#### **Internship**

インターンシップ

[Code] 51240 [Course Year] 3rd year [Term] 2nd term [Class day & Period] [Location] [Credits] 2

[Restriction] No Restriction [Lecture Form(s)] Exercise [Language] [Instructor]

【Course Description】 The aim of the internship is experiencing on-site activities involved production, manufacturing, development, designing and research of industrial goods at a factory or a research laboratory of Japanese leading companies. On-site learning of the importance of teamwork and production processes in manufacturing is also the aim.

【Grading】 Credits (2) are approved based on the summary report and presentation about the internship activities.

[Course Goals] The goal of the internship is to master a general method of thinking and methodology at Mechanical Engineering. Furthermore, by learning the relationship between a human and machines at an industry, motivate oneself to study and think about one's career development.

#### [Course Topics]

Theme	Class number of times	Description
	,	As a general rule, the internship should meet the above purpose. The duration
		should be not less than two weeks. Thus, the following cases are not approved
		as an internship; a short internship such as a week, a company tour, a company
		explanation meeting and so on. Longer term more than two weeks and an
		overseas internship such as IAESTE can be acceptable.
		Based on recruitment from companies. You can find them at company 's web
		sites and/or the instruction section of the Engineering Science office (Butsuri
		Kyoumu).

#### [Textbook]

【Textbook(supplemental)】

[Prerequisite(s)]

[Web Sites]

【Additional Information】 Pre-registration at the instruction section of the Engineering Science office (Butsuri Kyoumu) is required.

#### **Exercise for Machine Shop Practice**

機械製作実習

[Code] 50610 [Course Year] 2nd year [Term] 2nd term [Class day & Period] [Location] [Credits] 1 [Restriction] No Restriction [Lecture Form(s)] [Language] [Instructor]

Course Description This course consists of two parts: machine shop training and special lectures by visiting lecturers. The machine shop training will be offered for a week in August or September (during summer break). Students will learn the operation of various machine tools, e.g. a lathe, a milling machine, and a drilling machine, to make a stirling engine, whose performance will be tested at the end of the course. Hands-on training of disassembly and re-assembly of a commercial diesel engine (or a gasoline engine) will be also offered to learn actual engine mechanism.

The seminar series will be offered in the 2nd semester. Professional engineers from various companies will be invited to give a lecture on real-world experience on production design, manufacturing, or management.

[Grading] For the credit, students are in principle required to participate in all the classes, and to submit all the reports. The credit is given in pass/fail basis.

【Course Goals】 To experience turning, milling and drilling operations and other basic machining operations. To obtain basic knowledge and experience on machine tools, cutting tools, measurement, and machining accuracy by hands-on training.

【Course Topics】

Theme	Class number of times	Description
Lectures on principle	1	Students will learn basic knowledge on the priciple of a stirling engine and a diesel
of engines	1	(gasoline) engine.
Lectures on machine	1	Students will learn basic knowledge on machine tools that they will use in machine
tools	1	shop training.
Machine shop training		Turning operation for cylindrical parts (2 classes), milling and drilling operations
(making a stirling	4	(2 classes), assembly and evaluation (1 class). A group of two students will make
engine)		one stirling engine.
Disassembly of an	1	
engine	1	Assebly and disassembly of a commercial diesel (or gasoline) engine.
Lectures on safety	1	A special lecture on safety issues in manufacturing process and product design by a
		visiting lecturer.
		Special seminars by visiting lecturers. Lectures may be subject to change each
		year. Examples of past lectures:
		"To future Edison save the world by good idea and engineering,"
Special seminars	7	"Development of compressors to meet market's needs role of mechanical
		engineers,"
		"Japanese machine tools for the world's manufacturing - key technologies,"
		"Engineer's life in companies."
Factory tour	1	One-day trip to a factory in Kansai area.

[Textbook] A textbook will be handed out in class.

【Textbook(supplemental)】None.

[Prerequisite(s)] None.

[Web Sites] None.

[Additional Information] The class overview will be presented in a guidance class for 2nd year students in Undergraduate Course Program of Mechanical and Systems Engineering in April. Detailed schedule will be given then. Please be aware -- a large part of this class will be offered during the summer break.

A class guidance will be given typically in July. Its announcement will be posted in the 1st floor of the building of Dept. of Engineering Science. All the students who want to take this class must come to this guidance.

### **Basic Nuclear Reactor Exercise and Experiments**

原子炉基礎演習・実験

[Code] 51070 [Course Year] 4th year [Term] 1st term [Class day & Period] [Location] [Credits] 2

[Restriction] [Lecture Form(s)] [Language] [Instructor]

【Course Description】 Basic reactor physics experiments using Kyoto University Critical Assembly (KUCA) which is a small and low power reactor are carried out. Guidance and lectures before experiments are performed at Yoshida main campus, and experiments are performed at Research Reactor Institute (Osaka Kumatori-cho).

【Grading】 reports before and after experiments

[Course Goals] Understanding nuclear characteristics and safety system of nuclear reactor through reactor physics experiments

#### [Course Topics]

Theme	Class number of times	Description
Guidance	6	Guidance and lectures for experiments are performed at Yoshida main campus.
	1	Experiments are performed at Research Reactor Institute (Kumatori-cho,
E		Osaka) for 1 week. 1) guidance 2) criticality approarch experiment 3) control
Experiment		rod caribration experiment 4) neutron flux measurement experiment 5)
		operation of nuclear reactor

【Textbook】 Download from Web site (Japanese, English and Korean versions are available)

【Textbook(supplemental)】

[Prerequisite(s)] Basic knowledge about reactor physic

[Web Sites]

【Additional Information】1) Registration to workers for radioactive material treatment is required before experiment.

2) English course for this experiment is opened.

【Course Description】 The theory of analytic functions of one complex variable

[Grading] Evaluation depends mainly on marks of examination, but marks of exercises are taken into account when needed.

[Course Goals] To understand properties of analytic functions with a skill for evaluation of integrals appearing in applied mathematics and physics

#### [Course Topics]

Theme	Class number of times	Description
The plane of one	_	After describing the point-set topology of the plane of one complex variable,
complex variable and	3	elementary functions are introduced with their properties.
elementary functions		
Complex integrals		Cauchy's theorem and Cauchy's integral formula are shown along with
and Cauchy's	3	outstanding properties of analytic functions. An example is given of Cauchy's
theorem		theorem.
Power series	2	Sequences, series, and series of functions are discussed with the notion of
		convergence and divergence.
Taylor's expansio0n		The Taylor series of analytic functions and the Laurent series of analytic
and Laurent's	3	·
expansion		functions on an annulus are discussed together with some examples.
Singularity and	2	The calculus of residues is dealt with. Examples are given of integral
residues	3	evaluations.
Learning	1	Lagraing achievement test
achievement test	1	Learning achievement test.

### **Applied Mathematics A2**

工業数学 A2

[Code] 20600 [Course Year] 3rd year [Term] 1st term [Class day & Period] [Location] [Credits] 2

[Restriction] No Restriction [Lecture Form(s)] Lecture [Language] [Instructor] Nakamura Yoshimasa

【Course Description】 "Numerical Analysis" is prerequisite to this course. In this course matrix eigenvalue problem and singular value decomposition, iteration methods for nonlinear equations, interpolation methods by polynomials, and numerical integration methods are explained which are important especially in data science and information processing.

【Grading】 mainly evaluated by examination score, but reports of exercises will be taken into account in a case.

[Course Goals] Understanding both the theory and practical methods for applications through general-purpose softwares and/or programs by each student is a goal of this course.

#### [Course Topics]

Theme	Class number of times	Description
matrix eigenvalue		Computation of matrix eigenvalues and eigenvectors by the Jacobi method, the
problem	3	power method and the inverse iteration, the QR method
		computation of matrix singular value decomposition (SVD) by the QR method
matrix singular value	3	and the divide & conquer method with the Householder transformations dor
decomposition		preprocessing
iterative methods for	3	the principle of contractive mapping and the Newton method both of one and
nonlinear equations	3	multi variables, and convergence acceleration algorithms
interpolation	3	the Lagrange interpolation formula and the Hermitian interpolation formula by
methods	3	polynomials, and the spline functions
numerical integration	2	Newton-Cotes numerical integration formula, and the Gauss type numerical
methods	2	integration formula
confirmation for	1	
student assessment	1	confirmation for each student assessment

【Textbook】"Numerical Computation" (in Japanese) by H. Sunouchi and E. Ishiwata, SAIENSU-SHA

[Textbook(supplemental)] "Introduction of Numerical Analysis" (in Japanese) by T. Yamamoto, SAIENSU-SHA

[Prerequisite(s)] Linear algebra A, Linear Algebra B, Numerical Analysis

[ Web Sites ]

### **Applied Mathematics A3**

工業数学 A3

[Code] 20700 [Course Year] 3rd year [Term] 1st term [Class day & Period] [Location] [Credits] 2

[Restriction] No Restriction [Lecture Form(s)] Lecture [Language] [Instructor] Tsujimoto

【Course Description】 The theory of Fourier analysis

[Grading] Evaluation depends mainly on marks of examination, but marks of exercises are taken into account when needed.

[Course Goals] To understand fundamental theory of Fourier and Laplace analysis with a skill for evaluation of specific examples and applications in applied mathematics and physics.

#### [Course Topics]

Theme	Class number of times	Description	
		Introduction of the Fourier series for periodic functions. Best approximation	
Fourier series	4-5	property and the convergence of this series are shown. Discrete Fourier	
		transform is also discussed.	
Applications of	3-4	Application of Fourier series to differential equations	
Fourier series	3-4	Application of Fourier series to differential equations	
Fourier transform	3-4	Introduction of the Fourier transform for L <sup>2</sup> functions. Invertibility of this	
		transform and the convolution theorem are shown.	
Applications of		Application of Fourier series to differential equations. The relationship with	
Fourier transform	2-3	Application of Fourier series to differential equations. The relationship with	
related		Fourier transform and Laplace transform.	
Summary and	1	Summary and supplement of this course. Measure the progress of students in	
assessment	1	acquiring knowledge and skills.	

【Textbook】S. Nakamura: Fourier analysis, Asakura shoten

【Textbook(supplemental)】S. Oishi: Fourier analysis, Iwanami shoten

[Prerequisite(s)] Calculus, Linear algebra

[Restriction] No Restriction [Lecture Form(s)] Lecture [Language] [Instructor] Kano

[Course Description] Fourier analysis and its application will be described. The major part consists of Fourier series, Fourier transform, and Laplace transform.

[Grading] The regular examination, assignments, and attitude in the class will be taken into account.

[Course Goals] The goal is to understand the basics and applications of Fourier analysis.

#### 【Course Topics】

Theme	Class number of times	Description
Doubles in a sing	-	The goal and outline of this class are presented. Then, basic knowledge
Preliminaries	1	necessary to learn Fourier analysis is briefly reviewed.
Fourier series	2	Fourier series expansion of periodic functions is described.
Characteristics of	2	Differential and integral of Fourier series, complex Fourier series, and the best
Fourier series	2	approximation problem are described.
		In order to cope with aperiodic functions, Fourier transform is described.
Fourier transform	2-3	Characteristics and applications of Fourier transform is explained together with
		the Parseval's equation and its applications.
Partial differential	1.0	A 1' ' ' ' ' ' ' ' ' ' ' ' ' ' ' ' ' ' '
equations	1-2	Applications to partial differential equations are described.
Laplace transform	1-2	Laplace transform and its characteristics are described along with an
		application of solving ordinary differential equations.
Evaluation of	1	The chieve was an arranged at
achievement	1	The achievements are evaluated.

[Course Description] Fourier analysis, Laplace transform and their applications.

[Grading] Each lecture accompanies a half-hour exercise with two problems. The grading is made based on the total score earned in these exercises plus the result of regular examination.

[Course Goals] The final goal of this course is to understand basics of Fourier series expansion, Fourier transform, and Laplace transform, and to learn to make full use of these mathematical tools in analyzing various physical phenomena and solving relevant differential equations. Particular emphasis is placed not on pursuing mathematical rigor but on developing skills to perceive different physical aspects of these tools and select the most appropriate one in practical problem solving.

#### [Course Topics]

Theme	Class number of times	Description
		Complex numbers and complex analysis
		-complex numbers and complex functions
		-complex integrals, residue theorem, and their applications
		Delta function
		Fourier series expansion
		-periodic functions and their Fourier series expansion
		-complex Fourier series expansion
		-applications of Fourier series
		Fourier transform
		-basics of Fourier transform
		-convolution and correlation function
		-applications of Fourier transform
Fourier analysis,		-linear response system
Laplace transform and	15	Laplace transform and its applications
their applications		-basics of Laplace transform
		-applications of Laplace transform to linear systems
		Linear differential equations
		-solving linear differential equations using Fourier transform
		-solving linear differential equations using Laplace transform
		Thermal conduction/diffusion equation
		-thermal conduction/diffusion equation in an infinite/semi-infinite interval
		-thermal conduction/diffusion equation in a finite interval
		-thermal conduction/diffusion equation with time-dependent boundary conditions
		Wave equation
		-wave equation in an infinite/semi-infinite interval
		-wave equation in a finite interval
		-equation of forced oscillation

【Textbook】 Lecture notes are distributed at the class.

【Textbook(supplemental)】 Shin-ichi Oh-ishi, "Fourier analysis" (in Japanese), Iwanami, 1989

[Prerequisite(s)] Prerequisite subjects: complex numbers and basic calculus.

[ Web Sites ] Lectures notes in a PDF format can be accessed through KULASIS.

### **Mechanics of Solids**

固体力学

[Code] 50510 [Course Year] 3rd year [Term] 1st term [Class day & Period] [Location] [Credits] 2

[Restriction] No Restriction [Lecture Form(s)] Lecture [Language] [Instructor] S. Biwa

【Course Description】 While approximate methods of stress-strain analysis for elementary structural members are dealt with in "Mechanics of Materials" courses, general physical laws of the mechanical behavior of solids are dealt with in this course. Namely, the fundamental principles of solid mechanics such as three-dimensional expressions of stress and strain, equilibrium equations, Hooke's law and its thermodynamic background are treated, together with mathematical analysis of deformations in elastic bodies.

[Grading] Grading is made based on examination, possibly with considerations of reports.

[Course Goals] This course aims to establish understanding of three-dimensional and rigorous expressions of stress and strain and fundamentals of deformation analysis of solids and structures. It is also the aim to re-examine the value of approximate theories given in "Mechanics of Materials" courses from a rigorous viewpoint given in this course.

#### [Course Topics]

Theme	Class number of times	Description
Vectors and tensors	1	Components of vectors and stresses; Basis vecotrs; Kronecker's delta; Alternating
vectors and tensors		symbol; Summation convention
Stuage	3	Notion of stress; Cauchy's relation; Transformation of stress components;
Stress	3	Equilibrium equations; Symmetry of stress; Principal stresses and stress invariants
		Mathematical expressions of deformation; Green-Lagrange strain and infinitesimal
Strain	2	strain; Transformation of strain components; Principal strains; Compatibility
		equations
T71	2	Thermodynamics of elastic bodies; Hooke's law; Anisotropic solids;
Elasticity		Thermoelasticity
Fundamental	2	Maniada a continua Diana atauna and alama atauna Dalkasani Mishall salati as
equations of elasticity	2	Navier's equations; Plane stress and plane strain; Beltrami-Michell relation
Theoretical analysis of	2	Airy's stress function; Biharmonic equation; Stress function in polar coordinates;
elastic deformations	2	Two-dimensional elastostatic problems; Stress concentration of a circular hole
F	2	Principle of virtual work; Principle of complementary virtual work; Principle of
Energy principles	2	minimum potential energy
Assessment of	1	A
achievements	1	Assessment of achievements

[Textbook] No textbooks are assigned. The lecture is given in a "blackboard" style.

【Textbook(supplemental)】T. Kunio, "Fundamentals of Solid Mechanics" (Baihu-kan);

- S. Kobayashi and K. Kondo, "Elasticity" (Baihu-kan);
- T. Inoue, "Fundamentals of elasticity" (Nikkan Kogyo) (all in Japanese) .

For English references, students are advised to contact the instructor directly.

[Prerequisite(s)] The enrolling students are expected to have knowledge in "Mechanics of Materials" courses. Good understanding of calculus, linear algebra and vector analysis is preferable.

[ Additional Information ] The order and hours (weights) of each item are subject to possible change.

## **Fundamentals of Materials Science I**

材料科学基礎1

[Code] 51350 [Course Year] 2nd year [Term] 2nd term [Class day & Period] [Location] [Credits] 2

[Restriction] No Restriction [Lecture Form(s)] Lecture [Language] [Instructor]

[Course Description]

【Grading 】 A end-term examination will be a main part of grading determination. Attendance and daily reports may be considered in grading determination.

#### [Course Goals]

#### [Course Topics]

Theme	Class number of times	Description
Structure of solids	2	
Lattice defects	1	
Diffusion in solids	4	
Deformation of	2	
crystalline materials	2	
Plastic deformation		
of single crystals of	2	
metallic materials		
Plastic deformation		
of polycrystalline	2	
metals		
Deformation		
twinning and creep	1	
deformation		
	1

#### 【Course Topics】

Theme	Class number of times	Description
Structure of	2	electron configuration, bonding and structure in crystalline materials, density
Materials	2	and thermal expansion
Dhaca Equilibrium	2	phase equilibrium diagram, solid solution, solidification, eutectic and eutectoid
Phase Equilibrium	3	transformation
Mechanical	2	elastic and plastic deformation, stress-strain curve, fractography, creep,
Propterties	3	ductile-brittle transition
TT . (T)	2	quenching and tempering, martensitic transformation, annealing, normalizing,
Heat Treatment		diffusion, continuous cooling transformation diagram
Eurotional Proportion	3	thermal conductivity, specific heat, electrical conductivity, electron
Functional Properties		conduction, absorption and reflection of light
Resource and	1	crustal abundance, recoverable reserves, urban mines, recycling rate, life cycle
Recycle	1	assessment
	1

### **Analytical Sciences**

材料分析化学

[Code] 51200 [Course Year] 3rd year [Term] 2nd term [Class day & Period] [Location] [Credits] 2

[Restriction] No Restriction [Lecture Form(s)] Lecture [Language] [Instructor] Jun Kawai

【Course Description】 Quantum spectrochemistry, which is a basis of spectrochemical analysis, will be lectured. Various kinds of spectrometries which are used in materials analysis will also be explained.

【Grading 】 Checked only by exam.

[Course Goals] The goal of the course is to obtain knowledges about quantum chemistry, interaction between photons and electrons, spin, principles of spectrometers, quantum mechanical calculations related to spectroscopy, and so forth, which are necessary for spectrochemical analysis.

#### [Course Topics]

Theme	Class number of times	Description
1. Quantization	1	Bragg diffraction equation deduced from Bohr-Sommerferd quantization.
1. Qualitization	1	Compton scattering equation explained from both wave and particle views.
2 Dringinla of loast		Refraction of electron beam. Phase velocity and group velocity. Spin and
2. Principle of least	2	helicity of photon. Polarization of light. Inertial mass and gravitational mass
action		of photon and its relation to Maessbauer spectroscopy. Zeeman effect.
3. Matrix mechanics	1	Scheroedinger equation. Matrix mechanics. Role of harmonic oscillator in atomic spectra.
4. Perturbation	_	
theory	2	Time independent perturbation theory applied to ionic crystal.
5.0 4: 14 34:	_	Blackbody radiation. Time dependent perturbation. Tsallis entropy. Electric
5. Optical transition	2	dipole transition.
6. Harmonic	1	Hamania and Hatan WWD annuari and in Field annuari and
oscillator	1	Harmonic oscillator. WKB approximation. Field quantization.
7. Electron	1	Photoelectron spectroscopy of transition metal compounds. Configuration
spectroscopy	1	interaction.
8. Symmetry	1	Symmetry of molecules. Group theory. Projection operator.
9. Interaction		
between electrons	2	IR and Smekal-Raman spectroscopy.
and photons		
10. Angular	1	Angular momentum and onin. Snin arbital interaction
momentum and spin	1	Angular momentum and spin. Spin-orbital interaction.
11. Check of	1	
achievement	1

材料力学2

[Code] 50050 [Course Year] 2nd year [Term] 2nd term [Class day & Period] [Location] [Credits] 2

[Restriction] [Lecture Form(s)] Lecture [Language]

[Instructor] M. Nishikawa (50050), Hayashi (50051)

【Course Description】 The simplified one-dimensional treatments lectured in Mechanics of Materials 1 are extended to include more complex two- or three-dimensional problems. Analytical methods for the deformation and the stresses in various structural members are lectured including the combined stress states. More advanced topics such as the finite element analysis and the strength evaluation of materials are introduced.

[Grading] Grading is based on the mid-term and the final examinations, possibly with considerations of class-room tests or reports.

[Course Goals] The emphasis is to understand the fundamental concepts and methods for the stress/strain analysis of various structures or structural members, by advancing the basic principles given in Mechanics of Materials 1.

#### [Course Topics]

Theme	Class number of times	Description
Advanced problems	2	Statically in determined horman continuous horman symmed horman
of beams	3	Statically indeterminate beams; continuous beams; curved beams
		Combined stress states; Mohr's stress and strain circles; equilibrium equations;
Basics of elasticity	4	displacement-strain relations; stress-strain relations; plane stress or strain
		states; relation between elastic constants
Torsion	2	Torsion of circular bars; coil springs; Combination of bending and torsion
Buckling	1	Buckling of column; instability; effect of support conditions; buckling design
Axially symmetric	2	Circular cylinders; spherical shells; rotating circular plates
problems	2	Circular cyffiders, spherical shens, folathig circular plates
Bending of plates	1	Cylindrical bending, bending rigidity; axisymmetric bending
Applications	1	Finite element analysis; strength evaluation of materials

【Textbook】 Fundamentals of Strength of Materials (Zairyo-Rikigaku no Kiso) (T. Shibata et al.), Baifu-kan .

#### 【Textbook(supplemental)】

[Prerequisite(s)] Mechanics of Materials 1, and other subjects such as calculus, linear algebra, mechanics of particles and rigid bodies.

#### [Web Sites]

[Additional Information] The order and the hours (weights) for each item are possibly subject to change.

### **Control Engineering 1**

制御工学1

[Code] 50251 [Course Year] [Term] 1st term [Class day & Period] [Location] [Credits] 2

[Restriction] No Restriction [Lecture Form(s)] Lecture [Language] [Instructor]

【Course Description】 Control Engineering provides a methodology of controlling various systems including mechanical ones in a systematic way. Its major part consists of both Classical Control Theory and Modern Control Theory. This class describes the fundamentals of Classical Control Theory.

【Grading】 Scores of quizzes, reports and the regular examination are taken into account.

【Course Goals】 The course goal is to understand the basic concepts of Classical Control Theory such as transfer functions, frequency responses and stability.

#### [Course Topics]

Theme	Class number of times	Description	
Introduction	1	The basic idea of Control Engineering such as the purpose and methods of	
Introduction	1	control is described through various real world examples.	
Danga antation of		Mathematical description of systems is developed first. Then, the concept of	
Representation of	2-3	Transfer functions is introduced based on Laplace Transform, and Block	
dynamical systems		diagram representation is shown.	
Responses of	2	Time responses of linear systems are shown. Stability of systems and Stability	
dynamical systems	3	tests are described.	
Properties of	2.2	Basic properties such as steady state characteristics of feedback control	
feedback systems	2-3	systems and Root Locus are explained.	
		The concept of Frequency responses, Bode diagrams, Vector locus are	
Frequency responses	3-4	introduced. The stability test of feedback systems based on the frequency	
		responses is explained.	
Design of control	2	Basic components of classical controller design methods such as Phase lead,	
systems	2	Phase Lag, and PID compensation are described.	

【Textbook】T. Sugie, M. Fujita: Introduction of Feedback Control. Corona Publishing Co. Ltd.

【Textbook(supplemental)】 none

[Prerequisite(s)] Elementary knowledge of Laplace Transform may be helpful.

[Web Sites] none

[Additional Information] Some parts of the above contents may be skipped/added depending on the course schedule of the year.

### **Control Engineering 1**

制御工学1

[Code] 50252 [Course Year] 3rd year [Term] 2nd term [Class day & Period] [Location] [Credits] 2

[Restriction] No Restriction [Lecture Form(s)] Lecture [Language] [Instructor] Kenji Fujimoto

[Course Description] Control engineering consists of theory and methodology to design control systems. It includes the classical control theory to design feedback control systems based on transfer functions and frequency response.

【Grading】 The evaluation is based on repots (40%) and exam (60%).

[Course Goals] The goal of this course is to understand the classical control theory and the related methodologies to design feedback control systems based on transfer functions and frequency response.

#### [Course Topics]

Theme	Class number of times	Description	
Introduction	1	History and background of control engineering	
Dynamical systems and transfer functions	4	Basic knowledge on dynamical systems, ordinary differential equations, transfer functions and block diagrams	
Transit response and stability	3	Stability of dynamical systems, transit response, steady response and Routh-Hurwitz stability criteria	
Frequency response	2	Basic knowledge on frequency response using Bode plots and vector locus	
Characteristic of feedback control systems	3	Performance criteria of feedback control systems using Nyquist's stability criteria and the root locus method.	
Design of feedback control system	2	How to design feedback control system using phase-lead compensation, phase-lead-lag compensation and PID control	

【Textbook】T. Sugie and M. Fujita: Introduction to feedback control (in Japanese), Corona Publisher,

生産工学

[Code] 50300 [Course Year] 3rd year [Term] 2nd term [Class day & Period] [Location] [Credits] 2

[Restriction] No Restriction [Lecture Form(s)] Lecture [Language] [Instructor]

[Course Description] This course deals with how to construct and operate a manufacturing system of a mechanical product.

【Grading】 The regular examination, in-class examinations and reports are taken into account.

[Course Goals] The goal is to understand the concept of a manufacturing system, and to become able to handle related basic decision-making problems.

#### [Course Topics]

Theme	Class number of times	Description	
Introduction	1	The overall concept of a manufacturing system is given.	
		After introducing the concept of the manufacturing cost and cash flow, how to	
Industrial Economics	2	make decisions using the concept (for example, the DCF method for	
		investment decisions) is addressed.	
Production &		Demand forecasting production planning inventory management MDD HT	
Operations	2	Demand forecasting, production planning, inventory management, MRP, JIT,	
Management		etc. are covered.	
Production	2	Basic approaches for single machine scheduling, flow shop scheduling, job	
Scheduling	2	shop scheduling, and project scheduling are introduced.	
Plant Layout & Line	2	Pasia approaches for plant layout and line balancing are introduced	
Blancing	<u> </u>	Basic approaches for plant layout and line balancing are introduced.	
Industrial		After introducing the principles of motion economy, the approaches for	
	2	process analysis, human-machine analysis, Therblig analysis, standard time	
Engineering		setting, etc. are addressed.	
		The concept of the reliability and maintainability of a manufacturing facility	
Plant Maintenance	e 1	and how to evaluate them are introduced. Typical maintenance policies, how to	
		chose among them, TPM, etc. are also covered.

#### **Statistical Thermodynamics**

統計熱力学

[Code] 50731 [Course Year] 3rd year [Term] 2nd term [Class day & Period] [Location] [Credits] 2

[Restriction] No Restriction [Lecture Form(s)] Lecture [Language] [Instructor] Masao Miyake

[Course Description] In this lecture, fundamental ideas of Statistical Thermodynamics which is effective to microscopic understanding of macroscopic systems and some typical applications to condensed matter physics are presentaed.

[Grading] Situation of voluntary submission of some reports and score of exam are totally evaluated.

[Course Goals] The goals of this lecture are both to understand fundamental idead of Statistical Thermodynamics and to study typical applications to condensed matter physics.

#### [Course Topics]

Theme	Class number of times	Description
0.45		Basic ideas of Statistical Thermodynamics, thermal equilibrium, fundamentals of
Outlines	2	Statistics, means of measuremnts, ergodic theory.
Themodynamic	2	Thermodynamic laws, thermodynamic functions, Legendre transform, Maxwell
functions	2	relations, Gibbs-Helmholtz equation, thermodynamic variation, phase equilibrium.
		Phase space of movement, Liouville's theorem, micro canonical ensemble, Partition
Ideal and an	2	function, relation between Helmholtz free energy and Partition function, Principle
Ideal systems	2	of Boltzmann, simple applications of microcanonical ensamble (ideal gas, elastic
		of gum)
Comparing to a second to	2	Distribution with the maximum probability, Partition function, the 3rd law of
Canonical ensemble		thermodynamics, Gibbs's paradox, grand canonical ensamble.
		Grad canonical ensamble of quatum statistics, Fermion and Boson, Bose-Einstein
Quantum statistics	2	statistics, Fermi-Dirac statistics, ideal Fermi gas, electron specific heat, ideal Bose
		gas, Bose-Einstein condensation.
		Systems with two levels, Schottly type specific heat, Statistics of photons, Planck's
Typical applications	4	equation, one dimansional harmonic oscillation, Einstein model and specific heat
		of solid states.
Evaluation ad apple	1	Understanging of typical applications of statistic themodynamics and submission
Evaluation od goals		of homeworks.

【Textbook 】 The textbook is not appointed. Writing on the blackboard is performed in every lecture.

【Textbook(supplemental)】1.原島 鮮:「熱力学・統計力学」培風館,

[Restriction] No Restriction [Lecture Form(s)] Lecture [Language]

[Instructor] J. Kawai (50370), K. Ishihara/H. Okumura (50371)

[Course Description] The fundamentals of transport phenomena for the engineers and/or researchers related to physical engineering are given.

【Grading】 Assignment and written examination

[Course Goals] To be able to apply the fundamental equations of thermal and mass transport studied in the class to real phenomena.

#### [Course Topics]

Theme	Class number of times	Description
Momentum transport	2	Newton's law of viscosity, Equation of continuity
Non-steady mass transport	2	Systems with more than one variables, Energy equation
Heat conduction	2	Fourier's law, Steady heat conduction
Energy transport	3	Non-steady heat conduction, heat transfer, thermal radiation
Mass transport	2	Fick's law, mass transport in solidand in laminar flow
Complex transport	2	Non-isothermal mixing, mass transfer coefficient, heat and mass transport
phenomena	3	across an interface
Achievement check	1	Learning how to solve the problems through practical exercises.

#### **Fundamentals of Materials Science**

物質科学基礎

[Code] 51330 [Course Year] 2nd year [Term] 1st term [Class day & Period] [Location] [Credits] 2

[Restriction] No Restriction [Lecture Form(s)] Lecture [Language] [Instructor] Kuniaki MURASE

[Course Description] Based primarily on the solid-state chemistry, this course serves the outline of notation (descriptive method) and analytical techniques for solid substances, which become the basis of materials science and materials engineering.

[Grading] (1) Class participation, (2) take-home assignments (approx. 50% in total), and (3) exams (approx. 50%). Students will sign a roll sheet every class. Ten written take-home assignments are due throughout the semester. Supplementary examination to bail out low-performing students will not be given for any reason.

[Course Goals] Basic knowledges of physics, chemistry, mathematics, etc. are requires to learn materials science and materials engineering. In this course students learn basic technical terms and develop fundamental concepts of solid-state materials chemistry, to take subsequent advanced courses on materials science and materials engineering.

#### [Course Topics]

Theme	Class number of times	Description	
Substances and	1	Three states of matter; Amorphous and glasses; Liquid crystal; Materials	
materials	1	structures and properties in our surrounding living environment.	
Fundamentals of		Close packing and holes; Crystal structure of metals; Point symmetry and	
	3	space symmetry; Lattice and unit structure; Crystal system and Bravais lattice;	
crystal structures		Depiction of lattice plane and lattice direction; Fractional coordinates.	
Fundamentals of	2	Electronic configuration and shielding; Size of atoms and ions; Covalency and	
chemical bond theory	2	ionicity; Definition of electronegativity.	
Inorganic solid-state materials	3	Structure of important ionic crystals; Stoichiometry and lattice defects; Ionic	
		conduction and solid electrolytes; Crystal field and optical properties of	
		d-block elements.	
Fundamentals of		Generation and properties of X-ray; Fundamentals of X-ray scattering and	
diffraction	5	diffraction (Bragg condition, structure factor, extinction rule); Powder X-ray	
crystallography		diffractometry; Laue method	
Self-assessment of	1	Davis and American	
achievement	1	Review of the course contents	

【Textbook】 No textbook is required for this course. A course booklet will be given out at the first lecture.

【Textbook(supplemental)】B. D. Cullity and S.R. Stock, Elements of X-Ray Diffraction (3rd ed.), Prentice Hall, 2001 (ISBN 978-0201610918)

物理工学英語

[Code] 51250 [Course Year] [Term] 1st term [Class day & Period] [Location] [Credits] 2 [Restriction]

[Lecture Form(s)] [Language] [Instructor] J. Goodman

[Course Description] Instructors, who are native speakers of English, will provide various opportunities to gain communication skills in English. This course is mainly for students in Mechanical Engineering Course.

#### 【Grading】

#### [Course Goals]

#### [Course Topics]

Theme	Class number of times	Description
Group seminar	15	Small groups are organized. Classes will be given by an instructor of native speaker.

【Textbook】 The class instructor will arrange its contents.

【Textbook(supplemental)】

[Prerequisite(s)]

[Web Sites]

【Additional Information】 - Applicants should attend the guidance.

- Limited number (10-15) of registrants are allowed in each class.
- No cancellation is admitted once the class starts.

#### **English for Engineering Science**

物理工学英語

[Code] 51251 [Course Year] 4th year [Term] 1st term [Class day & Period] [Location] [Credits] 2

[Restriction] No Restriction [Lecture Form(s)] [Language] [Instructor] James L. de Witt

[Course Description] The instructor will provide guidance on supplementary materials for each topic. Students will be expected to prepare materials for discussion related to the topic each week.

[Grading] Attendance, preparedness, and daily participation will be considered in grade determination. A daily in-class grade based on 0, 1, 2, or 3 points will be given as follows: 0-absent 1-not participating and/or not prepared 2-normal, expected level of participation and preparedness 3-extra participation and preparedness One in-class grade point will be subtracted for tardiness, speaking Japanese in class, breaking basic rules, etc. for each day of incidence. Demerits: Each 30 minutes of absenteeism will count as 1 demerit. A total of 16 demerits (absent from > 30% of in-class time) will be cause for failure.

[Course Goals] Emphasis will be on developing skills for oral communication with other scientists and engineers, as well as with laymen. Topics will be discussed at both levels, to develop dual awareness of the importance of speaking in accurate technical terms with logical organization for peers, and in simple but clear terms for laymen.

#### [Course Topics]

Theme	Class number of times	Description
		The instructor will provide guidance on supplementary materials for each
	15	topic. Students will be expected to prepare materials for discussion related to
		the topic each week. Students will be encouraged to actively participate in
English for		discussions of weekly topics, primarily in small groups or pairs, but also singly
Engineering Science		to the class, and in light debate. Ample opportunity for practice in description,
		argumentation, asking questions, and other aspects of discussion will be
		provided. Students will develop vocabulary naturally through preparation and
		discussion, with guidance from the instructor.

【Textbook】 You can download a weekly plan of "English for Engineering Science" (http://www.mtl.kyoto-u.ac.jp/guidance/Syllabus-Kyodai-Phys-Eng-Spring-12.pdf).

【Textbook(supplemental)】

## **Introduction to Solid State Physics**

量子物性基礎論

[Code] 51480 [Course Year] 3rd year [Term] 2nd term [Class day & Period] [Location] [Credits] 2

[Restriction] No Restriction [Lecture Form(s)] Lecture [Language] [Instructor] Matsuo and Seki

[Course Description] Gain working understanding of periodicity in solids and how this periodicity and bonding governs solid properties, such as electrically magnetically and mechanically. To describe how quantum mechanics defines solid state properties on a microscopic and macroscopic scale.

[Grading] Coursework will be evaluated with attendance and report on subjects.

[Course Goals] To further develop the understanding of interactions between solid state and phonons, electrons and particles on a microscopic scale.

### [Course Topics]

Theme	Class number of times	Description
Introduction	1	Revision of ccrystal type and structure
Free electron model	2	Wave function theory of one dimensional lattice, energy state and Fermi
Free electron model	2	surface
Band structure	3	Bloch 's theory, Brillouin zone, Laue law, diffraction and structural factor
Defects and	2	Veccency diffusion color center
dislocations		Vacancy, diffusion, color center
Optical property	2	Kramers-Kronig relation, Drude theory, electron gas, Plasmon
Semiconductor	2	Band gap, electrons and holes, Homogeneous semiconductor, doping
Junction theory	2	p-n junctions, metal-semiconductor junction, hetero-junction
Final examination	1	Evaluation will be given by the contents of the reports and quizzes of the
and report	1	subjects leaned in this course.

## **Electronic Structures of Inorganic Materials 1**

量子無機材料学1

[Code] 51650 [Course Year] 3rd year [Term] 1st term [Class day & Period] [Location] [Credits] 2

[Restriction] No Restriction [Lecture Form(s)] Lecture [Language] [Instructor] Isao TANAKA

[Course Description] Electron theory is essential for fundamental understanding of the relationship among properties, crystal structure and chemical composition in wide variety of inorganic crystals. This course provides an introduction to the basic electron theory to be used to describe the electronic structures of inorganic materials in general.

### 【Grading】Final exam.

Some quiz-sheets are distributed at the lecture whose answers should be submitted on site. Their scores may count as a portion of the cumulative grade.

[Course Goals] This course provides an introduction to the basic electron theory to be used to describe the electronic structures of inorganic materials in general.

### [Course Topics]

Theme	Class number of times	Description
Introduction to	3	Description of electrons, Schroedinger equation
quantum theory	J	Description of electrons, Schroedinger equation
Electronic structures	3	hydrogen-like atoms, quantum numbers, many-electron atoms, self-consistent
of isolated atoms	3	method, electron spin
Electronic structure	3	molecular orbital method, homo/hetero nuclear diatomic molecules, chemical
of simple molecules	3	bondings
Electronic structures	4	electronic structure of monoatomic crystals and binary compounds, 1D chain
of crystals	4	of hydrogen atoms, Bloch theorem, band calculations
Application to	1	Density functional theory calculations and their application to materials
materials science	1	science
Assessment of		
mastery of the course	1	Assessment of mastery of the course content

## **Electronic Structures of Inorganic Materials 2**

量子無機材料学2

[Code] 51660 [Course Year] 3rd year [Term] 2nd term [Class day & Period] [Location] [Credits] 2 [Restriction] No Restriction [Lecture Form(s)] Lecture [Language] [Instructor] Fumiyasu Oba

[Course Description] It is important to understand the electronic structure of materials because of its determinantal impacts on material functions. This lecture gives the fundamentals of electronic structure calculations based on quantum chemistry and band theory. The relationship between the electronic structure of inorganic materials and their functions is also discussed.

[Grading] Evaluations are made based on the examination. The results of quizzes and reports may be considered.

[Course Goals] Learning the fundamentals of quantum chemistry and band theory, and their applications to the issues in materials science.

#### 【Course Topics】

Theme	Class number of times	Description
Electronic structure		
theory for materials	1	The roles of electronic structure theory in materials research and development.
science		
Fundamentals of		
electronic structure	3	The characteristics and physical meanings of wavefunctions, total energy, and
theory		one-electron energy.
Theory,		
approximations, and	4	Hadan and Hadan Ford and a character and an description
methods in quantum	4	Hartree and Hartree-Fock approximations in quantum chemistry.
chemistry (1)		
Theory,		
approximations, and		Density functional theory and perturbation theory.
methods in quantum	2	
chemistry (2)		
Electronic structure of	1	The wavefunctions and eigenvalues of atoms, Pauli principle, and Hund's rule.
atoms	1	
Electronic structure

## **Engineering and Ecology(in English)**

工学とエコロジー(英語)

[Code] 22110 [Course Year] [Term] 1st term [Class day & Period] [Location] [Credits] 2 [Restriction] [Lecture Form(s)] [Language] English [Instructor]

[Course Description] The purpose of this course is to teach global ecological and environmental topics from an engineer viewpoint. The course especially contains such global ecological and environmental topics where engineering can provide solutions for sustainability. The course is consisted of lectures and additional exercises, of which the student should complete five (5) written short reports and five (5) 60 minutes laboratory session attendances. The laboratory sessions are held weekly after the lecture, and consist of interactive group work tasks. Laboratory sessions are held weekly from 18 to19 o' clock.

The course is aimed for both Japanese and Foreign nationals.

The course starts on April 16th, 2013.

【Grading 】 Test, reports, laboratory performance.

[Course Goals] This course will provide tasks for engineering students to become aware of the relationships between engineering and various aspects of environmental issues. Students will also learn how to apply engineering skills to various environmental and ecological issues. The course prepares the students to be able to write engineering related ecological and environmental topics in English as well as verbally express themselves of these subjects.

## **Engineering and Economy(in English)**

工学と経済(英語)

[Code] 22210 [Course Year] [Term] 2nd term [Class day & Period] [Location] [Credits] 2 [Restriction] [Lecture Form(s)] [Language] English [Instructor]

Course Description 1 The purpose of this course is to teach economy from an engineer viewpoint. The course especially contains such economic topics which engineer can use to solve practical engineering economy problems. The course is consisted of lectures and additional exercises, of which the student should complete five (5) written short reports and five (5) 60 minutes laboratory session attendances. The laboratory sessions are held weekly after the lecture, and consist of interactive group work tasks. Laboratory sessions are held weekly from 18 to 19 o' clock.// The course is aimed for both Japanese and Foreign nationals.// The course starts on October 8th.

【Grading 】 Test, reports, laboratory performance.

[Course Goals] This course will provide tasks for engineering students to be able to understand relationships between engineering and engineering economy. Students will learn solving economic problems related to engineering project at various levels. The course also prepares the students to write engineering related economic topics in English as well as verbally express themselves of these subjects.
