering contaminated sludge on flow bottom etc., are mentioned.

【Grading】Grading is based on student ' s activities in lectures and written examination.

【Course Goals】Students understand the basics of sediment hydraulics and outline of advanced models for computational sediment hydraulics, such as multiphase flow model and granular material model. Students understand the present conditions of sediment control works.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	The purpose and constitution of the lecture, the method of the scholastic evaluation are explained.
Basics of sediment hydraulics	5	Physical characteristic of a movable bed and a non-equilibrium sediment transport process and its description are explained. Furthermore, the prediction technique of topographical change due to current and waves is outlined.
Computational mechanics of sediment transport: The state of the art	8	Essential parts of numerical models of the movable bed phenomena, which has been developed by introducing dynamic models such as a granular material model to describe a collision of sediment particles and a multiphase flow model to describe a fluid-sediment interaction, are described. In comparison with the conventional movable bed computation, the points on which has been improved to enhance the applicability of the models are concretely mentioned. Some frontier studies of sediment transport mechanics are also introduced.
Achievement cofirmation	1	Comprehension check of course contents.

【Textbook】Hitoshi Gotoh: Computational Mechanics of Sediment Transport, Morikita Shuppan Co., Ltd., p.223, 2004 (in Japanese).

【Textbook(supplemental)】Non

【Prerequisite(s)】Undergraduate-level Hydraulics or Hydrodynamics is required. Because a commentary easy as possible is kept in mind by lectures, students without these prerequisite are welcomed.

10F464

Hydrologic Design and Management
水工計画学

【Code】10F464 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Fri 2nd 【Location】C1-191 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese 【Instructor】Yasuto TACHIKAWA

【Course Description】Methods for hydrologic design and real-time rainfall-runoff predictions are described. The frequency analysis of hydrologic extreme values and the time series analysis of hydrologic variables are described, and then the methods to set the external force for the hydrologic design are explained. Next, a physically based hydrologic model which includes the process of human activities for the hydrologic cycle is described. In addition, the predictive uncertainty for the hydrologic simulation is introduced. A flood control planning and water resources management with the use of innovative hydrologic simulation tools is described. Then, the climate change and the relation to the hydrologic design are discussed. A real-time rainfall runoff prediction method with the use of Kalman filter theory is described.

【Grading】Examination and report

【Course Goals】The class aims to understand the statistical analysis and time serried analysis of hydrologic variables to set the external force of hydrologic designs, applications of hydrologic simulations for hydrologic designs, and real-time rainfall and runoff prediction methods for water resources management.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	A flood control planning and water resources planning are introduced.
Frequency analysis and hydrologic design	3	The frequency analysis of hydrologic extreme values is described. The methods to set the external force for the hydrologic design are explained.
Time series analysis and hydrologic design	3	The time series analysis of hydrologic variables is described. The methods to develop time series models, time serried data generation methods, spatiotemporal variation of hydrologic variables and a random field model, disaggregation methods are explained.
Hydrologic modeling and predictive uncertainty	1	Hydrologic models which include the process of human activities for the hydrologic cycle is described. Then, hydrologic predictive uncertainty is explained, which is inevitable coming from model structure uncertainty, parameter identification uncertainty and model input uncertainty. Especially, the relation between spatiotemporal scales of hydrologic modeling and model parameter values is described.
Hydrologic modeling system	1	A hydrologic modeling system which helps to develop complicated hydrologic simulation models and its importance for a flood control planning is also described.
Climate change and hydrologic design	1	Data analysis of the latest GCM simulation is presented and the possible changes of hydrologic extremes and hydrologic design are discussed.
Real-time rainfall runoff prediction	4	A real-time rainfall runoff prediction method with the use of Kalman filter theory is described.
Verification of study achievement	1	Verification of study achievement is conducted.

【Textbook】

【Textbook(supplemental)】

【Prerequisite(s)】Basic knowledge of hydrology, probability and statistics are required.

10F245

Open Channel Hydraulics

開水路の水理学

【Code】10F245 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Fri 1st
【Location】C1-173 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English
【Instructor】HOSODA, Takashi
【Course Description】Fundamental theory of Open Channel Hydraulics used in River Engineering and Urban Fluid Engineering Fields are lectured, showing various applications in Hydraulic Engineering Field. The contents include the following items: Application of singular point theory to water surface profile analysis, Derivation of 2-D depth averaged model, 1-D analysis of unsteady open channel flows, Plane 2-D analysis of steady high velocity flows, Plance 2-D analysis of unsteady flows, Higher order theory, etc.
【Grading】Regular examination
【Course Goals】to understand the grounds of Open Channel Hydraulics and to learn how to apply Open Channel Hydraulics to practical problems in hydraulic engineering field.
【Course Topics】

Theme	Class number of times	Description
Guidance	1	The outline of this class is introduced by overviewing the whole framework of Open Channel Hydraulics with various computational results.
Derivation of 2-D depth averaged model	1	Derivation procesures of plane 2-D depth averaged model are expalined in detail
Application of singular point theory to water surface profile analysis	1	
1-D analysis of unsteady open channel flows	3	Fundamental characteristics of 1-D unsteady open channel flows, Method of Characteristics, Dam break flow, Computational methods
Fundamentals of numerical simulation	1	Considering the convective equation as an example, fundamental knowledge of numerical simulation is explained by means of finite difference method, finite element method, etc. Applications these method to unsteady open channel flows are also shown with some practical applications.
Plane 2-D analysis of steady high velocity flows	1	Characteristics of steady plane 2-D flow are explained based on the method of characteristics.
Plance 2-D analysis of unsteady flows	3	Propagation of characteristic furface, shear layer instability, application of a generalized curvilinear coordinate to river flow computation, application of a moving coordinate system, etc.
Higher order theory	3	Boussinesq equation with the effect of vertical acceleration, full/partially full pressurized flow onserved in sewer network, trafic flow analysis by means of dynamic wave model
Examination of understanding	1	The understanding of the contents is examined through the paper examination.

【Textbook】Printed materials on the contents of this class are distributed in class.
【Textbook(supplemental)】
【Prerequisite(s)】Elementary knowledge of fluid dyanamics and hydraulics
【Web Sites】
【Additional Information】Students can contact with Hosoda by sending e-mail to hosoda.takashi.4w@kyoto-u.ac.jp This class is open in 2012.

10F462

Coastal Wave Dynamics
海岸波動論

【Code】10F462 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Fri 1st

【Location】C1-173 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English

【Instructor】Hitoshi Gotoh, Eiji Harada and Khayyer Abbas

【Course Description】Wave motion, which is the main driving force in coastal zone, is explained focusing on wave transformation theory and computational fluid dynamics, and design for coastal structures of their engineering applications is illustrated. As for the computational fluid dynamics for waves, methodology of free-surface wave based on the Navier-Stokes equation, which has been significantly developed in recent years, is explained in detail.

【Grading】Grading is based on student ' s activities in lectures and written examination.

【Course Goals】Goal of this course is a detailed understanding of fundamental of wave transformation theory and computational fluid dynamics related to wave motion, and is also acquiring a design concept for coastal structures as their engineering applications.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	The purpose and constitution of the lecture the method of the scholastic evaluation are explained.
Conservation laws of fluid	4	Fundamentals of fluid mechanics, liner / non-liner wave theories and numerical mathematics are explained.
Modeling of surf zone dynamics	6	Several methodologies against free-surface wave including breaking waves (i.e. VOF, MPS, SPH) are illustrated. Especially advanced approaches of MPS and SPH are explained in detail.
Introduction of turbulence models	1	Reynolds averaging models and large eddy simulation are outlined.
Modeling of rock mound dynamics	2	Method for tracking of armor blocks under high waves using Distinct Element Method is described.
Achievement Confirmation	1	Comprehension check of course contents.

【Instructor】Hori, T.(DPTI) and Tanaka, K.(DPRI)

【Course Description】Systems approach to natural and social phenomena associated to water resources is introduced in terms of planning and design of sustainable water resources systems.

【Grading】Grading is done based on examination and commitment to classes.

【Course Goals】Deep understanding of fundamentals for systems modeling of water-related natural and social processes and ability to perform data collection, analyses and design of sustainable water management systems.

【Course Topics】

Theme	Class number of times	Description
Optimum design of water resources systems	3	
desicion support for water resources management	3	
Recent topics on water management	1	
Water management practices in the world	3	
Land surface model and its application to water management	4	
achievement check	1	

【Textbook】Not specified.

【Textbook(supplemental)】Supplemental documents will be introduced in classes.

【Prerequisite(s)】Fundamentals of hydrology and water resouyrces engineering.

10F077

River basin management of flood and sediment

流域治水砂防学

【Code】10F077 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Mon 1st

【Location】C1-173 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】(DPRI) Nakagawa, H., (DPRI) Sumi, T., (DPRI) Takebayashi, H. and (DPRI) Kawaike, K.

【Course Description】In a river basin, various kinds of disasters such as debris flow, land slide, flood inundation, storm surge, and etc. sometimes happen from the origin to the mouth. This lecture presents occurrence examples, mechanisms, theory and methods of prediction and prevention/mitigation methods against those disasters. Also this lecture mentions comprehensive management in a sediment routing system focusing on sediment management strategy in dam reservoirs.

【Grading】Grading is based on 2 reports out of 4 topics and attendance.

【Course Goals】The goals of the class are to understand phenomena within a river basin and to have wide knowledge of problems of flood and sediment disasters and countermeasures against them.

【Course Topics】

Theme	Class number of times	Description
About Sabo Works	4	About Sabo works, sediment disasters, countermeasures against sediment disasters, Sabo projects.
About Reservoir Sediment Management	3	Reservoir sediment management focusing on reservoir sustainability and comprehensive management in a sediment routing system is overviewed including worldwide perspective and Japanese advanced case studies.
About basin-wide sediment routing	4	About the one dimensional bed deformation analysis and the sediment runoff model are introduced. Furthermore, some examples of the application of those models are introduced.
About basin-wide flood management	4	Flood disasters and countermeasures against them are overviewed along the history of flood management in Japan.

【Textbook】No designation. Printed materials regarding the contents of this class are distributed in class.

【Textbook(supplemental)】Instructed in class

【Prerequisite(s)】Fundamental knowledge of Hydraulics and river engineering

【Instructor】Hiromichi Shirato, Satoru Ushijima

【Course Description】Computational Fluid Dynamics (CFD) is largely developed according to the progress of computer technology in recent years. It is the powerful and effective technique to predict the various fluid phenomena, which show the complicated behaviors due to the non-linearity and other conditions. This course provides the dynamics of fluids and eddies as well as the discretization and numerical techniques, such as finite difference, finite volume and discrete vortex methods.

【Grading】The grading will be based on homework assignments.

【Course Goals】Course goal is to understand the basic theory and numerical techniques for CFD.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	Introduction of recent examples of CFD
computational method for incompressible fluids	7	The course introduces the MAC algorithm, which is generally used for incompressible Newtonian fluids on the basis of finite difference and finite volume methods (FDM and FVM). The outline of numerical methods is also discussed for parabolic, hyperbolic or elliptic partial differential equations, in terms of the numerical stability and accuracy. Homework will be assigned each week.
unsteady viscous flow around bluff body by surface vorticity method	7	The surface vorticity method is introduced as one of the effective method which can solve an unsteady separating flow from an edge and its reattachment to a body. The mesh- and pressure-free concept in this method is introduced, which can be applied various flow phenomena including unsteady separation. SOme special treatment such as how to introduce the viscosity (core spreading, random walk) and how to evaluate surface pressure distribution will be explained. Design of airfoil geometry is also introduced as one of application of the method.

【Textbook】No textbook assigned to the course

【Textbook(supplemental)】Recommended books and papers will be introduced in the course.

【Prerequisite(s)】Basic knowledge of fluid dynamics, continuum mechanics and computational technique

【Web Sites】

10F065

Hydraulic Engineering for Infrastructure Development and Management

水域社会基盤学

【Code】10F065 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Tue 3rd 【Location】C1-117 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English 【Instructor】Hosoda Takashi, Toda Keiichi, Gotoh Hitoshi, Tachikawa Yasuto, Kisihida Kiyoshi, Harada Eiji, Sanjou Michio and Khayyer Abbas

【Course Description】This lecture picks up various water-related problems and provides their explanation and solution methodology related to hydrodynamic and hydrological infrastructure improvements, maintenance, disaster prevention against flood and damage of water environment, interweaving several leading-edge cases in the real world. Turbulent flow and CFD, sediment transport system and design/planning of hydraulic structure are described on the basis of the integrated management of river-and-coast systems with sediment control and these relationship with infrastructure improvement. Perspective from the viewpoint of public environmental infrastructure on water environment is presented.

【Grading】Grading is based on students activities in lectures and reports.

【Course Goals】Students learn about case-based practical solutions against various problems related to hydraulic engineering, and students acquire academic preparation of how to approach to public environmental infrastructure on water area.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	The purpose and constitution of the lecture, the method of the scholastic evaluation are explained.
Hydraulics in open-channel flows	3	Several problems and exciting topics related to hydraulics in open-channel flows are discussed with advanced practical examples.
River basin management	3	Introduction of flood disasters during a few decades in the world, flood control planning in Japan, Economic evaluation and analysis of people ’ s awareness to river improvement projects with dam construction.
Beach erosion	3	Several problems and their solution methodology against sediment transport process in coastal zone are explained. Advanced approaches for sediment control are overviewed.
Rainfall-runoff prediction and hydrologic design	3	Water resources issues related to rainfall-runoff prediction and hydrologic design are discussed with advanced practical examples.
Numerical simulation for Hydraulic engineering	1	Recent numerical simulation development and related state-of-the-art technologies are overviewed.
Achievement Confirmation	1	Comprehension check of course contents.The exercises to the given subjects are performed.

【Instructor】Tomoharu Hori, Tetsuya Sumi, Yoshitaka Kido, Yasuhiro Takemon, Kenji Tanaka

【Course Description】Applied and integrated approach to the problems closely related to the water circulation system, such as floods, droughts, water contamination, ecological change, and social change is introduced mainly from the hydrological viewpoint with reference to water quantity, quality, ecological and socio-economic aspects. In the course, several actual water problems are taken up and solving process of each problem which comprises of problem-identification and formulation, impact assessment, countermeasures design and performance evaluation is learned through the lectures ’ description and also investigation and discussion among the students.

【Grading】Grading is based on student activities in lectures, presentation and reports

【Course Goals】To obtain fundamental Knowledge and skills to perform problem definition, survey amd countermeasure design on problems about water use, water hazard mitigation and water environment.

【Course Topics】

Theme	Class number of times	Description
Water Resources Systems	2	Interaction between water resources and socio-economic systems, Distributed flood risk assessment and countermeasures design from human security viewpoint
Reservoir Systems and Sustainability	2	Reservoir system and its environmental impacts, Sustainable management of reservoir system
Land Surface Proceses	3	Modelling of land surface processes, Application of land surface model
Water Quality Management	3	Diffuse pollution control, Water quality management of enclosed lake and groundwater
Hydro-eco Systems	3	Ecohydrological management of habitats in river ecosystems, Ecohydrological management of biodiversity in wetland ecosystems
Presentation and Discussion	2	Presentation and Discussion on related topics
Examination

【Instructor】K. TAKARA(DPRI), H. NAKAGAWA(DPRI), E. NAKAKITA(DPRI), H. MASE(DPRI), N. MORI(DPRI), Y. YAMASHIKI(DPRI)

【Course Description】Environmental impacts by infrastructure for disaster prevention and mitigation are discussed. Introducing various examples of natural disasters, degradation of the environment, and harmonizing disaster management and environmental conservation in the world, this classroom carries on a dialogue about effective measures for reducing negative environmental impacts and serious disasters.

【Grading】Considering both the number of attendances and the score of final test at the end of the semester.

【Course Goals】Conservation of the environment and prevention/mitigation of natural disasters, which are very important for human's survivability, often conflict with each other. This course introduces various examples. Students will learn many examples harmonizing these two issues, and shall consider technical and social countermeasures fitting to the regional characteristics.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	Introduction
Disaster due to heavy rainfall -- utilization of weather radar and global climate change	3	Disaster due to heavy rainfall -- utilization of weather radar and global climate change
Flood disaster prevention and the environment	2	Flood disaster prevention and the environment
River environment and disaster management	2	River environment and disaster management
The environment of closed water areas / Atmosphere-ocean climate interaction	2	The environment of closed water areas / Atmosphere-ocean climate interaction
Coastal disasters due to tsunamis and storm surges	2	Coastal disasters due to tsunamis and storm surges
Projection of climate and coastal environmental change	2	Projection of climate and coastal environmental change

【Textbook】No particular textbook for this course. Necessary documents and literature introduction are provided in the class room from time to time.

【Textbook(supplemental)】Some literature would be introduced by professors.

【Prerequisite(s)】No special knowledge and techniques are necessary, but requires reading, writing and discussing in English in the class.

10F106

Integrated Disasters and Resources Management in Watersheds
流域管理工学

【Code】10F106 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Mon 1st
【Location】Katsura Campus, Ujigawa Open Laboratory, Shirahama Oceanographic Observatory and Hodaka Sedimentation Observatory
【Credits】2 【Restriction】 【Lecture Form(s)】Lecture and Exercise 【Language】English
【Instructor】Masaharu FUJITA(DPRI), Tetsuya HIRAISHI(DPRI), Nozomu YONEYAMA(DPRI), Kenji KAWAIKE(DPRI), Hiroshi TAKEBAYASHI(DPRI), Daizo TSUTSUMI(DPRI)
【Course Description】Mechanism and countermeasures of sediment disasters, flood disasters, urban flood disasters and coastal disasters are explained. An integrated watershed management of these disasters and water/sediment resources is also introduced. This lecture will be open at Katsura Campus, Ujigawa Open Laboratory, Shirahama Oceanographic Observatory and Hodaka Sedimentation Observatory. Students attending this lecture must take one of the intensive experiment/field study courses offered in Ujigawa Open Laboratory and these observatories.
【Grading】Presentation, Discussion and Report
【Course Goals】Learn an integrated basin management system for natural disasters (sediment disasters, food disasters, coastal disasters, urban flood disasters) mitigation and water/sediment resources utilization considering environmental conservation.
【Course Topics】

Theme	Class number of times	Description
Urban flood disaster managemnet	2	We review urban floods from the viewpoint of river basins, flood causes, and features, together with the results of recent studies. Based on these studies, we propose comprehensive measures against urban floods, including underground inundations. In addition, we discuss on prediction methods of the tsunami disaster in urban area.
Flood disaster management	2	Prevention / mitigation measures against flood disasters and flood prediction methods are explained as well as examples of recent flood disasters in Japan.
Sediment disaster management	2	Showing the problems on sediment disasters and sediment resources, I explain an integrated sedimnet management system both for sediment disasters and sediment resources.
Coastal disaster management	2	Coastal erosion and tsunami hazard become remarkable in these days in Japanese coast. In a lecture, we discuss on characteristics of such coastal disasters.
Exercise on flood disaster at Ujigawa Open Laboratory (Selective)	集中２日間	Experiment and analysis on debris flows, riverbed variation and flooding at Ujigawa Open Laboratory, Fushimi-ku, Kyoto city.
Exercise on sediment related disaster at Hodaka Sedimentation Observatory (Selective)	集中２日間	The Hodaka Sedimentation Observatory is located at Okuhida region, Gifu Prefecture. In the field exercise, observation methods of rainfall-runoff and sediment movement processes will be explained. Field investigations into several types of erosion control facilities, sediment producing sites, debris flow sites and sediment related disaster sites will be carried out.
Exercise on coastal disaster at Shirahama Oceanographic Observatory (Selective)	集中２日間	The Sirahama Maritime Observatory is located in Wakayama Prefecture. In the lecture, observatory, waves, currents and tide levels monitoring system is demonstrated.

【Course Description】Mechanical behavior of soils and problems of its deformation and failure, based on the multiphase mixture theory and the mechanics of granular materials, will be covered in this lecture.

【Grading】Final examination and several papers

【Course Goals】The objectives of this course are to understand the basics of geomechanics, and the advanced theories.

【Course Topics】

Theme	Class number of times	Description
Deformation of geomaterils	1	Mechanical property of geomaterials, Critical state soil mechanics, Failure criteria, Effective stress, Suction
	2	
elasto-plastic constitutive model	3	Constitutive model for geomaterials, Elasto-plastic model, Cam clay model
Theory of viscosity and viscoplasticity	3	Viscoelasticity, viscoplasticity, Elasto-viscoplastic mode, Adachi-Oka model, Microstructure of soils, Temperature dependent behavior, Applications of constitutive models
Consolidation analysis	3	Biot's consolidation theory and its application, Consolidation of embankment
Liquefaction of soils	2	Liquefaction of sandy soil, Damage and failure due to liquefaction, Remedial measures for liquefaction
Confirmation of achievement	1	

【Textbook】Soil mechanics, Fusao Oka, Asakura Publishing (in Japaneses)
An elasto-viscoplastic constitutive model, Fusao Oka, Morikita Publishing (in Japanese)

【Textbook(supplemental)】

【Prerequisite(s)】Soil mechanics, Fundamentals of continuum mechanics

Geo-Risk Management

ジオリスクマネジメント

【Code】10F238 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Tue 4th

【Location】C1-172 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English

【Instructor】Ohtsu,Shiotani

【Course Description】This lecture aims to provide interdisciplinary knowledge associated with geo-risk engineering, the topics of risk analysis focusing on geotechnical structures. In detail, the contents of lectures consist of following topics: Introduction to risk analysis, Mathematical background of geo-risk evaluation, Examples of risk evaluation mainly focusing on slopes and Risk management on road slopes.

【Grading】Attendance(10%), Report(30%), Examination(60%)

【Course Goals】

【Course Topics】

Theme	Class number of times	Description
Guidance	1	Guidance Introduction of Geo-Asset Management
Basic	5	Basics of Risk Analysis (3), Basics of Monitoring (2)
Probability theory	4	Evaluation of Slope Risk
Miscellaneous of Risk	2	Application of Risk Based Inspection, Risk Management of International Construction Project
Case Studies in Southeast Asian Countries	2	Landslide Disaspter in Southeast Asian Countries (2)
Discussions	1	
Final Exam	1	

【Textbook】Hiroyasu Ohtsu, Project Management, Corona Publishing, 2010. (in Japanese)

【Textbook(supplemental)】C. Chapman and S. Ward, Project Risk Management, John Wiley & Sons, 1997.

10F241

Construction of Geotechnical Infrastructures

ジオコンストラクション

【Code】10F241 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Fri 1st

【Location】C1-171 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English

【Instructor】Kimura, Kishida

【Course Description】Advanced construction technology of geo infrastructures, such as tunnel, large underground cavern, foundation, culvert, retaining wall, is introduced and explained. And, the practical projects applied by the advanced construction technology are also introduced.

【Grading】Attendance (20 %), Report, Examination and Presentation (80 %)

【Course Goals】To learn to the advanced construction technology and to propose the project and design through the advanced construction technology.

【Course Topics】

Theme	Class number of times	Description
Guidance, Introduction of construction of geotechnical infrastructures	1	Guidance, Introduction of construction of geotechnical infrastructures
Underground cavern	2	Stability of underground cavern,
Auxiliary mthods of mountain tunnel	2	Role of auxiliary methods, Auxiliary method for safety in tunnel constrcution, Axiliary methods for preservation of the surrounding environment
Undergorund space project	2	Introduce two special projects of underground space, namely, nuclear waste disposal, and Carbon Capture and Storage
Field visit or special lecture	1	Visit the construction field or invite special lecture who is the expert engieer on the construction of geotechnical infrastructures.
Foundation	2	Design and construction of piles foundation and steel pipe sheet piles
Culvert	2	Design and construction of box type and arch type culverts
Retaining wall	2	Design and construction of retaining wall
Examination of understanding	1

10F405

Fundamental Geofront Engineering

ジオフロント工学原論

【Code】10F405 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Mon 3rd
【Location】C1-172 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English
【Instructor】M.Mimura,S.Nishiyama,T.Koyama,K.Ando
【Course Description】This lecture aims to learn a practical knowledge associated with mechanical and hydraulic problems in rock masses to realize environment-friendly development of underground space through exercise in modelling and analytical study of rock mass.
【Grading】Problem sets will be given almost every week and due one week later in class. You can work together but must turn in your own solutions.
【Course Goals】This course is designed to give students knowledge and understanding to recognise and apply the fundamental techniques used in engineering rock mechanics for the analysis of underground engineered structures.
【Course Topics】

Theme	Class number of times	Description
Introduction to rock mechanics and rock engineering	1	Introduction to common geophysical investigation methods and field investigation methodology.
Rock mass behaviour around excavations	1	How to apply popular failure criteria to determine the strength of both intact rock and discontinuities. How to assess the geometry of discontinuous rock masses using customary measures and techniques
	1	
	1	
Rock strength and rock mass classification	2	Rock construction techniques for rock foundation works and also for construction of rock caverns and tunnels. Proposals for support of strength and running of construction works in rocks based on conceptual engineering geological models, assessment of the Q-value and of the mechanical characteristics of the rock mass.
Underground excavations in discontinuous and stratified rock	1	Basic rock geology emphasizing characteristics of rocks, in particular structural features and the importance of discontinuities in rock construction works.
	1	
	1	
Computer methods in rock mechanics and rock engineering:	2	Introduction to computer programmes for underground space design, rock mechanics, and environmental control.
Hydrogeology and groundwater flow in geotechnical	1	The influence of the groundwater conditions on the characteristics of the rock mass, in particular concerning strength and stability but also rock construction technique and environmental consequences.
Risk assessment and risk management	2	Risk assessment processes in rock engineering and management principles with respect to the environment.
	1	

【Textbook】Handout will be distributed.
【Textbook(supplemental)】References are indicated in the handout.
【Prerequisite(s)】Undergraduate courses in geology, geotechnical engineering,and soil mechanics.

10A055

Environmental Geotechnics

環境地盤工学

【Code】10A055 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Mon 1st
【Location】C1-192 / Engineering Bldg.No.8 Kyodo No.1 (Yoshida Campus) 【Credits】2 【Restriction】No Restriction
【Lecture Form(s)】Lecture 【Language】Japanese/English 【Instructor】Takeshi Katsumi, Toru Inui
【Course Description】Several issues on environmental geotechnics including geoenvironmental contamination and countermeasure, waste containment and reuse are introduced to understand the contribution of geotechnical engineering to global and local environmental issues. Geoenvironmental issues due to the 2011 East Japan Earthquake and Tsunami are also introduced.
【Grading】Continuous assessment including attendance, some assignments, and final report
【Course Goals】Students should understand the geotechnics to solve the following geoenvironmental issues; soil & groundwater contamination, waste disposal and waste utilization, and extend this knowledge to the development of concepts and technologies for creating and preserving the geo-environment.
【Course Topics】

Theme	Class number of times	Description
Introduction	1	Introduction to Environmental Geotechnics, including goals, outline and grading policy of the course
Waste geotechnics	3-4	Functions and structures of waste containment facilities Geotechnics on the liner system (Geosynthetics, clay liner, Leachate collection layer) Post-closure utilization of waste landfill
Remediation geotechnics	3-4	Behaviors of contaminants in subsurface Mechanisms of soil and groundwater contamination Remediation of soil and groundwater contamination Case histories
Geo-environmental issues related to construction works, global environmental issues, and natural disasters	2-3	Mechanisms and remediation of geoenvironmental problems and geo-disasters caused by construction works Geoenvironmental issues caused by the 2011 East Japan Earthquake and Tsunami
Reuse of wastes in geotechnical applications	3-4	Engineering properties of recycled materials in geotechnical applications (Incineration ashes, coal ash, surplus soils, dredged soils) Geoenvironmental impact assessment and control of waste utilization Case histories
Presentation and discussion	2-3	Student presentation, discussion, and summary on above topics

【Textbook】Not specified.
Several technical papers related to the course will be distributed.
【Textbook(supplemental)】Geoenvironmental Engineering (Kyoritsu Shuppan Publishing, ISBN: 9784320074293)
Handbook of Geoenvironmental Engineering (Asakura Publishing, ISBN: 9784254261523)
Introduction to Environmental Geotechnics (Japanese Geotechnical Society, ISBN: 9784886444196)
【Prerequisite(s)】Having knowledge on soil mechanics and geotechnical engineering at bachelor level is preferable, but not requirement.

10F109

Disaster Prevention through Geotechnics

地盤防災工学

【Code】10F109 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Mon 2nd

【Location】C1-117 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English

【Instructor】Susumu Iai and Tetsuo Tobita

【Course Description】The lecture covers methods of numerical analysis for dynamic behavior of the ground and geotechnical structures. In particular, the lecture covers mechanism, failure modes, and mitigation measure to geo-hazards. The lecutre ranges from mechanics of granular materials to numerical simulation.

【Grading】Based on reports to excercises and attendance.

【Course Goals】Successful students will have the ability to initiate their own research work on geo-hazards based on the solid understanding of the mechanics of granular materials and numerical analysis.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	Introduction to the course (objectives, contents, and grading procedure) - ABC's of computers - Numerical errors - Application of numerical analysis to seismic engineering
Fundamentals of numerical analysis	2	- Numerical solution of a simultaneous equation of the 1st order (SOR method) - Numerical integration method of PDEs (finite difference method)
Application to boundary value problems	1	Seepage analysis - Governing equations - Boundary conditions - Numerical solution of boundary value problems
Spectral analysis 1	2	Spectral analysis 1 - Fourier spectrum - Power spectrum - Autocorrelation function
Spectral analysis 2	2	Spectral analysis 2 - Response spectra - Smoothing method - Bandpass filter
Fundamentals of dynamics	3	Learn fundamentals of dyanamics for numerical analysis of geo-hazards during earthquakes
Mechanics of granular materials	4	Learn granular materials subject to transient and cyclic loads

【Location】C1-173 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】Dai Nakagawa and Ryoji Matsunaka

【Course Description】This lecture aims to learn urban environmental policy and its fundamental theory and methodology to solve social and environmental problems that occur in urban area as well as to understand the structure of these problems.

【Grading】evaluation by commitment, tests, reports and examination

【Course Goals】to understand the structure of social and environmental problems in urban area and urban environmental policy, its fundamental theory and methodology to solve the problems

【Course Topics】

Theme	Class number of times	Description
Outline	1	
Structure of urban problems	3	Expansion of urban areas, Increase of Environmental impact, Making compact cities
Basic theory of transportation and environment	2	Downtown activation, Road space re-allocation, Pedestrianisation
Road traffic and Public transportation	2	Characteristics of traffic modes, Light Rail Transit, Bus Rapid Transit, Mobility Management
Fundamental theory for measurements of environmental values	3	Utility, Equivalent Surplus, Compensating Surplus
Methodology to measure environmental values	3	Travel Cost Method, Hedonic Approach, Contingent Valuation Method, Conjoint Analysis
Summary	1

City Logistics

シティロジスティクス

【Code】10F213 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Wed 3rd 【Location】 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English 【Instructor】Eiichi Taniguchi, Ali G. Qureshi

【Course Description】The methodologies of city logistics for establishing efficient and environmentally friendly logistics systems in urban areas will be described. Focusing on the truck traffic within road network, the process, models and the evaluation for building urban freight policy will be given. As well logistics systems using recent development of ICT, the effects of e-commerce on freight transport and supply chain management will be discussed.

【Grading】Term examination 80%, Report 10% and Quiz 10%

【Course Goals】The course goals are fully understanding the methodologies for establishing efficient, environmentally friendly and safe logistics systems in urban areas as well as obtaining the basic knowledge on modelling and evaluating city logistics initiatives.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	Introduction to issues on urban freight transport is given and the importance of these issues is discussed in conjunction with urban planning.
What is city logistics?	1	City logistics are presented to totally solve problems on the efficiency of urban freight transport as well as social problems including tranffic congestion, traffic environment, traffic safety and energy. The concepts of city logistics and characteristics and implementation methods are given.
Status quo and issues in freight transport---urban freight transport policy	1	The status quo and issues on freight transport is presented and urban freight transport policies are discussed for establishing efficient, environmentally friendly logistics systems in urban areas.
ITS and logistics	1	Logistics systems using ITS (Intelligent Transport Systems) are presented and how to implement city logistics initiatives using ITS is discussed.
Vehicle routing and scheduling	3	Models for optimising the visiting order and allocation of trucks in delivering goods to customers in urban areas are given and solution methodologies and practical applications are discussed. The probabilistic vehicle routing and scheduling problems with the uncertainty of travel times as well as the dynamic vehicle routing and scheduling problems with the real time travel times are also described.
Location of logistics terminals	2	The optimal location models of logistics terminals and the solution methodologies and their application to practical problems are presented. The location routing planning including vehicle routing and scheduling problems are discussed.
Cooperative freight transport systems	1	Cooperative freight transport systems which jointly operate logistics terminals, trucks and information systems are presented. The merits and demerits of cooperative freight transport systems as well as the methods for promoting them are discussed.
Application of ICT and ITS	1	It is shown that ICT (Information and Communication Technology) and ITS (Intelligent Transport Systems) allow us to collect data, transmit and analyse them relating to city logistics. The importance of ICT and ITS is emphasized.
Supply chain management, third party logistics and intermodal freight transport	1	Supply chain management, third party logistics and intermodal freight transport is presented and the innovative management systems which are used in modern logistics are discussed.
New freight transport systems	1	The chategorization, characteristics and significance of new freight transport systems including underground freight transport systems are presented. The possibility of realizing new freight transport systems is discussed based on cost benefit analyses.
transport demand management and e-commerce	1	The transport demand management, which is important in city logistics is described and the difference is highlighted with the transport demand management for passenger traffic. Effects of e-commerce on urban freight transport are discussed based on recent behaviour change of consumers.
deregulation and evaluating city logistics	1	The deregulation on freight transport is described and performance indicators for evaluating city logistics initiatives are discussed.

【Instructor】N. Uno and T. Yamada

【Course Description】This class provides you with the outlines of engineering methodology with information and communication technology as its core element for improving the safety, efficiency and reliability of traffic and transportation systems and reducing the environmental burden. Concretely, we discuss the applicability of countermeasures, such as Travel Demand Management, modal-mix in transportation systems, traffic safety improvement schemes for relieving contemporary problems in traffic and transportation systems, in addition to brief introduction of innovative approaches to collect high-quality of real-time traffic data. Moreover, the methodology for policy evaluation and the related basic theory are explained.

【Grading】Final report: 50-60%, Mid-term report: 30-40% and Attendance: 10%

【Course Goals】Goal of this class is to cultivate basic and critical abilities of students for implementing effective traffic and transportation management using ITS (Intelligent Transportation System).

【Course Topics】

Theme	Class number of times	Description
Basics for Transportation Network Analysis	1	
Estimation of OD Traffic Volume using Observed Link Traffic Counts	1	
Analytical Approaches Based on Transportation Network Equilibrium	3	
Outlines of ITS	1	
Traffic Management for Enhancing Efficiency	2	
Innovative Approaches for Data Collection Using ICT	1	
Application of ITS for Enhancing Traffic safety	1	
Travel Demand Management and Congestion Charging	2

【Lecture Form(s)】Lecture & Exercise 【Language】Japanese 【Instructor】Masayuki Tamura, Junichi Susaki

【Course Description】Geoinformatics is the science and technologies dealing with spatially distributed data acquired with remote sensing, digital photogrammetry, global positioning system, etc, to address the problems in natural phenomena or human activities. This lecture particularly focuses on satellite remote sensing and explains the theory and the technologies for analyzing environmental changes or disaster effects. A free software "MultiSpec" is used in exercises to learn the basic techniques of image processing.

【Grading】Grading is based on the achievements in home works given in every lesson.

【Course Goals】To understand the basic theory and to acquire the basic techniques of satellite remote sensing for observation and analysis of environmental changes and disaster effects.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	1. Introduction to remote sensing 2. Applications in environmental and disaster prevention fields
Classification of electromagnetic waves and satellite sensors	1	1. Classification of electromagnetic waves 2. Basic terms on electromagnetic radiation 3. Theory of electromagnetic radiation from objects 4. Classification of satellite sensors by observation wavelengths
Interaction of electromagnetic waves with earth surfaces	1	1. Reflection and scattering of electromagnetic waves by earth surfaces 1.1 Bidirectional reflectance distribution function 1.2 Bidirectional reflectance factor 2. Spectral reflectance properties of earth surfaces and objects
Atmospheric effects on satellite observations	1	1. Absorption and scattering of electromagnetic waves by atmospheric particles 2. Atmospheric radiative transfer of electromagnetic waves 3. Atmospheric effects on satellite observations 4. Correction of atmospheric effects
Optical sensors	1	1. Principles of visible and reflective infrared sensors 2. Examples of visible and reflective infrared sensors 3. Applications of reflective infrared sensors
Thermal infrared sensors	1	1. Principles of thermal infrared sensors 2. Measurements of surface temperature by satellite sensors 3. Examples of thermal infrared sensors 4. Applications of thermal infrared sensors
Image processing 1 (Image correction)	1	1. Image processing procedure 2. Image enhancement 3. Image correction 4. Correction of geometrical distortion
Image processing 2 (Image classification)	1	1. What is image classification? 2. Theory of image classification 3. Classification rules 4. Image classification procedure
Microwave sensors	1	1. Microwave 2. Microwave sensors 3. Real Aperture Radar (RAR) 4. Synthetic Aperture Radar (SAR) 5. Interferometric SAR 6. Differential Interferometric SAR

Risk Management Theory

リスクマネジメント論

【Code】10F223 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Wed 3rd

【Location】C1-173 【Credits】2 【Restriction】 【Lecture Form(s)】Lecture and exercise 【Language】English

【Instructor】Muneta Yokomatsu

【Course Description】The aim of the class is to provide the basic knowledge of risk management methods for various types of risks such as natural disaster, environment and natural resources in urban and rural areas. Students will learn the decision making principle under risks in Economics and asset pricing methods in Financial Engineering as well as have exercises of application on public project problems.

【Grading】20% of score is valuated on attendance and discussion in classes, and 80% on reports.

【Course Goals】It is targeted to understand 1) representative concepts of risk and risk management process, 2) expected utility theory and 3) foundation of Financial Engineering, and examine 4) public project problems by applying the above knowledge.

【Course Topics】

Theme	Class number of times	Description
Basic framework of risk management	2	1-1 Representative concept of risk 1-2 Risk management technologies
Decision making theory under risks	3	2-1 The Bayes' theorem 2-2 The Expected utility theory
Financial engineering	6	3-1 The Capital Asset Pricing Model 3-2 Option pricing theory 3-3 The arbitrage theorem 3-4 The Black-Scholes formula
Decision making methods for projects	3	4-1 The decision tree analysis 4-2 The real option approach
Comprehension check	1	5 Comprehension check

【Credits】2 【Restriction】 【Lecture Form(s)】Lecture 【Language】English
【Instructor】TATANO Hirokazu, YOKOMATSU Muneta
【Course Description】Natural disasters have low frequencies but high impacts. It is very important to make an integrated risk management plan that consists of various countermeasures such as prevention, mitigation, transfer, and preparedness. This class will present economic approaches to natural disaster risk management and designing appropriate countermeasures.
【Grading】Evaluate mainly by the presentations in the class as well as end-of-term report, taking active and constructive participation in the class into account.
【Course Goals】Students are expected to understand fundamental ways of economic analyses of disaster prevention such as economic valuation of disaster losses, decision making principle under risks, derivation of benefits of risk management.
【Course Topics】

Theme	Class number of times	Description
Introduction to disaster risk management	1	Introduction and Explanation of Course Outline, The Global Trends of Natural Disasters
1. Decision making theory under uncertainty	1	Bayes' theorem, Expected utility function
Methods of disaster risk management	1	Risk control and risk finance
Economic valuation of catastrophic risk mitigation	1	Cost-Benefit analysis, conventional valuation method, catastrophic risks and economic valuation of disaster mitigation
Risk perception bias, land-use and risk communication	2	Risk perception bias, land-use model, risk communication
Disaster risk finance	2	Recent issues of risk finance market, reinsurance, CAT bond, roles of government, derivatives
Risk curve and risk assessment	1	Fragility curve and risk assessment
General equilibrium analysis under disaster risk	1	General equilibrium model under disaster risk
Macrodynamics under disaster risk	1	GDP, economic growth
Disaster accounting	1	Accounting systems
Exercise and presentation	2	Students' exercise and presentation
Confirmation of the learning achievement degree	1	Confirmation of the learning achievement degree

Resources Development Systems
資源開発システム工学

【Code】10A402 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Fri 1st 【Location】C1-172 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese 【Instructor】T. Matsuoka, S. Murata

【Course Description】Development of mineral resources and energy resources is essential to the sustainable development of our society and economy. In this class, the exploration and development process of such the natural resources are reviewed including the environmental conservation and harmony. In addition, petrophysics dealing with the basic physical properties of rocks and its application to the resources exploration, fundamentals and applications of reservoir engineering used to evaluate the production behavior and reserves of oil and natural gas are lectured.

【Grading】Evaluation is made by the average score of the report problems presented by each teacher.

【Course Goals】The goal of this class is to master the fundamentals of petrophysics and reservoir engineering needed for the exploration and development of oil and natural gas resources.

【Course Topics】

Theme	Class number of times	Description
From exploration to development of natural resources	1	The exploration and development process of mineral resources and energy resources, which are essential to the sustainable development of our society and economy, is reviewed including the environmental conservation and harmony.
Petrophysics used in natural resources development	6	To know the elastic properties of sedimentary rocks is essential when we consider the exploration and development of oil and natural gas resources. For the sedimentary rocks, physical variables, a rule of thumb and the pore fluid that affect the elastic wave velocity are mainly lectured. For igneous rocks, in addition, the rule of thumb on the physical properties of the rocks affected by fractures are lectures, because fractures in the rocks defines their physical properties.
Fundamentals of reservoir engineering	5	The properties of reservoir fluids and the material balance method to evaluate the reserve of oil and natural gas are explained.
Fluid flow in the reservoir	2	Basic equations of fluid flow in the reservoir and the analytical solution for the flow of oil and natural gas around a well are explained, and the concept and the method of well test analysis are also explained.
Enhanced oil and natural gas recovery	1	The methods of enhanced oil and natural gas recovery (EOGR) are overviewed. The essentials of each EOGR method are explained.

【Textbook】Handouts are delivered.

Computational Mechanics and Simulation

計算力学及びシミュレーション

【Code】10K008 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Tue 2nd

【Location】C1-173 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture and Exercises

【Language】English 【Instructor】Gotoh, Murata, Furukawa, Liang

【Course Description】The process to obtain numerical solutions for various problems in compuational mechanics. Descretization and some solvinng technique for initial/boundary value problems is to be introdeced by the FEM, FDM, VM and PM with programming exercises. Statistical mechanics, molecular dynamics, Monte Carlo method and Multiple scale model will be shortly introduced in order to understand the basic theory of molecular dynamics simulation. Their application to engineering problems are to be also given by showing some up-to-date examples. Theory of the distinct element method (DEM) will be lectured, and its application in the engineering field will also be explained.Current technology of the particle method by is to be explained on the violent flow phenomena with free surface. The prticular subjects in PM such as mometum conservation and convection of pressure disturbance by numerical instability, etc. will be inntroduced. This course will be given in English.

【Grading】Achievement is evaluated by submitted reports to each topic.

【Course Goals】

【Course Topics】

Theme	Class number of times	Description
Homogenization technique and FEM	4	Homogenization method with FEM will be lectured in this item. It is used for obtaining the equivalent homogenized material constants of an anisotropic composit material to be analyzed. The method to obtain homogenized elastic coefficient tensor will be especially focused on.
Molecular dynamics simulation	4	Statistical mechanics, molecular dynamics, Monte Carlo method and Multiple scale model will be shortly introduced in order to understand the basic theory of molecular dynamics simulation. Their application to engineering problems are to be also given by showing some up-to-date examples.
Distinct element method and its application	4	Theory of the distinct element method (DEM) will be lectured in this item. The DEM is the numerical analysis method for discontinuum. The application of the DEM in the engineering field will also be explained.
Free surface flow analysis by particle method	3	Current technology of the particle method by is to be explained on the violent flow phenomena with free surface. The prticular subjects in PM such as mometum conservation and convection of pressure disturbance by numerical instability, etc. will be inntroduced.

Modelling of Geology

数理地質学

【Code】10F069 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Mon 2nd

【Location】C1-173 【Credits】2

【Restriction】should have unit(s) of an introductory lecture on earth science (i.e. Introduction to Earth Science) and/or earth resources engineering

【Lecture Form(s)】Leture, excercises, field excursions 【Language】Japanese or English (change every year)

【Instructor】Yasuhiro YAMADA

【Course Description】This lecture is on modelling of a geology phenomenon which becomes indispensable when carrying out underground-resources development. First of all, the lecture tells that geologic phenomena are complicated as a fundamental posture and mathematical analysis is possible only a part of them. Then, a various analysis techniques and the analysis example are explained with the basic theory for simplifying the natural phenomena to construct geologic models. Then, field excursions are carried out to see relation between topography and local geology. During the excursions, students learn the conditions and assumptions which are needed to model complicated phenomena in which two or more factors involve. The phenomenon in which modelling is possible is limited to a few part.

【Grading】Based on the reports on the lectures and field excursions.

【Course Goals】Students understand the scope of this lecture, the complexity of natural phenomena and our limited knowledge on them, and can explain the contents to others.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	Theme, lecture / excursion schedule, evaluation etc
modelling theory	2	basic theory on geologic modelling
methods and examples	6	methods of geologic modelling and examples are explained with exercises.
excursion 1	4	excursion to NE Kyoto basin to see the relation between topography and geology, in term of an active fault
excursion 2	2	excursion to SW Kyoto basin to see the relation between topography and geology, in term of a relatively inactive fault

【Textbook】no textbook. appropriate articles will be provided.

【Textbook(supplemental)】appropriate books will be informed, this may include ones on geologic modelling.

【Prerequisite(s)】basic knowledge on earth science, including skills to read geologic and geography maps, required.

【Web Sites】

【Additional Information】this lecture includes field excursions. the dates will be determined during the first class, thus all applicants have to attend this class.

10F071

Applied Elasticity for Rock Mechanics

応用弾性学

【Code】10F071 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Fri 3rd

【Location】C1-172 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】S. Murata

【Course Description】Theory of elasticity relating to the deformation and failure of rock and rock mass, design and management of rock structures is explained. Specifically, two-dimensional and three-dimensional analysis of elasticity using the basic equations, constitutive equations, and the complex stress function are explained. Several applications of this analysis to rock mechanics, rock engineering, and fracture mechanics are also explained.

【Grading】Evaluation is made by the score of two report problems or homework and semester final exam.

【Course Goals】The goal of this class is to master the theory of elasticity so as to solve the elastic problem in rock mechanics, rock engineering, and fracture mechanics.

【Course Topics】

Theme	Class number of times	Description
Airy ’ s stress function and complex stress function	2	Airy ’ s stress function used to solve a two-dimensional elastic problem is first explained, and then the complex stress functions that are the representation of Airy ’ s stress function by the complex variables are explained.
Two-dimensional elastic analysis using the complex stress function	8	Analytical solutions of the two-dimensional elastic problems in fracture mechanics and rock engineering are derived by using the complex stress functions. The mechanical behavior of rock material is also explained based on the derived solution.
Application of two-dimensional elastic analysis	2	The theory of rock support, ground characteristic curve, theoretical equations used for the evaluation of rock stress, which are derived from the solution of two-dimensional elastic problem, are explained.
Three-dimensional theory of elasticity	2	Stress functions to solve the three-dimensional elastic problem are explained, and some examples of the three-dimensional elasticity solution derived by using the stress functions are explained.
Achievement check	1	Check the achievement of course goals.

【Textbook】Handouts are delivered.

【Textbook(supplemental)】J.C. Jaeger, N.G.W. Cook, and R.W. Zimmerman: Fundamentals of Rock Mechanics -4th ed., Blackwell Publishing, 2007, ISBN-13: 978-0-632-05759-7

【Prerequisite(s)】It is desirable to have knowledge of calculus, vector analysis and complex analysis.

【Web Sites】Web page of this lecture is not specifically provided. When preparing it by need, the information is shown in the class.

【Additional Information】Not specified

10F073

Fundamental Theories in Geophysical Exploration

物理探査の基礎数理

【Code】10F073 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Fri 3rd

【Location】C1-171 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】Hitosih Mikada, Tada-nori Goto

【Course Description】We are outlining various basic mathematical principles used for the analysis of the dynamic and kinematic earth-scientific problems in conjunction with wave propagation, mass transfer, etc. in the crust, and presenting examples of such analysis techniques in the area of earth sciences and earth resources engineering.

【Grading】Rating is performed by the combination of exams (40%) and the attendance to the class (60%).

【Course Goals】The aims of the class is to understand various signal-processing theories, the applied seismology, and the applied geo-electromagnetics with respect to exploration geophysics as application tools in seismology and in geo-electromagnetics.

【Course Topics】

Theme	Class number of times	Description
Introduction to exploration geophysics	1	General introduction to the lecture.
Seismic wave propagation and signal processing	8	Acquire knowledge on the propagation phenomena of elastic waves to learn the equivalency of 1D propagation with the theory of system function. The topics included would be, z-transform, Levinson recursion, Hilbert transform, etc.
Fundamentals of geo-electromagnetics and their application to exploration geophysics	5	Learn fundamental theories of magnetotellurics, instantaneous potential, spontaneous potential, and apparent resistivity methods, etc. that deal with geo-electromagnetic phenomena. Case studies are introduced to understand the advantages of geo-electromagnetic exploration schemes.
Wave propagation problem in seismic exploration	1	Discussing fundamental theories of elastic wave propagation, used in subsurface structural surveys, in terms of the actual utilization and the theories of wave phenomena.

【Textbook】

【Textbook(supplemental)】Claerbout, J.F. (1976): Fundamentals of Geophysical Data Processing (Available online URL: http://sep.stanford.edu/oldreports/fgdp2/)

【Prerequisite(s)】Students should understand exploration geophysics of undergraduate level.

【Web Sites】Could be specified by the lecturers if any.

【Additional Information】

10F087

Design of Underground Structures

地下空間設計

【Code】10F087 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Tue 3rd

【Location】C1-172 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】Toshihiro Asakura, Tsuyoshi Ishida

【Course Description】Outline of the characteristic of underground, the present state and trend of underground development, historical change of underground utilization are explained.
Especially, design and maintenance technology for tunnels and underground opening, and rock stress problem, are lectured in detail.

【Grading】Attendance(50%), class quiz and report(50%)

【Course Goals】Acquire the fundamental technology of underground structure design and maintenance.

【Course Topics】

Theme	Class number of times	Description
Guidance	1	Course description, Grading and Goals
Historical change	1	Historical change of underground development
Environment and Characteristic	1	Environment and Characteristic of underground
Act of deep underground use	1	Social background of the act and engineering problem
Rock stress	2	Underground stability and rock stress problems
Construction(1)	1	Survey technology for tunnelling
Construction(2)	2	Design technology for tunnelling and feed back system
Construction(3)	2	Construction work for tunnelling
Construction(4)	1	Evaluation and utilization of measurement
Maintenance	2	Maintenance technology, Tunnel deformation, Earthquake disaster of tunnels
Achievement check	1	Check the understanding

【Textbook】No set text

【Textbook(supplemental)】Instructed in class

【Prerequisite(s)】Taking Underground Development Engineering and Rock Engineering (when undergraduate) are desirable.

【Web Sites】

【Additional Information】

10A420

Lecture on Exploration Geophysics

探査工学特論

【Code】10A420 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Wed 4th

【Location】C1-117 【Credits】2

【Restriction】The class of "Fundamental theories of geophysical exploration" is recommended to acuire.

【Lecture Form(s)】Lecture 【Language】English 【Instructor】Hitosih Mikada, Tada-nori Goto

【Course Description】Applied geophysical exploration technologies in disaster mitigation, civil engineering, and earth resources engineering is discussed in terms of seismological and of electromagnetic theories. Students may be asked to process data or design digital filters in the course.

【Grading】Attendances to the class and reports are weighted as 60 and 40, respectively.

【Course Goals】Understanding seismiclogical and electromagnetic theories used in geophysical exploration and subsurface-imaging technologies.

【Course Topics】

Theme	Class number of times	Description
Electromagnetic signal processing	3	Principles of magnetotelluric methods, electromagnetic sources and noise reduction.
Modeling technologies in electromagnetic methods	3	Subsurface structure modeling in EM methods. The effects of surface weathered layers, the identification of spatial dimensions, and modeling methodologies are discussed.
Signal processing in seismics	4	Digital filtering in seismic data processing.
Reflection seismology	3	Fundamental theories of reflection seismic data processing. Seismic migration is the one to be briefly discussed.
Petrophysics	2	Fundamental petrophysics, and fundamental measurement theories in geophysical logging are discussed.

【Textbook】Specified in the course.

【Textbook(supplemental)】J.F.Claerbout, 1976, Fundamentals of Geophysical Data Processing, (OOP:photocopies to be specified)

【Prerequisite(s)】The credits of "Exploration Geophysics" in undergraduate course and "Fundamental Theories of Geophysical Exploration" in graduate course are requested to obtain before the classes.

【Web Sites】May be specified by the lecturers.

【Additional Information】

10F085

Measurement in the earth's crust environment

地殻環境計測

【Code】10F085 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Wed 3rd 【Location】C1-192

【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English

【Instructor】Tsuyoshi ISHIDA, Toshihiro ASAKURA, Koji YAMAMOTO

【Course Description】Necessity of information on the environment in the upper layer of the earth's crust will be explained, as well as measuring methods for it and applications of the measuring results for various engineering projects. Among them, rock stress measurements and their applications will be focused in the relation to the projects of oil field development, underground disposal of high level radio active waste, geological sequestration of CO2, construction of underground power houses and hot dry rock geothermal power extraction. The importance of initial stress conditions on planning and maintenance of tunnels and others also will be discussed.

【Grading】Grading will be made from scores of the followings: ・Report for classes by Ishida. ・Achievement test for classes by Yamamoto. ・Report for classes by Asakura. ・Number of attendance for the classes.

【Course Goals】Goals of this course are the followings. 1) To understand the important effect of initial rock stress on stability of underground chambers and deep underground tunnels. 2) To understand stress relief methods as one of typical methods to measure initial rock stress condition. 3) To understand the principle of a least square method though learning a procedure to determine an initial rock stress condition from released strains measured on a borehole wall. 4) To understand importance and purpose of rock stress measurement for oil field development through borehole breakout problems and others. 5) To understand hydraulic fracturing stress measurement conducted in drill holes for oil field development. 6)To understand history of tunneling technology in Japan. 7) To understand relations between maintenance of tunnels and underground environment. 8) To understand countermeasures against damages of tunnels induced by earthquakes.

【Course Topics】

Theme	Class number of times	Description
Importance of rock stress condition in underground development (by ISHIDA)	3	Necessity of rock stress measurements and their applications for various engineering projects. Among the projects, underground disposal of high level radio active waste, geological sequestration of CO2, construction of underground power houses and hot dry rock geothermal power extraction will be focused.
Stress relief methods to measure rock stress and applicaiton of least square method (by ISHIDA)	3	Actual field works of stress relief methods to measure initial rock stress condition will be explained. Though learning a procedure to determine an initial rock stress condition from released strains measured on a borehole wall, the principle of a least square method will be explained. The report subject will be shown in the last week.
Rock stress measurement for oil field development (by YAMAMOTO)	4	Estimation of rock stress condition by hydraulic fracturing and logging, which is conducted at various steps for oil field development, will be explained. Importance of rock stress affecting on borehole stability will be explained as well.
Tunneling technology in relation to underground environment (by ASAKURA)	4	Tunneling technology in Japan is historically reviewed. Relations between maintenance of tunnels and underground environment and countermeasures against damages of tunnels induced by earthquakes will be explained.
Check of understanding	1	Your understanding is checked by a written test.

【Textbook】None. Printed materials will be given in classes when needed.

【Textbook(supplemental)】1) Amadei, B. & Stephansson, O.: Rock Stress and Its Measurements, Capman & Hall, 1977.
2) Vutukuri, V. S. & Katsuyama, K.: Introduction to Rock Mechanics, Industrial Publishing & Consulting, Inc., Tokyo, 1994.

【Prerequisite(s)】Elasticity, Linear Algebra (Calculation of Matrices) and Computer Literacy (for example, Excel, Word and so on.)

【Web Sites】

【Additional Information】This class is made by English.

Energy System Management

エネルギー基盤マネジメント工学

【Code】10F086 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Fri 2nd 【Location】C1-171

【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English 【Instructor】Katsuaki Koike

【Course Description】Securance and develpment harmonious with natural environments of the mineral and fossil energey resources, and utilization of storage function of geologic strata have become important issues for consructing ssustainable society. This subject introduces comprehensively the present situation of uses of mineral and energy resources, crust structure and dynamics, economic geology for the genesis and geologic envisonments of deposits, physical and chemical exploration methods of marine deposits, mathematical geology for reserve assessment, engineering geology for resource development and geological repository, and problems and promisingness of natural energy such as geothermal, solar, wind, and tide.

【Grading】Integrated evaluation by attendance to the classes and report grades

【Course Goals】To find out directionality about the technologies required for constructing sustainable society by yourself with full understandings of genetic mecanism, biased distribution, and the present situation of demand and supply of the mineral and energy resources.

【Course Topics】

Theme	Class number of times	Description
Introduction of this course and resources	1	Definition of renewable and non-renewable resources. Interaction among Earth environment, human society, and natural resources. Existence pattern of natural resources in the crust.
1. Internal structure of Earth and geodynamics	1	Inner structure of the Earth, geodynamics, geologic composition, temperature structure, rock physics, and chemical composition of crust.
2. Present and future of energy resources	1.5	Classification of energy sources, recent trend on social demand of energy, physical characteristics of each energy resources, and sustainability.
3. Present and future of mineral resources	1.5	Classification of minerals used for resources, recent trend on social demand of mineral resources, industrial uses of each mineral, and sustainability.
4. Economic geology (1)	1	Classification of ore deposits, distribution of each type of ore deposit, generation mechanism of deposit.
4. Economic geology (2)	1	General structure and distribution of fuel deposits (coal, petroleum, and natural gas), generation mechanism of deposits, and geological process of formation.
5. Resource exploration (1): Terrestrial area	1	Physical and chemical exploration technologies for natural resources in terrestrial area. Representative methods are remote sensing, electric sounding, electromagnetic survey, and seismic prospecting.
6. Resource exploration (2): Sea area	1	Introduction of marine natural resources such as methane hydrate, cobalt-rich crust, and manganese nodule, and exploration technologies for the deposits in sea area.
7. Assessment of ore reserves and deposit characterization	1	Fundamentals of geostatistics, variography for spatial correlation structure, spatial modeling by kriging, geostatistical simulation, integration of hard and soft data, and feasibility study.
. Resource development	1	Development and management technologies of energy resources related to coal, petroleum, and natural gas.
9. Engineering geology	2	Fundamentals of deep geological repository for high-level nuclear waste, CCS (carbon dioxide capture and storage), and underground storage of petroleum and gas.
10. Sustainability	2	Characteristics of natural energy related to geothermal, solar, wind, and tide, aand ssessment of natural energy resources. Co-existence of natural resource development with environment, low-carbon society, and problems for human sustainability.

【Textbook】Printed materials on the class contents are distributed before each class.

【Textbook(supplemental)】References on each topic will be instructed in classes.

【Prerequisite(s)】Elementary knowledge of engineering, mathematics, physics, and geology.

【Web Sites】

【Additional Information】This course is opened every two years, and opened in 2013.

Infrastructure Creation Engineering

社会基盤工学創生

【Code】10F081 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Thu 4th 【Location】C1-192

【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese 【Instructor】related teaching staff

【Course Description】A system of scientific principles and technologies is required which enable to create safe, reliable and vigourous human society with enough world-wide competitiveness. The class of Infrastructure Creation Engineering will lecture ongoing, retrospective and perspective on global environment, fundamental science/engineering, social science, social ecomonics and major scientific pronciples and technologies on natural environment including ecological system, which are needed to develop infrastructures.

【Grading】Grading will be based on reports (70%) and evaluation in each class (30%).

【Course Goals】It is aimed to make understand a system of scientific principles and technologies shich is required to create human society with sustainable development and to indicate their concept clearly. Major contents to create infrastructure as well as fundamental knowledge on its retrospective and perspective will be able to be learned.

【Course Topics】

Theme	Class number of times	Description
Role of geotechnics in sustainable infrastructure creation	2	
Role of hydro mechanics and water engineering in infrastructure creation and its evaluation	2	
Planning for infrastructure creation	2	
Subjects in material and structural engineering in rebuilding of infrastructure	2	
Role of earth resouses engineering for sustainable development in harmonious with environment	2	
Role of environmental engineering in infrastructure creation	2	
Thermal fliuid dynamics for fundamental understanding of global environmental subjects	2	
Confirmation of educational achievement	1	

【Textbook】None

【Textbook(supplemental)】To be introduced at any time

【Prerequisite(s)】It is desired to acquire basic knowledge on civil, environmental, eath resources and mechanical engineering.

【Web Sites】None

【Additional Information】To present in every class will be checked.

10X311

Urban Infrastructure Management
都市基盤マネジメント論

【Code】10X311 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Mon 3rd 【Location】C1-117 【Credits】2 【Restriction】 【Lecture Form(s)】Lecture 【Language】English 【Instructor】OHTSU Hiroyasu

【Course Description】This lecture aims to provide interdisciplinary knowledge associated with how urban infrastructure is comprehensively management, from viewpoint of not only economy but also "human security engineering". In detail, the contents of lectures consist of following topics:
Urban Infrastructure Asset Management,
Urban Environment Accounting System,
Urban Energy Supply Management,
Urban Food/Water Supply Management,
Urban Transport/Logistics Management.

【Grading】Attendance(10), Participation(10), Report(80)

【Course Goals】Aquisition of interdisciplinary knowledge associated with how urban infrastructure is comprehensively management, from viewpoint of not only economy but also "human security engineering".

【Course Topics】

Theme	Class number of times	Description
Guidance, Introduction of Urban Infrastructure Asset Management	1	
Urban Infrastructure Asset Management	3	
Urban Transport/Logistics Management	3	
Urban Environment Accounting System	2	
Urban Food/Water Supply Management	2	
Urban Energy Supply Management	2	
Presentation	2	

【Textbook】

【Textbook(supplemental)】Geotechnical Infrastructure Asset Management (Third Edition), Kyoto University Global COE Global Center for Education and Research on Human Security Engineering for Asian Megacities, 2011.

10F112

Introduction to Sustainability/ Survivability Science

生存科学概論

【Code】10F112 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Mon 2nd 【Location】C1-192 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English 【Instructor】K. Takara (DPRI), H. Ishikawa (DPRI), B. He (DPRI), T. Hosoda (Engineering) and S. Yoden (Science)

【Course Description】There are many threats for human beings on the earth: medicine/infectious diseases, food, population, energy, water, environment and natural hazards and disasters. This class gives how to cope with these for human beings and societies. If we realized sustainable society, there are still catastrophes that we have to face. This class considers how to survive such catastrophic situations. Especially focused on are frequent and amplified extreme weather due to climatic change (or global warming) and subsequent severe disasters, water and environmental problems. Concepts and technologies for these problems are introduced, discussing the future perspectives of our society, science and technology based on various aspects and examples of climate, culture and ways of life in the world.

【Grading】Students will be evaluated by the number of attendance and a final written examination.

【Course Goals】Any graduate students in various disciplines can join this class. Mixture of different graduate students from different disciplines gives good discussions in the classroom in which global issues will be introduced and discussed by the teachers and students together. This is a graduate school level lecture class including presentations by students.

【Course Topics】

Theme	Class number of times	Description
Ｉｎｔｒｏｄｕｃｔｉｏｎ	1	The framework of sustainability/survivability science is given to understand its significance.
Examples	2	Introducing how to cope with various examples of threats that human beings are facing: medicine/infectious diseases, food, population, energy, water, environment and natural hazards and disasters.
Global warming and mitigation	3	A theory of global warming, technical countermeasures of mitigation and political situation in the world are given.
Extreme weather and its prediction	2	Recent water-related disasters and water problems due to extreme weather are introduced.
Adaptation	3	Examples and ideas of adaptation in the world are considered to cope with water-related disasters that are occurring more frequent and getting bigger.
Discussions	3	Giving students an opportunity to express their own ideas, teachers and students discuss his/her ideas.
Summary	1	Conclude this series of lectures.

【Textbook】No textbook specified. Handouts will be distributed if necessary.

【Textbook(supplemental)】Relevant literature would be introduced.

【Prerequisite(s)】The class is given in English with some Japanese language supplement for technical/special words. No background knowledge is necessary. Reading, writing and discussing in English is requirement.

【Web Sites】This lecture is related to a Global COE Program “ Sustainability/survivability science for a resilient society adaptable to extreme weather conditions ” (GCOE-ARS) for a period of 2009 to 2013. See also http://ars.gcoe.kyoto-u.ac.jp/ for further information.

【Additional Information】This class, which is given as graduate school-level lectures, can be taken by any graduate students from different disciplines including natural science, social science and humanity. Mixture of graduate students from different disciplines encourages exciting and interesting discussions by them to discuss global environmental issues with several professors and PDs.

693291

Emergency Management Systems
危機管理特論

【Code】693291 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Wed 1st

【Location】Faculty of Engineering Integrated Research Bldg. 213 【Credits】2 【Restriction】No Restriction

【Lecture Form(s)】Lecture 【Language】Japanese 【Instructor】Haruo HAYASHI, Norio MAKI, Shingo SUZUKI

【Course Description】Damage from disasters is defined by two factors: scale of hazard and social vulnerability. Two strategies exist to reduce damage from disasters — namely, crisis management as a post-event countermeasure and risk management as a pre-event measure. This course introduces students to a system for effective emergency management, consisting of response, recovery, mitigation, and preparedness.

【Grading】Every after lecture, please submit short report writing following things 1) Three points you could learn in this lecture, and reason 2) What you would like to explain more? Please send your short report to following address by following formats 1.address: disaster.reporti2@drs.dpri.kyoto-u.ac.jp 2.subject:「Emergency Management Report “ date ”“ ID ” “ Name ” 3.No attach file

【Course Goals】Learning about Techniques for Business Continuity Management consisted of Risk Assessment, Strategic Planning, Emergency Response, and Training.

【Course Topics】

Theme	Class number of times	Description
Business Continuity Management	3	What is emergency response, and business continuity management.
Risk Assessment	3	Techniques for Risk Identification, and Risk Assessment
Strategic Planning	3	Techniques for Strategic Planning and Evaluation
Emergency Response	3	Incident Command System, and Design of Emergency Operation Center
Training	3	Learning, drill, Exercises for Emergency Response

【Textbook】Haruo Hayashi et.al., Soshiki no Kikikannri Nyuumon, Maruzen, 2008// Kyodai, NTT Resilience Kennkyuu Group, Shinayakana Syakai no Souzou, Nikkei BP, 2009

【Textbook(supplemental)】Tom Demarco et.al, Waltzing With Bears: Managing Risk on Software Projects, Dorset House, 2003// Project Management Institute：A Guide to the Project Management Body of Knowledge 2000 Edition, Project Management Institute, Inc, 2000// R. Max Wideman：Risk Management - A guide to Managing Project Risk & Opportunities - , Project Management Institute, Inc, 2000// Memorial Conference in Kobe, 12 sai karano hisaisya gaku, NHK Press, 2005//

10F201

Information Technology for Urban Society
都市社会情報論

【Code】10F201 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Thu 1st

【Location】C1-192 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】Related Instructors

【Course Description】The advancement of urban society by the use of information has been realized through the remarkable development of informational communication technology. This seminar has the discussions about the worth and affect in the urban society using engineering and economic estimation method, and lectures about the way of maintenance, operation and management of urban systems in the advanced informational and knowledge-intensive society.

10Z001

Urban Transport Policy
都市交通政策フロントランナー講座

【Code】10Z001 【Course Year】Master and Doctor Course 【Term】1st term

【Class day & Period】see the handbook for course registration

【Location】conference room, UPL karasuma office （see the handbook for course registration） 【Credits】1

【Restriction】see the handbook for course registration 【Lecture Form(s)】Intensive Lecture 【Language】Japanese

【Instructor】Dai Nakagawa, Ryoji Matsunaka, JongJin Yoon, Tetsuharu Oba, and Mitsuya Matsubara

【Course Description】This class will provide lectures on the new transport policy carried out in domestic and foreign cities and to understand the difference between the conventional transport policy and the new urban transport policy. Also, it will cover a process to realize the new urban transport policy.

【Grading】evaluation by attendance and class participation

【Course Goals】to understand the difference between the conventional transport policy and the new urban transport policy

【Course Topics】

Theme	Class number of times	Description
Outline	1	
Front runner of urban transport policy in the world	2	Reallocation of road space, Pedestrianisation
Front runner of urban transport policy in Japan	1	Downtown activation, Strategies of sustainable transport for our cities, Climate change
Front runner of urban transport policy in Kyoto	1	Eco model city, Transport demand management, Public transport network
Basic concept and best practices of new urban transport policy	1	Community bus, Compact city
Discussion	1	
Presentation	1

10Z002

Policy for Low-Carbon Society

低炭素都市圏政策論

【Code】10Z002 【Course Year】Master and Doctor Course 【Term】1st term

【Class day & Period】see the handbook for course registration

【Location】conference room, UPL karasuma office （see the handbook for course registration） 【Credits】1

【Restriction】see the handbook for course registration 【Lecture Form(s)】Intensive Lecture 【Language】Japanese

【Instructor】Dai Nakagawa, Eiichi Taniguchi, Masashi Kawasaki, Yasunaga Wakabayashi, Tsutomu Doi, JongJin Yoon, and Mitsuya Matsubara

【Course Description】This class will provide lectures on the contents of policies and the methods to realize a low carbon society. Also, it will cover the knowledge and the technical skill to relate to urban activation, reduction of the environmental load, compact city planning, and so on.

【Grading】evaluation by attendance and class participation

【Course Goals】to understand the knowledge and the technical skill to relate to urban activation, reduction of the environmental load, compact city planning, and so on.

【Course Topics】

Theme	Class number of times	Description
Outline	1	
Direction of urban policy for low-carbon society	1	Compact city, Interaction between land-use and transport
Urban policy management for low-carbon society	1	Eco model city, Guideline for low-carbon city construction
Downtown activation & urban policy for low-carbon socity	1	Downtown activation, Compact city
Landscape & environmental planning	1	Landscape design in public space, View structure
Urban policy for low-carbon society and change of urban structure	1	Public transport, Pedestrianisation
City logistics	1	Logistics、Corporate social responsibility, Intelligent transport systems、Freight quality partnership
Discussion	1

【Instructor】Dai Nakagawa, Satoshi Fujii, Nobuhiro Uno, JongJin Yoon, Tetsuharu Oba, and Mitsuya Matsubara

【Course Description】This class will provide lectures on characteristics and problems of transport modes such as car, public transport, and foot. Also, it will cover the technical skill to analyze present urban traffic problems quantitatively.

【Grading】evaluation by attendance and class participation

【Course Goals】to understand characteristics and problems of transport modes such as car, public transport, and foot.

【Course Topics】

Theme	Class number of times	Description
Outline	1	
Plan and practice of public transport	1	City activation and attractiveness, Public transport, Light rail transit, Bus
Basic concept of mobility management	1	Mobility management, Activation of the public transport, Downtown activation
Investigation, interpretation, and evaluation on urban traffic phenomenon	3	Person trip survey, Transportation demand management, Cost-benefit analysis
Exercise and discussion	2

10F383

Engineering Seminar for Disaster Resilience in ASEAN countries 1

強靱な国づくりのためのｴﾝｼﾞﾆｱﾘﾝｸﾞｾﾐﾅｰ 1

【Code】10F383 【Course Year】Master 1st 【Term】1st term 【Class day & Period】Early in September

【Location】School of Engineering, Kasetsart University, Bangkok, Thailand 【Credits】2

【Restriction】Due to the capacity, students attending “ International Course on Approaches for Disaster Resilience ” have priority.

【Lecture Form(s)】Intensive Lecture 【Language】English

【Instructor】Prof. Hiroyasu Ohtsu, Related lecturers in ASEAN collaborative universities

【Course Description】The purpose of this course is to provide practical lessons in ASEAN countries associated with disaster risk mitigation such as early warning and evacuation program, and disaster recovery/restoration from viewpoints of problems-finding/problem-solving through short term intensive lecture and field work. By taking the applied practical programs of shared major classes under the instructions of teachers in charge, the students can improve the ability of resolving issues on practical projects. Topics taught in this seminar are earthquake, tsunami, landslide, and geo-risk engineering.

【Grading】40% for course work assignments and reports, 60% for final exam.

【Course Goals】Course aims to foster international leaders who are able to solve and manage problems concerned about natural disaster, disaster mitigation, health and environmental issues, especially about case studies in ASEAN countries.

【Course Topics】

Theme	Class number of times	Description
Introduction: Engineering for Disaster Resilience	1	
Seismic Design Concept	1	
Earthquake Disaster	2	
Tsunami Disaster	2	
Landslide Disaster	2	
Geo-Risk Engineering	2	
Site visit	5	

【Textbook】Lecture notes provided by the instructors.

【Textbook(supplemental)】

【Prerequisite(s)】

【Web Sites】Consortium for International Human Resource Development for Disaster-Resilient Countries, Kyoto University
http://www.drc.t.kyoto-u.ac.jp/

【Additional Information】Those who want to take this course are requested to apply for "International Course on Approaches for Disaster Resilience". Refer the website above.

10F384

Engineering Seminar for Disaster Resilience in ASEAN countries 2

強靱な国づくりのためのｴﾝｼﾞﾆｱﾘﾝｸﾞｾﾐﾅｰ 2

【Code】10F384 【Course Year】Master 1st 【Term】1st term 【Class day & Period】Late in September

【Location】School of Engineering, Kasetsart University, Bangkok, Thailand 【Credits】2

【Restriction】Due to the capacity, students attending “ International Course on Approaches for Disaster Resilience ” have priority.

【Lecture Form(s)】Intensive Lecture 【Language】English

【Instructor】Assoc Prof. Yasuto Tachikawa, Related lecturers in ASEAN collaborative universities

【Course Description】The purpose of this course is to provide practical lessons in ASEAN countries associated with disaster risk mitigation such as early warning and evacuation program, and disaster recovery/restoration from viewpoints of problems-finding/problem-solving through short term intensive lecture and field work. By taking the applied practical programs of shared major classes under the instructions of teachers in charge, the students can improve the ability of resolving issues on practical projects. Topics taught in this seminar are flooding, dam risk, coastal/river erosion, and water resource engineering.

【Grading】40% for course work assignments and reports, 60% for final exam.

【Course Goals】Course aims to foster international leaders who are able to solve and manage problems concerned about natural disaster, disaster mitigation, health and environmental issues, especially about case studies in ASEAN countries.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	
Flooding Disaster	3	
Dam Risk Engineering	1	
Costal/River Erosion	2	
Land Subsidence	2	
Water Resource Engineering	2	
Site visit	4	

【Textbook】Lecture notes provided by the instructors

10F382

Disaster and Health Risk Management for Liveable City

安寧の都市のための災害及び健康ﾘｽｸﾏﾈｼﾞﾒﾝﾄ

【Code】10F382 【Course Year】Master Course 【Term】1st term 【Class day & Period】Intensive course (2 weeks)
【Location】Sugiura Hall, Yoshida Campus 【Credits】2 【Restriction】30 students, priority for DRC course students
【Lecture Form(s)】Relay Lecture 【Language】English
【Instructor】Kiyono, Koyama, Kikuchi, Mitani, Fujii, Kawasaki,, Ando, Taniguchi, Teo
【Course Description】Various types of disasters constantly attack to Asian countries, and those countries sometimes are very vulnerable to the natural disasters and health risk. The interdisciplinary approach of engineering and medical science is indispensable to construct disaster-resilient countries. The 2011 Tohoku earthquake was one of the worst disasters in recent Japanese history. However many lessons to mitigate and manage the disaster are learnt from the event. In order to solve the related issues, the course provides selected topics about natural disaster, disaster-induced human casualty, emergency response, urban search and rescue, emergency medical service, principle of behavior based on neuroscience, urban search and rescue, reconstruction and rehabilitation policy, social impact of disaster, transportation management, logistics during earthquake disaster and so on.
【Grading】Course work assignments and reports
【Course Goals】Course aims to foster international leaders who are able to solve and manage problems concerned about natural disaster, disaster mitigation, health and environmental issues, logistics and amenity for constructing liveable city.
【Course Topics】

Theme	Class number of times	Description
Guidance and Group Work	2	
ORT	3	
Earthquake disaster and human casualty	1	
Earthquake protection and emergency responses	1	
Human brain function and behavior	1	
Disaster medicine and epidemiology	1	
Resilient society	1	
Transition of the design for amenity in the river-front	1	
Concern that elderly people in rural area have over health and mobility	1	
Differences in logistics and humanitarian logistics	1	
Unique challenges of humanitarian logistics	1	
Advancement on humanitarian logistics	1	
Achievement evaluation	1	

【Textbook】Textbook for the course is provided by the instructor on the first day.
【Textbook(supplemental)】Some literatures would be introduced by professors.
【Prerequisite(s)】No special knowledge and techniques are necessary.

Information Technology for Urban Society

都市社会情報論

【Code】10F201 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Thu 1st

【Location】C1-192 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】Related Instructors

【Course Description】The advancement of urban society by the use of information has been realized through the remarkable development of informational communication technology. This seminar has the discussions about the worth and affect in the urban society using engineering and economic estimation method, and lectures about the way of maintenance, operation and management of urban systems in the advanced informational and knowledge-intensive society.

Exercise on Project Planning

自主企画プロジェクト

【Code】10F251 【Course Year】Master 1st 【Term】1st+2nd term

【Class day & Period】1st term: Thu 3rd, 2nd term: Wed 5th 【Location】C1-192 【Credits】2

【Restriction】No Restriction 【Lecture Form(s)】Exercise 【Language】Japanese 【Instructor】Related instructors

【Course Description】The purpose of this seminar is to bring out the self-initiative, the planning ability, the creativity of students. From project and to practice, the students set up the goals of projects, go ahead with the projects by themselves, and finally make the presentations of project results. Specifically, about the internship activities in enterprises, the training activities in enterprises or universities at home and abroad, the planning and operation of collaborative projects with citizen, the student makes the perfect plannings including the purposes, the ways, the results and so on. For a final, the students do practice, they write the reports and make the presentations about the project results.

【Grading】Planning, implementation of project and reports are comprehensively evaluated.

【Course Goals】Goals are cultivating ability for self-initiative, planning and creativity.

【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Exercise 【Language】Japanese

【Instructor】Related instructors

【Course Description】The students make the projects and plannings on various problems in the urban society by widely making use of the basic knowledge which you've gotten in Department or Master Course. Actually, the students simulate the actual problems, and make the collection and analysis of datas. By that, the students evaluate the practice and effect of projects. At the end , the students write the reports about a series of project results and make the presentations about them.

【Grading】Evaluation for each student is made comprehensively based on both report and presentation about the project, and usual contribution of student to the project.

【Course Goals】Goals are to cultivate student ’ s ability for planning, creativity and communication.

【Location】C1-192 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】Kunitomo Sugiura, Tomomi Yagi

【Course Description】Continuum mechanics is a unified basis for solid mechanics and fluid mechanics. The aims of this course are to introduce the continuum mechanics from their basics to the some forms of constitutive law and also to provide students with mathematical way of understanding the continuum mechanics. This course contains the fundamentals of vector and tensor calculus, the basic equations of continuum mechanics, the tensor expressions of elastic problems and further applications.

【Grading】Assessment will be based on exam, report and attendance.

【Course Goals】Fundamental theorems on structural mechanics and design will be learned, and ability to judge the proprieties of each computational structural analysis will be acquired.

【Course Topics】

Theme	Class number of times	Description
Introductions	1	
Matrices and tensors	1	
differential and integral calculus of tensors	1	
Kinematics	1	- Material derivative
Deformation and strain	2	- Strain tensors - Compatibility conditions
Stress and equilibrium equation	1	
Conservation law and governing equation	1	
Constitutive equation of idealized material	1	
Elastic-plastic behavior and constitutive equation of construction materials	1	
Boundary value problem	1	
Variational principle	1	
Various kinds of numerical analyses	2	
Confirmation of the attainment level of learning	1	

【Textbook】

【Textbook(supplemental)】

Structural Stability
構造安定論

【Code】10F067 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Mon 2nd

【Location】C1-171 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English

【Instructor】Hiromichi SHIRATO, Kunitomo SUGIURA

【Course Description】Fundamental concept of static and dynamic stability of large-scale structures such as bridges is to be introduced in addition to the way to keep/improve their safety and to evaluate their performance. Basic concept of structural stability and its application and technical subjects to improve safety will be lectured systematically. Furthermore, the practical solutions to the subjects are to be introduced to assure the safety of structures.

【Grading】Grading will be evaluated by written examination, reports and attendance.

【Course Goals】The class aims to cultivate the understanding of static and dynamic stability problems for structural system and make understand the methodology to clarify the limit state. To get knowledge on countermeasures to assure the stability which is applicable to practical design and manufacturing will be also required.

【Course Topics】

Theme	Class number of times	Description
Elastic Stability under Static Loading	7	Stability of Structures and Failures Basis of Structural Stability Elastic Buckling of Columns Elastic Buckling of Beams & Frames Elastic Buckling of Plates Elasto-plastic Buckling Buckling Analysis
Basic theory of dynamic stability and its application	7	The stability around the equilibrium points based on the state equation of motion in which the nonlinearity of external, damping and restring forces are taken into account. Wind-induced vibration of a square prism (Galloping) and 1dof system with nonlinear spring will be introduced as practical examples. Chaotic motion of a pendulum subjected to periodic external force is also explained as an introduction of chaos theory.
Achievement Check	1	Summary and Achievement Check.

【Textbook】Not specified.

【Textbook(supplemental)】Introduced in class if necessary.

【Prerequisite(s)】It is desired for participants to master structural mechanics, continuum mechanics, mathematical analysis as well as vibration theory.

10F068

Material and Structural System & Management

材料・構造マネジメント論

【Code】10F068 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Wed 2nd 【Location】C1-173 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Relay Lecture 【Language】English 【Instructor】Toyoaki Miyagawa, Hirotaka Kawano, Atsushi Hattori, Takashi Yamamoto

【Course Description】With regard to the maintenance of concrete structures, the deterioration prediction procedures in material and structural properties are discussed based on durability and deterioration processes of concrete structures. Repair materials and methods are also introduced. Note: strengthening materials and methods are discussed in Concrete Structural Engineering, provided in the second semester. In the later half of this lecture, structures are focused as groups rather than an individual structure to understand the difference between asset management and maintenance. By taking into consideration the economic aspect and human resources aspect as well as the physical aspect, the flow of the asset management for structures' groups with view points of the life cycle cost and the budget is provided.

【Grading】Reports ,presentations and other activities are inclusively considered.

【Course Goals】To understand the maintenance for a single structure and the asset management for structure's group.

【Course Topics】

Theme	Class number of times	Description
1. Outline of maintenance for concrete structures	1	
2. Deterioration mechanisms of concrete structures and deterioration prediction	4	
3. Repair materials and methods for concrete structures	1	
4. Maintenance and asset management	2	
5. Maintenance for structures' group	2	
6. Management for structures' group	2	
7. Presentations and discussions	3	

【Textbook】Not specified. Some materials may be provided.

【Textbook(supplemental)】Not specified.

【Prerequisite(s)】Basic knowledge on Construction Materials and Concrete Engineering.

【Web Sites】

【Additional Information】Positive presence in the lecture is expected by joining discussions for example.

【Location】C1-172 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Relay Lecture

【Language】English 【Instructor】Related Faculty members

【Course Description】Structural engineering problems related to planning, design, construction and maintenance of the infrastructures are discussed. Topics concerning structural engineering and management are widelly taken up including latest advanced knowledge and technology, future view and/or international topics. Special lectures by extramural lecturers are carried out if necessary.

【Grading】Coursework will be graded based on the reports.

【Course Goals】To grasp problems related to structural engineering and their specific solutions.
To understand applicability of advanced technologies and development prospects.

【Course Topics】

Theme	Class number of times	Description
Structural Materials, Structural Mechanics	4	Steel materials, Concrete materials, mechanical behavior of structures, Problems related to design, construction and maintenance
Applied Mechanics	1	Numerical analysis for structure performance evaluation
Earthquake and Wind Resistance of Structures	7	Infrastructure and natural disaster, Trends of disaster prevention technology, Problems related to Earthquake and wind resistant design
Maintenance of structure	3	International technology, Scenario design, International technological education and collaboration

【Textbook】The textbook is not required. Materials will be supplied by instructors.

【Textbook(supplemental)】Supplemental text books will be introduced by instructors.

【Prerequisite(s)】Structural Mechanics, Wind Resistant Design, Construction Materials, Dynamics of Structures, etc.

【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English

【Instructor】Tomoaki Utsunomiya, Yoshikazu Takahashi, Yoshiaki Kubota

【Course Description】This course provides the knowledge of the structural planning and design for civil infrastructures. Fundamentals of the reliability of structures based on the probability and statistics are given. Emphasis is placed on the reliability index and the calibration of partial safety factors in the LRFD design format. Furthermore, the structural morphology, aesthetics and case studies of structural design that satisfies “ utilitas, firmitas and venustas ” are given. Then we discuss what the holistic structural design should be.

【Grading】Assessed by term-end examination, reports and quizes

【Course Goals】To understand the structural planning and design for civil infrastructures.
 To understand the reliability-based design of structures.
To deepen the understanding of aesthetics of structures.

【Course Topics】

Theme	Class number of times	Description
Structural Planning	2	Structural Planning of civil infrastructures is introduced. The concept, significance of planning, characteristics of civil infrastructures are discussed. Practical planning process of a bridge is explained.
Modern Excellent Designs	1	The excellent examples of modern structural design are introduced from the viewpoint of the structural system and the urban design. Then the importance of integrated design of urban infrastructure as a place of human activities and how the design should be are lectured.
Structure and Form	2	The bridge types, for example, girder, truss, and arch etc. that have been regarded individually, are lectured as an integrated holistic concept from the viewpoint of the acting forces to understand the structural continuity, symmetry and the systems. Furthermore, the methods of the operation of structural form are given.
Structural Design and Performance-based Design	3	Design theory of civil infrastructures is introduced. The allowable stress design method and the limit state design method are explained. The basic of earthquake resistant design is discussed based on the dynamic response of structures. Performance-based design is also introduced.
Random Variables and Functions of Random Variables	1	Fundamentals of random variables, functions of random variables, probability of failure and reliability index in their simplest forms are lectured.
Structural Safety Analysis	3	Limit states, probability of failure, FOSM reliability index, Hasofer-Lind reliability index, Monte Carlo method are lectured.
Design Codes	2	Code format as Load and Resistance Factors Design (LRFD) method, calibration of partial safety factors based on the reliability method are given.
Assessment of the Level of Attainment	1	Assess the level of attainment.

【Textbook】Reliability of Structures, A. S. Nowak & K. R. Collins, McGraw-Hill, 2000 (for T. Utsunomiya)

【Textbook(supplemental)】U.Baus, M.Schleich, "Footbridges", Birkhauser, 2008（Japanese ver.: "Footbridges"(translated by Kubota, et al.), 鹿島出版会 , 2011）
久保田善明 , 『橋のディテール図鑑』, 鹿島出版会 , 2010
Other books will be given in the lectures as necessary.

【Prerequisite(s)】Fundamental knowledge on Probability and Statistics, and Structural Mechanics

【Web Sites】

【Additional Information】Structural planning and design will be given by Y. Takahashi, Excellent designs and structure & forms by Y. Kubota, and Structural reliability analysis by T. Utsunomiya.

10F010

Bridge Engineering

橋梁工学

【Code】10F010 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Mon 3rd 【Location】C1-172 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English

【Instructor】Hiromichi Shirato, Kunitomo Sugiura, Tomoaki Utsunomiya, Tomomi Yagi

【Course Description】The subject matter of bridge engineering can be divided into two main parts, which are steel structure and wind loading/wind resistant structure. The aim of this course is to provide details of mechanical behaviors, maintenance and design of bridge structures. The former part of this course contains the static instability of steel structures and the problems of corrosion、fatigue、brittleness、weldability on steel bridges. In the latter part, the basics of wind engineering, bridge aerodynamics and wind-resistant design including current problems to be solved are provided are provided.

【Grading】Assessment will be based on exam, reports and attendance.

【Course Goals】

Also, the basic knowledge for wind engineering and aerodynamic instabilities, which are necessary for the wind resistant design of bridges, will be acquired.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	- Fundamental knowledge on steel structures - Types of steel structures - Future trend of steel structures
Material behavior, Initial imperfections and Damages	1	- Construction of steel structures - Residual stresses and initial deformations - Damages
Stress-strain relationship, Joints	1	- Yield surfaces - Bauschinger effect - Hardening effect - Welded joint - Bolted joint
Fatigue fracture, fatigue life and fatigue design	1	- S-N design curve - Fatigue crack growth, stress intensity factor - Miner's rule on damage accumulation - Repair of fatigue damage
Structural stability and design for buckling	1	- Structural instability and accident - Theory of Stability - Compressive members, etc.
Corrosion and anti-corrosion of steel structures	1	- Mechanism of corrosion - Micro- and Macro- cells - Anti-corrsion - Life-cycle costs
Wind resistant design of structures	3	- Natural winds due to Typhoon, Tornado and so on - Evaluation and estimation of strong winds - Wind resistant design methods - Various kinds of design codes
Aerodynamic instabilities of structures	3	- Introduction of aerodynamic instabilities (ex. vortex-induced vibration, galloping, flutter, buffeting, cable vibrations) - Mechanisms of aerodynamic instabilities - Evaluation methods and Countermeasures
Wind-induced disaster	1	- Accidents on structures due to strong winds - Disaster prevention
Topics	1	Introduction of current topics on bridge engineering by a visiting lecturer
Confirmation of the attainment level of learning	1	Confirm the attainment level of learning

【Course Description】This course deals with dynamics of structural systems and related topics, to provide the theoretical basis to deal with the problems of vibration, safety under dynamic loads and health monitoring associated with infrastructures. The students will study the dynamic response, properties of natural modes and methods of eigenvalue analysis for multi-DOF systems. The topics on the numerical time integration schemes, probabilistic evaluation of structural response to random excitation, and dynamic response control techniques for structures are also studied.

【Grading】Based on the results of a final examination, plus homework assignments

【Course Goals】(1) To aquire the knowledge on theories and principles of analysis of MDOF systems (2) Systematic understanding of frequency-domain structural response analysis (3) Concept of analysis of numerical time integration schemes (4) Understanding of fundamentals of the random vibration theory

【Course Topics】

Theme	Class number of times	Description
Introduction	1	Fudamental concepts, harmonic motion
Dynamics of Multi-Degree-Of-Freedom Systems	2	Formulation of Eq. of Motion / Lagrange's method / Normal Modes / Modal Analysis / Modeling of System Damping
Frequency-Domain Analysis of System Response	1	Frequency Response Funcs. / Fourier Transform
Numerical Time Integration	2	Formulation / Stability and Accuracy Analysis of Integration
Random Vibration	6	Overview / Probability Theory / Sequence of i.i.d. Random Variables / Concept of Random Processes / Correlation Funcs. / White Noise / Stochastic Differential Eq. / Lyapunov Eq. / Response to White Noise Excitation / Covariance Matrix Approach / Correlation Funcs. of Random Response / Spectral Representation of Random Processes / Spectral Representation of Structural Response / Application
Structural Response Control	2	Active Control / Semi-Active Control
Achievement Evaluation	1	Students' achievements in understanding of the course material are evaluated.

【Textbook】Not used; Class hand-outs are distributed when necessary.

【Textbook(supplemental)】

【Prerequisite(s)】Mechanical vibration (undergraduate level), Complex calculus (integration of analytic functions, Fourier transform, etc.), Probability theory, Linear algebra

Seismic Engineering Exercise

サイスミックシミュレーション

【Code】10F263 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Mon 4th 【Location】C1-192 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture and Exercise 【Language】Japanese 【Instructor】Sawada, Takahashi

【Course Description】This course provides the knowledge of simulation methods for earthquake engineering. Small groups of students are exercised in the prediction of ground motion generated by a specified seismic fault and the response analysis of structure selected by themselves considering soil-structure interaction.

【Grading】Based on the performance during the course (including homework) and the results of presentation and reports.

【Course Goals】At the end of this course, students will be required to have a good understanding of: - Prediction of ground motion generated by a specified seismic fault - Dynamic response analysis of structures and foundation (linear/nonlinear)

【Course Topics】

Theme	Class number of times	Description
Frequency domain analysis	1	Basics of Fourier transformation is introduced.
Modeling of structure - soil system and time domain analysis	1	Equation of motion of SR model is introduced and the integration method of the equation in time domain is explained.
Exercise of linear seismic response analysis	2	Small groups of students are exercised in elastic modeling of structures and linear response analysis in time domain and frequency domain.
Prediction of ground motion by empirical Green's function method	3	Empirical Green's function method is introduced to predict large earthquakes based on observed small earthquakes.
Seismic analysis method of soil	2	Seismic analysis method of layered half-space based on equivalent linearization method is introduced.
Nonlinear seismic analysis method of structures	2	Nonlinear modeling of structures and the integration and iterative methods of the nonlinear equation of motion in time domain are introduced.
Exercise of nonlinear seismic response analysis	3	Small groups of students are exercised in the prediction of ground motion generated by a specified seismic fault and the nonlinear response analysis of structures and foundation.

【Course Description】Lecture on outline of impact of construntion materials to environment and influence on materials and structures from environment. Discuss how to use materials sustainably. Keywords are concrete, steel, composite materials, CO2, durability, recycle and reuse, life-cycle assessment.

【Grading】Attendance(%), Report(%),Presentation(%)

【Course Goals】To understand the limit of resources and effect of material use to environment. and to understand the basic theory to make environmental-friendly infrastructures from the view point of materials use.

【Course Topics】

Theme	Class number of times	Description
Guidance	1	Object of the Course, Grading and Goals
product of materials and impact to environment	1	Product of cement, steel, concrete CO2 product and its influence
recycle and reuse of materials	3	Recycle and reuse of steel, metals, concrete, asphalt, plastics Technology development of construction materials
deterioration of concrete structures	1	Mechanism of deterioration of concrete structures: carbonation, salt attack, alkali-aggregate reaction Maintenance and retrofit methods
deterioration of steel structures	1	Mechanism of deterioration of steel structures: corrosion, fatigue Maintenance and retrofit methods
deterioration of composite structures	1	Mechanism of deterioration of composite structures: Maintenance and retrofit methods
life-cycle assessment of structures	1	Life-cycle assessment of structures considering initial cost as well as maintenance cost
topics and discussion	2	Recent topics on construction materials and discussion
presentation by students and discussion	4	Presentation by students on the individual topics Discussion on the topics

【Course Description】The issues concerning the safety and reliability of infrastructures such as tunnels and bridges and also the issues on natural disaster are reviewed in the lecture.

【Grading】This lecture involves reports (70%) and attendance(30%)

【Course Goals】To understand the basic technologies to enhance the safety of structures and also the fundamentals on disaster prevention.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	Introduction on the safety of infrastructures
Reliability engineering and safety	3	Evaluation of safety based on reliability analysis and risk analysis
Maintenance of railway structures	1	Planning, investigation, evaluation and repair in maintenance for mainly railway structures is generally explained
Disaster prevention in railway structures	1	To sustain the users' safety in railway system, it is necessary to maintain the structures properly but also to consider the prevention against disaster. Thus herein disasters in railway structures and its counteractions are explained
Regulation and counteraction against rainfall	1	The need for regulation in railway operation at rainfall is explained
Risk assessment for rainfall disaster	1	Risk assessment for rainfall disaster is described and also some practical cases are introduced
Technical tour	2	Prevention technologies against natural disaster
Disaster prevention for structures in soil	1	Counteractions for railway structures against slope sliding are explained
Counteraction for strong wind	1	Practical actions against strong wind in railway operation is explained
Earthquake and its early detection	1	Warning system for earthquake and the algorithm of earthquake early detection, which is one of the regulations for Super expressway in earthquake, is explained
Report	1	Report

【Course Description】Physical mechanisms of the hydrologic cycle are described from the engineering viewpoint. The rainfall-runoff modeling and its prediction method are emphasized. Physical hydrological processes explored are surface flow, saturated-unsaturated subsurface flow, groundwater flow, streamflow routing, and evapotranspiration. Physical mechanism of each hydrological process and its numerical modeling method are explained. The basic equations and numerical simulation methods are provided. Then, distributed hydrological modeling which incorporate various hydrological processes and a lumping method of distributed hydrological model are explained.

【Grading】Examination and report

【Course Goals】The goals of the class are to understand the physical mechanism of hydrological processes, their basic equations, and numerical simulation methods.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	The hydrologic cycle and the hydrological processes are explained.
Surfaceflow	2	The physical process of the surface flow and its numerical modeling method are described. The basic equations of the surface flow and the numerical simulation methods are explained.
Saturated-unsaturated subsurface flow	2	The physical process of the saturated-unsaturated subsurface flow and its numerical modeling method are described. The basic equations of the saturated-unsaturated subsurface flow and the numerical simulation methods are explained.
Groundwater flow	2	The physical process of the groundwater flow and its numerical modeling method are described. The basic equations of the groundwater flow and the numerical simulation methods are explained.
Streamflow routing	2	The physical process of the streamflow routing and its numerical modeling method are described. The basic equations of the streamflow routing and the numerical simulation methods are explained.
Evapotranspiration	2	The physical process of the evapotranspiration and its numerical modeling method are described. The basic equations of the evapotranspiration and the numerical simulation methods are explained.
Channel network and watershed modeling	1	Numerical representations of channel networks and catchments are explained.
Distributed hydrological model	1	A physically-based distributed hydrological model is described, which is constructed with numerical representations of channel networks and catchments.
Lumping of flow, parameter and watershed model	1	Lumping methods of a distributed hydrological model are described, which include lumping of flow, parameter and watershed model.
verification of study achievement	1	Verification of study achievement

【Textbook】Handouts are distributed at each class.

【Textbook(supplemental)】

【Prerequisite(s)】Basic knowledge of hydraulics and hydrology

River Engineering and River Basin Management
河川マネジメント工学

【Code】10F019 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Wed 1st
【Location】C1-173 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese
【Instructor】Hosoda, Kishida
【Course Description】It is important to consider about rivers comprehensively in view of the various aspects based on natural science and engineering. The fundamental knowledge to consider rivers and make the plans of river basins is explained with the following contents: various view points to consider rivers, long term environmental changes of rivers and its main factors, river flows and river channel processes, ecological system of rivers and lakes, flood disasters, integrated river basin planning(flood defense, environmental improvement planning, sediment transport system), functions of dam reservoir and managementto learn the fundamental knowledge and grounding to consider rivers from the various points of view such as natural science, engineering and social science.
【Grading】Reports, Attendance
【Course Goals】The fundamental knowledge which can consider a river with various senses from a viewpoint of natural science, an engineering viewpoint and a social-scientific viewpoint, is mastered.
【Course Topics】

Theme	Class number of times	Description
Various view points on rivers and river basins	1	Various viewpoints and river basins, Various rivers on the earth, Formation processes of river basins, long term environmental changes of rivers and its main factors
Ecological system in rivers	2	Fundamental knowledge on river eco-system
Application of computational methods to environmental problems	2	Numerical analysis of the environmental change in Lake Biwa, Flood flows and river channel processes
Recent flood disasters & Integrated river basin planning	2	Characteristics of recent flood disasters, River law, Fundamental river management plan, River improvement plan, Procedures of flood defense planning, Flood invasion analysis and hazard map
Groundwater and its related field	2	Simulation technology of groundwater, Geo environmental issues, Reservoir Engineering, Contaminant Transport Processes
Sustainable development of dam	2	Needs of dam development and history of dam construction. Maintenace of Dam reservoir
Economic evaluation of environmental improvement projects	1	Evaluation of people's consciousness for river improvement works by means of CVM, Conjoint Analysis, etc.
Dam structure and maintenance	2	Dam structure, foundation, grouting. Desighn of Arch Dam and Graviety Dam.
Achievement Confirmation	1	Comprehension check of course contents (Report)

【Textbook】Printed materials regarding the contents of this class are distributed in class.
【Textbook(supplemental)】
【Prerequisite(s)】Fundamental knowledge of Hydraulics, Hydrology and Ecology
【Web Sites】
【Additional Information】Students can contact with professors by visiting their rooms and sending e-mail.

10A040

Sediment Hydraulics

流砂水理学

【Code】10A040 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Mon 2nd 【Location】C1-171 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese 【Instructor】Hitoshi Gotoh and Eiji Harada

【Course Description】Natural flows in river and coast are movable bed phenomena with the interaction of flow and sediment. At a river and a coast, a current and a wave activate a sediment transport and bring the topographical change of a bed such as sedimentation or erosion. This lecture provides an outline about the basics of sediment (or movable bed) hydraulics, and detail of the computational mechanics of sediment transport, which has been developed on the basis of dynamics of flow and sediment by introducing a multiphase flow model and a granular material model. Furthermore, about sediment and water-environment relationship, some of frontier technologies, such as an artificial flood, removal works of dam sedimentation, coastal protection works, and sand upwelling work for covering contaminated sludge on flow bottom etc., are mentioned.

【Grading】Grading is based on student ’ s activities in lectures and written examination.

【Course Goals】Students understand the basics of sediment hydraulics and outline of advanced models for computational sediment hydraulics, such as multiphase flow model and granular material model. Students understand the present conditions of sediment control works.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	The purpose and constitution of the lecture, the method of the scholastic evaluation are explained.
Basics of sediment hydraulics	5	Physical characteristic of a movable bed and a non-equilibrium sediment transport process and its description are explained. Furthermore, the prediction technique of topographical change due to current and waves is outlined.
Computational mechanics of sediment transport: The state of the art	8	Essential parts of numerical models of the movable bed phenomena, which has been developed by introducing dynamic models such as a granular material model to describe a collision of sediment particles and a multiphase flow model to describe a fluid-sediment interaction, are described. In comparison with the conventional movable bed computation, the points on which has been improved to enhance the applicability of the models are concretely mentioned. Some frontier studies of sediment transport mechanics are also introduced.
Achievement cofirmation	1	Comprehension check of course contents.

【Textbook】Hitoshi Gotoh: Computational Mechanics of Sediment Transport, Morikita Shuppan Co., Ltd., p.223, 2004 (in Japanese).

【Textbook(supplemental)】Non

【Prerequisite(s)】Undergraduate-level Hydraulics or Hydrodynamics is required. Because a commentary easy as possible is kept in mind by lectures, students without these prerequisite are welcomed.

10F464

Hydrologic Design and Management
水工計画学

【Code】10F464 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Fri 2nd 【Location】C1-191 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese 【Instructor】Yasuto TACHIKAWA

【Course Description】Methods for hydrologic design and real-time rainfall-runoff predictions are described. The frequency analysis of hydrologic extreme values and the time series analysis of hydrologic variables are described, and then the methods to set the external force for the hydrologic design are explained. Next, a physically based hydrologic model which includes the process of human activities for the hydrologic cycle is described. In addition, the predictive uncertainty for the hydrologic simulation is introduced. A flood control planning and water resources management with the use of innovative hydrologic simulation tools is described. Then, the climate change and the relation to the hydrologic design are discussed. A real-time rainfall runoff prediction method with the use of Kalman filter theory is described.

【Grading】Examination and report

【Course Goals】The class aims to understand the statistical analysis and time serried analysis of hydrologic variables to set the external force of hydrologic designs, applications of hydrologic simulations for hydrologic designs, and real-time rainfall and runoff prediction methods for water resources management.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	A flood control planning and water resources planning are introduced.
Frequency analysis and hydrologic design	3	The frequency analysis of hydrologic extreme values is described. The methods to set the external force for the hydrologic design are explained.
Time series analysis and hydrologic design	3	The time series analysis of hydrologic variables is described. The methods to develop time series models, time serried data generation methods, spatiotemporal variation of hydrologic variables and a random field model, disaggregation methods are explained.
Hydrologic modeling and predictive uncertainty	1	Hydrologic models which include the process of human activities for the hydrologic cycle is described. Then, hydrologic predictive uncertainty is explained, which is inevitable coming from model structure uncertainty, parameter identification uncertainty and model input uncertainty. Especially, the relation between spatiotemporal scales of hydrologic modeling and model parameter values is described.
Hydrologic modeling system	1	A hydrologic modeling system which helps to develop complicated hydrologic simulation models and its importance for a flood control planning is also described.
Climate change and hydrologic design	1	Data analysis of the latest GCM simulation is presented and the possible changes of hydrologic extremes and hydrologic design are discussed.
Real-time rainfall runoff prediction	4	A real-time rainfall runoff prediction method with the use of Kalman filter theory is described.
Verification of study achievement	1	Verification of study achievement is conducted.

10F245

Open Channel Hydraulics

開水路の水理学

【Code】10F245 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Fri 1st
【Location】C1-173 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English
【Instructor】HOSODA, Takashi

【Course Description】Fundamental theory of Open Channel Hydraulics used in River Engineering and Urban Fluid Engineering Fields are lectured, showing various applications in Hydraulic Engineering Field. The contents include the following items: Application of singular point theory to water surface profile analysis, Derivation of 2-D depth averaged model, 1-D analysis of unsteady open channel flows, Plane 2-D analysis of steady high velocity flows, Plance 2-D analysis of unsteady flows, Higher order theory, etc.

【Grading】Regular examination

【Course Goals】to understand the grounds of Open Channel Hydraulics and to learn how to apply Open Channel Hydraulics to practical problems in hydraulic engineering field.

【Course Topics】

Theme	Class number of times	Description
Guidance	1	The outline of this class is introduced by overviewing the whole framework of Open Channel Hydraulics with various computational results.
Derivation of 2-D depth averaged model	1	Derivation procesures of plane 2-D depth averaged model are expalined in detail
Application of singular point theory to water surface profile analysis	1	
1-D analysis of unsteady open channel flows	3	Fundamental characteristics of 1-D unsteady open channel flows, Method of Characteristics, Dam break flow, Computational methods
Fundamentals of numerical simulation	1	Considering the convective equation as an example, fundamental knowledge of numerical simulation is explained by means of finite difference method, finite element method, etc. Applications these method to unsteady open channel flows are also shown with some practical applications.
Plane 2-D analysis of steady high velocity flows	1	Characteristics of steady plane 2-D flow are explained based on the method of characteristics.
Plance 2-D analysis of unsteady flows	3	Propagation of characteristic furface, shear layer instability, application of a generalized curvilinear coordinate to river flow computation, application of a moving coordinate system, etc.
Higher order theory	3	Boussinesq equation with the effect of vertical acceleration, full/partially full pressurized flow onserved in sewer network, trafic flow analysis by means of dynamic wave model
Examination of understanding	1	The understanding of the contents is examined through the paper examination.

【Textbook】Printed materials on the contents of this class are distributed in class.

【Textbook(supplemental)】

【Prerequisite(s)】Elementary knowledge of fluid dyanamics and hydraulics

【Web Sites】

【Additional Information】Students can contact with Hosoda by sending e-mail to hosoda.takashi.4w@kyoto-u.ac.jp This class is open in 2012.

10F462

Coastal Wave Dynamics
海岸波動論

【Code】10F462 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Fri 1st

【Location】C1-173 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English

【Instructor】Hitoshi Gotoh, Eiji Harada and Khayyer Abbas

【Course Description】Wave motion, which is the main driving force in coastal zone, is explained focusing on wave transformation theory and computational fluid dynamics, and design for coastal structures of their engineering applications is illustrated. As for the computational fluid dynamics for waves, methodology of free-surface wave based on the Navier-Stokes equation, which has been significantly developed in recent years, is explained in detail.

【Grading】Grading is based on student ’ s activities in lectures and written examination.

【Course Goals】Goal of this course is a detailed understanding of fundamental of wave transformation theory and computational fluid dynamics related to wave motion, and is also acquiring a design concept for coastal structures as their engineering applications.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	The purpose and constitution of the lecture the method of the scholastic evaluation are explained.
Conservation laws of fluid	4	Fundamentals of fluid mechanics, liner / non-liner wave theories and numerical mathematics are explained.
Modeling of surf zone dynamics	6	Several methodologies against free-surface wave including breaking waves (i.e. VOF, MPS, SPH) are illustrated. Especially advanced approaches of MPS and SPH are explained in detail.
Introduction of turbulence models	1	Reynolds averaging models and large eddy simulation are outlined.
Modeling of rock mound dynamics	2	Method for tracking of armor blocks under high waves using Distinct Element Method is described.
Achievement Confirmation	1	Comprehension check of course contents.

【Instructor】Hori, T.(DPTI) and Tanaka, K.(DPRI)

【Course Description】Systems approach to natural and social phenomena associated to water resources is introduced in terms of planning and design of sustainable water resources systems.

【Grading】Grading is done based on examination and commitment to classes.

【Course Goals】Deep understanding of fundamentals for systems modeling of water-related natural and social processes and ability to perform data collection, analyses and design of sustainable water management systems.

【Course Topics】

Theme	Class number of times	Description
Optimum design of water resources systems	3	
desicion support for water resources management	3	
Recent topics on water management	1	
Water management practices in the world	3	
Land surface model and its application to water management	4	
achievement check	1	

【Textbook】Not specified.

【Textbook(supplemental)】Supplemental documents will be introduced in classes.

【Instructor】(DPRI) Nakagawa, H., (DPRI) Sumi, T., (DPRI) Takebayashi, H. and (DPRI) Kawaike, K.

【Course Description】In a river basin, various kinds of disasters such as debris flow, land slide, flood inundation, storm surge, and etc. sometimes happen from the origin to the mouth. This lecture presents occurrence examples, mechanisms, theory and methods of prediction and prevention/mitigation methods against those disasters. Also this lecture mentions comprehensive management in a sediment routing system focusing on sediment management strategy in dam reservoirs.

【Grading】Grading is based on 2 reports out of 4 topics and attendance.

【Course Goals】The goals of the class are to understand phenomena within a river basin and to have wide knowledge of problems of flood and sediment disasters and countermeasures against them.

【Course Topics】

Theme	Class number of times	Description
About Sabo Works	4	About Sabo works, sediment disasters, countermeasures against sediment disasters, Sabo projects.
About Reservoir Sediment Management	3	Reservoir sediment management focusing on reservoir sustainability and comprehensive management in a sediment routing system is overviewed including worldwide perspective and Japanese advanced case studies.
About basin-wide sediment routing	4	About the one dimensional bed deformation analysis and the sediment runoff model are introduced. Furthermore, some examples of the application of those models are introduced.
About basin-wide flood management	4	Flood disasters and countermeasures against them are overviewed along the history of flood management in Japan.

【Textbook】No designation. Printed materials regarding the contents of this class are distributed in class.

【Textbook(supplemental)】Instructed in class

【Prerequisite(s)】Fundamental knowledge of Hydraulics and river engineering

【Instructor】Hiromichi Shirato, Satoru Ushijima

【Course Description】Computational Fluid Dynamics (CFD) is largely developed according to the progress of computer technology in recent years. It is the powerful and effective technique to predict the various fluid phenomena, which show the complicated behaviors due to the non-linearity and other conditions. This course provides the dynamics of fluids and eddies as well as the discretization and numerical techniques, such as finite difference, finite volume and discrete vortex methods.

【Grading】The grading will be based on homework assignments.

【Course Goals】Course goal is to understand the basic theory and numerical techniques for CFD.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	Introduction of recent examples of CFD
computational method for incompressible fluids	7	The course introduces the MAC algorithm, which is generally used for incompressible Newtonian fluids on the basis of finite difference and finite volume methods (FDM and FVM). The outline of numerical methods is also discussed for parabolic, hyperbolic or elliptic partial differential equations, in terms of the numerical stability and accuracy. Homework will be assigned each week.
unsteady viscous flow around bluff body by surface vorticity method	7	The surface vorticity method is introduced as one of the effective method which can solve an unsteady separating flow from an edge and its reattachment to a body. The mesh- and pressure-free concept in this method is introduced, which can be applied various flow phenomena including unsteady separation. SOme special treatment such as how to introduce the viscosity (core spreading, random walk) and how to evaluate surface pressure distribution will be explained. Design of airfoil geometry is also introduced as one of application of the method.

【Textbook】No textbook assigned to the course

【Textbook(supplemental)】Recommended books and papers will be introduced in the course.

【Prerequisite(s)】Basic knowledge of fluid dynamics, continuum mechanics and computational technique

【Web Sites】

10F065

Hydraulic Engineering for Infrastructure Development and Management
水域社会基盤学

【Code】10F065 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Tue 3rd 【Location】C1-117 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English 【Instructor】Hosoda Takashi, Toda Keiichi, Gotoh Hitoshi, Tachikawa Yasuto, Kisihida Kiyoshi, Harada Eiji, Sanjou Michio and Khayyer Abbas

【Course Description】This lecture picks up various water-related problems and provides their explanation and solution methodology related to hydrodynamic and hydrological infrastructure improvements, maintenance, disaster prevention against flood and damage of water environment, interweaving several leading-edge cases in the real world. Turbulent flow and CFD, sediment transport system and design/planning of hydraulic structure are described on the basis of the integrated management of river-and-coast systems with sediment control and these relationship with infrastructure improvement. Perspective from the viewpoint of public environmental infrastructure on water environment is presented.

【Grading】Grading is based on students activities in lectures and reports.

【Course Goals】Students learn about case-based practical solutions against various problems related to hydraulic engineering, and students acquire academic preparation of how to approach to public environmental infrastructure on water area.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	The purpose and constitution of the lecture, the method of the scholastic evaluation are explained.
Hydraulics in open-channel flows	3	Several problems and exciting topics related to hydraulics in open-channel flows are discussed with advanced practical examples.
River basin management	3	Introduction of flood disasters during a few decades in the world, flood control planning in Japan, Economic evaluation and analysis of people ’ s awareness to river improvement projects with dam construction.
Beach erosion	3	Several problems and their solution methodology against sediment transport process in coastal zone are explained. Advanced approaches for sediment control are overviewed.
Rainfall-runoff prediction and hydrologic design	3	Water resources issues related to rainfall-runoff prediction and hydrologic design are discussed with advanced practical examples.
Numerical simulation for Hydraulic engineering	1	Recent numerical simulation development and related state-of-the-art technologies are overviewed.
Achievement Confirmation	1	Comprehension check of course contents.The exercises to the given subjects are performed.

【Instructor】Tomoharu Hori, Tetsuya Sumi, Yoshitaka Kido, Yasuhiro Takemon, Kenji Tanaka

【Course Description】Applied and integrated approach to the problems closely related to the water circulation system, such as floods, droughts, water contamination, ecological change, and social change is introduced mainly from the hydrological viewpoint with reference to water quantity, quality, ecological and socio-economic aspects. In the course, several actual water problems are taken up and solving process of each problem which comprises of problem-identification and formulation, impact assessment, countermeasures design and performance evaluation is learned through the lectures ' description and also investigation and discussion among the students.

【Grading】Grading is based on student activities in lectures, presentation and reports

【Course Goals】To obtain fundamental Knowledge and skills to perform problem definition, survey amd countermeasure design on problems about water use, water hazard mitigation and water environment.

【Course Topics】

Theme	Class number of times	Description
Water Resources Systems	2	Interaction between water resources and socio-economic systems, Distributed flood risk assessment and countermeasures design from human security viewpoint
Reservoir Systems and Sustainability	2	Reservoir system and its environmental impacts, Sustainable management of reservoir system
Land Surface Proceses	3	Modelling of land surface processes, Application of land surface model
Water Quality Management	3	Diffuse pollution control, Water quality management of enclosed lake and groundwater
Hydro-eco Systems	3	Ecohydrological management of habitats in river ecosystems, Ecohydrological management of biodiversity in wetland ecosystems
Presentation and Discussion	2	Presentation and Discussion on related topics
Examination

【Instructor】K. TAKARA(DPRI), H. NAKAGAWA(DPRI), E. NAKAKITA(DPRI), H. MASE(DPRI), N. MORI(DPRI), Y. YAMASHIKI(DPRI)

【Course Description】Environmental impacts by infrastructure for disaster prevention and mitigation are discussed. Introducing various examples of natural disasters, degradation of the environment, and harmonizing disaster management and environmental conservation in the world, this classroom carries on a dialogue about effective measures for reducing negative environmental impacts and serious disasters.

【Grading】Considering both the number of attendances and the score of final test at the end of the semester.

【Course Goals】Conservation of the environment and prevention/mitigation of natural disasters, which are very important for human's survivability, often conflict with each other. This course introduces various examples. Students will learn many examples harmonizing these two issues, and shall consider technical and social countermeasures fitting to the regional characteristics.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	Introduction
Disaster due to heavy rainfall -- utilization of weather radar and global climate change	3	Disaster due to heavy rainfall -- utilization of weather radar and global climate change
Flood disaster prevention and the environment	2	Flood disaster prevention and the environment
River environment and disaster management	2	River environment and disaster management
The environment of closed water areas / Atmosphere-ocean climate interaction	2	The environment of closed water areas / Atmosphere-ocean climate interaction
Coastal disasters due to tsunamis and storm surges	2	Coastal disasters due to tsunamis and storm surges
Projection of climate and coastal environmental change	2	Projection of climate and coastal environmental change

【Textbook】No particular textbook for this course. Necessary documents and literature introduction are provided in the class room from time to time.

【Textbook(supplemental)】Some literature would be introduced by professors.

【Prerequisite(s)】No special knowledge and techniques are necessary, but requires reading, writing and discussing in English in the class.

10F106

Integrated Disasters and Resources Management in Watersheds
流域管理工学

【Code】10F106 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Mon 1st

【Location】Katsura Campus, Ujigawa Open Laboratory, Shirahama Oceanographic Observatory and Hodaka Sedimentation Observatory

【Credits】2 【Restriction】 【Lecture Form(s)】Lecture and Exercise 【Language】English

【Instructor】Masaharu FUJITA(DPRI), Tetsuya HIRAISHI(DPRI), Nozomu YONEYAMA(DPRI), Kenji KAWAIKE(DPRI), Hiroshi TAKEBAYASHI(DPRI), Daizo TSUTSUMI(DPRI)

【Course Description】Mechanism and countermeasures of sediment disasters, flood disasters, urban flood disasters and coastal disasters are explained. An integrated watershed management of these disasters and water/sediment resources is also introduced. This lecture will be open at Katsura Campus, Ujigawa Open Laboratory, Shirahama Oceanographic Observatory and Hodaka Sedimentation Observatory. Students attending this lecture must take one of the intensive experiment/field study courses offered in Ujigawa Open Laboratory and these observatories.

【Grading】Presentation, Discussion and Report

【Course Goals】Learn an integrated basin management system for natural disasters (sediment disasters, food disasters, coastal disasters, urban flood disasters) mitigation and water/sediment resources utilization considering environmental conservation.

【Course Topics】

Theme	Class number of times	Description
Urban flood disaster managemnet	2	We review urban floods from the viewpoint of river basins, flood causes, and features, together with the results of recent studies. Based on these studies, we propose comprehensive measures against urban floods, including underground inundations. In addition, we discuss on prediction methods of the tsunami disaster in urban area.
Flood disaster management	2	Prevention / mitigation measures against flood disasters and flood prediction methods are explained as well as examples of recent flood disasters in Japan.
Sediment disaster management	2	Showing the problems on sediment disasters and sediment resources, I explain an integrated sedimnet management system both for sediment disasters and sediment resources.
Coastal disaster management	2	Coastal erosion and tsunami hazard become remarkable in these days in Japanese coast. In a lecture, we discuss on characteristics of such coastal disasters.
Exercise on flood disaster at Ujigawa Open Laboratory (Selective)	集中２日間	Experiment and analysis on debris flows, riverbed variation and flooding at Ujigawa Open Laboratory, Fushimi-ku, Kyoto city.
Exercise on sediment related disaster at Hodaka Sedimentation Observatory (Selective)	集中２日間	The Hodaka Sedimentation Observatory is located at Okuhida region, Gifu Prefecture. In the field exercise, observation methods of rainfall-runoff and sediment movement processes will be explained. Field investigations into several types of erosion control facilities, sediment producing sites, debris flow sites and sediment related disaster sites will be carried out.
Exercise on coastal disaster at Shirahama Oceanographic Observatory (Selective)	集中２日間	The Sirahama Maritime Observatory is located in Wakayama Prefecture. In the lecture, observatory, waves, currents and tide levels monitoring system is demonstrated.

Geomechanics

地盤力学

【Code】10F025 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Mon 2nd

【Location】C1-172 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】Fusao Oka, , Sayuri Kimoto

【Course Description】Mechanical behavior of soils and problems of its deformation and failure, based on the multiphase mixture theory and the mechanics of granular materials, will be covered in this lecture.

【Grading】Final examination and several papers

【Course Goals】The objectives of this course are to understand the basics of geomechanics, and the advanced theories.

【Course Topics】

Theme	Class number of times	Description
Deformation of geomaterils	1	Mechanical property of geomaterials, Critical state soil mechanics, Failure criteria, Effective stress, Suction
	2	
elasto-plastic constitutive model	3	Constitutive model for geomaterials, Elasto-plastic model, Cam clay model
Theory of viscosity and viscoplasticity	3	Viscoelasticity, viscoplasticity, Elasto-viscoplastic mode, Adachi-Oka model, Microstructure of soils, Temperature dependent behavior, Applications of constitutive models
Consolidation analysis	3	Biot's consolidation theory and its application, Consolidation of embankment
Liquefaction of soils	2	Liquefaction of sandy soil, Damage and failure due to liquefaction, Remedial measures for liquefaction
Confirmation of achievement	1	

【Textbook】Soil mechanics, Fusao Oka, Asakura Publishing (in Japaneses)
An elasto-viscoplastic constitutive model, Fusao Oka, Morikita Publishing (in Japanese)

【Textbook(supplemental)】

【Prerequisite(s)】Soil mechanics, Fundamentals of continuum mechanics

【Location】C1-172 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English

【Instructor】Ohtsu,Shiotani

【Course Description】This lecture aims to provide interdisciplinary knowledge associated with geo-risk engineering, the topics of risk analysis focusing on geotechnical structures. In detail, the contents of lectures consist of following topics: Introduction to risk analysis, Mathematical background of geo-risk evaluation, Examples of risk evaluation mainly focusing on slopes and Risk management on road slopes.

【Grading】Attendance(10%), Report(30%), Examination(60%)

【Course Goals】

【Course Topics】

Theme	Class number of times	Description
Guidance	1	Guidance Introduction of Geo-Asset Management
Basic	5	Basics of Risk Analysis (3), Basics of Monitoring (2)
Probability theory	4	Evaluation of Slope Risk
Miscellaneous of Risk	2	Application of Risk Based Inspection, Risk Management of International Construction Project
Case Studies in Southeast Asian Countries	2	Landslide Disaspter in Southeast Asian Countries (2)
Discussions	1	
Final Exam	1

10F241

Construction of Geotechnical Infrastructures

ジオコンストラクション

【Code】10F241 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Fri 1st

【Location】C1-171 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English

【Instructor】Kimura, Kishida

【Course Description】Advanced construction technology of geo infrastructures, such as tunnel, large underground cavern, foundation, culvert, retaining wall, is introduced and explained. And, the practical projects applied by the advanced construction technology are also introduced.

【Grading】Attendance (20 %), Report, Examination and Presentation (80 %)

【Course Goals】To learn to the advanced construction technology and to propose the project and design through the advanced construction technology.

【Course Topics】

Theme	Class number of times	Description
Guidance, Introduction of construction of geotechnical infrastructures	1	Guidance, Introduction of construction of geotechnical infrastructures
Underground cavern	2	Stability of underground cavern,
Auxiliary mthods of mountain tunnel	2	Role of auxiliary methods, Auxiliary method for safety in tunnel constrcution, Axiliary methods for preservation of the surrounding environment
Undergorund space project	2	Introduce two special projects of underground space, namely, nuclear waste disposal, and Carbon Capture and Storage
Field visit or special lecture	1	Visit the construction field or invite special lecture who is the expert engieer on the construction of geotechnical infrastructures.
Foundation	2	Design and construction of piles foundation and steel pipe sheet piles
Culvert	2	Design and construction of box type and arch type culverts
Retaining wall	2	Design and construction of retaining wall
Examination of understanding	1

10F405

Fundamental Geofront Engineering

ジオフロント工学原論

【Code】10F405 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Mon 3rd
【Location】C1-172 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English
【Instructor】M.Mimura,S.Nishiyama,T.Koyama,K.Ando

【Course Description】This lecture aims to learn a practical knowledge associated with mechanical and hydraulic problems in rock masses to realize environment-friendly development of underground space through exercise in modelling and analytical study of rock mass.

【Grading】Problem sets will be given almost every week and due one week later in class. You can work together but must turn in your own solutions.

【Course Goals】This course is designed to give students knowledge and understanding to recognise and apply the fundamental techniques used in engineering rock mechanics for the analysis of underground engineered structures.

【Course Topics】

Theme	Class number of times	Description
Introduction to rock mechanics and rock engineering	1	Introduction to common geophysical investigation methods and field investigation methodology.
Rock mass behaviour around excavations	1	How to apply popular failure criteria to determine the strength of both intact rock and discontinuities. How to assess the geometry of discontinuous rock masses using customary measures and techniques
	1	
	1	
Rock strength and rock mass classification	2	Rock construction techniques for rock foundation works and also for construction of rock caverns and tunnels. Proposals for support of strength and running of construction works in rocks based on conceptual engineering geological models, assessment of the Q-value and of the mechanical characteristics of the rock mass.
Underground excavations in discontinuous and stratified rock	1	Basic rock geology emphasizing characteristics of rocks, in particular structural features and the importance of discontinuities in rock construction works.
	1	
	1	
Computer methods in rock mechanics and rock engineering:	2	Introduction to computer programmes for underground space design, rock mechanics, and environmental control.
Hydrogeology and groundwater flow in geotechnical	1	The influence of the groundwater conditions on the characteristics of the rock mass, in particular concerning strength and stability but also rock construction technique and environmental consequences.
Risk assessment and risk management	2	Risk assessment processes in rock engineering and management principles with respect to the environment.
	1	

【Textbook】Handout will be distributed.
【Textbook(supplemental)】References are indicated in the handout.
【Prerequisite(s)】Undergraduate courses in geology, geotechnical engineering,and soil mechanics.

10A055

Environmental Geotechnics

環境地盤工学

【Code】10A055 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Mon 1st
【Location】C1-192 / Engineering Bldg.No.8 Kyodo No.1 (Yoshida Campus) 【Credits】2 【Restriction】No Restriction
【Lecture Form(s)】Lecture 【Language】Japanese/English 【Instructor】Takeshi Katsumi, Toru Inui
【Course Description】Several issues on environmental geotechnics including geoenvironmental contamination and countermeasure, waste containment and reuse are introduced to understand the contribution of geotechnical engineering to global and local environmental issues. Geoenvironmental issues due to the 2011 East Japan Earthquake and Tsunami are also introduced.
【Grading】Continuous assessment including attendance, some assignments, and final report
【Course Goals】Students should understand the geotechnics to solve the following geoenvironmental issues; soil & groundwater contamination, waste disposal and waste utilization, and extend this knowledge to the development of concepts and technologies for creating and preserving the geo-environment.
【Course Topics】

Theme	Class number of times	Description
Introduction	1	Introduction to Environmental Geotechnics, including goals, outline and grading policy of the course
Waste geotechnics	3-4	Functions and structures of waste containment facilities Geotechnics on the liner system (Geosynthetics, clay liner, Leachate collection layer) Post-closure utilization of waste landfill
Remediation geotechnics	3-4	Behaviors of contaminants in subsurface Mechanisms of soil and groundwater contamination Remediation of soil and groundwater contamination Case histories
Geo-environmental issues related to construction works, global environmental issues, and natural disasters	2-3	Mechanisms and remediation of geoenvironmental problems and geo-disasters caused by construction works Geoenvironmental issues caused by the 2011 East Japan Earthquake and Tsunami
Reuse of wastes in geotechnical applications	3-4	Engineering properties of recycled materials in geotechnical applications (Incineration ashes, coal ash, surplus soils, dredged soils) Geoenvironmental impact assessment and control of waste utilization Case histories
Presentation and discussion	2-3	Student presentation, discussion, and summary on above topics

【Textbook】Not specified.
Several technical papers related to the course will be distributed.
【Textbook(supplemental)】Geoenvironmental Engineering (Kyoritsu Shuppan Publishing, ISBN: 9784320074293)
Handbook of Geoenvironmental Engineering (Asakura Publishing, ISBN: 9784254261523)
Introduction to Environmental Geotechnics (Japanese Geotechnical Society, ISBN: 9784886444196)
【Prerequisite(s)】Having knowledge on soil mechanics and geotechnical engineering at bachelor level is preferable, but not requirement.

Disaster Prevention through Geotechnics

地盤防災工学

【Code】10F109 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Mon 2nd 【Location】C1-117 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English 【Instructor】Susumu Iai and Tetsuo Tobita

【Course Description】The lecture covers methods of numerical analysis for dynamic behavior of the ground and geotechnical structures. In particular, the lecture covers mechanism, failure modes, and mitigation measure to geo-hazards. The lecutre ranges from mechanics of granular materials to numerical simulation.

【Grading】Based on reports to excercises and attendance.

【Course Goals】Successful students will have the ability to initiate their own research work on geo-hazards based on the solid understanding of the mechanics of granular materials and numerical analysis.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	Introduction to the course (objectives, contents, and grading procedure) - ABC's of computers - Numerical errors - Application of numerical analysis to seismic engineering
Fundamentals of numerical analysis	2	- Numerical solution of a simultaneous equation of the 1st order (SOR method) - Numerical integration method of PDEs (finite difference method)
Application to boundary value problems	1	Seepage analysis - Governing equations - Boundary conditions - Numerical solution of boundary value problems
Spectral analysis 1	2	Spectral analysis 1 - Fourier spectrum - Power spectrum - Autocorrelation function
Spectral analysis 2	2	Spectral analysis 2 - Response spectra - Smoothing method - Bandpass filter
Fundamentals of dynamics	3	Learn fundamentals of dyanamics for numerical analysis of geo-hazards during earthquakes
Mechanics of granular materials	4	Learn granular materials subject to transient and cyclic loads

【Location】C1-173 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】Dai Nakagawa and Ryoji Matsunaka

【Course Description】This lecture aims to learn urban environmental policy and its fundamental theory and methodology to solve social and environmental problems that occur in urban area as well as to understand the structure of these problems.

【Grading】evaluation by commitment, tests, reports and examination

【Course Goals】to understand the structure of social and environmental problems in urban area and urban environmental policy, its fundamental theory and methodology to solve the problems

【Course Topics】

Theme	Class number of times	Description
Outline	1	
Structure of urban problems	3	Expansion of urban areas, Increase of Environmental impact, Making compact cities
Basic theory of transportation and environment	2	Downtown activation, Road space re-allocation, Pedestrianisation
Road traffic and Public transportation	2	Characteristics of traffic modes, Light Rail Transit, Bus Rapid Transit, Mobility Management
Fundamental theory for measurements of environmental values	3	Utility, Equivalent Surplus, Compensating Surplus
Methodology to measure environmental values	3	Travel Cost Method, Hedonic Approach, Contingent Valuation Method, Conjoint Analysis
Summary	1

City Logistics

シティロジスティクス

【Code】10F213 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Wed 3rd 【Location】 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English 【Instructor】Eiichi Taniguchi, Ali G. Qureshi

【Course Description】The methodologies of city logistics for establishing efficient and environmentally friendly logistics systems in urban areas will be described. Focusing on the truck traffic within road network, the process, models and the evaluation for building urban freight policy will be given. As well logistics systems using recent development of ICT, the effects of e-commerce on freight transport and supply chain management will be discussed.

【Grading】Term examination 80%, Report 10% and Quiz 10%

【Course Goals】The course goals are fully understanding the methodologies for establishing efficient, environmentally friendly and safe logistics systems in urban areas as well as obtaining the basic knowledge on modelling and evaluating city logistics initiatives.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	Introduction to issues on urban freight transport is given and the importance of these issues is discussed in conjunction with urban planning.
What is city logistics?	1	City logistics are presented to totally solve problems on the efficiency of urban freight transport as well as social problems including tranffic congestion, traffic environment, traffic safety and energy. The concepts of city logistics and characteristics and implementation methods are given.
Status quo and issues in freight transport---urban freight transport policy	1	The status quo and issues on freight transport is presented and urban freight transport policies are discussed for establishing efficient, environmentally friendly logistics systems in urban areas.
ITS and logistics	1	Logistics systems using ITS (Intelligent Transport Systems) are presented and how to implement city logistics initiatives using ITS is discussed.
Vehicle routing and scheduling	3	Models for optimising the visiting order and allocation of trucks in delivering goods to customers in urban areas are given and solution methodologies and practical applications are discussed. The probabilistic vehicle routing and scheduling problems with the uncertainty of travel times as well as the dynamic vehicle routing and scheduling problems with the real time travel times are also described.
Location of logistics terminals	2	The optimal location models of logistics terminals and the solution methodologies and their application to practical problems are presented. The location routing planning including vehicle routing and scheduling problems are discussed.
Cooperative freight transport systems	1	Cooperative freight transport systems which jointly operate logistics terminals, trucks and information systems are presented. The merits and demerits of cooperative freight transport systems as well as the methods for promoting them are discussed.
Application of ICT and ITS	1	It is shown that ICT (Information and Communication Technology) and ITS (Intelligent Transport Systems) allow us to collect data, transmit and analyse them relating to city logistics. The importance of ICT and ITS is emphasized.
Supply chain management, third party logistics and intermodal freight transport	1	Supply chain management, third party logistics and intermodal freight transport is presented and the innovative management systems which are used in modern logistics are discussed.
New freight transport systems	1	The chategorization, characteristics and significance of new freight transport systems including underground freight transport systems are presented. The possibility of realizing new freight transport systems is discussed based on cost benefit analyses.
transport demand management and e-commerce	1	The transport demand management, which is important in city logistics is described and the difference is highlighted with the transport demand management for passenger traffic. Effects of e-commerce on urban freight transport are discussed based on recent behaviour change of consumers.
deregulation and evaluating city logistics	1	The deregulation on freight transport is described and performance indicators for evaluating city logistics initiatives are discussed.

【Instructor】N. Uno and T. Yamada
【Course Description】This class provides you with the outlines of engineering methodology with information and communication technology as its core element for improving the safety, efficiency and reliability of traffic and transportation systems and reducing the environmental burden. Concretely, we discuss the applicability of countermeasures, such as Travel Demand Management, modal-mix in transportation systems, traffic safety improvement schemes for relieving contemporary problems in traffic and transportation systems, in addition to brief introduction of innovative approaches to collect high-quality of real-time traffic data. Moreover, the methodology for policy evaluation and the related basic theory are explained.
【Grading】Final report: 50-60%, Mid-term report: 30-40% and Attendance: 10%
【Course Goals】Goal of this class is to cultivate basic and critical abilities of students for implementing effective traffic and transportation management using ITS (Intelligent Transportation System).
【Course Topics】

Theme	Class number of times	Description
Basics for Transportation Network Analysis	1	
Estimation of OD Traffic Volume using Observed Link Traffic Counts	1	
Analytical Approaches Based on Transportation Network Equilibrium	3	
Outlines of ITS	1	
Traffic Management for Enhancing Efficiency	2	
Innovative Approaches for Data Collection Using ICT	1	
Application of ITS for Enhancing Traffic safety	1	
Travel Demand Management and Congestion Charging	2

【Lecture Form(s)】Lecture & Exercise 【Language】Japanese 【Instructor】Masayuki Tamura, Junichi Susaki
【Course Description】Geoinformatics is the science and technologies dealing with spatially distributed data acquired with remote sensing, digital photogrammetry, global positioning system, etc, to address the problems in natural phenomena or human activities. This lecture particularly focuses on satellite remote sensing and explains the theory and the technologies for analyzing environmental changes or disaster effects. A free software "MultiSpec" is used in exercises to learn the basic techniques of image processing.
【Grading】Grading is based on the achievements in home works given in every lesson.
【Course Goals】To understand the basic theory and to acquire the basic techniques of satellite remote sensing for observation and analysis of environmental changes and disaster effects.
【Course Topics】

Theme	Class number of times	Description
Introduction	1	1. Introduction to remote sensing 2. Applications in environmental and disaster prevention fields
Classification of electromagnetic waves and satellite sensors	1	1. Classification of electromagnetic waves 2. Basic terms on electromagnetic radiation 3. Theory of electromagnetic radiation from objects 4. Classification of satellite sensors by observation wavelengths
Interaction of electromagnetic waves with earth surfaces	1	1. Reflection and scattering of electromagnetic waves by earth surfaces 1.1 Bidirectional reflectance distribution function 1.2 Bidirectional reflectance factor 2. Spectral reflectance properties of earth surfaces and objects
Atmospheric effects on satellite observations	1	1. Absorption and scattering of electromagnetic waves by atmospheric particles 2. Atmospheric radiative transfer of electromagnetic waves 3. Atmospheric effects on satellite observations 4. Correction of atmospheric effects
Optical sensors	1	1. Principles of visible and reflective infrared sensors 2. Examples of visible and reflective infrared sensors 3. Applications of reflective infrared sensors
Thermal infrared sensors	1	1. Principles of thermal infrared sensors 2. Measurements of surface temperature by satellite sensors 3. Examples of thermal infrared sensors 4. Applications of thermal infrared sensors
Image processing 1 (Image correction)	1	1. Image processing procedure 2. Image enhancement 3. Image correction 4. Correction of geometrical distortion
Image processing 2 (Image classification)	1	1. What is image classification? 2. Theory of image classification 3. Classification rules 4. Image classification procedure
Microwave sensors	1	1. Microwave 2. Microwave sensors 3. Real Aperture Radar (RAR) 4. Synthetic Aperture Radar (SAR) 5. Interferometric SAR 6. Differential Interferometric SAR

【Instructor】Muneta Yokomatsu

【Course Description】The aim of the class is to provide the basic knowledge of risk management methods for various types of risks such as natural disaster, environment and natural resources in urban and rural areas. Students will learn the decision making principle under risks in Economics and asset pricing methods in Financial Engineering as well as have exercises of application on public project problems.

【Grading】20% of score is valuated on attendance and discussion in classes, and 80% on reports.

【Course Goals】It is targeted to understand 1) representative concepts of risk and risk management process, 2) expected utility theory and 3) foundation of Financial Engineering, and examine 4) public project problems by applying the above knowledge.

【Course Topics】

Theme	Class number of times	Description
Basic framework of risk management	2	1-1 Representative concept of risk 1-2 Risk management technologies
Decision making theory under risks	3	2-1 The Bayes' theorem 2-2 The Expected utility theory
Financial engineering	6	3-1 The Capital Asset Pricing Model 3-2 Option pricing theory 3-3 The arbitrage theorem 3-4 The Black-Scholes formula
Decision making methods for projects	3	4-1 The decision tree analysis 4-2 The real option approach
Comprehension check	1	5 Comprehension check

【Instructor】TATANO Hirokazu, YOKOMATSU Muneta
【Course Description】Natural disasters have low frequencies but high impacts. It is very important to make an integrated risk management plan that consists of various countermeasures such as prevention, mitigation, transfer, and preparedness. This class will present economic approaches to natural disaster risk management and designing appropriate countermeasures.
【Grading】Evaluate mainly by the presentations in the class as well as end-of-term report, taking active and constructive participation in the class into account.
【Course Goals】Students are expected to understand fundamental ways of economic analyses of disaster prevention such as economic valuation of disaster losses, decision making principle under risks, derivation of benefits of risk management.
【Course Topics】

Theme	Class number of times	Description
Introduction to disaster risk management	1	Introduction and Explanation of Course Outline, The Global Trends of Natural Disasters
1. Decision making theory under uncertainty	1	Bayes' theorem, Expected utility function
Methods of disaster risk management	1	Risk control and risk finance
Economic valuation of catastrophic risk mitigation	1	Cost-Benefit analysis, conventional valuation method, catastrophic risks and economic valuation of disaster mitigation
Risk perception bias, land-use and risk communication	2	Risk perception bias, land-use model, risk communication
Disaster risk finance	2	Recent issues of risk finance market, reinsurance, CAT bond, roles of government, derivatives
Risk curve and risk assessment	1	Fragility curve and risk assessment
General equilibrium analysis under disaster risk	1	General equilibrium model under disaster risk
Macrodynamics under disaster risk	1	GDP, economic growth
Disaster accounting	1	Accounting systems
Exercise and presentation	2	Students' exercise and presentation
Confirmation of the learning achievement degree	1	Confirmation of the learning achievement degree

【Course Description】This lecture gives an outline of disaster prevention and reduction countermeasures both inside and outside Japan with special reference to disaster information related topics. Concrete examples of disaster information systems are introduced to show that psychological aspect of information users under critical social conditions is carefully taken into account in such current disaster information systems.
【Grading】Submit every class reports and end-of-term report Every class reports:
“ Point out 3 discoveries for you and 1 request which you want to know more with reasons in this class.
Submit report via Email by the following rules
1. Address: disaster¡nfo@imdr.dpri.kyoto-u.ac.jp
2. subject: “ Disaster Information Report [Date] Student ID, Name ”
3. Don ’ t use attached file.
4. Dead line: Next Tuesday

Resources Development Systems

資源開発システム工学

【Code】10A402 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Fri 1st 【Location】C1-172 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese 【Instructor】T. Matsuoka, S. Murata

【Course Description】Development of mineral resources and energy resources is essential to the sustainable development of our society and economy. In this class, the exploration and development process of such the natural resources are reviewed including the environmental conservation and harmony. In addition, petrophysics dealing with the basic physical properties of rocks and its application to the resources exploration, fundamentals and applications of reservoir engineering used to evaluate the production behavior and reserves of oil and natural gas are lectured.

【Grading】Evaluation is made by the average score of the report problems presented by each teacher.

【Course Goals】The goal of this class is to master the fundamentals of petrophysics and reservoir engineering needed for the exploration and development of oil and natural gas resources.

【Course Topics】

Theme	Class number of times	Description
From exploration to development of natural resources	1	The exploration and development process of mineral resources and energy resources, which are essential to the sustainable development of our society and economy, is reviewed including the environmental conservation and harmony.
Petrophysics used in natural resources development	6	To know the elastic properties of sedimentary rocks is essential when we consider the exploration and development of oil and natural gas resources. For the sedimentary rocks, physical variables, a rule of thumb and the pore fluid that affect the elastic wave velocity are mainly lectured. For igneous rocks, in addition, the rule of thumb on the physical properties of the rocks affected by fractures are lectures, because fractures in the rocks defines their physical properties.
Fundamentals of reservoir engineering	5	The properties of reservoir fluids and the material balance method to evaluate the reserve of oil and natural gas are explained.
Fluid flow in the reservoir	2	Basic equations of fluid flow in the reservoir and the analytical solution for the flow of oil and natural gas around a well are explained, and the concept and the method of well test analysis are also explained.
Enhanced oil and natural gas recovery	1	The methods of enhanced oil and natural gas recovery (EOGR) are overviewed. The essentials of each EOGR method are explained.

【Textbook】Handouts are delivered.

Computational Mechanics and Simulation

計算力学及びシミュレーション

【Code】10K008 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Tue 2nd

【Location】C1-173 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture and Exercises

【Language】English 【Instructor】Gotoh, Murata, Furukawa, Liang

【Course Description】The process to obtain numerical solutions for various problems in compuational mechanics. Descretization and some solvinng technique for initial/boundary value problems is to be introdeced by the FEM, FDM, VM and PM with programming exercises. Statistical mechanics, molecular dynamics, Monte Carlo method and Multiple scale model will be shortly introduced in order to understand the basic theory of molecular dynamics simulation. Their application to engineering problems are to be also given by showing some up-to-date examples. Theory of the distinct element method (DEM) will be lectured, and its application in the engineering field will also be explained.Current technology of the particle method by is to be explained on the violent flow phenomena with free surface. The prticular subjects in PM such as mometum conservation and convection of pressure disturbance by numerical instability, etc. will be inntroduced. This course will be given in English.

【Grading】Achievement is evaluated by submitted reports to each topic.

【Course Goals】

【Course Topics】

Theme	Class number of times	Description
Homogenization technique and FEM	4	Homogenization method with FEM will be lectured in this item. It is used for obtaining the equivalent homogenized material constants of an anisotropic composit material to be analyzed. The method to obtain homogenized elastic coefficient tensor will be especially focused on.
Molecular dynamics simulation	4	Statistical mechanics, molecular dynamics, Monte Carlo method and Multiple scale model will be shortly introduced in order to understand the basic theory of molecular dynamics simulation. Their application to engineering problems are to be also given by showing some up-to-date examples.
Distinct element method and its application	4	Theory of the distinct element method (DEM) will be lectured in this item. The DEM is the numerical analysis method for discontinuum. The application of the DEM in the engineering field will also be explained.
Free surface flow analysis by particle method	3	Current technology of the particle method by is to be explained on the violent flow phenomena with free surface. The prticular subjects in PM such as mometum conservation and convection of pressure disturbance by numerical instability, etc. will be inntroduced.

Modelling of Geology

数理地質学

【Code】10F069 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Mon 2nd

【Location】C1-173 【Credits】2

【Restriction】should have unit(s) of an introductory lecture on earth science (i.e. Introduction to Earth Science) and/or earth resources engineering

【Lecture Form(s)】Leture, excercises, field excursions 【Language】Japanese or English (change every year)

【Instructor】Yasuhiro YAMADA

【Course Description】This lecture is on modelling of a geology phenomenon which becomes indispensable when carrying out underground-resources development. First of all, the lecture tells that geologic phenomena are complicated as a fundamental posture and mathematical analysis is possible only a part of them. Then, a various analysis techniques and the analysis example are explained with the basic theory for simplifying the natural phenomena to construct geologic models. Then, field excursions are carried out to see relation between topography and local geology. During the excursions, students learn the conditions and assumptions which are needed to model complicated phenomena in which two or more factors involve. The phenomenon in which modelling is possible is limited to a few part.

【Grading】Based on the reports on the lectures and field excursions.

【Course Goals】Students understand the scope of this lecture, the complexity of natural phenomena and our limited knowledge on them, and can explain the contents to others.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	Theme, lecture / excursion schedule, evaluation etc
modelling theory	2	basic theory on geologic modelling
methods and examples	6	methods of geologic modelling and examples are explained with exercises.
excursion 1	4	excursion to NE Kyoto basin to see the relation between topography and geology, in term of an active fault
excursion 2	2	excursion to SW Kyoto basin to see the relation between topography and geology, in term of a relatively inactive fault

【Textbook】no textbook. appropriate articles will be provided.

【Textbook(supplemental)】appropriate books will be informed, this may include ones on geologic modelling.

【Prerequisite(s)】basic knowledge on earth science, including skills to read geologic and geography maps, required.

【Web Sites】

【Additional Information】this lecture includes field excursions. the dates will be determined during the first class, thus all applicants have to attend this class.

10F071

Applied Elasticity for Rock Mechanics
応用弾性学

【Code】10F071 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Fri 3rd

【Location】C1-172 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】S. Murata

【Course Description】Theory of elasticity relating to the deformation and failure of rock and rock mass, design and management of rock structures is explained. Specifically, two-dimensional and three-dimensional analysis of elasticity using the basic equations, constitutive equations, and the complex stress function are explained. Several applications of this analysis to rock mechanics, rock engineering, and fracture mechanics are also explained.

【Grading】Evaluation is made by the score of two report problems or homework and semester final exam.

【Course Goals】The goal of this class is to master the theory of elasticity so as to solve the elastic problem in rock mechanics, rock engineering, and fracture mechanics.

【Course Topics】

Theme	Class number of times	Description
Airy ’ s stress function and complex stress function	2	Airy ’ s stress function used to solve a two-dimensional elastic problem is first explained, and then the complex stress functions that are the representation of Airy ’ s stress function by the complex variables are explained.
Two-dimensional elastic analysis using the complex stress function	8	Analytical solutions of the two-dimensional elastic problems in fracture mechanics and rock engineering are derived by using the complex stress functions. The mechanical behavior of rock material is also explained based on the derived solution.
Application of two-dimensional elastic analysis	2	The theory of rock support, ground characteristic curve, theoretical equations used for the evaluation of rock stress, which are derived from the solution of two-dimensional elastic problem, are explained.
Three-dimensional theory of elasticity	2	Stress functions to solve the three-dimensional elastic problem are explained, and some examples of the three-dimensional elasticity solution derived by using the stress functions are explained.
Achievement check	1	Check the achievement of course goals.

【Textbook】Handouts are delivered.

【Textbook(supplemental)】J.C. Jaeger, N.G.W. Cook, and R.W. Zimmerman: Fundamentals of Rock Mechanics -4th ed., Blackwell Publishing, 2007, ISBN-13: 978-0-632-05759-7

【Prerequisite(s)】It is desirable to have knowledge of calculus, vector analysis and complex analysis.

【Web Sites】Web page of this lecture is not specifically provided. When preparing it by need, the information is shown in the class.

【Additional Information】Not specified

10F073

Fundamental Theories in Geophysical Exploration

物理探査の基礎数理

【Code】10F073 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Fri 3rd

【Location】C1-171 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】Hitosih Mikada, Tada-nori Goto

【Course Description】We are outlining various basic mathematical principles used for the analysis of the dynamic and kinematic earth-scientific problems in conjunction with wave propagation, mass transfer, etc. in the crust, and presenting examples of such analysis techniques in the area of earth sciences and earth resources engineering.

【Grading】Rating is performed by the combination of exams (40%) and the attendance to the class (60%).

【Course Goals】The aims of the class is to understand various signal-processing theories, the applied seismology, and the applied geo-electromagnetics with respect to exploration geophysics as application tools in seismology and in geo-electromagnetics.

【Course Topics】

Theme	Class number of times	Description
Introduction to exploration geophysics	1	General introduction to the lecture.
Seismic wave propagation and signal processing	8	Acquire knowledge on the propagation phenomena of elastic waves to learn the equivalency of 1D propagation with the theory of system function. The topics included would be, z-transform, Levinson recursion, Hilbert transform, etc.
Fundamentals of geo-electromagnetics and their application to exploration geophysics	5	Learn fundamental theories of magnetotellurics, instantaneous potential, spontaneous potential, and apparent resistivity methods, etc. that deal with geo-electromagnetic phenomena. Case studies are introduced to understand the advantages of geo-electromagnetic exploration schemes.
Wave propagation problem in seismic exploration	1	Discussing fundamental theories of elastic wave propagation, used in subsurface structural surveys, in terms of the actual utilization and the theories of wave phenomena.

【Textbook】

【Textbook(supplemental)】Claerbout, J.F. (1976): Fundamentals of Geophysical Data Processing (Available online URL: http://sep.stanford.edu/oldreports/fgdp2/)

【Prerequisite(s)】Students should understand exploration geophysics of undergraduate level.

【Web Sites】Could be specified by the lecturers if any.

【Additional Information】

10F087

Design of Underground Structures

地下空間設計

【Code】10F087 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Tue 3rd

【Location】C1-172 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】Toshihiro Asakura, Tsuyoshi Ishida

【Course Description】Outline of the characteristic of underground, the present state and trend of underground development, historical change of underground utilization are explained.
Especially, design and maintenance technology for tunnels and underground opening, and rock stress problem, are lectured in detail.

【Grading】Attendance(50%), class quiz and report(50%)

【Course Goals】Acquire the fundamental technology of underground structure design and maintenance.

【Course Topics】

Theme	Class number of times	Description
Guidance	1	Course description, Grading and Goals
Historical change	1	Historical change of underground development
Environment and Characteristic	1	Environment and Characteristic of underground
Act of deep underground use	1	Social background of the act and engineering problem
Rock stress	2	Underground stability and rock stress problems
Construction(1)	1	Survey technology for tunnelling
Construction(2)	2	Design technology for tunnelling and feed back system
Construction(3)	2	Construction work for tunnelling
Construction(4)	1	Evaluation and utilization of measurement
Maintenance	2	Maintenance technology, Tunnel deformation, Earthquake disaster of tunnels
Achievement check	1	Check the understanding

【Textbook】No set text

【Textbook(supplemental)】Instructed in class

【Prerequisite(s)】Taking Underground Development Engineering and Rock Engineering (when undergraduate) are desirable.

【Web Sites】

【Additional Information】

10A420

Lecture on Exploration Geophysics
探査工学特論

【Code】10A420 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Wed 4th

【Location】C1-117 【Credits】2

【Restriction】The class of "Fundamental theories of geophysical exploration" is recommended to acuire.

【Lecture Form(s)】Lecture 【Language】English 【Instructor】Hitosih Mikada, Tada-nori Goto

【Course Description】Applied geophysical exploration technologies in disaster mitigation, civil engineering, and earth resources engineering is discussed in terms of seismological and of electromagnetic theories. Students may be asked to process data or design digital filters in the course.

【Grading】Attendances to the class and reports are weighted as 60 and 40, respectively.

【Course Goals】Understanding seismiclogical and electromagnetic theories used in geophysical exploration and subsurface-imaging technologies.

【Course Topics】

Theme	Class number of times	Description
Electromagnetic signal processing	3	Principles of magnetotelluric methods, electromagnetic sources and noise reduction.
Modeling technologies in electromagnetic methods	3	Subsurface structure modeling in EM methods. The effects of surface weathered layers, the identification of spatial dimensions, and modeling methodologies are discussed.
Signal processing in seismics	4	Digital filtering in seismic data processing.
Reflection seismology	3	Fundamental theories of reflection seismic data processing. Seismic migration is the one to be briefly discussed.
Petrophysics	2	Fundamental petrophysics, and fundamental measurement theories in geophysical logging are discussed.

【Textbook】Specified in the course.

【Textbook(supplemental)】J.F.Claerbout, 1976, Fundamentals of Geophysical Data Processing, (OOP:photocopies to be specified)

【Prerequisite(s)】The credits of "Exploration Geophysics" in undergraduate course and "Fundamental Theories of Geophysical Exploration" in graduate course are requested to obtain before the classes.

【Web Sites】May be specified by the lecturers.

【Additional Information】

10F085

Measurement in the earth's crust environment

地殻環境計測

【Code】10F085 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Wed 3rd 【Location】C1-192

【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English

【Instructor】Tsuyoshi ISHIDA, Toshihiro ASAKURA, Koji YAMAMOTO

【Course Description】Necessity of information on the environment in the upper layer of the earth's crust will be explained, as well as measuring methods for it and applications of the measuring results for various engineering projects. Among them, rock stress measurements and their applications will be focused in the relation to the projects of oil field development, underground disposal of high level radio active waste, geological sequestration of CO2, construction of underground power houses and hot dry rock geothermal power extraction. The importance of initial stress conditions on planning and maintenance of tunnels and others also will be discussed.

【Grading】Grading will be made from scores of the followings: ・Report for classes by Ishida. ・Achievement test for classes by Yamamoto. ・Report for classes by Asakura. ・Number of attendance for the classes.

【Course Goals】Goals of this course are the followings. 1) To understand the important effect of initial rock stress on stability of underground chambers and deep underground tunnels. 2) To understand stress relief methods as one of typical methods to measure initial rock stress condition. 3) To understand the principle of a least square method though learning a procedure to determine an initial rock stress condition from released strains measured on a borehole wall. 4) To understand importance and purpose of rock stress measurement for oil field development through borehole breakout problems and others. 5) To understand hydraulic fracturing stress measurement conducted in drill holes for oil field development. 6)To understand history of tunneling technology in Japan. 7) To understand relations between maintenance of tunnels and underground environment. 8) To understand countermeasures against damages of tunnels induced by earthquakes.

【Course Topics】

Theme	Class number of times	Description
Importance of rock stress condition in underground development (by ISHIDA)	3	Necessity of rock stress measurements and their applications for various engineering projects. Among the projects, underground disposal of high level radio active waste, geological sequestration of CO2, construction of underground power houses and hot dry rock geothermal power extraction will be focused.
Stress relief methods to measure rock stress and applicaiton of least square method (by ISHIDA)	3	Actual field works of stress relief methods to measure initial rock stress condition will be explained. Though learning a procedure to determine an initial rock stress condition from released strains measured on a borehole wall, the principle of a least square method will be explained. The report subject will be shown in the last week.
Rock stress measurement for oil field development (by YAMAMOTO)	4	Estimation of rock stress condition by hydraulic fracturing and logging, which is conducted at various steps for oil field development, will be explained. Importance of rock stress affecting on borehole stability will be explained as well.
Tunneling technology in relation to underground environment (by ASAKURA)	4	Tunneling technology in Japan is historically reviewed. Relations between maintenance of tunnels and underground environment and countermeasures against damages of tunnels induced by earthquakes will be explained.
Check of understanding	1	Your understanding is checked by a written test.

【Textbook】None. Printed materials will be given in classes when needed.

【Textbook(supplemental)】1) Amadei, B. & Stephansson, O.: Rock Stress and Its Measurements, Capman & Hall, 1977.
2) Vutukuri, V. S. & Katsuyama, K.: Introduction to Rock Mechanics, Industrial Publishing & Consulting, Inc., Tokyo, 1994.

【Prerequisite(s)】Elasticity, Linear Algebra (Calculation of Matrices) and Computer Literacy (for example, Excel, Word and so on.)

【Web Sites】

【Additional Information】This class is made by English.

【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English 【Instructor】Katsuaki Koike

【Course Description】Securance and develpment harmonious with natural environments of the mineral and fossil energey resources, and utilization of storage function of geologic strata have become important issues for consructing ssustainable society. This subject introduces comprehensively the present situation of uses of mineral and energy resources, crust structure and dynamics, economic geology for the genesis and geologic envisonments of deposits, physical and chemical exploration methods of marine deposits, mathematical geology for reserve assessment, engineering geology for resource development and geological repository, and problems and promisingness of natural energy such as geothermal, solar, wind, and tide.

【Grading】Integrated evaluation by attendance to the classes and report grades

【Course Goals】To find out directionality about the technologies required for constructing sustainable society by yourself with full understandings of genetic mecanism, biased distribution, and the present situation of demand and supply of the mineral and energy resources.

【Course Topics】

Theme	Class number of times	Description
Introduction of this course and resources	1	Definition of renewable and non-renewable resources. Interaction among Earth environment, human society, and natural resources. Existence pattern of natural resources in the crust.
1. Internal structure of Earth and geodynamics	1	Inner structure of the Earth, geodynamics, geologic composition, temperature structure, rock physics, and chemical composition of crust.
2. Present and future of energy resources	1.5	Classification of energy sources, recent trend on social demand of energy, physical characteristics of each energy resources, and sustainability.
3. Present and future of mineral resources	1.5	Classification of minerals used for resources, recent trend on social demand of mineral resources, industrial uses of each mineral, and sustainability.
4. Economic geology (1)	1	Classification of ore deposits, distribution of each type of ore deposit, generation mechanism of deposit.
4. Economic geology (2)	1	General structure and distribution of fuel deposits (coal, petroleum, and natural gas), generation mechanism of deposits, and geological process of formation.
5. Resource exploration (1): Terrestrial area	1	Physical and chemical exploration technologies for natural resources in terrestrial area. Representative methods are remote sensing, electric sounding, electromagnetic survey, and seismic prospecting.
6. Resource exploration (2): Sea area	1	Introduction of marine natural resources such as methane hydrate, cobalt-rich crust, and manganese nodule, and exploration technologies for the deposits in sea area.
7. Assessment of ore reserves and deposit characterization	1	Fundamentals of geostatistics, variography for spatial correlation structure, spatial modeling by kriging, geostatistical simulation, integration of hard and soft data, and feasibility study.
. Resource development	1	Development and management technologies of energy resources related to coal, petroleum, and natural gas.
9. Engineering geology	2	Fundamentals of deep geological repository for high-level nuclear waste, CCS (carbon dioxide capture and storage), and underground storage of petroleum and gas.
10. Sustainability	2	Characteristics of natural energy related to geothermal, solar, wind, and tide, aand ssessment of natural energy resources. Co-existence of natural resource development with environment, low-carbon society, and problems for human sustainability.

【Textbook】Printed materials on the class contents are distributed before each class.

【Textbook(supplemental)】References on each topic will be instructed in classes.

【Prerequisite(s)】Elementary knowledge of engineering, mathematics, physics, and geology.

【Web Sites】

【Additional Information】This course is opened every two years, and opened in 2013.

10F081

Infrastructure Creation Engineering

社会基盤工学創生

【Code】10F081 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Thu 4th 【Location】C1-192

【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese 【Instructor】related teaching staff

【Course Description】A system of scientific principles and technologies is required which enable to create safe, reliable and vigourous human society with enough world-wide competitiveness. The class of Infrastructure Creation Engineering will lecture ongoing, retrospective and perspective on global environment, fundamental science/engineering, social science, social ecomonics and major scientific pronciples and technologies on natural environment including ecological system, which are needed to develop infrastructures.

【Grading】Grading will be based on reports (70%) and evaluation in each class (30%).

【Course Goals】It is aimed to make understand a system of scientific principles and technologies shich is required to create human society with sustainable development and to indicate their concept clearly. Major contents to create infrastructure as well as fundamental knowledge on its retrospective and perspective will be able to be learned.

【Course Topics】

Theme	Class number of times	Description
Role of geotechnics in sustainable infrastructure creation	2	
Role of hydro mechanics and water engineering in infrastructure creation and its evaluation	2	
Planning for infrastructure creation	2	
Subjects in material and structural engineering in rebuilding of infrastructure	2	
Role of earth resouses engineering for sustainable development in harmonious with environment	2	
Role of environmental engineering in infrastructure creation	2	
Thermal fliuid dynamics for fundamental understanding of global environmental subjects	2	
Confirmation of educational achievement	1	

【Textbook】None

【Textbook(supplemental)】To be introduced at any time

【Prerequisite(s)】It is desired to acquire basic knowledge on civil, environmental, eath resources and mechanical engineering.

【Web Sites】None

【Additional Information】To present in every class will be checked.

10X311

Urban Infrastructure Management
都市基盤マネジメント論

【Code】10X311 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Mon 3rd

【Location】C1-117 【Credits】2 【Restriction】 【Lecture Form(s)】Lecture 【Language】English

【Instructor】OHTSU Hiroyasu

【Course Description】This lecture aims to provide interdisciplinary knowledge associated with how urban infrastructure is comprehensively management, from viewpoint of not only economy but also "human security engineering". In detail, the contents of lectures consist of following topics:

Urban Infrastructure Asset Management,
Urban Environment Accounting System,
Urban Energy Supply Management,
Urban Food/Water Supply Management,
Urban Transport/Logistics Management.

【Grading】Attendance(10), Participation(10), Report(80)

【Course Goals】Aquisition of interdisciplinary knowledge associated with how urban infrastructure is comprehensively management, from viewpoint of not only economy but also "human security engineering".

【Course Topics】

Theme	Class number of times	Description
Guidance, Introduction of Urban Infrastructure Asset Management	1	
Urban Infrastructure Asset Management	3	
Urban Transport/Logistics Management	3	
Urban Environment Accounting System	2	
Urban Food/Water Supply Management	2	
Urban Energy Supply Management	2	
Presentation	2	

【Textbook】

【Textbook(supplemental)】Geotechnical Infrastructure Asset Management (Third Edition), Kyoto University Global COE Global Center for Education and Research on Human Security Engineering for Asian Megacities, 2011.

10F112

Introduction to Sustainability/ Survivability Science
生存科学概論

【Code】10F112 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Mon 2nd
【Location】C1-192 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English
【Instructor】K. Takara (DPRI), H. Ishikawa (DPRI), B. He (DPRI), T. Hosoda (Engineering) and S. Yoden (Science)
【Course Description】There are many threats for human beings on the earth: medicine/infectious diseases, food, population, energy, water, environment and natural hazards and disasters. This class gives how to cope with these for human beings and societies. If we realized sustainable society, there are still catastrophes that we have to face. This class considers how to survive such catastrophic situations. Especially focused on are frequent and amplified extreme weather due to climatic change (or global warming) and subsequent severe disasters, water and environmental problems. Concepts and technologies for these problems are introduced, discussing the future perspectives of our society, science and technology based on various aspects and examples of climate, culture and ways of life in the world.
【Grading】Students will be evaluated by the number of attendance and a final written examination.
【Course Goals】Any graduate students in various disciplines can join this class. Mixture of different graduate students from different disciplines gives good discussions in the classroom in which global issues will be introduced and discussed by the teachers and students together. This is a graduate school level lecture class including presentations by students.
【Course Topics】

Theme	Class number of times	Description
Ｉｎｔｒｏｄｕｃｔｉｏｎ	1	The framework of sustainability/survivability science is given to understand its significance.
Examples	2	Introducing how to cope with various examples of threats that human beings are facing: medicine/infectious diseases, food, population, energy, water, environment and natural hazards and disasters.
Global warming and mitigation	3	A theory of global warming, technical countermeasures of mitigation and political situation in the world are given.
Extreme weather and its prediction	2	Recent water-related disasters and water problems due to extreme weather are introduced.
Adaptation	3	Examples and ideas of adaptation in the world are considered to cope with water-related disasters that are occurring more frequent and getting bigger.
Discussions	3	Giving students an opportunity to express their own ideas, teachers and students discuss his/her ideas.
Summary	1	Conclude this series of lectures.

【Textbook】No textbook specified. Handouts will be distributed if necessary.
【Textbook(supplemental)】Relevant literature would be introduced.
【Prerequisite(s)】The class is given in English with some Japanese language supplement for technical/special words. No background knowledge is necessary. Reading, writing and discussing in English is requirement.
【Web Sites】This lecture is related to a Global COE Program “Sustainability/survivability science for a resilient society adaptable to extreme weather conditions ”(GCOE-ARS) for a period of 2009 to 2013. See also http://ars.gcoe.kyoto-u.ac.jp/ for further information.
【Additional Information】This class, which is given as graduate school-level lectures, can be taken by any graduate students from different disciplines including natural science, social science and humanity. Mixture of graduate students from different disciplines encourages exciting and interesting discussions by them to discuss global environmental issues with several professors and PDs.

Emergency Management Systems
危機管理特論

【Code】693291 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Wed 1st

【Location】Faculty of Engineering Integrated Research Bldg. 213 【Credits】2 【Restriction】No Restriction

【Lecture Form(s)】Lecture 【Language】Japanese 【Instructor】Haruo HAYASHI, Norio MAKI, Shingo SUZUKI

【Course Description】Damage from disasters is defined by two factors: scale of hazard and social vulnerability. Two strategies exist to reduce damage from disasters — namely, crisis management as a post-event countermeasure and risk management as a pre-event measure. This course introduces students to a system for effective emergency management, consisting of response, recovery, mitigation, and preparedness.

【Grading】Every after lecture, please submit short report writing following things 1) Three points you could learn in this lecture, and reason 2) What you would like to explain more? Please send your short report to following address by following formats 1.address: disaster.reporti2@drs.dpri.kyoto-u.ac.jp 2.subject:「Emergency Management Report “ date ”“ ID ” “ Name ” 3.No attach file

【Course Goals】Learning about Techniques for Business Continuity Management consisted of Risk Assessment, Strategic Planning, Emergency Response, and Training.

【Course Topics】

Theme	Class number of times	Description
Business Continuity Management	3	What is emergency response, and business continuity management.
Risk Assessment	3	Techniques for Risk Identification, and Risk Assessment
Strategic Planning	3	Techniques for Strategic Planning and Evaluation
Emergency Response	3	Incident Command System, and Design of Emergency Operation Center
Training	3	Learning, drill, Exercises for Emergency Response

【Textbook】Haruo Hayashi et.al., Soshiki no Kikikannri Nyuumon, Maruzen, 2008// Kyodai, NTT Resilience Kennkyuu Group, Shinayakana Syakai no Souzou, Nikkei BP, 2009

【Textbook(supplemental)】Tom Demarco et.al, Waltzing With Bears: Managing Risk on Software Projects, Dorset House, 2003// Project Management Institute：A Guide to the Project Management Body of Knowledge 2000 Edition, Project Management Institute, Inc, 2000// R. Max Wideman：Risk Management - A guide to Managing Project Risk & Opportunities - , Project Management Institute, Inc, 2000// Memorial Conference in Kobe, 12 sai karano hisaisya gaku, NHK Press, 2005//

Urban Transport Policy

都市交通政策フロントランナー講座

【Code】10Z001 【Course Year】Master and Doctor Course 【Term】1st term

【Class day & Period】see the handbook for course registration

【Location】conference room, UPL karasuma office （see the handbook for course registration） 【Credits】1

【Restriction】see the handbook for course registration 【Lecture Form(s)】Intensive Lecture 【Language】Japanese

【Instructor】Dai Nakagawa, Ryoji Matsunaka, JongJin Yoon, Tetsuharu Oba, and Mitsuya Matsubara

【Course Description】This class will provide lectures on the new transport policy carried out in domestic and foreign cities and to understand the difference between the conventional transport policy and the new urban transport policy. Also, it will cover a process to realize the new urban transport policy.

【Grading】evaluation by attendance and class participation

【Course Goals】to understand the difference between the conventional transport policy and the new urban transport policy

【Course Topics】

Theme	Class number of times	Description
Outline	1	
Front runner of urban transport policy in the world	2	Reallocation of road space, Pedestrianisation
Front runner of urban transport policy in Japan	1	Downtown activation, Strategies of sustainable transport for our cities, Climate change
Front runner of urban transport policy in Kyoto	1	Eco model city, Transport demand management, Public transport network
Basic concept and best practices of new urban transport policy	1	Community bus, Compact city
Discussion	1	
Presentation	1

【Restriction】see the handbook for course registration 【Lecture Form(s)】Intensive Lecture 【Language】Japanese

【Instructor】Dai Nakagawa, Eiichi Taniguchi, Masashi Kawasaki, Yasunaga Wakabayashi, Tsutomu Doi, JongJin Yoon, and Mitsuya Matsubara

【Course Description】This class will provide lectures on the contents of policies and the methods to realize a low carbon society. Also, it will cover the knowledge and the technical skill to relate to urban activation, reduction of the environmental load, compact city planning, and so on.

【Grading】evaluation by attendance and class participation

【Course Goals】to understand the knowledge and the technical skill to relate to urban activation, reduction of the environmental load, compact city planning, and so on.

【Course Topics】

Theme	Class number of times	Description
Outline	1	
Direction of urban policy for low-carbon society	1	Compact city, Interaction between land-use and transport
Urban policy management for low-carbon society	1	Eco model city, Guideline for low-carbon city construction
Downtown activation & urban policy for low-carbon socity	1	Downtown activation, Compact city
Landscape & environmental planning	1	Landscape design in public space, View structure
Urban policy for low-carbon society and change of urban structure	1	Public transport, Pedestrianisation
City logistics	1	Logistics、Corporate social responsibility, Intelligent transport systems、Freight quality partnership
Discussion	1

10F383

Engineering Seminar for Disaster Resilience in ASEAN countries 1

強靱な国づくりのためのｴﾝｼﾞﾆｱﾘﾝｸﾞｾﾐﾅｰ 1

【Code】10F383 【Course Year】Master 1st 【Term】1st term 【Class day & Period】Early in September

【Location】School of Engineering, Kasetsart University, Bangkok, Thailand 【Credits】2

【Restriction】Due to the capacity, students attending “ International Course on Approaches for Disaster Resilience ” have priority.

【Lecture Form(s)】Intensive Lecture 【Language】English

【Instructor】Prof. Hiroyasu Ohtsu, Related lecturers in ASEAN collaborative universities

【Course Description】The purpose of this course is to provide practical lessons in ASEAN countries associated with disaster risk mitigation such as early warning and evacuation program, and disaster recovery/restoration from viewpoints of problems-finding/problem-solving through short term intensive lecture and field work. By taking the applied practical programs of shared major classes under the instructions of teachers in charge, the students can improve the ability of resolving issues on practical projects. Topics taught in this seminar are earthquake, tsunami, landslide, and geo-risk engineering.

【Grading】40% for course work assignments and reports, 60% for final exam.

【Course Goals】Course aims to foster international leaders who are able to solve and manage problems concerned about natural disaster, disaster mitigation, health and environmental issues, especially about case studies in ASEAN countries.

【Course Topics】

Theme	Class number of times	Description
Introduction: Engineering for Disaster Resilience	1	
Seismic Design Concept	1	
Earthquake Disaster	2	
Tsunami Disaster	2	
Landslide Disaster	2	
Geo-Risk Engineering	2	
Site visit	5	

【Textbook】Lecture notes provided by the instructors.

【Textbook(supplemental)】

【Prerequisite(s)】

【Web Sites】Consortium for International Human Resource Development for Disaster-Resilient Countries, Kyoto University
http://www.drc.t.kyoto-u.ac.jp/

【Additional Information】Those who want to take this course are requested to apply for "International Course on Approaches for Disaster Resilience". Refer the website above.

10F382

Disaster and Health Risk Management for Liveable City

安寧の都市のための災害及び健康ﾘｽｸﾏﾈｼﾞﾒﾝﾄ

【Code】10F382 【Course Year】Master Course 【Term】1st term 【Class day & Period】Intensive course (2 weeks)
【Location】Sugiura Hall, Yoshida Campus 【Credits】2 【Restriction】30 students, priority for DRC course students
【Lecture Form(s)】Relay Lecture 【Language】English
【Instructor】Kiyono, Koyama, Kikuchi, Mitani, Fujii, Kawasaki,, Ando, Taniguchi, Teo
【Course Description】Various types of disasters constantly attack to Asian countries, and those countries sometimes are very vulnerable to the natural disasters and health risk. The interdisciplinary approach of engineering and medical science is indispensable to construct disaster-resilient countries. The 2011 Tohoku earthquake was one of the worst disasters in recent Japanese history. However many lessons to mitigate and manage the disaster are learnt from the event. In order to solve the related issues, the course provides selected topics about natural disaster, disaster-induced human casualty, emergency response, urban search and rescue, emergency medical service, principle of behavior based on neuroscience, urban search and rescue, reconstruction and rehabilitation policy, social impact of disaster, transportation management, logistics during earthquake disaster and so on.
【Grading】Course work assignments and reports
【Course Goals】Course aims to foster international leaders who are able to solve and manage problems concerned about natural disaster, disaster mitigation, health and environmental issues, logistics and amenity for constructing liveable city.
【Course Topics】

Theme	Class number of times	Description
Guidance and Group Work	2	
ORT	3	
Earthquake disaster and human casualty	1	
Earthquake protection and emergency responses	1	
Human brain function and behavior	1	
Disaster medicine and epidemiology	1	
Resilient society	1	
Transition of the design for amenity in the river-front	1	
Concern that elderly people in rural area have over health and mobility	1	
Differences in logistics and humanitarian logistics	1	
Unique challenges of humanitarian logistics	1	
Advancement on humanitarian logistics	1	
Achievement evaluation	1	

【Textbook】Textbook for the course is provided by the instructor on the first day.
【Textbook(supplemental)】Some literatures would be introduced by professors.
【Prerequisite(s)】No special knowledge and techniques are necessary.

【Course Description】Global warming, ecosystem crisis, and depletion of natural resources are of great concern today. To solve these problems, we have to build the sustainable society where low carbon dioxide emission, low environmental burdens, and the reduction of wastes by recycling are realized. It is possible to utilize municipal wastes, wastewaters, and unused biomass as resources instead of the natural resources used at present. Recycling-oriented technologies that enable sustainable utilization of those wastes and the concept to develop those technologies are introduced.

Lecture on Environmental Management Leader

環境リスク管理リーダー論

【Code】10X321【Course Year】Master and Doctor Course【Term】1st term【Class day & Period】Thu 5th【Location】C1-171【Credits】2【Restriction】
【Lecture Form(s)】Relay Lecture 【Language】English 【Instructor】TANAKA Hiroaki, SHIMIZU Yoshihisa, FUJII Shigeo
【Course Description】In this class, we ’ ll give lectures on theory of risk analysis, risk identification, risk assessment, risk evaluation, and risk reduction and avoidance in the field of urban human security including human health risk and ecological risk. The main purpose of this lecture is to provide students basic viewpoint and knowledge required for environmental leaders who can practically solve environmental issues occurring in developing countries, showing several international environmental projects as practical case works.
【Grading】Participation, Oral and Poster Presentation, and Report
【Course Goals】The main purpose of this lecture is to provide students with the basic viewpoint and knowledge required for environmental leaders able to practically solve environmental issues occurring in developing countries, focusing on several international environmental projects as practical case works.
【Course Topics】

Theme	Class number of times	Description
Introduction	1	In this introductory lecture, the current situation and problems of the environment in Asian developing countries are explained, and basic ideas for their improvement measures are given together with fundamental terminologies.
Energy and Environment	1	
View point and commitment to rural environmental issues	1	
Disaster Risk Management and Grass-roots International Cooperation	1	
Environmental Risk Assessment and Risk Communication	1	
Water, Sanitation and Solid Waste Management for Developing Countries	1	
Presentations and Discussions	2	
Japan's Lessens on Economy & Development	1	
Solid Waste Management	1	
Ensuring Sustainability in Water Supply and Sewerage Sector	1	
Water Supply and Human Security	1	
Impending Issues in Lake Biwa-Yodo River Water Management and the Basin Governance	1	
Environment & Sanitary Engineering Research International Session	1	
Poster Presentation in Environment & Sanitary Engineering Research Symposium	1

10F456

New Environmental Engineering I, Advanced
新環境工学特論 I

【Code】10F456 【Course Year】2013 【Term】1st term 【Class day & Period】Mon 5th
【Location】Reserch Bldg.No.5-Lecture Room(2nd floor)/C1-171 【Credits】2 【Restriction】No Restriction
【Lecture Form(s)】Relay Lecture 【Language】English
【Instructor】Y. Shimizu (Prof), H. Tanaka (Prof), and S. Fujii (Prof)
【Course Description】This course provides various kinds of engineering issues related to the water environment in English, which cover fundamental knowledge, the latest technologies and regional application examples. These lectures, English presentations by students, and discussions enhance English capability and internationality of students.
The course is conducted in simultaneous distance-learning from Kyoto University, or from remote lecture stations in University of Malaya, and Tsinghua University of China. For the distance-learning, a hybrid system is used, which consists of prerecorded lecture VIDEO, VCS (Video conference system) and SS (slide sharing system).
【Grading】Evaluated by class attendance, Q&A and presentation.
【Course Goals】Each student is requested to give a short presentation in English in the end of the course. The students will understand the present circumstance of environments in the world, and the students may improve their English skill and international senses through these lectures, presentations, and discussions.
【Course Topics】

Theme	Class number of times	Description
Wastewater Treatment in Japan	1.4	Guidance & self introduction of students & lecturer on “ Wastewater Treatment Plants Case Study in Japan (Fujii)
Ecological Sanitation	1.4	From Ecotoilets to Ecotowns（Shimizu)
Wastewater Reuse	1.4	Wastewater Reuse & Disinfection (Tanaka)
Membrane Treatment	1.3	Treatment Technologies (Practical & Advanced Technology I): Membrane Technology (MT) (Prof. Huang, Tsinghua University)
POPs	1.4	Global POPs (Persistent Organic Pollutants) Pollution, and Countermeasures (Fujii)
Wastewater Treatment in Malaysia	1.3	Wastewater Treatment Plants Case Study in Malaysia - Design Consideration - (Prof. Ghazaly, University of Malaya)
Anaerobic Treatment	1.3	Anaerobic Biological Treatment Technologies (Prof. Shaliza, University of Malaya)
Wastewater Treatment in China	1.3	Wastewater Treatment Plant: Case Study in China, Biological Nutrient Removal (Prof. Wen, Tsinghua University)
Water Pollution in Malaysia	1.4	History of Water Pollution in Malaysia (Prof. Ghufran, University of Malaya)
Student Presentation	1.4	Student Presentations /Discussions I (all)
Student Presentation	1.4	Student Presentations /Discussions II (all)

【Textbook】Class handouts
【Textbook(supplemental)】Introduced in the classes
【Prerequisite(s)】General understanding of water environmental issues
【Web Sites】
【Additional Information】Either of this course or “ New Environmental Engineering II, advanced ” can be dealt as “ Asian Environmental Engineering ”. PowerPoint slides are main teaching materials in the lectures, and their hard copies are distributed to the students. In addition, a list of technical terms and difficult English words is given to the students with their explanation and Japanese translation.

10F468

Environmental Organic Micropollutants Analysis Lab.

環境微量分析演習

【Code】10F468 【Course Year】Master and Doctor Course 【Term】Intensive course (25th-27th Sep.)

【Class day & Period】9:00 am- 6:00 pm

【Location】Seminer Room, Research Center for Environmental Quality Management 【Credits】2

【Restriction】around 10 students 【Lecture Form(s)】Intensive Lecture 【Language】Japanese

【Instructor】Shimizu, Yoshihisa, Matsuda, Tomonari

【Course Description】This 3 days intensive course, limited to around 10 people, will be held in Research Center for Environmental Quality Management in Otsu City. This course includes both lecture and experiments about analytical strategies of environmental micropollutants.

【Grading】Reports and attendance

【Course Goals】Understand about principle and practical techniques of chromatography. Understand about principle of several bioassays.

【Course Topics】

Theme	Class number of times	Description
HPLC -How to separate it-	3	Learn about principle and practice of HPLC separation. How do you choose columns, solvents and detectors? How to improve peak separation?
Fractionation and Purification by using HPLC	3	Learn about practical techniques of fractionation and purification using HPLC.
LC/MS/MS	5	Learn about principle and practice of LC/MS/MS analysis. Understand about 3 different scan modes, full scan, daughter scan and MRM. How to make an analytical method in a refined way for substances of your interest.
Bioassays	4	Lecture about several bioassays which are used for evaluation of environmental toxicity, and discuss about how to identify toxic compounds in environment by using HPLC in combination with bioassays.

【Textbook】

【Textbook(supplemental)】

【Prerequisite(s)】

【Web Sites】

【Additional Information】This intensive course is useful especially for students who usually use or intend to use HPLC and LC/MS/MS for their research.

【Instructor】Naoki Katoh

【Course Description】We will teach theory and methodology to model the design process of an architecture and to carry out planning, analysis, design, production and and management. For this, we will teach the system engineering methodology such as system analysis method, optimization theory, and heuristics approach, and data analysis methodology such as data mining. We will give assignments which require to use computer software.

【Grading】It is based on the attendance of class, and on reports.

【Course Goals】The goal is to make students to acquire the knowledge of system engineering methods such as optimization theory and data analysis and to apply the knowledge to solve real problems.

【Course Topics】

Theme	Class number of times	Description
What is optimization method?	1	We will give a brief overview about the fundamental concepts.
linear programming, network programming	3	We will give lectures about inear programming and network programming by focusing on how to model real problems as linear and network problems. We will teach how to use linear programming software.
integer programming, approximation method	3	We will introduce problems that can be modeled as integer programs by giving applications to architectural problems. We will also teach how to use software for solving integer programs.
location theory	2	We will teach what is location theory and mention several applications in urban design.
data mining	3	Among method for knowledge discovery from huge amount of data, we will teach association rules, decision trees, clustering, and multiple regression analysis. We will give assignment which require to use data mining software called Weka.
computational geometry and Cmbinatorial rigidity	3	We will teach what are computational geometry and combinatorial rigidity and mention applications to architecture.

【Textbook】Introduction to architectural Systems, Naoki Katoh, Makoto Ohsaki, Akinori Tani, Kyoritsu Shuppan (in Japanese).

【Textbook(supplemental)】Mathematical Programming, Naoki Katoh, Corona Sha (in Japanese). Data mining and its Applications, Naoki Katoh, Yukinobu Hamuro, Katsutoshi Yada, Asakura Shoten (in Japanese).

【Prerequisite(s)】linear algebra, calculus, probability theory

10B037

Design Mechanics for Building Structures
建築設計力学

【Code】10B037 【Course Year】Master Course 【Term】1st term 【Class day & Period】Mon 1st 【Location】C2-101

【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese 【Instructor】I. Takewaki, M. Tsuji

【Course Description】Basic mechanics and inverse problem for design of building structures are explained. Structural optimization methods are also presented. Rational structural design approaches are introduced in place of conventional try-and-error approaches.

【Grading】Grading is based on the examination at the end of semester.

【Course Goals】Obtain the knowledge on basic mechanics for design of building structures. Also obtain advanced knowledges on new theories and methodologies of structural optimization and inverse-problem formulations.

【Course Topics】

Theme	Class number of times	Description
Fundamentals of mathematical programming	2	Fundamentals of mathematical programming methods are explained. Linear and nonlinear programming methods are introduced and some examples are presented.
Design sensitivity analysis	1	Basic methods of sensitivity analysis for computing derivatives (sensitivity coefficients) of static responses and frequencies of free vibration with respect to vatiations of design parameters, shape sensitivity analysis with respect to nodal
Application to optimization of framed structures	1	Application of mathematical programming methods to optimization of framed structures is presented.
Earthquake response constrained design	1	Design earthquakes defined in response spectrum and earthquake response constrained design for shear building models
Earthquake response constrained design for response controlled	1	Earthquake response constrained design for response controlled structures and isolated structures including the design of control devices.
	1	
Exercise 1	1	Exercise on simple structural optimization problem.
Concept of inverse problem	1	Examples of inverse problem in terms of shear building models
Hybrid inverse problem of structural systems	1	Examples of hybrid inverse problem in vibration and classification of hybrid inverse problems. The solution procedure of hybrid inverse mode problems is discussed.
Strain-controlled design method for moment-resisting frames	1	Simple examples are used for understanding fundamental concepts of strain-controlled design.
Inverse problem via design sensitivity analysis	1	An inverse problem formulation via design sensitivity analysis (direct method) is explained.
Earthquake-response constrained design	1	A method of earthquake-response constrained design for shear building models is explained. Design loads in terms of the design response spectrum are used in the design method.
Performance-based Design	1	A design methodology based on the concept of performance-based design is explained.
Exercise 2	1	Exercise on inverse problems.
	1

【Instructor】Yoshikazu Araki

【Course Description】Fundamentals of stress tensor, strain tensor, and constitutive relations are discussed. Based on these concepts, boundary value problem is formulated. Finite deformation and elastoplastic constitutive relations are also discussed. Based on displacement method, approximate formulations for beams and plates are also discussed.

【Grading】Examination

【Course Goals】To learn fundamentals of solid mechanics

【Course Topics】

Theme	Class number of times	Description
Stress tensor and strain tensor	4	Fundamentals of tensor analysis, stress tensor, strain tensor, and constitutive relation is discussed.
Conservation laws and boundary value problem	3	Conservation laws and displacement-based boundary value problem is formulated.
Geometric nonlinearity and material nonliniarity	3	Stress and strain tensors are presented for dealing with finite deformations. Fundamentals of elastoplastic constitutive relations, e.g., yield condition, normality law, and hardening rules, are also discussed.
Plate theory	4	Displacement-based thick and thin plate theories are formulated from the basic equations for 3D continua.
Beam theory	1	Based on the virtual work principles, St. Venant's and Wagnar's torsion theories are derived. 3D beam theory including bending and shear is also presented.
Exam		Understanding of the theories and formulations presented in this class is examined.

【Instructor】Kazunori HARADA

【Course Description】This lecture deals with functional aspects of building envelope as a shelter from outdoor climate. Lecture will be given on specified topic on principles of thermal and moisture insulation, control strategy of indoor environment, the prediction methods of air flow, thermal radiation and indoor air quality. Examples will be shown for use in building design for thermal environment control and safety problems during fire.

【Grading】Score is evaluated by end-term examination.

【Course Goals】To acquire basic concepts on fundamental concepts on thermal environment control for preparation of master thesis development.

【Course Topics】

Theme	Class number of times	Description
introduction	1	The history of numerical methods in architectural environmental control is briefly introduced, followed by introduction of mathematical formulation of physical phenomena.
numerical methods in heat conduction	4	As a common knowledge, heat conduction equation is dealt with in order to understand the basic framework in numerical methods. At the end of this term, report will be obligatory to understand the meaning of discrete equations and their nature.
numerical methods on fluid motion	5	Lecture will be given for standard methods of calculation of fluid dynamics. At the end of this term, simple practice on control volume method and SIMPLE algorithm will be obligatory.
simultaneous system and turbulence	4	Lecture will be given for simultaneous systems of fluid motion and thermal field. In a similar way, turbulence model is to be introduced. The participants are expected to have learned on environmental engineering in architecture at bachelor level.
Evaluation of archivements	1	Evaluation of archivements will be conducted.

【Textbook】None specified.

【Textbook(supplemental)】To be specified during the course.

【Prerequisite(s)】The participants are expected to have learned on environmental engineering in architecture at bachelor level.

【Course Description】In explanatory theory of human psychology and behavior in built-environment, formation of privacy feeling based on territorial behavior or owing to others sight line is explained. Furthermore, crime prevention through environmental design (CPTED) and feeling of insecurity against crime is also explained. How privacy was dealt in the field of, firstly information and then architectural planning and urban planning and so on are widely explained. Especially, privacy of residents living in detached houses and apartment houses in built-up area designed and built by successive rebuilding way is major issues. Furthermore, through field survey and presentation, understanding about subject matter will be enriched.

【Grading】Presentation in class - 50%, Report at the end of period - 50%

【Course Goals】Enriching understanding about privacy dealt in architectural and urban planning field

【Course Topics】

Theme	Class number of times	Description
privacy in post modern society	3	Explain outline how privacy is dealt in post-modern society in relation to advancement of informatization, such as SNS, handheld terminal.
Privacy between members in family	1	Privacy between members in family in one house which began to be considered after the modern Enlightenment in Europe is explained
Privacy dealt in houses rebuilt by successively in built-up area	1	Develpment in built-up area designed and built by successive rebuilding way is explained. And get a better grasp that understanding of privacy feeling of residents in such area is important
Privacy dealt with sunshine condition and open space condition	1	Privacy dealt with sunshine condition and open space condition especially in urban planning is explained
Privacy after possession of territory	1	Formation of privacy feeling after possession of territory explained by proxemics theory is explained
Privacy dealt after comparing windows of houses and buildings to eyes	3	Formation of privacy feeling after comparing windows of houses and buildings to ones' eyes is explained
Crime prevention, Fear of crime	2	CPTED concepts besed on possession of territory and feeling of insecurity against crime is explained.
Presentation by students	2	In addition to knowledge got from lecture, based on field survey and so on, presentation by students
confirmation of level of attainment	1	Confirmation of level of attainment

【Course Description】Fundamentals of finite element method (FEM) are presented for based on variational and energy principles. Formulations are derived for 2D and 1D finite elements. Basic theories and algorithms for nonlinear FEM are also presented.

【Grading】Examination

【Course Goals】Understanding of fundamentals of FEM

【Course Topics】

Theme	Class number of times	Description
Fundamentals of FEM	2	Fundamental theories and concepts are presented. As a concrete example, formulations for 2D triangle element are derived.
Isoparametric and structural elements	2	Isoparametric and structural elements are presented.
Displacement method and stress method	2	Displacement method and stress method are presented, wherein displacement and stress are respectively selected as unknown variables. Based on Lagrange's multiplier method, hybrid displacement and stress methods are also presented.
Fundamentals of nonlinear FEM	3	Fundamentals of nonlinear FEM are presented. Based on Newton's method, basic theories and algorithms are presented for solving quasi-static and dynamic problems.
Elastoplastic and buckling analysis	2	Basic theories and algorithms for elastoplastic analysis and buckling analysis are presented.
Nonlinear beam elements	3	Nonlinear beam elements are formulated. Both geometric and material nonlinearities are discussed.

【Location】C2-313 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】Hiroshi Kawase, Shiichi Matsushima

【Course Description】The natural disaster to urban society is getting complex and difficult to predict along with the density growth and high performance build-up, and so the risk of the disaster has risen more and more in recent years. Therefore, the necessity of the integrated disaster mitigation measures before the disaster, immediately after the disaster, and long after the disaster is pointed out. In this lecture, we provide the lessens learned from earthquake disaster in the past, prediction methods of strong motions and building damages, earthquake-proof performance evaluation technique in a real building, and a pros and cons of the present building code for the disaster mitigation.

【Grading】Grading will be based on the attendance and report.

【Course Goals】Understand the seismic vulnerability evaluation of structures and urban systems, the disaster impact evaluation scheme, and the disaster prevention countermeasures. Then learn basic knowledge needed to foresee and prepare for the earthquake disaster in future by themselves.

【Course Topics】

Theme	Class number of times	Description
Earthquake Mechanism	4	Source mechanisms for disastrous earthquakes
Wave propagation	3	Wave propagation analysis and strong motion simulation
Structural response	3	Modeling of structures and prediction of their responses
Great eartuquake disaster	3	Predictions of great earthquake disaster and its environmental impact
Seismic design and retrofit	2	Problems associated with the current building code and retrofitting technology

【Course Description】Wave propagation theories are explained first for 1D, 2D and 3D models. 1D multi-reflection problems of waves are also formulated and explained. Based on these theories, methods for construction of design earthquake ground motions are presented. Soil-structure interaction problems are stated finally for the purpose of developing more rational design methods for building structures.

【Grading】Evaluated by the term examination at the end of the semester.

【Course Goals】Obtain the knowledge on wave propagation theories and 1D multi-reflection theory of waves. Furthermore obtain the knowledge on construction of design earthquake ground motions and soil-structure interaction.

【Course Topics】

Theme	Class number of times	Description
Introduction and in-situ (field) tests	1	Introduction of course is conducted and in-situ (field) tests are explained.
Wave propagation 1 (one-dimensional wave propagation 1)	1	1D wave propagation problems are formulated and explained from its fundamentals.
Wave propagation 2 (one-dimensional wave propagation 2)	1	1D multi-reflection problems of waves are formulated and explained. The introduction of the program of SHAKE is also made.
Wave propagation 3 (2D and 3D wave propagation 1)	1	3D wave propagation problems are formulated and explained.
Wave propagation 4 (2D and 3D wave propagation 2)	1	2D wave propagation problems are formulated and explained as the simplification of 3D problems.
Wave propagation 5 (2D and 3D wave propagation 3)	1	Surface waves (Rayleigh and Love waves) are explained from its fundamentals.
Exercise on wave propagation	1	Exercise on wave propagation is conducted. 1D, 2D wave propagations are treated.
Construction of design earthquake ground motions	1	Construction of design earthquake ground motions is discussed. Response spectrum, Fourier spectrum and power spectrum are also discussed from the viewpoint of construction of design earthquake ground motions.
Soil-structure interaction	2	The problem of soil-structure interaction is explained and various models for this problem are introduced.
Exercise on structural design considering soil-structure interaction	1	Exercise on structural design considering soil-structure interaction is conducted.
Seismic damage to soil, pile and foundation	1	Seismic damage to soil, pile and foundation is explained.
Seismic upgrading (structures)	1	Seismic upgrading (structures) is discussed.
Seismic upgrading (soil, pile and foundation)	1	Seismic upgrading (soil, pile and foundation) is discussed.

【Location】C1-191 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】Yoshio Kaneko

【Course Description】Compositions, constitutive laws and applications of major structural materials including concrete and steel are lectured. Demanded performances of structural materials are explained from the view point of mutual dependencies between materials and structural systems. Furthermore, newly developed high performance materials (HPM), structural systems using HPM, and environmental control technique using structural materials are discussed.

【Grading】Evaluation will be made based on attendance to lectures and submissions of assignments.

【Course Goals】1) To understand Compositions, constitutive laws and applications of major structural materials including concrete and steel as well as continual process of research, development and design from the material level up to the structural level. 2) To understand engineering meanings of structural materials in development of new structural systems and research trend of new structural materials. 3) To understand how to apply the varied structural materials into new structural systems and development of environmental control systems.

【Course Topics】

Theme	Class number of times	Description
	4	
Guidance and Structural Material (1) Basic Theory	4	Basic properties, plastic theory, fracture theory, and softening characteristics of cementitious composites and steel are lectured. Fundamental principle of material constitutive laws and mathematical model of materials are explained.
Structural Material (2) New material	6	Research trend and application of new materials are lectured. Fiber reinforced cementitious composites, intelligent-smart material, application of structural materials into new structural systems are explained.
Structural Material (3) Environmental Control	1	Environmental controls of concrete and metallic materials are lectured. Health monitoring of concrete, environmental control systems using steel, production and environment of metallic materials are explained.

【Textbook】Not assigned.

【Textbook(supplemental)】H. Mihashi, K. Rokugo and M. Kunieda (Editors): “Crack of Concrete and Fracture Mechanics,” Gihodo Publisher, Tokyo, July 2010, (in Japanese).

【Prerequisite(s)】Basic knowledge on concrete, steel and structures.

【Additional Information】It is encouraged to ask questions and attend with positive mind.

10F433

Design of Acoustic Environment
音環境設計論

【Code】10F433 【Course Year】Master Course 【Term】1st term 【Class day & Period】Tue 1st

【Location】C1-173 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】Prof. Hirotsugu Takahashi

【Course Description】The aim of this lecture is the acquisition of the theory and technology regarding acoustics, which are needed in designing optimum acoustic environment for our living space in the complex urban society. To achieve good urban environment having less stresses in both physiological and psychological aspects, it is important to optimize the parameters regarding this factor. The education programs for this aim are the lecture of the conception for acoustic environment of human space, acoustic theory and technology for noise and vibration control stressing physical nature based on human science.

【Grading】The learning results are evaluated overall in terms of both the record of attendance and the final exam.

【Course Goals】The goal of this lecture is better understanding of the theory and technology regarding acoustics, which are needed in designing optimum acoustic environment for our living space in the complex urban society.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	Explanation of outline of the lecture and the method for evaluation of the learning results
Fundamentals of acoustic design	4	Explanation of fundamentals of sound and vibration, propagation of acoustic energy and sound radiation problems, which are necessary to understand the physical phenomena of various acoustic problems
Noise and vibration problems in buildings	5	Lectures of physical phenomena and method of measures and evaluation method for various acoustic problems in buildings, The problems are air-borne and structure-borne sound, sound insulation, floor impact sound, duct noise, and so on
Room acoustics	3	Lectures of method of analysis, measuring techniques and evaluation of acoustics in the room in order to control and optimize the acoustic environment of the room
Update topics of acoustic problems	1	Lectures of update topics regarding the problem of noise, vibration and room acoustics
Check of study achievement	1	Check of both the degree of an understanding and applied skills

【Textbook】Distribution of the lecture materials

【Textbook(supplemental)】Introduced if necessary

【Prerequisite(s)】Fundamentals of Dynamics, Differential and Integration

【Instructor】,

【Course Description】In the 21st century, it is required to reconsider what is a design and what is a design method. The era a simple artifact is requested is over, and we have to create environmental and social systems including various relations such as the relation among artifacts, the relation between artifacts and men & environment, and the relation among human beings. The role of design is to develop “ Human Centered Design (HCD) ” which creates meaningful experiences through system integration of man-environmental systems. In this lecture, we explore the design methodology as a basic theory of design after 1960 ’ s, explaining design problems, design process, design method, design thinking, and design science based on the design studies in various design fields such as craft, product, architecture, city, landscape, environment, community, education, society, mobility, business, and information. Especially to investigate the mechanism of creative design thinking is very important to solve the daily life problems and many difficult problems human kind encounters. Therefore we explain the design semiotics to clarify the mechanism of generating creative designs and to show valuable examples.

【Location】 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】, ,

【Course Description】We are now strongly required to extend the design object from the artifact environment to man-environment system in the field of architecture, city, environment, and landscape. It is not enough to construct the general theory of design separated from specific design fields, and we have to develop “ Man-environment System Design Theory ” to organize design objects and design methods, because the feeling and knowledge on design object have a great influence on design process. In this lecture, we explain design theories and design methods in architectural and urban fields from the multiple viewpoints such as architectural and urban planning & design, landscape design, history and design, social system engineering, and environmental engineering. Moreover we will try to illustrate some design projects as case studies.

【Lecture Form(s)】Lectures, Group works&tasks 【Language】English 【Instructor】Juha Lintuluoto

【Course Description】Engineering economics plays central role in any industrial engineering project. For an engineer, it is important to apply the engineering know-how with the economic analysis skills to obtain the best available materials, methods, devices, etc. in the most economical way. This course is aimed to teach engineering students the basic economic methods to manage economically an engineering project. In addition, the report writing on various engineering economic issues prepares to write reports in a professional form. The lab sessions are meant for the verbal skills improvement as well as improvement of analytical thinking. The topics are of current relevant topics Small-group brain-storming method is used. The exercise sessions cover the use of Ms-Excel for various quantitative economic analyses.

【Grading】Final test, reports, class activity

【Course Goals】This course is aimed to strengthen engineering students ’ skills in economics. The course concept is to teach students selectively those subjects which serve as major tools to solve economic tasks in engineering environment. The reports and lab sessions provide students stimulating and analytical thinking requiring tasks, and presentation skills training is an important part of this course.

【Course Topics】

Theme	Class number of times	Description
Student orientation and Introduction to engineering economy	1	
Cost concepts and design economics	1	
Cost estimation techniques	1	
The time value of money	1	
Evaluating a single project	1	
Comparison and selection among alternatives	1	
Depreciation and income taxes	1	
Price changes and exchange rates	1	
Replacement analysis	1	
Evaluating projects with the benefit-cost ratio method	1	
Breakeven and sensitivity analysis	1	
Probabilistic risk analysis	1	
The capital budgeting process	1	
Decision making considering multiattributes	1	
Final test	1	
		Additionally, students will submit five reports during the course on given engineering economy subjects. Also, required are the five lab participations (ca.60 min/each) for each student. Additionally, three exercise sessions (ca.60 min/each), where use of Ms-Excel will be practiced for solving various engineering economy tasks, should be completed

【Textbook】Engineering Economy 15th ed. William G. Sullivan (2011)

【Textbook(supplemental)】Will be informed if necessary.

【Prerequisite(s)】-This course is highly recommended for those who attend “ Inter-Engineering -Highly interactive lessons (discussion), Small group working method

【Web Sites】The web-site will be opened in the home page of the GL education center.

【Additional Information】Students are requested to check in advance whether the credits of this course are counted as the units for graduation requirement at department level. The course starts on Apr.11th.

【Course Description】In Part I, fundamental issues of the finite deformation analysis of solids and structures are introduced, including tensor analysis, kinematics of continua, conservation laws, and various stress/strain measures. In Part II, basic ideas of elastoplastic and viscoplastic theories are lectured to describe nonlinear material properties, and the derivation of inelastic constitutive equations and their application to numerical analyses are also introduced.

【Grading】Grading is based on the examination, possibly with considerations of reports.

【Course Goals】The goal is to understand the concepts of finite deformation analysis and inelastic constitutive relations, which constitute the basis of computational mechanics simulations for mechanical/structural design.

【Course Topics】

Theme	Class number of times	Description
Part I. Fundamentals of finite deformation analysis		
I-1. Tensor analysis	2	Tensor as a linear transformation; Tensor algebra; Transformation of tensor components due to change of basis; Eigenvalues of symmetric tensors; Spectral decomposition; Integral theorem
I-2. Kinematics	2	Reference and current configurations; Deformation gradient; Cauchy-Green deformation tensors; Strain tensors; Velocity and acceleration; Deformation-rate tensor and spin tensor
I-3. Conservation laws	2	Conservation of mass; Laws of motion by Euler and Cauchy; Cauchy stress tensor; Equation of motion; Principle pf virtual work
I-4. Various definitions of stress	1	First and second Piola-Kirchhoff stresses; Alternative expression of equation of motion; Objectivity of vectors and tensors; stress-rate
Part II. Basis of inelastic analyses		
II-1. Constitutive equations of elastoplastic body	3	Models of plasticity for uniaxial tension; Yield functions for isotropic materials; Work hardening; J2 flow theory; Elastoplastic constitutive equations
II-2. Numerical methods for elastoplastic body	2	Incremental virtual work principle; Basis for incremental finite element analyses
II-3. Constitutive equations of elastic-viscoplastic body	2	Models of rate-dependent plasticity; Elastic-viscoplastic constitutive equations based on tangent modulus method
III. Assessment	1	Assessment of understanding and achievements

【Textbook】Parts I, II: Lecture materials are distributed in classroom or to be downloaded on the website.

【Textbook(supplemental)】Part I: T. Kyoya, "Continuum Mechanics," Morikita (2008); A. J. M. Spencer, "Continuum Mechanics," Dover (1980).
Part II: Y. Tomita,“Foundation and Application of Elastoplasticity,”Morikita (1995); E. Neto et al.,“Computational Methods for Plasticity,”John Wiley & Sons (2008).

【Prerequisite(s)】Enrolling students are expected to have knowledge in "Mechanics of Materials," "Continuum Mechanics," or "Mechanics of Solids" courses on the undergraduate level.

Engineering Ethics and Management of Technology

技術者倫理と技術経営

【Code】10G057 【Course Year】Master 1st 【Term】1st term 【Class day & Period】Thu 3rd

【Location】Butsurikei-Kousya 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lectures and Exercise

【Language】Japanese 【Instructor】Sawaragi, Nishiwaki, Tomita, M. Komori, Tsuchiya, Noda, Sato, Iseda

【Course Description】Basic knowledge of Engineering Ethics and Management of Technology needed for future project leaders in companies and society is taught. Students have to make group work after-class hours as well as presentations of wrapping-up the discussions. Engineering ethics is the field of applied ethics and system of moral principles that apply to the practice of engineering. The field examines and sets the obligations by engineers to society, to their clients, and to the profession. Management of Technology is a set of management disciplines that allows organizations to manage their technological fundamentals to create competitive advantage. This course consists of lectures, exercises, discussions and oral presentations under supervision of professional faculties and extramural lecturers.

【Grading】Submission of reports and presentations

【Course Goals】To cultivate a spirit of self-sufficiency needed for engineers

【Course Topics】

Theme	Class number of times	Description
Engineering Ethics	9	1. Introduction to Engineering Ethics (EE) 2.Medical Engineering Ethics 3.EE by Institution of Professional Engineers, Japan and abroad 4.Product Safety and Product Liability 5.Comprehensive Manufacturing and EE (1) 6.Comprehensive Manufacturing and EE (2) 7.Group Discussions 8.History and Philosophy of EE 9.Presentation on exercise of EE
Management of Technology	5	1.Product Portfolio, Strategy for Competition 2.Bussiness Domain and MOT for Marketing 3. Organizational Strategy for Corporates' R & D 4. Management Theory for R & D 5.Presentation on exercise of MOT

Fracture Mechanics

破壊力学

【Code】10G017 【Course Year】Master Course 【Term】2nd term 【Class day & Period】Fri 1st

【Location】C3-Lecture Room 3 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】Takayuki Kitamura

【Course Description】The basics of the fracture mechanics will be lectured.
Elastic problem, Stress function of a crack, Stress field around a crack tip, Stress intensity factors, Energy release rate, J-integral, Elastic plastic fracture mechanics, Interfacial fracture mechanics etc.
Fracture toughness, Crackings in fatigue, environmental fatigue and creep-fatigue etc.

【Grading】Mini-reports will be evaluated.

【Course Goals】The objective of this lecture is to master the basic knowledge of the fracture mechanics, and to be able to discuss about material strength on the basis of the knowledge.

【Course Topics】

Theme	Class number of times	Description
Introduction	2	Introduction Examples of fracture in real components Deformation and fracture Stress concentration and singular stress field Basics of solid mechanics
Linear fracture mechanics	3	Mechanics of cracked body under linear elasticity Singular stress field near a crack tip, Stress intensity factor, Energy release rate, J-integral, Small scale yielding Interfacial fracture mechnics in dissimilar materials, Stress field near an interface edge, Stress field near an interfacial crack
Nonlinear fracture mechanics	2	Fracture mechanics in non-linear elastic solid HRR singular field, J-integral, creep Stress field near an interface edge
farcture phenomenon and mechanics	3	Application of fracture mechanics to fracture toughness Application of fracture mechanics to fatigue cracking Application of fracture mechanics to environmental cracking Application of fracture mechanics to fatigue cracking at high temperatures
fracture mechanics on growth of small cracks	1	Growth of physicall small crack Growth of microstrucually small crack
Smakk crack and cavity in creep	1	Cavity growth by diffusion creep Difference of stress filed between crack and cavity
Fracture nanomechanics	1	Research works on fracture mechanics in nanometer scale
Fracture in atomic scale	1	Research works on fracture in atomic scale
Summary	1	Discussion and report

【Textbook】The teacher provide articles for this lecture.

【Textbook(supplemental)】

【Prerequisite(s)】The traditional material strength and the linear elastic mechanics should be learned before taking this lecture.

【Course Description】Understanding of intelligent behaviors of living things is very interesting. And realization of their intelligent motion by a robot is also attractive for mechanical engineering. In this lecture, we consider basic understanding of beautiful human skill “ manipulation ” on the point of view of dynamics and control. First modeling methodologies for a rigid multibody system and a general dynamic model of a manipulator are provided. Next, a typical nonlinear control law is introduced and some problems for applying the controller are shown. Based on nature of the dynamics of the manipulator, a very simple and robust controller can be derived by designing energy of the system. This lecture provides modeling methodologies and controller design strategies of the rigid multibody system and we analyze a beautiful human skill of the manipulation.

Advanced Finite Element Methods
有限要素法特論

【Code】10G041 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Wed 2nd

【Location】C3-Lecture Room 2 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture and Practice

【Language】English 【Instructor】Kotera and Nishiwaki

【Course Description】This course presents the basic concept and mathematical theory of the Finite Element Method (FEM), and explains how the FEM is applied in engineering problems. We also address important topics such as the physical meaning of geometrical non-linearity, material non-linearity, and non-linearity of boundary conditions, and we explore numerical methods to deal with these nonlinearities. Also, we guide students in class in the use of software to solve several numerical problems, to develop practical skill in applying the FEM to engineering problems.

【Grading】Grading is based the quality of two or three reports and the final exam.

【Course Goals】The course goals are for students to understand the mathematical theory of the FEM and the numerical methods for analyzing non-linear problems based on the FEM.

【Course Topics】

Theme	Class number of times	Description
Basic knowledge of the FEM	3	What is the FEM? The history of the FEM, classifications of partial differential equations, linear problems and non-linear problems, mathematical descriptions of structural problems (stress and strain, strong form and weak form, the principle of energy).
Mathematical background of the FEM	2	Variational calculus and the norm space, the convergence of the solutions.
FEM formulations	3	FEM approximations for linear problems, formulations of iso-parametric elements, numerical instability problems such as shear locking, formulations of reduced integration elements, non-conforming elements, the mixed approach, and assumed-stress elements.
Classifications of nonlinearities and their formulations	4	Classifications of nonlinearities and numerical methods to deal with these nonlinearities.
Numerical practice	2	Numerical practice using COMSOL.
Evaluation of student achievements	1

Strength of Advanced Materials

先進材料強度論

【Code】10B418 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Thu 2nd
【Location】C3-Lecture Room 2 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese
【Instructor】M. Hojo and M. Nishikawa
【Course Description】The mechanism underlying mechanical and functional properties are lectured for advanced materials used and developed in advanced fields of current engineering. In particular, advanced composite materials, used for aircraft structure etc., are introduced, with a detailed description of the relationship between microscopic constituent materials and macroscopic properties from the perspective of multiscale mechanics; also the anisotropy of their properties, their fatigue and fracture properties are described in the basic discipline for strength of materials. The latest applications are introduced in the field of various transportation systems including airplanes.
【Grading】Grading is based on the reports. The assignments will be given around three times.
【Course Goals】The course goal is to understand basic concepts of composite materials and the underlying mechanism of their mechanical properties from multiscale viewpoints, while the phsyical understanding of composites is developed based on multiple disciplines.
【Course Topics】

Theme	Class number of times	Description
Concept of composite materials	2	The concept and definition of composite materials, their constituent materials and manufacturing methods are illustrated. Their application to aircraft structures etc. are also introduced.
Mechanical properties of microscopic constituent materials	2	Resin for matrix and various fiber types are explained including their structure and mechanical properties. The weakest link model and Weibull distribution are described as a basis of the statistic nature of strength.
Basic mechanical properties	4	The specific strength, the specific stiffness, and the rule of mixture for elastic modulus and strength are lectured. In particular, the detailed explanation is made to the anisotropy of elastic modulus, independent elastic constants in the generalized Hookean law, the anisotropic failure criteria, and laminate theory. The relationship between the mechanical properties of microscopic constituent materials and macroscopic properties of composite materials is also illustrated.
Micromechanics	2	The mechanism of transverse fracture is illustrated. The mechanical models are described for short fiber reinforced composites and particle dispersed composites. The micromechanical analyses based on finite element method is also illustrated for the physical understanding of the strength of composite materials.
Fracture mechanics properties	2	Fracture mechanics of anisotropic materials are described. The interlaminar fracture toughness and interlaminar fatigue crack propagation, the critical issues in the application of composite structures, are explained including their underlying mechanism.
Superconducting materials	1	High-temperature superconducting materials are the composite materials consisting of metals and fibrous superconducting materials made of oxides. The mechanism are explained for understanding that their mechanical properties so much control their electric properties.
Process and mechanical properties of composite materials	1	The molding and machining process of composite materials is explained to relate it to their mechanical properties. Fiber preform, the selection of resin, intermediate materials, machining and assembly and inspection methods are overviewed from the academic viewpoints.
Academic achievement test	1	Academic achievements is assessed.

【Textbook】Supplementary handouts will be distributed in the class.
【Textbook(supplemental)】D.Hull and T.W.Clyne, "An Introduction to Composite Materials," Cambridge University Press.
【Prerequisite(s)】Mechanics of Materials, Continuum Mechanics, Fundamentals of Materials, Solid Mechanics, Adv.

【Language】Japanese 【Instructor】M. Matsumoto

【Course Description】Based on elementary thermodynamics and statistical physics, I will describe non-equilibrium thermodynamics and advanced statistical physics, including phase transition, pattern formation, and entropy production.

【Grading】Paper assignments

【Course Goals】Understanding the principle mechanisms of phase transition, cooperation phenomena, patern formation, and relaxation phenomena, in terms of advanced statistical mechanics and non-equilibrium thermodynamics.

【Course Topics】

Theme	Class number of times	Description
Elementary statistical physics: review	1	Review of equilibrium statistical mechanics
Phase transition as a cooperative phenomenon	3	Statistical mechanics of interacting particle system - Exact calculation - Monte Carlo simulation - Mean field approximation
Pattern formation of non-equilibrium systems	4	After a time dependent Ginzburg-Landau (TDGL) model is introduced, formation of spatial patterns is discussed from various viewpoints.
Equilibrium thermodynamics: review	1	Review of elementary thermodynamics
Non-equilibrium thermodynamics: Basics	2	System stability and the principle of irreversible process are discussed in terms of thermodynamics.
Non-equilibrium thermodynamics: Applications	3	- Entropy production - Linear response theory - Onsager's reciprocal relation
Examination	1

【Course Description】The important learning objective of this class is to understand the fundamental mechanisms of momentum, heat, and mass transfer phenomena, the knowledge of which will be markedly required for the thermal energy control technologies to further practice conservations of natural resources and energies for sustainable development. Heat and mass transfer processes consisting of conduction and forced/natural convection will be highlighted in detail, referring to the similarity characteristics of flow velocity, fluid temperature, and species concentration. Some topics on Reynolds stress, turbulent heat flux, and phase change will be introduced, expanding to their numerical models, together with some recent trends of high-tech heat and energy devices.

【Course Description】Particle simulations are a tool of analyzing microscopic phenomena, and widely used in various fields of science and engineering. After providing the basics of particle simulation methods through lectures and exercises, we show various practical applications in thermofluids, solid materials, and quantum systems.

【Grading】Reports, presentation/discussion

【Course Goals】- Understanding the basics of particle simulations - Mastering data analysis techniques

【Course Topics】

Theme	Class number of times	Description
Basics of MD simulations (M.Matsumoto)	5	- Numerical simulation of equations of motion - Model potentials - Data analysis - Equilibrium vs. non-equilibrium
Application: Thermofluidal systems (M. Matsumoto)	2	- Lennard-Jones fluids - Interface, phase change, energy transport, etc.
Application: Polymeric materials (Nishikawa)	2	
Application: Biosystems (Inoue)	2	
Application: Solid systems (R. Matsumoto)	2	- Deformation and destruction - Alternative methods
Application: Quantum systems (Shimada)	2	- First principle MD - Mechanical and electronic properties on nanoscale

【Language】English 【Instructor】

【Course Description】Outline: New materials are necessary for the advancement of high technologies, but in order to develop these new materials for practical applications, a number of problems must be solved. In this course, the problems encountered in the fields of chemical engineering, electrical / electronic engineering, mechanical engineering and civil engineering are discussed. Discussions are also held on natural resources, and how computers are being used in the development of new materials. Lectures are given in English.

【Grading】Credit: The evaluation of a student ' s work will be given on a pass / fail basis, based on his / her attendance and reports, not on examinations.(1) Attending the class 10 times or more and submitting at least 5 reports with passing marks is required to receive 2 credits.(2) A report assignment will be given by every lecturer and must be submitted within 2 weeks from the end of the lecture.(3) A student ' s report on any lecture from which he / she is absent will not be accepted.

【Code】10X402 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Wed 5th

【Location】C3-Lecture Room 4a 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture

【Language】Japanese 【Instructor】

【Course Description】The activity of design is fundamentally similar across a wide variety of domains. I use artifact in a broad and atypical sense to describe any product of intentional creation, including physical goods, services, information systems, buildings, landscapes, organizations, and societies. The central theme of this lecture is that a unifying framework informs the human activity of design across all domains. For this purpose, the following steps of the design process are described: Sense gap, Define problem, Explore alternatives, and Select plan according to the Ulrich ’ s classification. The principles and methodologies for each of those steps are provided in the lecture. Moreover, understanding user needs is a key element of problem definition, and that understanding is usually best developed with interactive and immersive methods. In this lecture, a variety of methodologies for participatory systems approach and an idea of user-experience are provided, and its contributions to the design process are discussed.

Crystallography of Metals

金属結晶学

【Code】10G055 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Thu 3rd
【Location】C3-Lecture Room 3 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese
【Instructor】
【Course Description】Metallic crystal structure and deformation behavior are lectured on the basis of metal physics and dislocation theory. Especially, mechanical properties of dislocation and its substructure, which is changed in association with deformation, are introduced, and the effect of grain boundary and free surface on dislocation motion is explained.
【Grading】Reporting assignment
【Course Goals】The objective of this lecture is to deepen a further understanding of crystal growth methods, the dislocation theory and industrial problems.
【Course Topics】

Theme	Class number of times	Description
Introduction	1	Introduction Ideal strength and slip deformation Concept of dislocation Simulation
Basis of crystallography	1	Typical crystallographic structure Allotropic transformation Stereographic projection of crystal
High temperature and vacuum techniques	1	Furnace Vacuum pump
Crystal breeding	2	Single- and bi-crystal growth Crystal growth Vapor deposition and thin film
Dislocation theory	3	Plastic deformation of crystal Definition and type of dislocation Strain field around dislocation Dislocation reaction Dislocation multiplication
Mechanical properties of single- and bi-crystals	1	Dislocation substructure Grain boundary structure Reaction between dislocation and grain boundary Deformation of micro- and nano- materials
Fatigue	3	Fatigue of single crystal Fatigue dislocation substructure Fatigue cracking mechanism Fatigue of micro- and nano- materials
Observation and analysis techniques	2	Introduction of electron microscope and observation case
Summary	1	Discussion and report

【Location】C3-Lecture Room 1 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】S. Biwa, M. Nishikawa

【Course Description】In Part I, fundamental issues of the finite deformation analysis of solids and structures are introduced, including tensor analysis, kinematics of continua, conservation laws, and various stress/strain measures. In Part II, basic ideas of elastoplastic and viscoplastic theories are lectured to describe nonlinear material properties, and the derivation of inelastic constitutive equations and their application to numerical analyses are also introduced.

【Grading】Grading is based on the examination, possibly with considerations of reports.

【Course Goals】The goal is to understand the concepts of finite deformation analysis and inelastic constitutive relations, which constitute the basis of computational mechanics simulations for mechanical/structural design.

【Course Topics】

Theme	Class number of times	Description
Part I. Fundamentals of finite deformation analysis		
I-1. Tensor analysis	2	Tensor as a linear transformation; Tensor algebra; Transformation of tensor components due to change of basis; Eigenvalues of symmetric tensors; Spectral decomposition; Integral theorem
I-2. Kinematics	2	Reference and current configurations; Deformation gradient; Cauchy-Green deformation tensors; Strain tensors; Velocity and acceleration; Deformation-rate tensor and spin tensor
I-3. Conservation laws	2	Conservation of mass; Laws of motion by Euler and Cauchy; Cauchy stress tensor; Equation of motion; Principle pf virtual work
I-4. Various definitions of stress	1	First and second Piola-Kirchhoff stresses; Alternative expression of equation of motion; Objectivity of vectors and tensors; stress-rate
Part II. Basis of inelastic analyses		
II-1. Constitutive equations of elastoplastic body	3	Models of plasticity for uniaxial tension; Yield functions for isotropic materials; Work hardening; J2 flow theory; Elastoplastic constitutive equations
II-2. Numerical methods for elastoplastic body	2	Incremental virtual work principle; Basis for incremental finite element analyses
II-3. Constitutive equations of elastic-viscoplastic body	2	Models of rate-dependent plasticity; Elastic-viscoplastic constitutive equations based on tangent modulus method
III. Assessment	1	Assessment of understanding and achievements

【Textbook】Parts I, II: Lecture materials are distributed in classroom or to be downloaded on the website.

【Textbook(supplemental)】Part I: T. Kyoya, "Continuum Mechanics," Morikita (2008); A. J. M. Spencer, "Continuum Mechanics," Dover (1980).
Part II: Y. Tomita, “Foundation and Application of Elastoplasticity,” Morikita (1995); E. Neto et al., “Computational Methods for Plasticity,” John Wiley & Sons (2008).

【Prerequisite(s)】Enrolling students are expected to have knowledge in "Mechanics of Materials," "Continuum Mechanics," or "Mechanics of Solids" courses on the undergraduate level.

【Language】Japanese 【Instructor】Sawaragi, Nishiwaki, Tomita, M. Komori, Tsuchiya, Noda, Sato, Iseda

【Course Description】Basic knowledge of Engineering Ethics and Management of Technology needed for future project leaders in companies and society is taught. Students have to make group work after-class hours as well as presentations of wrapping-up the discussions. Engineering ethics is the field of applied ethics and system of moral principles that apply to the practice of engineering. The field examines and sets the obligations by engineers to society, to their clients, and to the profession. Management of Technology is a set of management disciplines that allows organizations to manage their technological fundamentals to create competitive advantage. This course consists of lectures, exercises, discussions and oral presentations under supervision of professional faculties and extramural lecturers.

【Grading】Submission of reports and presentations

【Course Goals】To cultivate a spirit of self-sufficiency needed for engineers

【Course Topics】

Theme	Class number of times	Description
Engineering Ethics	9	1. Introduction to Engineering Ethics (EE) 2.Medical Engineering Ethics 3.EE by Institution of Professional Engineers, Japan and abroad 4.Product Safety and Product Liability 5.Comprehensive Manufacturing and EE (1) 6.Comprehensive Manufacturing and EE (2) 7.Group Discussions 8.History and Philosophy of EE 9.Presentation on exercise of EE
Management of Technology	5	1.Product Portfolio, Strategy for Competition 2.Bussiness Domain and MOT for Marketing 3. Organizational Strategy for Corporates' R & D 4. Management Theory for R & D 5.Presentation on exercise of MOT

【Code】10G205 【Course Year】Master Course 【Term】2nd term 【Class day & Period】Mon 3rd

【Location】C3-Lecture Room 4a 【Credits】2 【Restriction】 【Lecture Form(s)】Lecture 【Language】English

【Instructor】O. Tabata, H. Kotera, T. Tsuchiya, R. Yokokawa

【Course Description】Microsystem covers not only technologies related to individual physical or chemical phenomenon in micro scale, but also complex phenomena which are eveolved from their interaction. In this course, the physics and chemistry in micro and nanoscale will be lectured in contrast to those in macro scale. The various kinds of application devices (ex. physical (pressure, flow, force) sensors, chemical sensors, biosensors, actuators (piezoelectric, electrostatic, and shape memory) and their system are discussed.

【Grading】The evaluation will be based on the reports given in each lecture.

【Course Goals】Understand the theory of sensing and actuating in microsystem. Acquire basic knowledge to handle various kinds of phenomena in microscale.

【Course Topics】

Theme	Class number of times	Description
MEMS modeling	2	Multi-physics modeling in microscale. Electro-mechanical coupling analysis.
MEMS simulation	2	System level simulation in MEMS.
Electrostatic microsystem	3	Electrostatic sensors and actuators. Theory and application devices.
Physical sensors	4	Physical sensors as a fundamental application in microsystem. Accelerometer, vibrating gyroscope, pressure sensors.
Micro total analysys system	4	Chemical analysis system and bio-sensing device using microsytem.

【Textbook】Provided in the lecture.

【Textbook(supplemental)】Provided in the lecture.

【Prerequisite(s)】Students are required to take the 10G203 course "Micro Process and Material Engineering".

【Web Sites】

【Additional Information】The student of this class is strongly recommended to take a course 10V201 "Introduction to the Design and Implementation of Micro-Systems", which is a practice for designing microsystem. Those who wants to take this course, please contact one of the instructors as early as possible.

Strength of Advanced Materials

先進材料強度論

【Code】10B418 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Thu 2nd
【Location】C3-Lecture Room 2 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese
【Instructor】M. Hojo and M. Nishikawa
【Course Description】The mechanism underlying mechanical and functional properties are lectured for advanced materials used and developed in advanced fields of current engineering. In particular, advanced composite materials, used for aircraft structure etc., are introduced, with a detailed description of the relationship between microscopic constituent materials and macroscopic properties from the perspective of multiscale mechanics; also the anisotropy of their properties, their fatigue and fracture properties are described in the basic discipline for strength of materials. The latest applications are introduced in the field of various transportation systems including airplanes.
【Grading】Grading is based on the reports. The assignments will be given around three times.
【Course Goals】The course goal is to understand basic concepts of composite materials and the underlying mechanism of their mechanical properties from multiscale viewpoints, while the phsyical understanding of composites is developed based on multiple disciplines.
【Course Topics】

Theme	Class number of times	Description
Concept of composite materials	2	The concept and definition of composite materials, their constituent materials and manufacturing methods are illustrated. Their application to aircraft structures etc. are also introduced.
Mechanical properties of microscopic constituent materials	2	Resin for matrix and various fiber types are explained including their structure and mechanical properties. The weakest link model and Weibull distribution are described as a basis of the statistic nature of strength.
Basic mechanical properties	4	The specific strength, the specific stiffness, and the rule of mixture for elastic modulus and strength are lectured. In particular, the detailed explanation is made to the anisotropy of elastic modulus, independent elastic constants in the generalized Hookean law, the anisotropic failure criteria, and laminate theory. The relationship between the mechanical properties of microscopic constituent materials and macroscopic properties of composite materials is also illustrated.
Micromechanics	2	The mechanism of transverse fracture is illustrated. The mechanical models are described for short fiber reinforced composites and particle dispersed composites. The micromechanical analyses based on finite element method is also illustrated for the physical understanding of the strength of composite materials.
Fracture mechanics properties	2	Fracture mechanics of anisotropic materials are described. The interlaminar fracture toughness and interlaminar fatigue crack propagation, the critical issues in the application of composite structures, are explained including their underlying mechanism.
Superconducting materials	1	High-temperature superconducting materials are the composite materials consisting of metals and fibrous superconducting materials made of oxides. The mechanism are explained for understanding that their mechanical properties so much control their electric properties.
Process and mechanical properties of composite materials	1	The molding and machining process of composite materials is explained to relate it to their mechanical properties. Fiber preform, the selection of resin, intermediate materials, machining and assembly and inspection methods are overviewed from the academic viewpoints.
Academic achievement test	1	Academic achievements is assessed.

【Textbook】Supplementary handouts will be distributed in the class.
【Textbook(supplemental)】D.Hull and T.W.Clyne, "An Introduction to Composite Materials," Cambridge University Press.
【Prerequisite(s)】Mechanics of Materials, Continuum Mechanics, Fundamentals of Materials, Solid Mechanics, Adv.

Introduction to the Design and Implementation of Micro-Systems

微小電気機械システム創製学

【Code】10V201 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Mon 2nd

【Location】C3-Lecture Room 4b 【Credits】2 【Restriction】Take class 10G205 "Microsystem Engineering"

【Lecture Form(s)】Lecture and Pactice 【Language】English

【Instructor】O. Tabata, H. Kotera, T. Tsuchiya, R. Yokokawa

【Course Description】This is a joint lecture with Hong Kong University of Science and Technology (HKUST). A team consists of two students from each University work together to fullfill the assignment (design a microsystem) through paper survey, analysis,design, and presentation. A student can acquire not only the basic knowledge of a microsystem, but also comprehensive ability of English such as technical knowledge in English, skill for team work, and communication.

【Grading】Presentation, Assignments, and Achievement

【Course Goals】Acquire the knowledge and skill to design and analyze a microsystem.

【Course Topics】

Theme	Class number of times	Description
Tutorial on microsystem CAD software	3	Master CAD program for microsystem design and analysis which will be utilized to accomplish an assignment.
Lecture and Task Introduction	2	Learn basic knowledge necessary to design a microsystem/MEMS(Micro Electromechical Systems) utilizing microfabrication technology.
Design and analysis work	3	Analyze and design a microsystem by communicating with a team member of HKUST.
Presentation I	2	The designed device and its analyzed results is presented in detail by team in English.
Evatuation of device	3	Evaluate the fabricated microsystem.
Presentation II	2	The measured results and comparison between the analyzed results of the fabricated microsystem is presented by team in English.

【Textbook】

【Textbook(supplemental)】

【Prerequisite(s)】Students are required to take the 10G203 course "Micro Process and Material Engineering".

【Web Sites】

【Additional Information】The student of this class is required to take the course 10G205 "Microsystem Engineering", which provide the knowledge about the theory of sensing and actuating in microsystem. Those who wants to take this course have to take training course for CAD in advance. For more detail, please contact one of the instructors as early as possible.

10G041

Advanced Finite Element Methods

有限要素法特論

【Code】10G041 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Wed 2nd 【Location】C3-Lecture Room 2 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture and Practice 【Language】English 【Instructor】Kotera and Nishiwaki

【Course Description】This course presents the basic concept and mathematical theory of the Finite Element Method (FEM), and explains how the FEM is applied in engineering problems. We also address important topics such as the physical meaning of geometrical non-linearity, material non-linearity, and non-linearity of boundary conditions, and we explore numerical methods to deal with these nonlinearities. Also, we guide students in class in the use of software to solve several numerical problems, to develop practical skill in applying the FEM to engineering problems.

【Grading】Grading is based the quality of two or three reports and the final exam.

【Course Goals】The course goals are for students to understand the mathematical theory of the FEM and the numerical methods for analyzing non-linear problems based on the FEM.

【Course Topics】

Theme	Class number of times	Description
Basic knowledge of the FEM	3	What is the FEM? The history of the FEM, classifications of partial differential equations, linear problems and non-linear problems, mathematical descriptions of structural problems (stress and strain, strong form and weak form, the principle of energy).
Mathematical background of the FEM	2	Variational calculus and the norm space, the convergence of the solutions.
FEM formulations	3	FEM approximations for linear problems, formulations of iso-parametric elements, numerical instability problems such as shear locking, formulations of reduced integration elements, non-conforming elements, the mixed approach, and assumed-stress elements.
Classifications of nonlinearities and their formulations	4	Classifications of nonlinearities and numerical methods to deal with these nonlinearities.
Numerical practice	2	Numerical practice using COMSOL.
Evaluation of student achievements	1

【Course Description】The activity of design is fundamentally similar across a wide variety of domains. I use artifact in a broad and atypical sense to describe any product of intentional creation, including physical goods, services, information systems, buildings, landscapes, organizations, and societies. The central theme of this lecture is that a unifying framework informs the human activity of design across all domains. For this purpose, the following steps of the design process are described: Sense gap, Define problem, Explore alternatives, and Select plan according to the Ulrich ’ s classification. The principles and methodologies for each of those steps are provided in the lecture. Moreover, understanding user needs is a key element of problem definition, and that understanding is usually best developed with interactive and immersive methods. In this lecture, a variety of methodologies for participatory systems approach and an idea of user-experience are provided, and its contributions to the design process are discussed.

【Instructor】ＴＡＢＡＴＡ , KITAMURA, HOJO, ADACHI, TSUCHIYA, YOKOKAWA, SUMIGAWA, NISHIKAWA, INOUE, NAKAMURA, HAN, (University of Hyogo) NAMAZU

【Course Description】This class lectures specific mechanical properties and behavior of micro to nano scale materials, underlying mechanism of those properties and behavior and characterization method. Furthermore, techniques of measurements, analysis and structural design of biomaterial such as protein and DNA which are expected to be utilized as micro nano scale materials are lectured.

【Grading】The evaluation will be based on the reports given in each lecture.

【Course Goals】Educate engineers and researchers with fundamental knowledge on specific mechanical properties and behavior of micro to nano scale materials. They can promote industrial application of micro and nano materials based on the deep understanding about how specific mechanical properties and behavior of micro to nano scale materials dominate performance, reliability and lifetime of MEMS (Micro Electromechanical Systems), microsystems and micro scale components.

【Course Topics】

Theme	Class number of times	Description
Outline	1	In this lecture, application examples of micro and nano scale material on devices and importance of mechanical properties and its behavior on device characteristics are described. (Tabata)
Mechanical properties of Silicon	2	Silicon, one of the most widely used materrials in micro/nano devices, is used not only a semiconductor material but also a mechanical material because of its sperior mechcanical properties. In this lecture, the properties of silicon, such as physical, electrical, mechanical, electro-mechanical properties, will be presented in the view point of a mechanical structural material. Especially the lecture will focus on the elastic properties, piezoresistive effect, and fracture/fatigue properties of silicon, indespensable for designing micro/nano-devices. (Tsuchiya)
Characterization of micro nano material	2	In this class, first I will lecture the evaluation method for the mechanical properties of micro and nano-scale materials used for MEMS and semiconductor devices. Several representative experimental techniques for micro and nano mechanical testing will be presented and explained. Then I will lecture representative functional materials, such as shape memory alloy films and self-propagating exothermic foils, and lecture regarding the possibility of their application to MEMS. (Tsuchiya, Namazu)
Fracture and fatigue mechanism of materials in the micro- and nano-meter scale	4	We explain fundamentals on the fracture and fatigue mechanism of materials in the micro- and nano-meter scale. At first, the characteristic properties of deformation and fracture in small components such as thin films, wires, dots etc. are discussed in terms of the solid mechanics. Focus is put on the interface strength of dissimilar materials as well including the effect of fatigue, creep and environment. Then, we extend our explanation to the multi-physics property of nano-components on the basis of the ab initio simulations. As a representative example of materials with microscale structures, properties of composite materials are lectured. Characterization of microscopic components such as fibers and matrices are explained from the view points of the difference from bulk materials. Testing methods and properties of fiber/matrix interface are described. The relationship between the deformation and fracture of microscopic components and those of macroscopic composite materials are explained including the underlying mechanism. Explanation is also made to anisotropy of elastic properties and strength. (Kitamura, Sumigawa, Hojo, Nishikawa)
Piezoresistive effect of micro and nano material	2	In this theme, we will study the fundamental concepts of electronic-state theory and band structures to represent behavior of electrons in materials, and will discuss the electromechanical properties of materials based on the electronic-state theory. In particular, the principle and features of the piezoresistive effect, the change in the electrical resistivity due to mechanical stresses and strains, will be derived from the band structures of materials. The mechanisms of scale dependence of piezoresistivity in nanoscale materials such as silicon, carbon nanotube, and graphene will be also discussed. (Nakamura)
Bio/Nano material (1)	2	In tissue adaptation, regeneration and stem cell differentiation in tissue morphogenesis, cellular functional activities such as cell migration and division are regulated by complex mechano-chemical couplings at molecular level. To understand such a hierarchical dynamics from nanoscopic molecular events to microscopic cellular dynamics, we will discuss analysis of the molecular and cellular mechanical behaviors as bio-nano materials by integrating experiments, mathematical modeling and computer simulations. (Adachi, Inoue, Han)
Bio/Nano material (2)	1	Motor proteins are nano-scale actuators in vivo. Their active functions can be reconstructed in vitro to be utilized as a driving source of micro/nano systems. This lecture introduces fundamentals of their mechanical properties and molecular design methods. (Yokokawa)
Bio/Nano material (3)		This lecture describes DNA nanotechnology to construct nanoscale structures using DNA as a structural material. Fundamental knowledge, design methodology and application of DNA origami technique are focused. (Tabata)

【Instructor】TABATA, (Kobe University) KANNO, (Kyoto Institute of Technology) YAMASHITA, (University of Hyogo) FUJITA, (Kobe University) ISHIDA, WASA, MATSUSHIMA
【Course Description】This course presents the fundamentals and applications of functional thin films for the micro-devices. The fabrication and characterization of the thin films will be described, and furthermore, the performance of application devices is discussed. Especially, we focus on the piezoelectric energy harvesters and talk about the basics and application of piezoelectric MEMS.
【Grading】The evaluation will be based on the reports given in each lecture.
【Course Goals】The goal of this course is to understand the interdisciplinary technologies of material science, mechanical and electric engineering aiming for the creation of new functional MEMS devices. Especially, the development process of the practical functional microdevices is discussed on the basis of fundamental science and technologies.
【Course Topics】

Theme	Class number of times	Description
Basics and applications of piezoelectric actuators	3	This lecture presents piezoelectric actuators from the basic principle to the MEMS-actuators of piezoelectric thin films. (Kanno, Tabata)
Basics and applications of piezoelectric sensors	3	This lecture presents basic characteristics of piezoelectricity on ferroelectric materials and applications for sensors, especially ultrasonic microsensors of piezoelectric materials are described. (Yamashita)
Electric circuit of piezoelectric systems	3	This lecture presents the piezoelectric electric circuit of micro-sensors and actuators. Electric circuit of piezoelectric energy harvesters is also described. (Fujita)
Basics and applications of organic piezoelectric materials	3	Fundamentals of organic ferroelectric materials are presented. Thin film process including structure control, and characteristics of organic ferroelectrics will be discussed. (Ishida)
Thin film process of piezoelectric materials	2	Piezoelectric thin-film sensors and actuators are presented. Thin film process will be described. (Wasa)
Applications of piezoelectric MEMS	1	Piezoelectric ceramics and thin films are explained from a viewpoint of industrial application. In particular, piezoelectric rf-devices and energy harvesters are presented. (Matsushima)

【Instructor】TABATA, HIRAO, MIURA, TANAKA, FUJITA, SIMOTSUMA, TABE, SAKABE, SAKAKURA
【Course Description】In this lecture, micro/nano scale materials providing the peculiar optical and magnetic properties are presented together with their mechanism and characterization method. Moreover, the lecture is also focused on the optical property measurements and analytical design techniques on the promising micro/nano photonic devices.
【Grading】The evaluation will be based on the reports given in each lecture.
【Course Goals】In this lecture, the micro/nano scale properties and behaviors determining the photonic devices performance are basically presented. The lecture also encourages the researchers and technician to promote the photonic materials to industrial application based on the basic scholarship obtained.
【Course Topics】

Theme	Class number of times	Description
Outline	1	In this course, micro/nano photonic devises are introduced in terms of the representative examples of actual devices and their significant structural dependences on device properties. Moreover, the various application examples using the micro/nano photonic devices are mentioned not only for the photonics field but the bio-technology field.
Rare-earth doped photonic materials for green technologies	5	Fundamentals and basic principles of various rare-earth doped materials for optoelectronics and photonics will be described such as optical amplifiers for telecommunication, phosphors for white LEDs and quantum-cutting downconverters for photovoltaic applications.
Nano- and microscale magnetism of photonic devices	2	Phenomena and mechanisms relevant to optical and magnetic properties on nanoscale for metallic, inorganic, organic, and composite materials are described. Their applications are also mentioned.
Photonic Device Fabrication With Femtosecond Laser	5	Various phenomena induced by femtosecond laser are reviewed and the mechanisms of the observed phenomena are discussed. The femtosecond laser-induced structures are very promising in the fabrication of micro-optical components with various optical functions. In particular, the use of femtosecond laser processing to create three-dimensional structures in the glass is technologically attractive for applications.
Nanophotonics	2	Basic understanding of the plasmon and the quantum effect characteristically observed in the nanoscale materials. Furthermore, description of Its applications to devices.

【Instructor】S. Biwa, M. Nishikawa

【Course Description】In Part I, fundamental issues of the finite deformation analysis of solids and structures are introduced, including tensor analysis, kinematics of continua, conservation laws, and various stress/strain measures. In Part II, basic ideas of elastoplastic and viscoplastic theories are lectured to describe nonlinear material properties, and the derivation of inelastic constitutive equations and their application to numerical analyses are also introduced.

【Grading】Grading is based on the examination, possibly with considerations of reports.

【Course Goals】The goal is to understand the concepts of finite deformation analysis and inelastic constitutive relations, which constitute the basis of computational mechanics simulations for mechanical/structural design.

【Course Topics】

Theme	Class number of times	Description
Part I. Fundamentals of finite deformation analysis		
I-1. Tensor analysis	2	Tensor as a linear transformation; Tensor algebra; Transformation of tensor components due to change of basis; Eigenvalues of symmetric tensors; Spectral decomposition; Integral theorem
I-2. Kinematics	2	Reference and current configurations; Deformation gradient; Cauchy-Green deformation tensors; Strain tensors; Velocity and acceleration; Deformation-rate tensor and spin tensor
I-3. Conservation laws	2	Conservation of mass; Laws of motion by Euler and Cauchy; Cauchy stress tensor; Equation of motion; Principle pf virtual work
I-4. Various definitions of stress	1	First and second Piola-Kirchhoff stresses; Alternative expression of equation of motion; Objectivity of vectors and tensors; stress-rate
Part II. Basis of inelastic analyses		
II-1. Constitutive equations of elastoplastic body	3	Models of plasticity for uniaxial tension; Yield functions for isotropic materials; Work hardening; J2 flow theory; Elastoplastic constitutive equations
II-2. Numerical methods for elastoplastic body	2	Incremental virtual work principle; Basis for incremental finite element analyses
II-3. Constitutive equations of elastic-viscoplastic body	2	Models of rate-dependent plasticity; Elastic-viscoplastic constitutive equations based on tangent modulus method
III. Assessment	1	Assessment of understanding and achievements

【Textbook】Parts I, II: Lecture materials are distributed in classroom or to be downloaded on the website.

【Textbook(supplemental)】Part I: T. Kyoya, "Continuum Mechanics," Morikita (2008); A. J. M. Spencer, "Continuum Mechanics," Dover (1980).
Part II: Y. Tomita, “Foundation and Application of Elastoplasticity,” Morikita (1995); E. Neto et al., “Computational Methods for Plasticity,” John Wiley & Sons (2008).

【Prerequisite(s)】Enrolling students are expected to have knowledge in "Mechanics of Materials," "Continuum Mechanics," or "Mechanics of Solids" courses on the undergraduate level.

Engineering Ethics and Management of Technology

技術者倫理と技術経営

【Code】10G057 【Course Year】Master 1st 【Term】1st term 【Class day & Period】Thu 3rd

【Location】Butsurikei-Kousya 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lectures and Exercise

【Language】Japanese 【Instructor】Sawaragi, Nishiwaki, Tomita, M. Komori, Tsuchiya, Noda, Sato, Iseda

【Course Description】Basic knowledge of Engineering Ethics and Management of Technology needed for future project leaders in companies and society is taught. Students have to make group work after-class hours as well as presentations of wrapping-up the discussions. Engineering ethics is the field of applied ethics and system of moral principles that apply to the practice of engineering. The field examines and sets the obligations by engineers to society, to their clients, and to the profession. Management of Technology is a set of management disciplines that allows organizations to manage their technological fundamentals to create competitive advantage. This course consists of lectures, exercises, discussions and oral presentations under supervision of professional faculties and extramural lecturers.

【Grading】Submission of reports and presentations

【Course Goals】To cultivate a spirit of self-sufficiency needed for engineers

【Course Topics】

Theme	Class number of times	Description
Engineering Ethics	9	1. Introduction to Engineering Ethics (EE) 2.Medical Engineering Ethics 3.EE by Institution of Professional Engineers, Japan and abroad 4.Product Safety and Product Liability 5.Comprehensive Manufacturing and EE (1) 6.Comprehensive Manufacturing and EE (2) 7.Group Discussions 8.History and Philosophy of EE 9.Presentation on exercise of EE
Management of Technology	5	1.Product Portfolio, Strategy for Competition 2.Bussiness Domain and MOT for Marketing 3. Organizational Strategy for Corporates' R & D 4. Management Theory for R & D 5.Presentation on exercise of MOT

10G230

Dynamics of Solids and Structures

動的固体力学

【Code】10G230 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Mon 2nd

【Location】C3-Lecture Room 3 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture

【Language】Japanese 【Instructor】S. Biwa and T. Hayashi

【Course Description】Fundamental principles for dynamic deformations of solids and structures are examined. In particular, basic characteristics of elastic wave motion in solid media are emphasized. Responses of materials and structures to impact loading are also considered.

【Grading】Grading is based on the attendance, homework reports and the final examination (possibly replaced by reports).

【Course Goals】This course aims to establish the understanding of basic characteristics of dynamic deformations and elastic waves in solid media, as well as to learn about technological applications of ultrasound in a variety of fields extending from micro- to macro-scales. Particular emphasis is put on the mathematical aspects of the physical phenomena involved.

【Course Topics】

Theme	Class number of times	Description
Fundamentals of elastodynamics	3	Expressions of stress and strain; Conservation laws; Hooke's law; Hamilton's principle, Love's theory for longitudinal waves in a bar.
Basics of wave propagation in solids	3	One-dimensional wave equation; D'Alembert's solution; Harmonic waves; Spectral analysis; Waves in structural members; Dispersion; Phase and group velocities; Plastic waves; Impact strength
Waves in isotropic elastic media	2	Voigt notation of Hooke's law; Navier's equations; Longitudinal and transverse waves; Propagation of plane wave.
Waves in anisotropic elastic media	2	Stiffness matrix; Propagation of plane wave; Christoffel's equation; Propagation and polarization directions.
Reflection and transmission	2	Reflection and transmission of normal incident waves; Snell's law; Mode conversion; Reflection and refraction of oblique incident waves.
Guided elastic waves	2	Bulk waves and guided waves; Rayleigh wave; Love wave; Lamb wave.
Assessment of achievement	1	Assessment of achievement.

【Textbook】No textbooks are assigned. The lecture is mainly given in a blackboard style. Print-outs are handed in when needed.

【Textbook(supplemental)】

【Prerequisite(s)】Basic knowledge of mechanics of materials (solid mechanics, continuum mechanics) is expected.

【Web Sites】

【Additional Information】The time units and weights for each item on the above list are subject to possible changes.

10G423

Transport Phenomena in Reactive Flows

Transport Phenomena in Reactive Flows

【Code】10G423 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Wed 1st

【Location】C3-Lecture Room 2 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture

【Language】English 【Instructor】YOSHIDA Hideo, IWAI Hiroshi

【Course Description】This lecture is designed for the students who want to gain their knowledge and understanding on transport phenomena associated mainly with convective flows with chemical reactions. It starts with a brief review of undergraduate level subjects followed by more advanced discussion on heat and mass transfer with reactions. The reactions of interest in the lecture include combustion (oxidation), reforming and electrochemical reactions. As the reactions may proceed on catalysts, the discussion covers the catalytic surface reactions, reactions in porous media as well as gas phase reactions. The students are expected to have learned fundamentals of Fluid dynamics, Thermodynamics and Heat transfer during their undergraduate courses.

【Grading】Grade evaluation is based on attendance, short reports and one's term paper submitted at the end of the semester.

【Course Goals】Starting from the basic heat and mass transfer, the lecture aims to expand the students ' comprehensive understanding on transport phenomena in physicochemical processes including thermochemical and electrochemical reactions.

【Course Topics】

Theme	Class number of times	Description
Transport phenomena in reactive flows	14	Transport phenomena in convective flows with chemical reactions including combustion (oxidation), reforming and electrochemical reactions.
Achievement Confirmation	1	Achievement Confirmation

【Course Description】We study basics of quantum field theories as introduction to particle physics, condensed matter and quantum optics.

【Grading】examination

【Course Goals】We aim to understand that the dual feature of wave and particle in the microscopic physical world is described systematically in terms of the quantization of fields.

【Course Topics】

Theme	Class number of times	Description
Quantization of free fields	8	We present a detailed description for the quantization of free fields.
Interactions among quantized fields	6	We introduce interaction among fields, and describe the elementary processes for particles such as electron and phonon. Then, we consider transtion prcesses in terms of perturbative expantion, providing the Feynman propagaters and diagrams.
Confirmation of achievement in study	1

【Course Description】This course involves fundamental interactions of electrons, ions and photons to atoms, molecules and condensed matters, and practical applications for nanotechnology. Great emphases are on fundamental mechanisms of beam-solid interactions, characterization techniques, material synthesis and processing for quantum devices with quantum beam. Recent progress of related area of quantum beam will be also introduced in this course.

【Grading】Coursework will be evaluated with attendance and report on subjects.

【Course Goals】To provide students to understand fundamental interactions in quantum science.

【Course Topics】

Theme	Class number of times	Description
Interactions between quantum beams and solids	7	Interactions between quantum beams and solids are described with various formulas. Collisions with nucleus, electronic excitation, defect formation and energy loss will be discussed and related scientific topics, such as discovery of electron will be introduced.
Applications of quantum beams	7	The interactions of quantum beam are widely used for various applications. Material processing and analysis with quantum beams are essential in nanotechnology and quantum beams are also important for diagnostics of diseases and cancer therapy in medical field. Practical applications will be presented with recent progress and challenges.
Final examination and report	1	Evaluation will be given by the contents of the reports and quizzes of the subjects leaned in this course.

【Course Description】The reliable nuclear fuel cycle is essential to realize the long-range utilization of the nuclear energy. The scope of this course is to understand concepts, engineering schemes, and chemical principles of the nuclear fuel cycle, that is, recycling system for fast breeder reactor, nuclear reprocessing, partitioning and transmutation, especially, chemical separation, isotope enrichment, recycling methods of plutonium and thorium, environmental problems, and so on.

【Grading】Reports for subjects asked in the course.

【Course Goals】To gain the fundamental knowledge of the nuclear fuel cycle and deepen understanding of the nuclear science.

【Course Topics】

Theme	Class number of times	Description
General	2-3	Nuclear energy use and nuclear fuel cycle
Radiochemistry	3	*Formation of radionuclides in nuclear fuel *Radiochemical properties of nuclides focused in nuclear fuel cycle *Chemistry of actinide elements (f-elements)
Reprocessing	2	Methods and characteristics of nuclear fuel reprocessing
Concepts of reprocessing	2	Recycling of plutionium in light water reactor system (pluthermal), Thorium fuel cycle
Solution chemistry 1	2	Wet reprocessing of nuclear fuel (dissolution and extraction processes)
Solution chemistry 2	2	Pyro-reprocessing (chemistry of molten salts)
Isotope separation	1	Isotope enrichment of uranium
Environmental impact	1	Environmental impact via nuclear fuel cycle

【Textbook】Not specified. According to need, documents may be distributed.

Fundamentals of Magnetohydrodynamics
基礎電磁流体力学

【Code】10C076 【Course Year】Master and Doctor Course 【Term】1st term 【Class day & Period】Thu 2nd

【Location】C3-Lecture Room 5 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】English Lecture

【Language】English 【Instructor】Tomoaki Kunugi, Atsushi Fukuyama

【Course Description】This course provides fundamentals of magnetohydrodynamics which describes the dynamics of electrically conducting fluids, such as plasmas and liquid metals. The course covers the fundamental equations in magnetohydrodynamics, dynamics and heat transfer of magnetofluid in a magnetic field, equilibrium and stability of magnetized plasmas, as well as illustrative examples.

【Grading】Attendance and two reports

【Course Goals】The students can understand fundamentals of magnetohydrodynamics which describes the dynamics of electrically conducting fluids, such as plasmas and liquid metals. Moreover, the students will figure out the applications of magnetohydrodynamics to the various science and engineering fields.

【Course Topics】

Theme	Class number of times	Description
Liquid Metal MHD	7	1. Introduction and Overview of Magnetohydrodynamics 2. Governing Equations of Electrodynamics and Fluid Dynamics 3. Turbulence and Its Modeling 4. Dynamics at Low Magnetic Reynolds Numbers 5. Glimpse at MHD Turbulence & Natural Convection under B field 6. Boundary Layers of MHD Duct Flows 7. MHD Turbulence at Low and High Magnetic Reynolds Numbers
Plasma MHD	8	1. Introduction to Plasma MHD 2. Basic Equation of Plasma MHD 3. MHD Equilibrium 4. Axisymmetric MHD Equilibrium 5. Ideal MHD Instabilities 6. Resistive MHD Instabilities 7. MHD Waves in Plasmas 8. Student Assessment

【Textbook】Handout of the presentation will be provided at the lecture

【Textbook(supplemental)】P. A. Davidson, “ An Introduction to Magnetohydrodynamics, ” Cambridge texts in applied mathematics, Cambridge University Press, 2001

Multiphase Flow Engineering and Its Application

混相流工学

【Code】10C037【Course Year】Master and Doctor Course【Term】2nd term【Class day & Period】Wed 2nd【Location】
【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese
【Instructor】KUNUGI, Tomoaki, YOKOMINE, Takehiko
【Course Description】Reviewing of the fundamental definition and characteristics of multiphase flows, and to learn the governmental equations and some modelings of the constitutive equations and the current status of the multiphase flows. Moreover, to review and learn the fundamental definition and characteristics of particle flows, and to learn the numerical methods to track the particle laden flows and the particle measurement method.
【Grading】Present a summary of some papers regarding multiphase flows research by using a power point, and then answer several questions made by lecturers. The quality of your presentation and how deep understand your subject are the grading point.
【Course Goals】As for the multiphase flows, to learn its fluid dynamics behaviors, governing equations and numerical methods, and finally to discuss its applications to many engineering fields.
【Course Topics】

Theme	Class number of times	Description
What's the multiphase flows?	1	To review the definitions and fundamental characteristics of multiphase flows.
Governing equation of gas-liquid two phase flows	2	To learn the governing equation of gas-liquid two phase flows
Modeling of gas-liquid two phase flows	2	To learn modeling of gas-liquid two phase flows and its constitutive equations
Numerical methods	3	To learn the numerical methods to solve the single-phase and two-phase flows
Examples of gas-liquid two phase flow analysis	1	To show some examples of gas-liquid two phase flow analysis
Characteristics of particle flows	1	Review characteristics of particle flows
Fundamental aspect of particle flows	1	Explain variables and parameters subjected to interaction between particle and particle and/or particle and flow. Moreover, momentum and heat exchange between phases, i.e., to explain One-way, Two-way and Four-way coupling numerical methods.
Particle methods	2	Explain numerical method for thermofluid including static particles like a packed bed. Moreover, numerical methods for macroscopic and microscopic particles such as Discrete Element Method.
Measurements of particle characteristics	2	Review several measuring methods of particle characteristics and thermofluid behaviors

【Course Description】Particle accelerator is essential for proceeding nuclear and particle physics but also becomes a very important tool for future nuclear sciences and engineering. In this lecture, a basics theory of accelerator physics including beam optics and dynamics of the circular accelerators is given, and also various applications of the accelerators are also presented.

【Grading】Reports on practical issues and subjects.

【Course Goals】This lecture aims to learn a basic accelerator theory and to attain abilities to make a primitive design of circular accelerator.

【Course Topics】

Theme	Class number of times	Description
Hisitory and outline of particle accelerator	1	
Basic theory of beam dynamics in circular accelerator	2	
Beam oribit theory	3	
Hardwares of particle accelerator	2	
Strong focusing theory and lattice design	3	
Radio frequency acceleration theory	3	
Summary and check the accomplishment	1

【Course Description】Medical physics is the general term for the physics and technology which are supporting radiation diagnosis and therapy, and particle therapy. As it covers many different fields, the important subjects are “ promotion for the advance of radiation therapy ” and “ quality assurance for radiation therapy ” . The scope of this course is to learn the fundamental knowledge for radiation medical physics. Especially, the focus is put on the understanding for (1) the bases of physics, biology and so on for radiation, (2) the physics for the radiations applied to diagnosis, (3) the characteristics of radiations and particle beams applied to therapy, and (4) the radiation protection, quality assurance and so on for radiation diagnosis and therapy.

【Grading】Attendance and reports

【Course Goals】To learn the fundamental knowledge of medical physics, mainly for radiation physics in diagnosis and therapy

【Course Topics】

Theme	Class number of times	Description
Fundamental physics for radiation	2	
Fundamental bilology for radiation	2	
Radiation measurement and evaluation	2	
Physics in radiation diagnosis	3	
Physics in radiation therapy	3	
Quality assurance and standard dosimetry	1	
Radiation protection	1	
Achievement Assessment	1	

【Textbook】Not specified. Handouts will be given for each topic.

【Textbook(supplemental)】F.M.Khan, “ The Physics of Radiation Therapy: Mechanisms, Diagnosis, and Management ” (Lippincott Williams & Wilkins, Baltimore, 2003)

【Prerequisite(s)】It is recommended to attend the course, “ Radiation Measurement for Medicine ” , concurrently.

【Course Description】The various technologies used in the field of material science serve as bases for so-called "high technologies", and, in turn, the high technologies develop material science. These relate to each other very closely and contribute to the development of modern industries. In this class, recent progresses in material science are briefly introduced, along with selected current topics on new biomaterials, nuclear engineering materials, new metal materials and natural raw materials. The methods of material analysis and future developments in material science are also discussed.

【Grading】In order to obtain two credits, students must attend at least ten lectures, and at least five of the submitted reports must be evaluated as “ passed ” by each lecturer. Each report should be submitted to the lecturer within two weeks after his/her lecture. NOTE: Reports are NOT acceptable from those who do not attend the lecture.

【Course Description】Outline: New materials are necessary for the advancement of high technologies, but in order to develop these new materials for practical applications, a number of problems must be solved. In this course, the problems encountered in the fields of chemical engineering, electrical / electronic engineering, mechanical engineering and civil engineering are discussed. Discussions are also held on natural resources, and how computers are being used in the development of new materials. Lectures are given in English.

【Grading】Credit: The evaluation of a student ’ s work will be given on a pass / fail basis, based on his / her attendance and reports, not on examinations.(1) Attending the class 10 times or more and submitting at least 5 reports with passing marks is required to receive 2 credits.(2) A report assignment will be given by every lecturer and must be submitted within 2 weeks from the end of the lecture.(3) A student ’ s report on any lecture from which he / she is absent will not be accepted.

【Code】10C267 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Thu 2nd

【Location】Engineering Science Depts Bldg.-112 【Credits】2 【Restriction】No Restriction

【Lecture Form(s)】Lecture 【Language】Japanese 【Instructor】I. Tanaka and F. Oba

【Course Description】This lecture covers the mechanical, optical, and electronic properties of ceramics, their microscopic mechanisms, and fundamental knowledge required for the design of ceramics. Applications of advanced experimental and theoretical approaches to ceramic research are also discussed.

【Grading】Evaluations are made based on the examination or reports.

【Course Goals】Systematic understanding of the properties of ceramics on macroscopic and microscopic scales and learning approaches to the issues in ceramic research.

【Course Topics】

Theme	Class number of times	Description
Introduction to ceramics	2	Overview of the history and commercial applications of ceramics.
Fundamentals of ceramics	4	Fundamentals of ceramics such as crystal structure, electronic structure, and thermodynamical properties. The atomic and electronic structure of point defects, surfaces, grain boundaries, and their impacts on the properties of ceramics.
Structural ceramics	2	Mechanical properties of ceramics.
Energy ceramics	2	Ceramics for energy applications and their understanding from the viewpoint of the atomic and electronic structure.
Optical and electronic ceramics	4	Optical and electronic properties of ceramics for laser and electronic device applications and their understanding from the viewpoint of the atomic and electronic structure.
Assessment of mastery of the course content	1	The mastery of the course content is assessed.

Physics of Mesoscopic Materials

メゾ材料物性学

【Code】10C234 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Mon 2nd

【Location】Engineering Science Depts Bldg.-112 【Credits】2 【Restriction】No Restriction

【Lecture Form(s)】Lecture 【Language】Japanese 【Instructor】Akira Sakai, Shu Kurokawa

【Course Description】The first half of the lecture explains the mesoscopic phenomena, a variety of electronic transport phenomena observed in a nano- or atomic-scale specimen that is smaller in size than the mean free path of electrons. The second half covers scanning probe microscopy (SPM), a powerful observation tool widely exploited in nanotechnology. Principles of various types of SPM and their applications in materials science are exposited with many illustrative examples.

【Grading】Grading will be made based on the report on the assigned problems.

【Course Goals】The final goal of this lecture is to make students acquire basic understanding on the mesoscopic phenomena and the characterization of materials with SPM.

【Course Topics】

Theme	Class number of times	Description
Mesocopic electron transport phenomena	7	1. Introduction to electronic conduction 2. Quantum interference between electrons and its influence on electronic conduction 3. Ballistic conduction 4. Single-electron tunneling 5. Electron transport through atom-sized contacts of metals 6. Electron transport through single molecules 7. Newest topics of mesoscopic electronic conduction
Materials characterization with SPM	8	1. Atomic and electronic structures of surfaces 2. Properties of tunneling electrons 4. Forces acting across ultrasmall junctions 5. Materials characterization with SPM (1) 6. Materials characterization with SPM (2) 7. Materials characterization with SPM (3) 8. Cutting-edge SPM researches

【Textbook】Lacture notes in a paper form will be distributed.

【Textbook(supplemental)】

【Location】KatsuraA2-308,Yoshida Research Bldg.No4,-Room3(Distance lectures) 【Credits】2

【Restriction】No Restriction 【Lecture Form(s)】Relay Lecture 【Language】English 【Instructor】

【Course Description】The various technologies used in the field of material science serve as bases for so-called "high technologies", and, in turn, the high technologies develop material science. These relate to each other very closely and contribute to the development of modern industries. In this class, recent progresses in material science are briefly introduced, along with selected current topics on new biomaterials, nuclear engineering materials, new metal materials and natural raw materials. The methods of material analysis and future developments in material science are also discussed.

【Grading】In order to obtain two credits, students must attend at least ten lectures, and at least five of the submitted reports must be evaluated as “ passed ” by each lecturer. Each report should be submitted to the lecturer within two weeks after his/her lecture. NOTE: Reports are NOT acceptable from those who do not attend the lecture.

【Language】English 【Instructor】

【Course Description】Outline: New materials are necessary for the advancement of high technologies, but in order to develop these new materials for practical applications, a number of problems must be solved. In this course, the problems encountered in the fields of chemical engineering, electrical / electronic engineering, mechanical engineering and civil engineering are discussed. Discussions are also held on natural resources, and how computers are being used in the development of new materials. Lectures are given in English.

【Grading】Credit: The evaluation of a student ' s work will be given on a pass / fail basis, based on his / her attendance and reports, not on examinations.(1) Attending the class 10 times or more and submitting at least 5 reports with passing marks is required to receive 2 credits.(2) A report assignment will be given by every lecturer and must be submitted within 2 weeks from the end of the lecture.(3) A student ' s report on any lecture from which he / she is absent will not be accepted.

【Course Goals】

【Course Topics】

Theme	Class number of times	Description
Improving Sanitation and Resource Recovery in both Developing and Developed Countries (Yoshihisa SHIMIZU)	1	先進国および発展途上国における公衆衛生と再資源化の改善
Soils Recovered from Disaster Debris (Takeshi KATSUMI)	1	災害廃棄物の処理と分別土砂の有効利用
Separation Analyses in Micro- and Nano-scale (Koji OTSUKA)	1	マイクロ・ナノスケールの分離分析
Polymer Synthesis beyond the 21st Century: Precision Polymerizations and Novel Polymeric Materials (Mitsuo SAWAMOTO)	1	２１世紀からの高分子精密合成
Solid State Lighting based on Light Emitting Diodes (Yoichi KAWAKAMI)	1	発光ダイオードをベースとした固体照明
Material Properties of Fiber Reinforced Cementitious Composites and Applicability to Structures (Yoshio KANEKO)	1	繊維補強セメント系複合材料の材料特性と構造物への応用
Materials in Micro Electro Mechanical Systems (MEMS) (Toshiyuki TSUCHIYA)	1	MEMS における材料
Composite Materials: Smart, Lightweight and Strong Materials (Masaki HOJO)	2	複合材料：賢く軽くて強い材料
Inorganic New Materials (Koichi EGUCHI)	1	新無機素材論
Structural biochemistry of proteins (Masahiro SHIRAKAWA)	1	タンパク質の構造生物化学
Semiconductor Materials and Devices (Tsunenobu KIMOTO)	2	半導体材料とデバイス
High Temperature Superconductivity and Its Application to Electronics (Itsuhiro KAKEYA)	1	高温超伝導とそのエレクトロニクス応用

State Space Theory of Dynamical Systems
状態方程式論

【Code】10C628 【Course Year】Master Course 【Term】1st term 【Class day & Period】Wed 3rd 【Location】

【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】T. Hagiwara, Y. Ebihara

【Course Description】The course deals with the dynamical system theory based on linear time-invariant state equations. It covers such topics as state equations, controllability and observability, mode decomposition and its relevance to controllability/observability, stability of dynamical systems, and the Kalman canonical decomposition.

【Grading】The grading will be based on the exam.

【Course Goals】To acquire the knowledge on the basic theory for linear system analysis by means of state equations.

【Course Topics】

Theme	Class number of times	Description
feedback systems and state equations	3～4	fundamentals of state equations, their relationship to transfer functions and block diagram representations
responses of linear systems	5～6	state transition matrices, equivalence transformation of systems, mode decomposition and Lyapunov stability
controllability and observability	5～6	controllability and observability, mode decomposition and its relevance to controllability/observability, controllable subspace and unobservable subspace, and the Kalman canonical decomposition; Checking degrees of understanding of all the lecture topics closes the class.

【Textbook】

【Textbook(supplemental)】

【Prerequisite(s)】classical control theory (in terms of transfer functions), linear algebra and calculus

【Instructor】E. Furutani

【Course Description】The course deals with mathematical methods of system optimization mainly for combinatorial optimization problems. It covers such topics as the integer optimization and its typical problems, exact solution methods including the dynamic programming and the branch and bound method, approximate solution methods including the greedy method, meta-heuristics including the genetic algorithms, the simulated annealing method, and the tabu search.

【Grading】The grading will be based on an exam and the evaluation of the reports on the subjects given in the class.

【Course Goals】To acquire the knowledge on formulation of combinatorial optimization problems into integer programming problems, basic concepts, algorithms, characteristics, and application procedures of exact solution methods, approximate solution methods, and meta-heuristics.

【Course Topics】

Theme	Class number of times	Description
combinatorial optimization problems and complexity	2	necessity and importance of combinatorial optimization, typical problems, complexity, classes P and NP, complexity of combinatorial optimization problems, limitation of exact solution methods, necessity of approximate solution methods and meta-heuristics
exact solution methods	3	principle of optimality, dynamic programming, branch and bound method, and their applications
integer programming	2-3	formulation into integer programming problem, relaxation problem, and cutting plane algorithm
approximate solution methods	1-2	greedy method, relaxation method, partial enumeration method, etc.
meta-heuristics	5-6	local search, basic ideas of meta-heuristics, genetic algorithms, simulated annealing method, tabu search, etc. The level of understanding will be confirmed.

【Instructor】T. Hikihara & S. Doi

【Course Description】In the class, fundamental mathematics is lectured for electrical engineering, electronics, system engineering, and material science. In particular, system theory, nonlinear dynamics, and particle dynamics in force field can be discussed with mathematical clear image.

【Grading】Students are requested to reply to report assignments. The grading is based on the evaluation of the reports.

【Course Goals】Professors expect students to model their system and analyze the models theoretically. Students will be requested to understand their system in principle mechanics and control them based on system theory.

【Course Topics】

Theme	Class number of times	Description
	1	
	3	
	3	
Introduction 2	1	Relationship between the previous classes and further will be explained. The introduction to nonlinear dynamics will be explained based on oscillation theory.
Hamiltonian mechanics	4	Hamiltonian mechanics on linear symplectic space is lectured.
Manifold and vector field	3	Manifold is discussed in nonlinear system with relation to vector filed analysis.

【Course Description】The first half: computational electromagnetics
The latter half: the special theory of relativity and the covariance of Maxwell's equations

【Grading】Submission of reports (twice)

【Course Goals】1. Understanding of computational methods for electromagnetic field analysis
2. Understanding of the basic concepts of special theory of relativity and the covariant formulation of Maxwell's equations

【Course Topics】

Theme	Class number of times	Description
Finite integration method for electromagnetic field analysis	3-4	- Introduction to finite integration method - Application to electromagnetic field analysis
Finite element method for magnetic field analysis	1	- Introduction to finite element analysis for magnetic field analysis - Edge element for three-dimensional magnetic field analysis
Maxwell's equations in differential form	2-3	- Introduction to differential form to represent Maxwell's equations
Introduction to special theory of relativity	2-3	- Galilean relativity and special relativity - Lorentz transformation
Tensor representation and relativistic dynamics	2-3	- Introduction to tensor representation - Relativistic dynamics
Covariant formulation of Maxwell ’ s equations	2-3	- Electromagnetic field tensor - Lorentz covariance of Maxwell ’ s equations

【Instructor】Takashi Hikihara, Shinji Doi, Yoshihiko Susuki, Syun'ichi Azuma

【Course Description】Many engineering systems show hybrid dynamical structure, which is accompanied with discrete change of vector flow by control and regulate the trajectory to target dynamically. In the course, the fundamental characteristics and theorems are lectured. The framework of hybrid system, automaton model, and singular perturbation theorem are explain. Dynamic quantizer, power system, and network are picked up as examples.

【Grading】Exercise and repots are evaluated.

【Course Goals】Students are requested to understand the characteristics of hybrid system, approaching method, and control methods.

【Course Topics】

Theme	Class number of times	Description
Fundamentals of hybrid system	4	As fundamentals, the definition of hybrid system and the method of modeling is explained.
Singular perturbation and asymptotic expansion	3	Singular perturbation theorema and asymptotic expansion are explained. For the global oscillation of singular perturbed system, analytical and geometrical singular perturbation methods are introduced.
Application of hybrid system-1: power system	3	The application to power system is explained. The outline of power system, then safety and examination, the stability analysis, and the modeling towards control are given.
Application of hybrid system-2: dynamic quantizer	2	As an application, dynamic quantizer is adopted. The outline of the dynamic quantizer, the analysis, and the design of the system are given.
Application of hybrid system-3: networking	3	As an application, the communication network is adopted. The internet network is also explained as an example of modeling and control.

【Textbook】Each professors prepare the prints of lectures.

【Instructor】T. Hagiwara, Y. Ebihara

【Course Description】The course is based on State Space Theory of Dynamical Systems, and provides the applications of the concepts given therein to systematic control system design. The course covers such topics as state feedback and pole assignment, observers, synthesis of feedback control systems, servo conditions and feedforward, and optimal control under quadratic performance indices.

【Grading】In principle, the grading will be based on the absolute and comprehensive evaluation of the reports on the subjects given in the class. Should this change due to inadequate efforts on the submitted reports, an exam might be also imposed, in which case the details will be announced at the class at least two weeks before the exam term.

【Course Goals】To understand the basic ideas of control system design based on state space representations, and acquire fundamental knowledge and skills on practical control system design through simulated experiences with the report subjects.

【Course Topics】

Theme	Class number of times	Description
pole assignment by state feedback	4 ～ 5	state feedback, controllable canonical forms and pole assignment of scalar/multivariable systems, computation of the state feedback gains for pole assignment, transient responses, uncontrollable poles and stabilizability
observers	3 ～ 4	observable canonical forms and observability conditions, full-order observer, minimal-order observer, conditions for observers and observer-based feedback
synthesis of feedback systems	2 ～ 3	feedback systems with integral compensation, servo systems, internal model principle, synthesis of servo systems
optimal control under quadratic performance index	3 ～ 4	optimal regulators and their closed-loop poles, Riccati equations and their solutions, relationship with the pole assignment problem; Checking degrees of understanding of all the lecture topics closes the class.

【Textbook】Handouts will be given at the class.

【Textbook(supplemental)】

【Prerequisite(s)】The contents given in State Space Theory of Dynamical Systems, and linear algebra.

【Instructor】Hiroshi Yamakawa, Hirotsugu Kojima

【Course Description】The present lecture provides the guideline how the technology on the electronics and propulsion system is used for the development of spacecraft and space systems. Furthermore, in order to understand the environment in space, we also give a lecture on the space plasma physics.

【Grading】attendance and reports

【Course Goals】Mastery of the way how we can make use of the knowledges of the physics and technology to the space engineering.

【Course Topics】

Theme	Class number of times	Description
Space environment	2	The space environment in the view point of spacecraft desing such as thermal condition, plasmas, and charging.
Spacecraft system and its related technology	6	The spacecraft system and its technology related to power system, communication system, EMC, and payload desings.
Spacecraft dynamics	3	Spacecraft orbit design and its attitude control
System engineering of spacecraft	4	Spacecraft propulsion system including the advanced systems which make use of solar power, GPS navigation system, and space debris

【Location】(Katsura)A1-131, (Yoshida)N1, (Uji)S-143H 【Credits】2 【Restriction】 【Lecture Form(s)】Lecture

【Language】Japanese 【Instructor】(RISH) Shinohara, (RISH) Mitani

【Course Description】This lecture picks up microwave power transmission (MPT) technology, rectifying antenna (rectenna), antenna and propagation for the MPT, microwave transmitters, and some MPT applications like the Space Solar Power Satellite/Station. This lecture also picks up the other wireless power transmission technologies like resonnance coupling, energy harvesting, and applied microwave technologies of microwave processing, wireless communications, and radar.

【Grading】Reports

【Course Goals】Students learn about applied microwave engeering, mainly microwave power transmission.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	The purpose and constitution of the lecture, and review of microwave engineering are explained.
Applications of Wireless Power Tramsmission	3-4	Space Solar Power Satellite/Station and Ubiquitous power source as applications of microwave power transmission, the resonance coupling and energy harvesting as the other battery-less technologies are explained.
rectifying antenna (rectenna)	1-2	rectifying antenna (rectenna) for the MPT are explained.
antenna and propagation for the MPT	5-6	Calculation of beam collection efficiency and beam propagation with FDTD method are explained. Phased array technologies, beam targetting method, non linear physics of microwave-plasma interation are overviwed.
Microwave transmitters	2	High efficient semi-conductor amplifiers and microwave tubes are explained.
microwave processing, wireless communications, and radar	2	Microwave processing, wireless communications, and radar texhnologies are explained.

【Textbook】Naoki Shinohara, "Solar Power Satellite (in Japanese)", ISBN978-4-274-21233-8, Ohm-Sya

Spacio-Temporal Media Analysis

時空間メディア解析特論

【Code】10C714 【Course Year】Master Course 【Term】1st term 【Class day & Period】Tue 3rd

【Location】工学部 3 号館 N1 教室・A1-131・宇治生存研講義室 【Credits】2 【Restriction】No Restriction

【Lecture Form(s)】Lecture 【Language】Japanese 【Instructor】Yuichi Nakamura

【Course Description】Representation, feature extraction, recognition of media with two or higher dimensions, especially image and videos, are explained with comparing to human ability and biological systems.

【Grading】Evaluation is based on attendance and reports.

【Course Goals】To learn the basic of representation, feature extraction, od recognition of signals or media with two or higher dimension, and their applications.

【Course Topics】

Theme	Class number of times	Description
Spatio-Temporal Media	1	What is spatio-temporal media. Some examples.
Light and Colors	1-2	Intensity, colors, and spectrum in image media.
Features and Segmentation	2	Features such as edge, region, etc. for analysing image media.
Filtering and Wavelet Transform	1-2	Introduction to filtering and Wavelet Transform.
Discrete Wavelet Transform and Applications	1-2	Dicrete Wavelet Transform and applications such as image enhancement, image compression, etc.
Geometry of Image Capturing	1-2	The mechanism and geometry of image capturing: projection of a 3D world into 2D images.
3D Measurements and Reconstruction	2	3D measurements and 3D world reconstrunction from a set of 2D images.
Measurement of Motions	1-2	Motion detection and measurement, and oject tracking.
Pattern Recognition	0-2	The basic idea of pattern recognition and usuful tools such as Support Vector Machine.

【Textbook】No specific textbook. Handsout will be given when necessary.

【Location】KatsuraA2-308,Yoshida Research Bldg.No4,-Room3(Distance lectures) 【Credits】2

【Restriction】No Restriction 【Lecture Form(s)】Relay Lecture 【Language】English 【Instructor】

【Course Description】The various technologies used in the field of material science serve as bases for so-called "high technologies", and, in turn, the high technologies develop material science. These relate to each other very closely and contribute to the development of modern industries. In this class, recent progresses in material science are briefly introduced, along with selected current topics on new biomaterials, nuclear engineering materials, new metal materials and natural raw materials. The methods of material analysis and future developments in material science are also discussed.

【Grading】In order to obtain two credits, students must attend at least ten lectures, and at least five of the submitted reports must be evaluated as “ passed ” by each lecturer. Each report should be submitted to the lecturer within two weeks after his/her lecture. NOTE: Reports are NOT acceptable from those who do not attend the lecture.

【Location】A1-001 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】Yasuhito Gotoh

【Course Description】Fundamental technologies of an ion beam system, such as ion sources, formation and evaluation of ion beams, transport of ion beams, and ion-solid interaction will be presented. Taking ion implantation as one of the example of the ion beam application, the relationship between the incident ion energy and implantation depth will be presented. Each element of a typical ion beam system is explained in detail.

【Grading】Evaluation will be made with the results of final examination. Achievements of exercises in the class are also taken into consideration.

【Course Goals】To understand the details of an ion beam apparatus: generation, transport and evaluation of an ion beam. Understanding of the entire ion beam apparatus as a system is also purpose of the class.

【Course Topics】

Theme	Class number of times	Description
Ion beam systems and their applications	1	Outline of the class is presented. Physical properties of ions in vacuum are given, and ion beam apparatuses and their application will be introduced with some typical examples.
Ion-solid interaction	3	Interaction between high energy ion and solid atoms are given. Major topics are: how the ions transfer their energy to the target atoms, i.e., how the ions are decelerated in the solid, and relationship between incident ion energy and implantation depth is given.
Generation and transport of ion beam	4	Methods of ion generation for various elements are explained. Important euqations of beam extraction and beam transport are given. Starting with the paraxial ray equation, concept of transfer matrix is given. Finally, some important physical parameters of ion beams are given.
Mass separators and energy analyzers	4	Details of magnetic sector as mass separator are given. Transfer matrix of the mass separator are presented and focusing effect is described. An important parameter of mass resolution is given. Some different kinds of energy analyzers are also introduced.
Vacuum pumping system	1	Fundamentals of vacuum pumping is given. Several pumps used for ion beam systems are also introduced.
Design of ion beam systems	2	Design of an ion beam system under a given condition will be presented. In the last class, achievment test will be performed.

【Textbook】Yasuhito Gotoh, Charged Particle Beam Appratus, 2013 version (to be sold at CO-OP shop in Katsura Campus)

プラズマ工学特論

【Code】10C807 【Course Year】Master Course 【Term】1st term 【Class day & Period】Mon 3rd 【Location】

【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】Osamu SAKAI

【Course Description】Main regimes of plasma generation such as capacitive-coupled discharges, inductive-coupled discharges, and wave-propagation discharges are investigated and categorized with discussion of wave-heating mechanisms and particle/energy balance equations. These discussions are based on elementary process of atoms and molecules and wave dispersions in a plasma. In addition, various wave modes emerging in a spatiotemporal structure of plasmas are addressed.

【Grading】Judged by regular examination and submitted report sheet. (In some years, regular examination is replaced by a set of report sheets.)

【Course Goals】Reviewing fundamentals of plasma engineering, understandings of industrially-available plasma sources and electromagnetic-wave propagation in a plasma are required.

【Course Topics】

Theme	Class number of times	Description
Fundamentals	2-3	Reviewing fundamentals of plasma engineering, basic phenomena including elementary processes in a plasma are addressed.
Plasma sources	6-7	Based on wave propagation in a plasma, regimes of plasma generation such as capacitive-coupled discharges, inductive-coupled discharges, and wave-propagation discharges are investigated and categorized with discussion of wave-heating mechanisms and particle/energy balance equations.
Electromagnetic wave propagation	5-6	Various wave modes emerging in a spatiotemporal structure of plasmas are addressed; not only gaseous plasmas but also plasmas in solids are discussed.
Final check point of comprehension	1	Comprehension of the above lectures is checked out.

【Textbook】

【Textbook(supplemental)】F. F. Chen and J. P. Chang, Lecture Notes on Principles of Plasma Processing (Kluwar Academic/Plenum Publishing, New York, 2003)

【Prerequisite(s)】Knowledge addressed in plasma science and engineering in the bachelor course, or similar one corresponding to this subject.

【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese 【Instructor】

【Course Description】As an example of high precision measurements using quantum phenomena, frequency standards, which is realized with the smallest uncertainty in all measurement quantities at present, are discussed. The principle and evaluation of frequency standards are explained.

【Grading】Report(two times, at the first lecture and the after all lectures)

【Course Goals】The goal of this lecture is to understand that precision measurements are realized with combination of the best technologies and is based on physics.

【Course Topics】

Theme	Class number of times	Description
Introduction and principle of time measurement	1.5	Two principles of time measurement: Reproducibility postulate and dynamic model
Time and relativistic theory	3	Impact of special and general relativistic theory on time measurement
Fundamentals of atomic frequency standards	2.5	Atomic states, its energy shifts, high-resolution spectroscopy and high-sensitive detection
Cesium frequency standard and atom interferometer	2.5	Principle of Ramsey resonance and its interpretation as atom interferometer
Specification of frequency standards: evaluation methods and theoritical limit	2	Fundamentals of evaluation of frequency stability with Allan variance, and theoretical limit of frequency stability
Noise	2.5	Incoherent signals and shot noise
Evaluation of understanding	1	

【Textbook】

【Textbook(supplemental)】C. Audoin and B. Guinot,The Measurement of Time, (Cambridge University Press, 2001). M. Kitano, Fundamentals of electronic circuits (Reimei publishing, 2009) in Japanese.

【Prerequisite(s)】Fundamentals of physics (quantum physics, in particular) and electric circuits including linear system.
The level which average graduate students of electric and electronic science and technology acquire is sufficient.

【Course Description】The various technologies used in the field of material science serve as bases for so-called "high technologies", and, in turn, the high technologies develop material science. These relate to each other very closely and contribute to the development of modern industries. In this class, recent progresses in material science are briefly introduced, along with selected current topics on new biomaterials, nuclear engineering materials, new metal materials and natural raw materials. The methods of material analysis and future developments in material science are also discussed.

【Grading】In order to obtain two credits, students must attend at least ten lectures, and at least five of the submitted reports must be evaluated as “ passed ” by each lecturer. Each report should be submitted to the lecturer within two weeks after his/her lecture. NOTE: Reports are NOT acceptable from those who do not attend the lecture.

【Language】English 【Instructor】

【Course Description】Outline: New materials are necessary for the advancement of high technologies, but in order to develop these new materials for practical applications, a number of problems must be solved. In this course, the problems encountered in the fields of chemical engineering, electrical / electronic engineering, mechanical engineering and civil engineering are discussed. Discussions are also held on natural resources, and how computers are being used in the development of new materials. Lectures are given in English.

【Grading】Credit: The evaluation of a student ’ s work will be given on a pass / fail basis, based on his / her attendance and reports, not on examinations.(1) Attending the class 10 times or more and submitting at least 5 reports with passing marks is required to receive 2 credits.(2) A report assignment will be given by every lecturer and must be submitted within 2 weeks from the end of the lecture.(3) A student ’ s report on any lecture from which he / she is absent will not be accepted.

【Course Goals】

【Course Topics】

Theme	Class number of times	Description
Improving Sanitation and Resource Recovery in both Developing and Developed Countries (Yoshihisa SHIMIZU)	1	先進国および発展途上国における公衆衛生と再資源化の改善
Soils Recovered from Disaster Debris (Takeshi KATSUMI)	1	災害廃棄物の処理と分別土砂の有効利用
Separation Analyses in Micro- and Nano-scale (Koji OTSUKA)	1	マイクロ・ナノスケールの分離分析
Polymer Synthesis beyond the 21st Century: Precision Polymerizations and Novel Polymeric Materials (Mitsuo SAWAMOTO)	1	２１世紀からの高分子精密合成
Solid State Lighting based on Light Emitting Diodes (Yoichi KAWAKAMI)	1	発光ダイオードをベースとした固体照明
Material Properties of Fiber Reinforced Cementitious Composites and Applicability to Structures (Yoshio KANEKO)	1	繊維補強セメント系複合材料の材料特性と構造物への応用
Materials in Micro Electro Mechanical Systems (MEMS) (Toshiyuki TSUCHIYA)	1	MEMS における材料
Composite Materials: Smart, Lightweight and Strong Materials (Masaki HOJO)	2	複合材料：賢く軽くて強い材料
Inorganic New Materials (Koichi EGUCHI)	1	新無機素材論
Structural biochemistry of proteins (Masahiro SHIRAKAWA)	1	タンパク質の構造生物化学
Semiconductor Materials and Devices (Tsunenobu KIMOTO)	2	半導体材料とデバイス
High Temperature Superconductivity and Its Application to Electronics (Itsuhiro KAKEYA)	1	高温超伝導とそのエレクトロニクス応用

Chemistry of Organometallic Complexes
有機錯体化学

【Code】10D210 【Course Year】Master and Doctor Course 【Term】 【Class day & Period】 【Location】A2-303 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】
【Language】Japanese 【Instructor】Tsuji,Terao
【Course Description】Basic organometallic chemistry including history, structure, bonding, reactions, and survey of various metal complexes is lectured. Several typical catalytic reactions are explicated on the basis of elementary steps in organometallic chemistry such as ligand substitution, oxidative addition, reductive elimination, and insertion reactions.
【Grading】Graded by written examination
【Course Goals】Acquirement of basic idea of:
1. General properties of transition metal organometallic complexes
2. Reactivity of transition metal organometallic compounds
3. Homogeneous catalysis of practical importance
4. Recent research trends in homogeneous catalysis
【Course Topics】

Theme	Class number of times	Description
Introduction	1	History Application Research trends Zaise salt Grignard reagent Alkyl lithium Ferrocene
General properties of transition metal organometallic complexes (1)	1	Ziegler catalyst Hydroboration Wittig reaction Serendipity
General properties of transition metal organometallic complexes (2)	1	Bonding Structure in general Coordination number η -Structure μ -Structure
General properties of transition metal organometallic complexes (3)	1	Number of d- and s-electrons Classification and the nature of ligands Effect of complexation Formal charge Electron counting 18-electron rule Oxidation state
Reactivity of transition metal organometallic compounds (1)	1	Oxidative addition Reductive elimination
Reactivity of transition metal organometallic compounds (2)	1	Insertion reaction Direct attack to the ligand Other reactivities
Homogeneous catalysis (1)	1	Monsanto's acetic acid process Hydroformylation Hydrosilylation Hydrocyanation Polymerization
Homogeneous catalysis (2)	1	Wacker process Various cross-coupling reaction Mizoroki-Heck reaction
Recent research trends in homogeneous catalysis (1)	1	C-H and C-C bond activation
Recent research trends in homogeneous catalysis (2)	2	Asymetric catalysis
Organometallics in materials science (1)	2	Strucural metarials
Organometallics in materials science (2)	1	Electronic and optoelectronic applications
	1	

【Textbook】No textbooks are used.
【Textbook(supplemental)】R.H.Crabtree,The Organometallic Chemistry of the Transition MetalsFourth Edition;Wiley-Interscience:Hoboken,2005.

【Course Description】A number of challenges have been made on development of modified DNA, RNA and proteins, chemical or physical properties of which are controlled by several triggers. These intelligent materials are promising for next generation gene diagnostics and therapy. In this lecture, we discuss the molecular design of these artificial biological materials and their application.

【Grading】attendance and report

【Course Goals】Synthetic chemistry of DNA, RNA and protein//Chemical structure and basic funciton of biological materials//Regulation of biological function//Medical applications of artificial DNA, RNA and protein

【Course Topics】

Theme	Class number of times	Description
Chemical structure and synthesis	2	Synthetic chemistry of nucleic acids
Gene manipulation	2	Synthesis of protein Gene Sequencing
Functions of intelligent molecules	2	Function of artificial peptides Functions of artificial nucleic acids
Drugs related to DNA	2	DNA cleavage by drugs Crosslinking by artificial nucleic acids Alkylation by drugs
Expansion of genetic code	2	Artificial nucleobases Synthesis of modified protein in cells
Medical application	2	Molecular targeting Molecular imaging

【Instructor】Tanabe, Kobayashi

【Course Description】--Geochemistry-- Chemistry, often referred to as the central science, concerns matter and the transformations it can undergo. While much of the curriculum focuses on how chemistry can be applied to solving various problems relevant to our society, chemistry also offers a convenient framework to understand the complexity of the natural world surrounding us. The goal of this class is to apply chemical principles to understand the natural (non-living) world around us and appreciate its complexity.

【Grading】Grades will be determined by a combination of attendance, homework, and final exam

【Course Goals】To understand the main chemical processes and chemical history of the Earth

【Course Topics】

Theme	Class number of times	Description
Basic Introduction	1	Earth's history, generation of the elements, basic minerology
Aquatic Chemistry	1	Hydrological cycle, carbonate cycle, ion exchange, clays/minerals
Trace Elements/Igneous Processes	1	
Isotope Geochemistry	1	(Radiogenic isotope geochemistry)
Isotope Geochemistry	1	(Stable isotope geochemistry)
Chemistry of the Solid Earth	1	
Other Topics	1	

【Textbook】There is no mandatory textbook, so lecture notes will be important.

【Textbook(supplemental)】

【Prerequisite(s)】A basic inorganic/physical chemistry background is necessary.

【Location】KatsuraA2-308,Yoshida Research Bldg.No4,-Room3(Distance lectures) 【Credits】2

【Restriction】No Restriction 【Lecture Form(s)】Relay Lecture 【Language】English 【Instructor】

【Course Description】The various technologies used in the field of material science serve as bases for so-called "high technologies", and, in turn, the high technologies develop material science. These relate to each other very closely and contribute to the development of modern industries. In this class, recent progresses in material science are briefly introduced, along with selected current topics on new biomaterials, nuclear engineering materials, new metal materials and natural raw materials. The methods of material analysis and future developments in material science are also discussed.

【Grading】In order to obtain two credits, students must attend at least ten lectures, and at least five of the submitted reports must be evaluated as “ passed ” by each lecturer. Each report should be submitted to the lecturer within two weeks after his/her lecture. NOTE: Reports are NOT acceptable from those who do not attend the lecture.

【Language】English 【Instructor】

【Course Description】Outline: New materials are necessary for the advancement of high technologies, but in order to develop these new materials for practical applications, a number of problems must be solved. In this course, the problems encountered in the fields of chemical engineering, electrical / electronic engineering, mechanical engineering and civil engineering are discussed. Discussions are also held on natural resources, and how computers are being used in the development of new materials. Lectures are given in English.

【Grading】Credit: The evaluation of a student ' s work will be given on a pass / fail basis, based on his / her attendance and reports, not on examinations.(1) Attending the class 10 times or more and submitting at least 5 reports with passing marks is required to receive 2 credits.(2) A report assignment will be given by every lecturer and must be submitted within 2 weeks from the end of the lecture.(3) A student ' s report on any lecture from which he / she is absent will not be accepted.

【Course Goals】

【Course Topics】

Theme	Class number of times	Description
Improving Sanitation and Resource Recovery in both Developing and Developed Countries (Yoshihisa SHIMIZU)	1	先進国および発展途上国における公衆衛生と再資源化の改善
Soils Recovered from Disaster Debris (Takeshi KATSUMI)	1	災害廃棄物の処理と分別土砂の有効利用
Separation Analyses in Micro- and Nano-scale (Koji OTSUKA)	1	マイクロ・ナノスケールの分離分析
Polymer Synthesis beyond the 21st Century: Precision Polymerizations and Novel Polymeric Materials (Mitsuo SAWAMOTO)	1	２１世紀からの高分子精密合成
Solid State Lighting based on Light Emitting Diodes (Yoichi KAWAKAMI)	1	発光ダイオードをベースとした固体照明
Material Properties of Fiber Reinforced Cementitious Composites and Applicability to Structures (Yoshio KANEKO)	1	繊維補強セメント系複合材料の材料特性と構造物への応用
Materials in Micro Electro Mechanical Systems (MEMS) (Toshiyuki TSUCHIYA)	1	MEMS における材料
Composite Materials: Smart, Lightweight and Strong Materials (Masaki HOJO)	2	複合材料：賢く軽くて強い材料
Inorganic New Materials (Koichi EGUCHI)	1	新無機素材論
Structural biochemistry of proteins (Masahiro SHIRAKAWA)	1	タンパク質の構造生物化学
Semiconductor Materials and Devices (Tsunenobu KIMOTO)	2	半導体材料とデバイス
High Temperature Superconductivity and Its Application to Electronics (Itsuhiro KAKEYA)	1	高温超伝導とそのエレクトロニクス応用

【Instructor】H. Watanabe, Y. Masubuchi

【Course Description】Lecture is given for the rheology and dynamics of polymeric liquids and their molecular basis.

【Grading】Mainly with report

【Course Goals】Understanding molecular dynamics and rheology of polymers

【Course Topics】

Theme	Class number of times	Description
Rheology basics	2	Rheology and its role in science and engineering, flow / deformation/ stress, viscosity, modulus
Rheological behavior of matter	2	Rheological behavior of matter and classification, viscoelasticity, non-Newtonian flow, plastic flow
Viscoelastic relaxations	2	Boltzmann's principle, relaxation functions, relaxation time, conversion among response functions, complex modulus
Viscoelasticity and temperature	1	Glass transition, time-temperature superposition rule, WLF equation
Stress expression of polymers	2	Stress expression, tension / free-energy / distribution-function of subchains
Rouse model	1	Model description, model equation, derivation of stress and relaxation modulus, discussion on the relaxation behavior
Zimm model	1	Model description, model equation, derivation of stress and relaxation modulus, discussion on the relaxation behavior, comparison to Rouse dynamics
reptation model	2	Model description, model equation, derivation of stress and relaxation modulus, discussion on the relaxation behavior, comparison to Rouse dynamics
advanced reptation models	2	Contour Length Fluctuation, Constraint Release, Convective Constraint Release, Slip-link Model, Pom-pom Model

【Textbook】Original text will be distributed in the class

Introduction to Advanced Material Science and Technology（English lecture）

先端マテリアルサイエンス通論（英語科目）

【Code】10K001 【Course Year】Master and Doctor Course 【Term】1st term

【Class day & Period】Friday,4th-5th

【Location】KatsuraA2-308,Yoshida Research Bldg.No4,-Room3(Distance lectures) 【Credits】2

【Restriction】No Restriction 【Lecture Form(s)】Relay Lecture 【Language】English 【Instructor】

【Course Description】The various technologies used in the field of material science serve as bases for so-called "high technologies", and, in turn, the high technologies develop material science. These relate to each other very closely and contribute to the development of modern industries. In this class, recent progresses in material science are briefly introduced, along with selected current topics on new biomaterials, nuclear engineering materials, new metal materials and natural raw materials. The methods of material analysis and future developments in material science are also discussed.

【Grading】In order to obtain two credits, students must attend at least ten lectures, and at least five of the submitted reports must be evaluated as “ passed ” by each lecturer. Each report should be submitted to the lecturer within two weeks after his/her lecture. NOTE: Reports are NOT acceptable from those who do not attend the lecture.

【Location】KatsuraA2-308,Yoshida Research Bldg.No4,-Room3(Distance lectures) 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Relay Lecture

【Language】English 【Instructor】

【Course Description】Outline: New materials are necessary for the advancement of high technologies, but in order to develop these new materials for practical applications, a number of problems must be solved. In this course, the problems encountered in the fields of chemical engineering, electrical / electronic engineering, mechanical engineering and civil engineering are discussed. Discussions are also held on natural resources, and how computers are being used in the development of new materials. Lectures are given in English.

【Grading】Credit: The evaluation of a student ’ s work will be given on a pass / fail basis, based on his / her attendance and reports, not on examinations.(1) Attending the class 10 times or more and submitting at least 5 reports with passing marks is required to receive 2 credits.(2) A report assignment will be given by every lecturer and must be submitted within 2 weeks from the end of the lecture.(3) A student ’ s report on any lecture from which he / she is absent will not be accepted.

【Instructor】Hirokazu Hasegawa, Takenao Yoshizaki, Tsuyoshi Koga, Mikihito Takenaka, Hiroyuki Aoki

【Course Description】A concise explanation is given of physical properties of polymer solutions and polymeric solids along with relevant basic theories.

【Grading】Final grades will be evaluated in a comprehensive manner on the basis of attendance, reports, and examinations.

【Course Goals】Fundamental knowledge of physical properties of polymer materials.

【Course Topics】

Theme	Class number of times	Description
Polymer Chain Conformation in Dilute Solutions	3	After a clarification of basic factors which determine the conformations of real polymer chains in dilute solutions, some polymer chain models are introduced to describe the equilibrium conformational behavior of the real chains. Further, behavior of average chain dimensions as a functions of molecular weight is considered based on the chain models.
Thermodynamics and Phase Behavior of Polymer Solutions	3	Various phase transition phenomena in polymer solutions (phase separation, hydration, association, gelation, etc.) are systematically explained from thermodynamic and statistical-mechanical viewpoints. "Phase separation of polymer solutions", "Aqueous polymer solutions", and "Association and gelation of polymers" are discussed in the lectures.
Exercise	1	Exercise in polymer solutions.
Structure and Mechanical Properties of Polymeric Solids	4	Polymeric solids such as rubber and plastics, especially thermodynamics of rubber elasticity, polymer crystallization and crystalline/amorphous higher-order structures, are discussed. Moreover, fundamentals of viscoelastic properties of polymers are introduced to provide the understandings of relaxation phenomena such as glass transition.
Electronic and Optical Properties of Polymeric Solids	3	The electronic and optical properties of polymers is reviewed. The application of polymer materials in the opto-electronics and display devices is also presented.
Exercise	1	Exercise in polymeric solids.

【Course Description】Polymers are indispensable in our modern society, fundamental in industry, and functional for chemistry, medicine, electronics, and many other advanced and emerging technologies. In this class, photo- and electric functions of polymeric materials are discussed on the basis of photochemistry and photophysics. In particular, the importance of designing nanostructures of polymer assembly is highlighted by explaining examples of state-of-the-art real systems.

【Grading】Evaluated with the grade on the final test or the quality of report submitted after the final class.

【Course Goals】

【Course Topics】

Theme	Class number of times	Description
Introduction	1	
Photofunctional Polymers	5	
Nanostructure and Dynamics of Polymers	2	
Electronic Functions of Polymers	5	
Advanced Functionality of Polymers	2	

【Textbook】None: Some handouts will be dealt in the class of every lecture.

【Textbook(supplemental)】None:

【Prerequisite(s)】Students are expected to have knowledge of Physical Chemistry and Polymer Chemistry provided in chemisty course of undergraduate.

【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】Hirokazu Hasegawa, Mikihito Takenaka

【Course Description】Polymers self-assemble or self-organize by intra- and/or intermolecular interaction to form assembled structures of polymer molecules. Such structures are closely related to the properties of the polymeric materials, it is necessary to control the assembled structures of the constituent polymer molecules in order to control the properties of polymeric materials, especially solid materials. In this lecture particularly, formation mechanisms, analytical techniques, and elucidated structures of crystalline polymers, phase-separated structures of polymer mixtures, microphase-separated structures of block and graft copolymers will be discussed.

【Grading】The grading is based on the short tests and report assignments.

【Course Goals】This course aims for the development of the faculty to infer the properties of polymeric materials from their morphology based on the knowledge of structure-property relationships of higher-order structures of crystalline polymers, phase-separated structures of polymer mixtures (blends), microdomain stuctures of block copolymers, etc.

【Course Topics】

Theme	Class number of times	Description
Self-assembly and Self-organization	1	The differences between self-assembly and self-organization will be discussed by referring the examples in natural phenomena and polymeric systems.
Crystalline Polymers	3	In the lectures, unit cell structures and hierarchical higher-order structures of polymer crystals such as folded-chain lamellar crystals and spherulites, as well as deformation and thermal behavior of polymer crystals will be discussed.
Polymer Blends	5	Miscibility, phase-diagrams, mechanisms and dynamics of phase transitions, relationships between phase-separated structures and properties, methods to control the phase-separated structures will be discussed.
Block and Graft Copolymers	5	The lectures include nano-scale domain formation of block copolymers by microphase-separation, miscibility and phase diagrams, order-disorder and order-order transitions, bicontinuous structures, structure formation in thin films, blends with homopolymers or other block copolymers, multi-component multi-block copolymers, miktoarm star block copolymers, and more.
Evaluation of Degree of Understandings	1	Degree of understandings of the lectures will be evaluated by means of a short test and group discussions.

【Textbook】Not used.

【Textbook(supplemental)】Introduced in the lectures.

【Prerequisite(s)】Thermodynamics preferable.

【Instructor】Takenao Yoshizaki, Yo Nakamura

【Course Description】Effects of stiffness and local conformations of polymer chains on polymer solution properties observed in the light scattering and viscosity experiments are considered based on appropriate polymer chain models.

【Grading】Term-end examination.

【Course Goals】

【Course Topics】

Theme	Class number of times	Description
Review	1	Definitions of physical quantities determined from the light scattering and viscosity measurements and the theoretical formulations of those quantities.
Experiments in dilute polymer solutions	4	Principles of the light scattering and viscosity experiments.
Polymer chain models and their statistics	4	Static models for polymer chains: the Gaussian chain, the wormlike chain, and the helical wormlike chain. A comparison of experimental data for the mean-square radius of gyration with relevant theories.
Excluded-volume effects	2	Intra- and intermolecular excluded-volume effects represented by the expansion factors and the second virial coefficient, respectively.
Steady-state transport properties	2	A comparison of experimental data for the intrinsic viscosity and diffusion coefficient with relevant theories.
Dynamic properties	2	Dynamic models for polymer chains: the Rouse-Zimm spring-bead model and the dynamic helical wormlike chain. A comparison of experimental data for the first cumulant of the dynamic structure factor with relevant theories.

【Course Description】The various technologies used in the field of material science serve as bases for so-called "high technologies", and, in turn, the high technologies develop material science. These relate to each other very closely and contribute to the development of modern industries. In this class, recent progresses in material science are briefly introduced, along with selected current topics on new biomaterials, nuclear engineering materials, new metal materials and natural raw materials. The methods of material analysis and future developments in material science are also discussed.

【Grading】In order to obtain two credits, students must attend at least ten lectures, and at least five of the submitted reports must be evaluated as “ passed ” by each lecturer. Each report should be submitted to the lecturer within two weeks after his/her lecture. NOTE: Reports are NOT acceptable from those who do not attend the lecture.

【Course Description】Outline: New materials are necessary for the advancement of high technologies, but in order to develop these new materials for practical applications, a number of problems must be solved. In this course, the problems encountered in the fields of chemical engineering, electrical / electronic engineering, mechanical engineering and civil engineering are discussed. Discussions are also held on natural resources, and how computers are being used in the development of new materials. Lectures are given in English.

【Grading】Credit: The evaluation of a student ’ s work will be given on a pass / fail basis, based on his / her attendance and reports, not on examinations.(1) Attending the class 10 times or more and submitting at least 5 reports with passing marks is required to receive 2 credits.(2) A report assignment will be given by every lecturer and must be submitted within 2 weeks from the end of the lecture.(3) A student ’ s report on any lecture from which he / she is absent will not be accepted.

【Course Description】Biological responses are elicited at the interface of intrinsic genetic information and extrinsic environmental factors. This course discusses on molecular aspects of brain function and immunity. Experimental tools such as fluorescent probes for second messenger molecules are also explained through performance of experiments using the probes.

Introduction to Advanced Material Science and Technology（English lecture）

先端マテリアルサイエンス通論（英語科目）

【Code】10K001 【Course Year】Master and Doctor Course 【Term】1st term

【Class day & Period】Friday,4th-5th

【Location】KatsuraA2-308,Yoshida Research Bldg.No4,-Room3(Distance lectures) 【Credits】2

【Restriction】No Restriction 【Lecture Form(s)】Relay Lecture 【Language】English 【Instructor】

【Course Description】The various technologies used in the field of material science serve as bases for so-called "high technologies", and, in turn, the high technologies develop material science. These relate to each other very closely and contribute to the development of modern industries. In this class, recent progresses in material science are briefly introduced, along with selected current topics on new biomaterials, nuclear engineering materials, new metal materials and natural raw materials. The methods of material analysis and future developments in material science are also discussed.

【Grading】In order to obtain two credits, students must attend at least ten lectures, and at least five of the submitted reports must be evaluated as “ passed ” by each lecturer. Each report should be submitted to the lecturer within two weeks after his/her lecture. NOTE: Reports are NOT acceptable from those who do not attend the lecture.

【Course Goals】

【Language】English 【Instructor】

【Course Description】Outline: New materials are necessary for the advancement of high technologies, but in order to develop these new materials for practical applications, a number of problems must be solved. In this course, the problems encountered in the fields of chemical engineering, electrical / electronic engineering, mechanical engineering and civil engineering are discussed. Discussions are also held on natural resources, and how computers are being used in the development of new materials. Lectures are given in English.

【Grading】Credit: The evaluation of a student ’ s work will be given on a pass / fail basis, based on his / her attendance and reports, not on examinations.(1) Attending the class 10 times or more and submitting at least 5 reports with passing marks is required to receive 2 credits.(2) A report assignment will be given by every lecturer and must be submitted within 2 weeks from the end of the lecture.(3) A student ’ s report on any lecture from which he / she is absent will not be accepted.

【Course Goals】

【Course Topics】

Theme	Class number of times	Description
Improving Sanitation and Resource Recovery in both Developing and Developed Countries (Yoshihisa SHIMIZU)	1	先進国および発展途上国における公衆衛生と再資源化の改善
Soils Recovered from Disaster Debris (Takeshi KATSUMI)	1	災害廃棄物の処理と分別土砂の有効利用
Separation Analyses in Micro- and Nano-scale (Koji OTSUKA)	1	マイクロ・ナノスケールの分離分析
Polymer Synthesis beyond the 21st Century: Precision Polymerizations and Novel Polymeric Materials (Mitsuo SAWAMOTO)	1	２１世紀からの高分子精密合成
Solid State Lighting based on Light Emitting Diodes (Yoichi KAWAKAMI)	1	発光ダイオードをベースとした固体照明
Material Properties of Fiber Reinforced Cementitious Composites and Applicability to Structures (Yoshio KANEKO)	1	繊維補強セメント系複合材料の材料特性と構造物への応用
Materials in Micro Electro Mechanical Systems (MEMS) (Toshiyuki TSUCHIYA)	1	MEMS における材料
Composite Materials: Smart, Lightweight and Strong Materials (Masaki HOJO)	2	複合材料：賢く軽くて強い材料
Inorganic New Materials (Koichi EGUCHI)	1	新無機素材論
Structural biochemistry of proteins (Masahiro SHIRAKAWA)	1	タンパク質の構造生物化学
Semiconductor Materials and Devices (Tsunenobu KIMOTO)	2	半導体材料とデバイス
High Temperature Superconductivity and Its Application to Electronics (Itsuhiro KAKEYA)	1	高温超伝導とそのエレクトロニクス応用

【Lecture Form(s)】Lectures, Group works&tasks 【Language】English 【Instructor】Juha Lintuluoto

【Course Description】Engineering economics plays central role in any industrial engineering project. For an engineer, it is important to apply the engineering know-how with the economic analysis skills to obtain the best available materials, methods, devices, etc. in the most economical way. This course is aimed to teach engineering students the basic economic methods to manage economically an engineering project. In addition, the report writing on various engineering economic issues prepares to write reports in a professional form. The lab sessions are meant for the verbal skills improvement as well as improvement of analytical thinking. The topics are of current relevant topics Small-group brain-storming method is used. The exercise sessions cover the use of Ms-Excel for various quantitative economic analyses.

【Grading】Final test, reports, class activity

【Course Goals】This course is aimed to strengthen engineering students ' skills in economics. The course concept is to teach students selectively those subjects which serve as major tools to solve economic tasks in engineering environment. The reports and lab sessions provide students stimulating and analytical thinking requiring tasks, and presentation skills training is an important part of this course.

【Course Topics】

Theme	Class number of times	Description
Student orientation and Introduction to engineering economy	1	
Cost concepts and design economics	1	
Cost estimation techniques	1	
The time value of money	1	
Evaluating a single project	1	
Comparison and selection among alternatives	1	
Depreciation and income taxes	1	
Price changes and exchange rates	1	
Replacement analysis	1	
Evaluating projects with the benefit-cost ratio method	1	
Breakeven and sensitivity analysis	1	
Probabilistic risk analysis	1	
The capital budgeting process	1	
Decision making considering multiattributes	1	
Final test	1	
		Additionally, students will submit five reports during the course on given engineering economy subjects. Also, required are the five lab participations (ca.60 min/each) for each student. Additionally, three exercise sessions (ca.60 min/each), where use of Ms-Excel will be practiced for solving various engineering economy tasks, should be completed

【Textbook】Engineering Economy 15th ed. William G. Sullivan (2011)

【Textbook(supplemental)】Will be informed if necessary.

【Prerequisite(s)】-This course is highly recommended for those who attend " Inter-Engineering -Highly interactive lessons (discussion), Small group working method

【Web Sites】The web-site will be opened in the home page of the GL education center.

【Additional Information】Students are requested to check in advance whether the credits of this course are counted as the units for graduation requirement at department level. The course starts on Apr.11th.

【Course Description】Kinetic analysis of gas-solid-catalyst reaction and gas-solid reaction
Operation and design of reactors for gas-solid-catalyst and gas-solid reactions
Industrial reactors including fixed bed, fluidized bed, moving bed, simulated moving bed, and stirred tank types

【Grading】Based on the result of examination at the end of term and the results of quizzes and reports imposed every week

【Course Goals】

【Course Topics】

Theme	Class number of times	Description
Gas-solid reaction I. Industrial gas-solid reactions	2	As examples of industrial gas-solid reactions, the pyrolysis (carbonization) and gasification of coal as well as reactors for these reactions are explained.
Gas-solid reaction II. Kinetic analysis of gas-solid reaction	3.5	Kinetic measurement and analysis of complicated reactions, particularly coal pyrolysis, are explained from the first-order reaction model to the distributed activation energy model (DAEM).
Gas-solid reaction III. Models of gas-solid reactions	2.5	Concepts and derivation of the reaction models including the grain model and the random-pore model are explained. Application of the models to coal gasification is overviewed.
Gas-solid-catalyst reaction I. Effectiveness factor and selectivity	2	Commercial catalysts and industrial gas-solid-catalyst reactions are overviewed. The generalized effectiveness factor and the selectivity affected by mass transfer are explained.
Gas-solid-catalyst reaction II. Industrial catalytic reactors	2	Industrial catalytic reactors including fixed-bed and fluidized-bed reactors are overviewed. Design and operation of these reactors including thermal stability are explained.
Gas-solid-catalyst reaction III. Deactivation and regeneration of catalyst	3	Deactivation mechanisms of solid catalysts are overviewed. The deactivation and consequent change in selectivity are explained in terms of the decay function and specific activity.

【Textbook】Prints are distributed.

【Instructor】S. Hasebe

【Course Description】Process data analysis methods for product quality prediction, fault detection and diagnosis, and product yield improvement is explained together with their industrial applications. The basics and methods covered in this lecture are: basics of probability and statistics, correlation analysis, regression analysis, multivariate analysis such as principal component analysis, discriminant analysis, and partial least squares. In addition, soft-sensor design and multivariate statistical process control are explained.

【Grading】Based on both the examination result and reports.

【Course Goals】To understand the basics of probability and statistics.
To understand multivariate analysis.
To be able to apply process data analysis to practical problems.

【Course Topics】

Theme	Class number of times	Description
what is process data analysis	1	
preparation for data analysis	1	
point estimation and interval estimation	2-3	
regression analysis	2-3	
multivariate analysis	3-5	
soft-sensor design	1-2	
multivariate statistical process control	1-2

【Instructor】Shuji Matsusaka

【Course Description】Analyses of particle behavior in gases, Particle handling operations, and measurement methods are lectured. Also, particle charging that affect particle behavior in gases are theoretically explained. Furthermore, the control of the particle charging and its applications are lectured.

【Grading】Examination

【Course Goals】Understand the analysis and modeling of dynamic behavior of particles. Furthermore develop the ability to apply the knowledge for particle handling and processing.

【Course Topics】

Theme	Class number of times	Description
Particle properties and measurements	3	Mathematical description of particle diameter distribution, properties of fine particles, and their measurement methods are explained.
Particle adhesion and dynamical analysis	4	Measurement methods for adhesion forces of particles and dynamical analysis method for particle collision and elastic deformation are lectured. Furthermore, distinct element method is explained.
Behavior of particles in airflow	4	Temporal and spatial distribution of deposition and reentrainment of fine particles in gas-solid flow are explained using physical models and probability theory. In addition, complicated reentrainment phenomena during particle collision are discussed.
Particle charging and control	3	Concept of particle charging and quantitative analysis methods of charging process are explained; also, charge distribution of particles is analyzed. Furthermore, new methods to control particle charge are introduced.
Particle sampling	1	Sampling of fine particles and statistical evaluation methods are explained.

【Course Description】First, we overview the concept of environmentally benign chemical processing based on the causal relation between energy and environmental issues. Then, we discuss various new technologies for energy production and environmentally harmonized processes from the viewpoint of chemical engineering.

【Grading】Coursework will be graded based on the reports.

【Course Goals】To learn methodology for system-up of environmentally benign process based on energy and exergy. To consider perspective of biomass and hydrogen utilization. To understand several environmental evaluation methods.

【Course Topics】

Theme	Class number of times	Description
Overview of energy and environmental issues	1	Present situation of environmental issue and perspective of sustainable society. Summary of concept for future technology.
Concept of environmentally benign system based on exergy	4	Basic of exergy and calculation of exergy for various conversion process
Biomass conversion	3	Introduction of various conversion processes for baiomass and wastes from the view point of kinetics
On-site environmental technology	1	Explanetion of concept of on-site environmental technology with illustrating several new technologies such as CO removal, hydrogen production, fuel cell.
Environmental evaluation method (1)	2	Introduction of various environmental evaluation methods Calculation of LCA analysis
Environmental evaluation method (2)	2	Calculation of E-factor and environmental efficiency for sevaral chemical processes
Estimation of environmentally benign system	1	Discussion for direction of future environmentally benign system
Confirmation of study achievement	1	

【Textbook】The textbook is not required. Materials will be supplied by instructors.

【Textbook(supplemental)】Pysical chemistry, Themodynamics

【Prerequisite(s)】Basic knowledge for chemical engieering themodynamics is required.

【Course Description】Lecture on viscoelastic fluid seen in polymeric system

【Grading】Evaluatation will be performed through reports and a test at the semester end

【Course Goals】To attain fundamental knowledge on viscoelastic fluids seen in polymeric liquids

【Course Topics】

Theme	Class number of times	Description
Examples of the behavior of vicoelastic fluid	1	a) Recoil after Cessation b) Weisenberg effect c) Baras effect (Die swell effect) d) tubelss siphon effect
Rheometry and material functions	3	a) disk, cone types rheometer b) Steady simple shear flow: shear stress, 1st and 2nd normal stress differences c) SAOS: Small-Amplitude Oscillatory Shear, Relaxation function d) Steady state elongational flow, elongational viscosity, Trouton law e) Capillary Rheometer
Non-Newtonian viscosity and the generalized non-Newtonian models	4	a) Bingham model b) Casson fluid model c) Power law model d) Carreau-Yasuda model e) flow of power law fluid in a capillary - Hagen-Poiseuille flow - Rabinovitch correction - End effect correction by using Bagley plot - Observation of slippage using capillary rheometer + Mooney method, and modified Mooney method
Elasticity and linear viscoelastic models	4	a) Principle of material objectivity b) Deformation gradient tensor Finger tensor Cauchy tensor c) Upper convected derivative Lower convected derivative Corotational derivative d) Vicoelastic models - Maxwell model - Jeffery model - Generalized Maxwell model (multi-mode Maxwell model) e) The corotational derivatives and nonlinear viscoelastic models
Molecular theories for polymer liquids	4	a) dumbbell model for a dilute polymer solution b) FENE dumbbel model c) Rouse model d) Zimm model e) Reptation model for polymer melt f) other recent models
academic achievement test	1	Test

Chemical Engineering for Advanced Materials

先端物質化学工学

【Code】10i027 【Course Year】Master Course 【Term】1st+2nd term 【Class day & Period】Oct. 14, 21, 28, Nov. 4 10:30-18:00
【Location】A2-304 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】English
【Instructor】Prof. Wiwut Tanthapanichakoon, PhD, Department of Chemical Engineering, Graduate School of Science & Engineering, Tokyo Institute of Technology
【Course Description】The main objective of this 2-credit graduate course is to explain how (selected) advanced materials are designed, synthesized and/or processed (manufactured) in the research labs and certain high-tech industries, whilst pointing out the key roles played by Chemical Engineering in the relevant stages of developments.
【Grading】Class attendance: 20 points Individual Presentation of Assigned Projects & Presentation Files: 40 points Full Individual Project Report: 40 points Total: 100 points There will be no examination. Individual topic assignment as well as the Format of oral presentation and report will be given on the first day of lectures.
【Course Goals】
【Course Topics】

Theme	Class number of times	Description
1. Chemistry of advanced materials		
2. Nanotechnology, nanomaterials, and nanoparticles		
3. The nanostructure of aerogels: Preparation, investigations, modifications, and utilizations		
4. Dispersion of fine silica particles using alkoxysilane and industrialization		
5. Carbon nanotubes in multifunctional polymer nanocomposites		
6. Development of polymer-clay nanocomposites by dispersion of particles into polymer materials		
7. Ceramic filter for trapping diesel particles		
8.Zeolite membrane		
9. Development of new cosmetics based on nanoparticles		
10. Development of functional skincare cosmetics using biodegradable PLGA nanospheres

Introduction to Advanced Material Science and Technology（English lecture）

先端マテリアルサイエンス通論（英語科目）

【Code】10K001 【Course Year】Master and Doctor Course 【Term】1st term

【Class day & Period】Friday,4th-5th

【Location】KatsuraA2-308,Yoshida Research Bldg.No4,-Room3(Distance lectures) 【Credits】2

【Restriction】No Restriction 【Lecture Form(s)】Relay Lecture 【Language】English 【Instructor】

【Course Description】The various technologies used in the field of material science serve as bases for so-called "high technologies", and, in turn, the high technologies develop material science. These relate to each other very closely and contribute to the development of modern industries. In this class, recent progresses in material science are briefly introduced, along with selected current topics on new biomaterials, nuclear engineering materials, new metal materials and natural raw materials. The methods of material analysis and future developments in material science are also discussed.

【Grading】In order to obtain two credits, students must attend at least ten lectures, and at least five of the submitted reports must be evaluated as “ passed ” by each lecturer. Each report should be submitted to the lecturer within two weeks after his/her lecture. NOTE: Reports are NOT acceptable from those who do not attend the lecture.

New Engineering Materials, Adv.（English lecture）

新工業素材特論（英語科目）

【Code】10K004 【Course Year】Master and Doctor Course 【Term】2nd term 【Class day & Period】Thu 5th

【Location】KatsuraA2-308,Yoshida Research Bldg.No4,-Room3(Distance lectures) 【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Relay Lecture

【Language】English 【Instructor】

【Course Description】Outline: New materials are necessary for the advancement of high technologies, but in order to develop these new materials for practical applications, a number of problems must be solved. In this course, the problems encountered in the fields of chemical engineering, electrical / electronic engineering, mechanical engineering and civil engineering are discussed. Discussions are also held on natural resources, and how computers are being used in the development of new materials. Lectures are given in English.

【Grading】Credit: The evaluation of a student ’ s work will be given on a pass / fail basis, based on his / her attendance and reports, not on examinations.(1) Attending the class 10 times or more and submitting at least 5 reports with passing marks is required to receive 2 credits.(2) A report assignment will be given by every lecturer and must be submitted within 2 weeks from the end of the lecture.(3) A student ’ s report on any lecture from which he / she is absent will not be accepted.

【Course Goals】

【Course Topics】

Theme	Class number of times	Description
Improving Sanitation and Resource Recovery in both Developing and Developed Countries (Yoshihisa SHIMIZU)	1	先進国および発展途上国における公衆衛生と再資源化の改善
Soils Recovered from Disaster Debris (Takeshi KATSUMI)	1	災害廃棄物の処理と分別土砂の有効利用
Separation Analyses in Micro- and Nano-scale (Koji OTSUKA)	1	マイクロ・ナノスケールの分離分析
Polymer Synthesis beyond the 21st Century: Precision Polymerizations and Novel Polymeric Materials (Mitsuo SAWAMOTO)	1	２１世紀からの高分子精密合成
Solid State Lighting based on Light Emitting Diodes (Yoichi KAWAKAMI)	1	発光ダイオードをベースとした固体照明
Material Properties of Fiber Reinforced Cementitious Composites and Applicability to Structures (Yoshio KANEKO)	1	繊維補強セメント系複合材料の材料特性と構造物への応用
Materials in Micro Electro Mechanical Systems (MEMS) (Toshiyuki TSUCHIYA)	1	MEMS における材料
Composite Materials: Smart, Lightweight and Strong Materials (Masaki HOJO)	2	複合材料：賢く軽くて強い材料
Inorganic New Materials (Koichi EGUCHI)	1	新無機素材論
Structural biochemistry of proteins (Masahiro SHIRAKAWA)	1	タンパク質の構造生物化学
Semiconductor Materials and Devices (Tsunenobu KIMOTO)	2	半導体材料とデバイス
High Temperature Superconductivity and Its Application to Electronics (Itsuhiro KAKEYA)	1	高温超伝導とそのエレクトロニクス応用
