2014

## [F] Industrial Chemistry

Kyoto University, Faculty of Engineering

# [F] Industrial Chemistry

## Industrial Chemistry

74050 Introduction to Industrial Chemistry	1
71020 Physical Chemistry: Fundamentals and Exercises	2
71030 Exercises in Basic Organic Chemistry	3
71040 Basic Inorganic Chemistry	4
71050 Fundamentals of Chemical Process Engineering	5
71120 Physical Chemistry I (Frontier Chemistry)	6
71110 Organic Chemistry I (Frontier Chemistry)	7
71130 Inorganic Chemistry (Frontier Chemistry)	8
71140 Analytical Chemistry (Frontier Chemistry)	9
71150 Elements of Polymer Chemistry I (Frontier Chemistry)	10
71320 Mathematics of Chemistry (Frontier Chemistry)	11
71350 Frontier Chemistry Laboratory I(Frontier Chemistry)	12
71360 Frontier Chemistry Laboratory II(Frontier Chemistry)	13
71190 Physical Chemistry II (Frontier Chemistry)	14
71170 Organic Chemistry II (Frontier Chemistry)	15
71220 Instrumental Analytical Chemistry (Frontier Chemistry)	16
71200 Elements of Polymer Chemistry II (Frontier Chemistry)	17
71180 Biorelated Material Chemistry (Frontier Chemistry)	18
71210 Introduction to Statistical Thermodynamics (Frontier Chemistry)	19
71240 Physical Chemistry III (Frontier Chemistry)	20
71230 Organic Chemistry III (Frontier Chemistry)	21
71330 Coordination Chemistry (Frontier Chemistry)	22
71260 Advanced Instrumental Analysis (Frontier Chemistry)	23
71300 Polymer Chemistry I	24
71290 Chemical Biology	25
74040 Organic Material Synthetic Chemistry	26
71340 Polymer Chemistry II	27
71270 Frontier Chemistry (Frontier Chemistry)	28
71280 Advanced Seminar on Science in Industry	29
72000 Physical Chemistry I (Fundamental Chemistry)	30
72010 Inorganic Chemistry I (Fundamental Chemistry)	31
72020 Analytical Chemistry I (Fundamental Chemistry)	32
72030 Organic Chemistry I (Fundamental Chemistry)	33
72040 Mathematical Method in Chemistry I (Fundamental Chemistry)	34
72250 Chemical Basis of Life (Fundamental Chemistry)	35
72230 Fundamental Chemistry Laboratory I(Fundamental Chemistry)	36
72240 Fundamental Chemistry Laboratory II(Fundamental Chemistry)	37
72070 Physical Chemistry II (Fundamental Chemistry)	38
72080 Organic Chemistry II (Fundamental Chemistry)	39

72090 Inorganic Chemistry II (Fundamental Chemistry)	40
72100 Analytical Chemistry II (Fundamental Chemistry)	41
72110 Introduction to Green Chemistry	42
72120 Basic Biochemistry I(Fundamental Chemistry)	43
72130 Introduction to Polymer Chemistry I (Fundamental Chemistry)	44
72200 Mathematical Method in Chemistry II	45
72140 Organic Chemistry III (Fundamental Chemistry)	46
72150 Physical Chemistry III (Fundamental Chemistry)	47
72160 Inorganic Chemistry III (Fundamental Chemistry)	48
70641 Basic Biochemistry II	49
72170 Introduction to Polymer Chemistry II (Fundamental Chemistry)	50
70520 Introduction to Quantum Chemistry	51
72210 Chemistry of Interfaces	52
70610 Catalyst Chemistry	53
72180 Statistical Mechanics for Chemistry (Fundamental Chemistry)	54
72220 Organic Chemistry IV (Fundamental Chemistry)	55
72190 Frontiers in Instrumental Analytical Science	56
73000 Physical Chemistry I (Chemical Engineering)	57
73010 Inorganic Chemistry I (Chemical Engineering)	58
74010 Fundamental Fluid Mechanics	59
73020 Mathematics for Chemical Engineering I (Chemical Engineering)	60
74020 Computer Programming in Chemical Engineering	61
74030 Chemical Reaction Engineering I	62
70460 Transport Phenomena	63
73030 Fluid-Phase Separation Engineering	64
70480 Process Control	65
73040 Physical Chemistry II (Chemical Engineering)	66
73050 Mathematics for Chemical Engineering II	67
70820 Numerical Computation for Chemical Engineering	68
73120 Chemical Process Engineering Laboratory I(Chemical Engineering)	69
73130 Chemical Process Engineering Laboratory II(Chemical Engineering)	70
73070 Chemical Reaction Engineering II	71
73080 Solid-Phase Separation Engineering	72
70700 Fine Particle Technology	73
70710 Process Systems Engineering	74
71010 Simulations in Chemical Engineering	75
73090 Physical Chemistry III (Chemical Engineering)	76
70720 Process Design	77
74000 Chemical Process Engineering	78
70280 Industrial Organic Chemistry	79
70300 Biochemical Engineering	80
70420 Introduction to Environmental Preservation	81
70430 Chemistry and Environmental Safety	82
70560 Electrochemistry	83

70590 Spectroscopy for Organic Compounds	84
70960 Safety in Chemistry Laboratory	85
21050 Engineering Ethics	86
21080 Introduction to Engineering	87
22020 Exercise in English of Science and Technology(in English)	88
22110 Engineering and Ecology(in English)	89
22210 Engineering and Economy(in English)	90
24010 Global Leadership Seminar I	91
25010 Global Leadership Seminar II	92

【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】

【Instructor】Mitsuo Sawamoto and Makoto Ouchi

【Course Description】Based on the courses "Fundamental Polymer Science I and II" (covering polycondensation and radical polymerization), this course is to discuss the concepts and the characteristics of coordination, stereospecific, ionic (anionic and cationic), ring-opening, and living polymerizations. Examples are provided for initiators, monomers, reaction mechanism, polymerization intermediates, and produced polymers.

【Grading】Written Examination

【Course Goals】To discuss fundamental aspects of polymer chemistry, particularly the fundamental nature of polymers and their synthesis (polymerization reactions).

【Course Topics】

Theme	Class number of times	Description
Coordination Polymerization	2	To discuss: The fundamentals of coordination and Ziegler-Natta polymerizations, including ring-opening metathesis polymerization, and the relation between catalyst design and polymerization mechanism.
Stereospecific Polymerization	2	To discuss: The fundamentals of stereospecific polymerization, polymer characterization therein, and the relation between polymer steric structure and polymerization mechanism.
Study Achievement Test (1)	1	To examine as "feed-back": The achievement of studying in the subjects that have already been discussed (coordination and stereospecific polymerizations).
Anionic Polymerization	3	To discuss: The fundamental of anionic polymerization, including initiators, monomers, their structure – reactivity relationships, elementary reactions, kinetics, and reaction mechanisms.
Cationic Polymerization	3	To discuss: The fundamental of cationic polymerization, including initiators, monomers, their structure – reactivity relationships, elementary reactions, kinetics, and reaction mechanisms.
Ring-Opening Polymerization	1	To discuss: The fundamental of ring-opening polymerization, including initiators, monomers, their structure – reactivity relationships, elementary reactions, kinetics, and reaction mechanisms.
Living Polymerization	2	To discuss: The definition and examples of "living" polymerization, including initiators, catalysts, monomers, their structure-reactivity relationships, elementary reactions, kinetics, and reaction mechanisms
Study Achievement Test (2)	1	To examine as "feed-back": The achievement of studying in the subjects that have already been discussed (ionic and living polymerizations).

【Textbook】None in particular. PDF files of slides that are to be shown at the course lectures will be uploaded into the course website, and it is strongly recommended for students to download these materials for review and self-learning.

【Textbook(supplemental)】"Fundamentals in Polymer Science", Tokyo Kagaku Dojin:

【Prerequisite(s)】Fundamental Polymer Science I (2nd year, 2nd term) and Fundamental Polymer Science II (3rd year, 1st term)

## Chemical Biology

化学生物学

【Code】 71290 【Course Year】 3rd year 【Term】 2nd term 【Class day & Period】 【Location】 【Credits】 2

【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】

【Instructor】 Tabata and Yamamoto (Inst. for Frontier Med. Sci.)

【Course Description】 It is important in the field of life science to understand biochemistry and biological medicine in terms of organic material chemistry. The way to think and view the biological system and bioprocess at the molecular level can make clear the academic knowledge of life science and contribute to the development of engineering-medicine-pharmacy interdisciplinary research area. In this lecture, proteins, polysaccharides, and lipids of bio-related substances as well as cells, cell membrane, extracellular matrix of biological system are explained in terms of chemical biology. As a representative of engineering-medicine-pharmacy interdisciplinary research area, drug delivery system (DDS) and regenerative medicine are introduced. In addition, some topics in the field of life science, including stem cells, body defense and immunology, and endocrine disruptor, are also covered.

【Grading】 The credit is judged by the scheduled examination and the attendant rate.

【Course Goals】 The objective of the lecture is to obtain the fundamental knowledge of proteins, polysaccharides, lipids, cells, and extracellular matrix and understand stem cells, body defense, DDS, regenerative medicine, and endocrine disruptor of life science application.

【Course Topics】

Theme	Class number of times	Description
Proteins and enzymes	2	Structure and function of proteins and enzymes
Polysaccharides and lipids	1	Structure and function of polysaccharides and lipids
Cell and cell membrane	1	Structure and function of cells and membrane transportation
Signal transduction	1	Signal transduction at cell membrane
Energy conversion	1	Oxidative phosphorylation to generate ATP
Cytoskeleton	1	Cellular biomechanics and biochemistry of cytoskeleton
Body defense and immunology	1	System and function of body defense and immunology
Stem cells	1	System, function, and medical application of stem cells
Cell and extracellular matrix	1	Structure and function of extracellular matrix
Regenerative medicine and material science	2	Overview of regenerative medicine based on material science
Drug delivery system (DDS)	1	Overview of DDS based on material science
Endocrine disruptor	1	Overview of endocrine disruptor based on material science
Achievement evaluation	1	Credit evaluation based on the understanding level of lecture contents

【Course Description】The solution equilibria that are important not only for introductory analytical chemistry but also for the fundamentals of chemistry, in general, such as acid-base equilibrium, complex formation, precipitation, and oxidation-reduction equilibrium, are the subjects of this course.

【Grading】Grading is based on the examination held at the end of the semester. The attendance rate and the reports submitted during the course may be counted in evaluation.

【Course Goals】Not only the understanding of the basics of solution equilibria and the capability of solving related problems, but the appreciation of the relationship of the solution equilibria with other disciplines of chemistry and science, in general, will be targeted.

**【Course Topics】**

<b>Theme</b>	Class number of times	<b>Description</b>
Intriduction to chemical equilibrium	2	
Acid-base equilibrium	4	
Precipitation equilibrium	1	
Complexation equilibrium	2	
Oxidation-recdution equilibrium	5

【Course Description】 This course is designed for student who already learned basic organic chemistry. This course consists of three major parts. The first part concerns stereochemistry of organic compounds and reactions. The second part focuses on the reaction of saturated organic compounds bearing leaving groups. Nucleophilic substitution and elimination are involved in this part. The third part gives the details of the reactivities of unsaturated organic compounds bearing p-electrons such as alkenes, enols, enolates, and aromatic compounds.

【Grading】

【Course Goals】

【Course Topics】

Theme	Class number of times	Description
Stereochemistry	2	Enantiomers; Diastereomers; Chiral compounds devoid of chiral centers; Symmetry, Optical resolution (Chapter 14)
Nucleophilic Substitution	3	Mechanism; SN1 and SN2 reactions; Leaving group; Nucleophiles; Elimination and Rearrangement (Chapter 15)
Elimination	2	Effect of Nucleophiles on Elimination and Substitution; E1 and E2 Elimination; Role of leaving group; Stereochemistry of elimination; E1cB reaction (Chapter 17)
Electrophilic Addition to Alkenes	3	Bromination, Epoxidation; Regio- and stereochemistry of electrophilic addition; addition to conjugated dienes; Mechanism, Halolactonization (Chapter 19)
Formation and Reaction of Enols and Enolate	2	Keto-enol Tautomerization; Acid- and base-catalyzed enolization; Stable enols; Reactions involving enols and enolates as intermediates; Stable enolate equivalents; Reaction at the oxygen atoms of enol and enolate; Reactions of enol ethers (Chapter 20)
Aromatic Electrophilic Substitution	2	Electrophilic substitution of benzene, phenol, and anilines; ortho/para and meta preferences (Chapter 21)
Examination	1

【Course Description】 Inorganic Chemistry II is an advanced course after learning Basic Inorganic Chemistry and Inorganic Chemistry I.

Structures, electronic spectra and reaction mechanism in coordination chemistry of metal complexes and organometallic compounds are lectured.

【Grading】 Grades based on attendance and a final exam.

【Course Goals】 Understanding of the basis of steric structure, electronic structure, electronic spectra and reaction mechanism in metal complexes and organometallic compounds

## 【Course Topics】

Theme	Class number of times	Description
19. d-Metal complexes: electronic structure and spectra	7	
20. Coordination chemistry: reactions of complexes	4	
21. d-Metal organometallic chemistry	3	
Lecture review	1

**Organic Chemistry III (Fundamental Chemistry)**

有機化学 III (工業基礎化学)

【Code】 72140 【Course Year】 3rd year 【Term】 2nd term 【Class day &amp; Period】 【Location】 【Credits】 2

【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 【Instructor】 Tsuji, Kondo, Ohmura

【Course Description】 The lecture is given on Organic Chemistry which is indispensable to a researcher and an engineer. After the Organic Chemistry I (2nd year, 2nd term) and the Organic Chemistry II (3rd year, 1st term), the lecture is given on the chapters 26 - 31 of the same textbook, which covers characteristic reactions of electron-deficient alkenes and aromatic compounds, protection and deprotection of functional groups, and chemistry of carbonyl compounds including various reactivity of enolates.

【Grading】 The grade is given based on the final examination.

Attendance, reports during the class, and the midterm examination could be considered.

【Course Goals】 Comprehensive understanding of reactions of aromatic compounds, reactivities of functional groups, and chemistry of carbonyl compounds including alkylation of enolates, the aldol reaction, and other condensation reactions is a goal of this course. By combining ideas learned in the Organic Chemistry I and the Organic Chemistry II, high-level knowledge of organic chemistry must be acquired which is indispensable for a accomplished researcher and engineer.

## 【Course Topics】

Theme	Class number of times	Description
Conjugate addition and nucleophilic aromatic substitution	3	Conjugate addition reactions, conjugate substitution reactions, nucleophilic epoxidation, electrophilic aromatic substitution, addition-elimination mechanism, diazonium compounds, reactions via benzyne intermediate (Chapter 22)
Chemoselectivity and protecting groups	3	Reducing agents, reduction of carbonyl groups, catalytic hydrogenation, removal of functional groups, dissolving metal reductions, selectivity in oxidation reactions, reactivities of functional groups, protecting groups (Chapter 23)
Regioselectivity	2	Regioselectivity in electrophilic aromatic substitution reactions, electrophilic attack on alkenes, regioselectivity in radical reactions, nucleophilic attack on allylic compounds, electrophilic attack on conjugated dienes, direct addition vs. conjugate addition (Chapter 24)
Alkylation of enolates	3	Alkylation of nitriles and nitroalkanes, electrophiles for alkylation, alkylation of lithium enolates, alkylation using enolate equivalents, alkylation of beta-dicarbonyl compounds, regioselectivity in alkylation of ketones (Chapter 25)
Reactions of enolates with carbonyl compounds: the aldol and Claisen reactions	3	The aldol reaction, cross aldol condensation, aldol reactions using enolates and their equivalents, intramolecular aldol reaction, acylation of enolates, Claisen condensation, cross Claisen condensation, intramolecular cross Claisen condensation (Chapter 26)

【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】

【Instructor】 H. Watanabe (ICR), H. Kaji (ICR), Y. Masubuchi (ICR), and Y. Matsumiya (ICR)

【Course Description】 Characteristic structures (such as crystalline and amorphous structures) and characteristic properties (such as viscoelasticity) of polymers result from the thread-like primary structure of polymer molecules. Focusing on this point, this lecture addresses the structures and properties of polymers in solutions, in melts, and in solids.

【Grading】 Judged on the basis of home-work reports and the final exam.

【Course Goals】 Molecular origin of the characteristic structures, dynamics, and properties of polymers.

【Course Topics】

Theme	Class number of times	Description
Conformation of Polymer Chain	2	The conformation distribution of flexible polymers and the relationship between their average size and molecular weight are explained.
Solution Properties	3	The thermodynamic behavior of polymer solutions, such as the osmotic pressure and phase separation, is explained on the basis of the Flory-Huggins theory. For this purpose, molecular expressions are derived for the mixing entropy, mixing enthalpy, and chemical potential. In addition, a brief introduction is given for methods of molecular weight determination on the basis of the solution properties.
Structure in Solid State	2	Various morphology of crystalline polymers, i.e., single crystal, spherulite, lamellar crystalline, and extended chain crystal, are introduced and basic crystallization processes giving this variety of morphology are explained. In addition, methods of analysis of these crystalline structures are introduced and the results of the analysis are explained.
Glass Transition	1	The glass transition phenomenon is explained in relation to the thermal motion of polymer chains. Changes of the thermal and mechanical properties on this transition are explained are related to the motion of the polymer chains.
Rubber Elasticity	2	From a molecular point of view, the conformation distribution of flexible polymer chains above the glass transition point is related to the rubber elasticity. The molecular expression is derived for the equilibrium modulus of rubbers.
Polymer Dynamics	4	The viscoelastic behavior of flexible polymer melts is related to the large scale motion of the polymer chains. In particular, the entanglement effect due to the uncrossability of the chains is explained from a molecular point of view, and some basic models are introduced. In addition, for polymers having type-A dipoles parallel along the chain backbone, a relationship between viscoelastic and dielectric properties is explained.
Summary	1	Essence of the whole lecture and a relationship among all items in the lecture are summarized, thereby improving the understanding of the attending students in particular for the items not well addressed in the the exams.

【Textbook】 Printed documents are distributed in the class.

【Textbook(supplemental)】 Shin Kobunshi Kagaku Joron (a book published from Kagaku Dojin)

Kobunshi no Kouzou to Bussei (a book published from Koudansha) ISBN978-4-06-154380-5

【Course Description】Thermodynamics is an essential subject to learn chemical engineering. This class provides an elementary level of chemical engineering thermodynamics.

【Grading】The score is evaluated by reports (homeworks) and examinations.

【Course Goals】The goal is to learn the way to apply the basics of thermodynamics to chemical process calculations.

## 【Course Topics】

Theme	Class number of times	Description
Introduction	0.5	
The First Law of Thermodynamics and Other Basic Concepts	1	
Volumetric Properties of Pure Fluids	1.5	
Thermochemistry	2	
The Second Law of Thermodynamics	2	
Confirmation of the Level of Attainment 1	1	
Balance for Open Systems	1	
Thermodynamic Properties of Fluids	2	
Phase Equilibrium	1	
Application of Thermodynamics to Industrial Processes	2	
Confirmation of the Level of Attainment 2	1	

【Textbook】J. M. Smith and H. C. Van Ness : Introduction to Chemical Engineering Thermodynamics, Seventh Edition (McGraw-Hill International)

 【Course Description】Lecture on fundamentals of fluid dynamics needed for Chemical Engineering  
 【Grading】Grade will be determined by (i) the examination at the end of semester and (ii) homeworks during semester.

【Course Goals】Goal of this class is to understand the fundamental principles in fluid dynamics.

【Course Topics】

Theme	Class number of times	Description
Introduction to fluid dynamics	3	0. Example of flows
		0-1. flow of ideal fluid
		0-2. Laminar flow
		0-3. Stability of flow
		0-4. Turbulent
		0-5. Computational fluid dynamics
		1. Properties of fluid
		1-1. Viscosity
		1-2. Compressibility
		1-3. Laminar and turbulent flows
Dynamics of Ideal Fluid	6	2. Quiescent fluid
		2-1. Pressure
		2-2. Buoyancy
		3. Fundamentals on flows
		3-1. Particles and continuum body
		3-2. One dimensional flow 3-3. Three dimensional flow (Preparation of Mathematics)
		4-1. Mechanics in the ideal fluid
		4-2. Equation of continuity
		4-3. Euler's equation of motion
		4-4. Bernoulli's theorem
4-5. Examples		
4-6. Streaming function and potential flow		
Dynamics of viscous fluid	5	5. Dynamics of viscous fluid
		5-1. Viscosity
		5-2. Stress tensor
Confirmation of the level of attainment	1	5-3. Exact soluble problem described by Navier-Stokes equation
		Confirmation of the level of attainment
		Comments on the term-end Exam

【Textbook】

【Textbook(supplemental)】Bird, Stewart, Lightfoot "Transport Phenomena 2nd Ed." (Wiley)

【Prerequisite(s)】It is recommended for students to take the class: "Mathematics for Chemical Engineers I".

【Web Sites】

【Additional Information】

**Mathematics for Chemical Engineering I ( Chemical Engineering)**

化学工学数学 I (化学工学)

【Code】73020 【Course Year】2nd year 【Term】2nd term 【Class day &amp; Period】 【Location】 【Credits】2

【Restriction】No Restriction 【Lecture Form(s)】 【Language】 【Instructor】Takashi Taniguchi, Shinsuke Nagamine

【Course Description】 The aim of this class is to learn the fundamental mathematics commonly used in Chemical Process Engineering, Chemical System Engineering, such as ordinary differential equations, Laplace transformation, methods to solve differential equations by using Laplace transformation, and vector analysis. The style of the class is mainly lecture style.

【Grading】 Grade will be evaluated by (i) the examination at the end of semester and (ii) homework during semester.

【Course Goals】 To attain the mathematical knowledge and skill how to solve ordinal differential equations by using Laplace transformations

**【Course Topics】**

<b>Theme</b>	Class number of times	<b>Description</b>
Ordinary differential Equation	7	
Laplace Transformation	4	The historical background and the discovery of Laplace transformation. We learn how to solve ordinal differential equations and integral equations by using Laplace transformation, and also learn applications of Laplace transformation to definite integration,
Vector Analysis	3	Learning of differentiation of vector fields, integration of vector fields, Integral Theorems for vector fields.
Confirmation of the level of attainment	1	Confirmation of the level of attainment Comments on the term-end Exam

# Mathematics for Chemical Engineering II

## 化学工学数学 II

【Code】 73050 【Course Year】 3rd year 【Term】 1st term 【Class day & Period】 【Location】 【Credits】 2

【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 【Instructor】 Takashi Taniguchi, Noriaki Sano

【Course Description】 We will give a series of lectures on necessary mathematical knowledge and skills when students will learn subjects in the chemical engineering course, especially on Probability and Statistics, Fourier Transformation, Partial Differential Equations.

【Grading】 Grading will be determined by a test at the end of series of lectures, and reports and short tests in class, if necessary.

【Course Goals】 Goal of the class is that students attain necessary mathematical knowledge that is needed when students learn subjects in the chemical engineering course.

### 【Course Topics】

Theme	Class number of times	Description
Probability and Statistics	5	1-1. Definition and properties of probability 1-2. Conditional probability 1-3. Stochastic variable and its properties (a) Probability distribution function, (b) Average, Expectation value, Moment, (c) Moment generating function 1-4. Multi-stochastic variable case (a) simultaneous distribution function (b) marginal and conditional probability (c) covariance, correlation coefficient 1-5. Various distribution function (a) binomial distribution functions (b) Poisson distribution functions (c) Gauss distribution functions 1-6. Law of large numbers Central limit theorem Normal distribution
Stochastic Process	2	2. Stochastic Process 2-1. What is the stochastic process 2-2. One dimensional random walk Relation between the diffusion equation and random walk 2-3. Brownian motion and Langevin equation
Fourier Transformation	4	3-1. Euler's formula 3-2. Fourier integral 3-3. Fourier transformation
Partial Differential Equation	3	4. Fundamentals to solve partial differential equations Equation of wave Diffusion equation Multi-dimensional problem
Confirmation of the level of attainment	1	Confirmation of the level of attainment Comments on the term-end Exam

【Textbook】

【Textbook(supplemental)】

【Prerequisite(s)】 It is required that students have already had the lecture : Mathematics for Chemical Engineering I in the former semester.

【Additional Information】

## Numerical Computation for Chemical Engineering

計算化学工学

【Code】 70820 【Course Year】 3rd year 【Term】 1st term 【Class day & Period】 【Location】 【Credits】 2

【Restriction】 No Restriction 【Lecture Form(s)】 【Language】 【Instructor】 Masahiro Ohshima, Shinsuke Nagamine

【Course Description】 Solving several Chemical Engineering problems with computer language, Visual Basic (VBA) in Excel, the students earn the basic computational skills for engineering calculations. They will be learning how to solve the linear and nonlinear algebraic equations, differential equations, integral and linear and nonlinear least square method for parameter fittings

【Grading】 The submission of all homework assignments will be worth 40% of the final grade. The term end exam will be evaluated for the rest of the 60 % of the final grade.

【Course Goals】 The goals of this course is to write computer programming codes by students themselves for solving the simple Chemical Engineering Problems.

### 【Course Topics】

Theme	Class number of times	Description
How to solve the Algebraic Equation	3	After the orientation and introduction of class, the simple chemical engineering problems that can be formulated by algebraic equations are assigned to solve with VBA.
How to solve the differential equation	3	After learning the Euler, RKG methods for solving the differential equations, the students work on the calculation of chemical reactor.
How to integrate	1	After learning computer algorithm, like Simpson method, a calculation of a sedimentation and separation process is solved.
How to manipulative the matrix and vector	3	The programming codes for performing basic matrix calculations will be taught first, Then, the students will develop a computer program to derive a linear regression model from the data using the matrix calculation codes.
How to solve the partial differential equation	2	The scheme of approximating the partial differential equation with difference equations for computer calculation is taught.
non-linear least square method for parameter fitting	2	The students will learn Non-linear least square method after understanding the steepest descent method and Newtonian method.
Exercise with some selected problem	1	Review the entire course and perform Question and Answer. Some selected chemical engineering problem may be given to exercise and self-score own computer programming skill.

【Textbook】 Text will be prepared by the tutors

【Textbook(supplemental)】 Exercise of Chemical Engineering Programming. Programming for Chemical Engineering with Basic

【Prerequisite(s)】 Excel is to be used. The basic operation of computer and excel is prerequisite.

【Web Sites】

【Additional Information】 The first 30 minutes of the class will be devoted for explaining theory and basic computational scheme needed to solve the assignment of the day. Then, Move to the computer room and solve the assignment by using the computer.

## Chemical Process Engineering Laboratory I(Chemical Engineering)

化学プロセス工学実験 I (化学工学)

【Code】 73120 【Course Year】 3rd year 【Term】 1st term 【Class day & Period】 【Location】 【Credits】 6

【Restriction】 【Lecture Form(s)】 Exercise 【Language】

【Instructor】 Teaching staff in department of chemical engineering

【Course Description】 Experimental training on chemical analyses (gravimetric analysis, titration analysis) and fundamentals of chemical engineering (physical chemistry, transport phenomena, reaction engineering, etc.)

【Grading】 Attendance, performance in experiments, reports will be evaluated.

【Course Goals】 This course will enhance students' understanding of quantitative chemical analysis and chemical engineering.

【Course Topics】

Theme	Class number of times	Description
Fundamentals on chemical analyses	15	training regarding glass tools, electric balance, condensation, filtration, volumetric measurement, titration, etc. Also study tour for Kyoto University Environmental Preservation Research Center is organized to learn waste liquid treatment.
Chemical Engineering I/Physical Chemistry	14	freezing point drop, precise measurement of liquid density and partial molar volume, Liquid-liquid equilibrium, gas-liquid equilibrium, measurement of gas diffusivity, fabrication of pH meter, surface tension and wettability
Chemical Engineering I/Transport Phenomena	4	viscosity and flow dynamics, pressure drop in liquid flow
Chemical Engineering I/Reaction Engineering	4	kinetic analysis in batch reactor, characterization of flow reactor
Chemical Engineering I/Apparatus Setup	2	electric-cooling temperature-controlled batch,

【Instructor】 Teaching staff in department of chemical engineering

【Course Description】 Experimental training of chemical engineering fundamentals(transport phenomena, separation engineering, reaction engineering, powder technology, process control)

【Grading】 Attendance, performance in experiments, reports will be evaluated.

【Course Goals】 This course will enhance students' understanding of chemical engineering, and the students will learn typical operations in the experiments.

## 【Course Topics】

Theme	Class number of times	Description
Chemical Engineering II/Transport phenomena	9	unsteady state heat transfer, heat transfer with forced flow, mass transport through interface
Chemical Engineering II/Separation Engineering	9	continuous distillation, pressure drop and gas absorption in packed bed tower, cyclone characteristics for particle sizes
Chemical Engineering II/Reaction Engineering and Process Control	9	gas-solid reaction, gas-solid catalytic reaction, , dynamic characteristics in process control

【Textbook】 Textbook edited by teaching staff in department of chemical engineering

## Process Systems Engineering

プロセスシステム工学

【Code】 70710 【Course Year】 3rd year 【Term】 2nd term 【Class day & Period】 【Location】 【Credits】 2

【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 【Instructor】 S. Hasebe

【Course Description】 The chemical processes consist of various unit operations. In this course, the concepts and the methods of optimal synthesis, optimal design and production management are described. The mathematical methods for optimization are also explained.

【Grading】 Homework assigned in the lectures is treated as 30 points, and the final examination is treated as 70 points of the total score.

【Course Goals】 This course aims to understand the systematic modelling procedures of the design and operational problems for chemical processes. In addition, it is requested to understand the optimization methods for solving the problems which are formulated as the linear, non-linear or combinatorial programming problem.

【Course Topics】

Theme	Class number of times	Description
What is PSE?	1	The concept of process systems engineering is explained.
Modelling of the processes -physical model	1	The feature of physical models used in the process design and operation problems is explained.
Modelling of the processes - statistical model	1	The least square method used in constructing the statistical model is explained.
Optimal design and operation	1	The Lagrange's multiplier method which converts the constraint optimization problem to the unconstraint optimization problem is explained.
Procedure of process design	1	The procedure of process design and the solution method using input and output model are explained.
Process design using simulation	1	The sequential modular approach which is commonly used in the process simulators is explained.
Evaluation of understanding	1	For the contents explained in the lectures, the level of understanding is evaluated by the exercise.
Process synthesis	1	The combinatorial programming method and multi-step heuristic method which are used in the conceptual design are explained.
Heat exchanger network synthesis	2	A systematic synthesis method using T-Q diagram is explained for the heat exchanger network synthesis problem.
Production management of chemical processes	1	The concept of production management including supply chain problem is explained.
Solution procedure using LP	2	The formulation of the production planning problem as a linear programming problem, and its solution method using the simplex method are explained.
Scheduling problem and B&B method	1	The formulation of the scheduling problem of batch processes as a traveling salesman problem and its solution procedure using the branch and bound method are explained.
Various scheduling problems of batch processes	1	Various scheduling problems which arise in batch processes and their solution methods are explained.

【Textbook】 Lecture materials are distributed in the class.

【Textbook(supplemental)】

【Prerequisite(s)】 The basic knowledge of chemical engineering such as the unit operation and reaction engineering, and that of differential and integral calculus are requested.

【Course Description】 The purpose of this course is to teach global ecological and environmental topics from an engineer viewpoint. The course especially contains such global ecological and environmental topics where engineering can provide solutions for sustainability. The course is consisted of lectures and additional exercises, of which the student should complete five (5) written short reports and five (5) 60 minutes laboratory session attendances. The laboratory sessions are held weekly after the lecture, and consist of interactive group work tasks. Laboratory sessions are held weekly from 18 to 19 o'clock.

The course is aimed for both Japanese and Foreign nationals.

The course starts on April 8th, 2014.

【Grading】 Test, reports, laboratory performance.

【Course Goals】 This course will provide tasks for engineering students to become aware of the relationships between engineering and various aspects of environmental issues. Students will also learn how to apply engineering skills to various environmental and ecological issues. The course prepares the students to be able to write engineering related ecological and environmental topics in English as well as verbally express themselves of these subjects.

**【Course Topics】**

Theme	Class number of times	Description
Student orientation, and Basic issues and critical thinking about the environment	1	
Environment and human population, ecosystems and communities	2	
Succession and restoration	3	
Biogeography	4	
Productivity and energy flow	5	
World food supply	6	
Effects of agriculture	7	
Basics of energy, fossil fuels	8	
Alternative - and nuclear energies and environment	9	
Water supply and use	10	
Water management, pollution and treatment	11	
Air pollution, Environmental economics	12	
Waste management, environmental planning	13	
Final test	14	

【Textbook】 Botkin, Keller; Environmental Science, 8th Ed. 2012.

【Textbook(supplemental)】 None

【Prerequisite(s)】 Note:

- Interactive lessons (discussion), Small group working method
- This course is held in English.

【Web Sites】 None

工学と経済（英語）

【Code】22210 【Course Year】 【Term】2nd term 【Class day &amp; Period】 【Location】 【Credits】2 【Restriction】 【Lecture Form(s)】

【Language】English 【Instructor】

【Course Description】 The purpose of this course is to teach economy from an engineer viewpoint. The course especially contains such economic topics which engineer can use to solve practical engineering economy problems. The course is consisted of lectures and additional exercises, of which the student should complete five (5) written short reports and five (5) 60 minutes laboratory session attendances. The laboratory sessions are held weekly after the lecture, and consist of interactive group work tasks. Laboratory sessions are held weekly from 18 to 19 o'clock.// The course is aimed for both Japanese and Foreign nationals.// The course starts on October 2nd.

【Grading】 Test, reports, laboratory performance.

【Course Goals】 This course will provide tasks for engineering students to be able to understand relationships between engineering and engineering economy. Students will learn solving economic problems related to engineering project at various levels. The course also prepares the students to write engineering related economic topics in English as well as verbally express themselves of these subjects.

【Course Topics】

Theme	Class number of times	Description
Student orientation, Introduction to engineering economy	1	
Cost concept	2	
Design economics	3	
Cost estimation techniques I	4	
Cost estimation techniques II	5	
The time value of money I	6	
The time value of money II	7	
The time value of money III	8	
Evaluation of a single project I	9	
Evaluation of a single project II	10	
Comparison and selection among alternatives I	11	
Comparison and selection among alternatives II	12	
Income taxes and depreciation	13	
Final test	14	

【Textbook】 Sullivan, Wicks, Koelling; Engineering Economy, 15th Ed. 2012, Chapters 1-7.

【Textbook(supplemental)】

【Prerequisite(s)】 Note:

- Interactive lessons (discussion), Small group working method
- This course is held in English.
