Internship

インターンシップ

【Code】 51240 【Course Year】 3rd year 【Term】 【Class day & Period】 【Location】 【Credits】 2

【Restriction】 No Restriction 【Lecture Form(s)】 Exercise 【Language】 Japanese 【Instructor】 ,

【Course Description】 The aim of the internship is experiencing on-site activities involved production, manufacturing, development, designing and research of industrial goods at a factory or a research laboratory of Japanese leading companies. On-site learning of the importance of teamwork and production processes in manufacturing is also the aim.

【Grading】 Credits (2) are approved based on the summary report and presentation about the internship activities.

【Course Goals】 The goal of the internship is to master a general method of thinking and methodology at Mechanical Engineering. Furthermore, by learning the relationship between a human and machines at an industry, motivate oneself to study and think about one's career development.

【Course Topics】

Theme	Class number of times	Description
		As a general rule, the internship should meet the above purpose. The duration should be not less than two weeks. Thus, the following cases are not approved as an internship; a short internship such as a week, a company tour, a company explanation meeting and so on. Longer term more than two weeks and an overseas internship such as IAESTE can be acceptable.
		Based on recruitment from companies. You can find them at company ' s web sites and/or the instruction section of the Engineering Science office (Butsuri Kyoumu).

【Textbook】

【Textbook(supplemental)】

【Prerequisite(s)】

【 】

【Web Sites】

【Additional Information】 Pre-registration at the instruction section of the Engineering Science office (Butsuri Kyoumu) is required.

Energy Conversion

エネルギー変換工学

【Code】 50230 【Course Year】 3rd year 【Term】 【Class day & Period】 【Location】 【Credits】 2

【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 Japanese

【Instructor】 Shioji (Grad. School of Energy Science) Nakabe (Grad. School of Engineering)

【Course Description】 Various energy sources and energy conversion systems will be outlined. Also, basic matters on energy conversion processes and thermodynamics treatments for the effective use of energy will be lectured.

【Grading】 Achievement will be synthetically evaluated from attendance, report and final examination.

【Course Goals】 From this class, fundamental issues related to energy conversion engineering are learned, as well as a target is put in the current situation of energy resources, latest technologies of energy conservation and new energy system, environmental measures are comprehensible.

【Course Topics】

Theme	Class number of times	Description
Energy source and energy conversion system	3 ~ 4	* Energy resources
	3 ~ 4

Exercise for Machine Shop Practice

機械製作実習

【Code】 50610 【Course Year】 2nd year 【Term】 【Class day & Period】 【Location】 【Credits】 1

【Restriction】 No Restriction 【Lecture Form(s)】 【Language】 Japanese

【Instructor】 Nakabe, Matsubara, Nishiwaki, Ibaraki and guest lecturers

【Course Description】 This course consists of two parts: machine shop training and special lectures by visiting lecturers. The machine shop training will be offered for a week in August or September (during summer break). Students will learn the operation of various machine tools, e.g. a lathe, a milling machine, and a drilling machine, to make a stirling engine, whose performance will be tested at the end of the course. Hands-on training of disassembly and re-assembly of a commercial diesel engine (or a gasoline engine) will be also offered to learn actual engine mechanism.

The seminar series will be offered in the 2nd semester. Professional engineers from various companies will be invited to give a lecture on real-world experience on production design, manufacturing, or management.

【Grading】 For the credit, students are in principle required to participate in all the classes, and to submit all the reports.

【Course Goals】 To experience turning, milling and drilling operations and other basic machining operations. To obtain basic knowledge and experience on machine tools, cutting tools, measurement, and machining accuracy by hands-on training.

【Course Topics】

Theme	Class number of times	Description
Lectures on principle of engines	1	Students will learn basic knowledge on the principle of a stirling engine and a diesel (gasoline) engine.
Lectures on machine tools	1	Students will learn basic knowledge on machine tools that they will use in machine shop training.
Machine shop training (making a stirling engine)	4	Turning operation for cylindrical parts (2 classes), milling and drilling operations (2 classes), assembly and evaluation (1 class). A group of two students will make one stirling engine.
Disassembly of an engine	1	Assembly and disassembly of a commercial diesel (or gasoline) engine.
Lectures on safety	1	A special lecture on safety issues in manufacturing process and product design by a visiting lecturer.
Special seminars	7	Special seminars by visiting lecturers. Lectures may be subject to change each year. Examples of past lectures: "To future Edison -- save the world by good idea and engineering," "Development of compressors to meet market's needs -- role of mechanical engineers," "Japanese machine tools for the world's manufacturing - key technologies," "Engineer's life in companies."
Factory tour	1	One-day trip to a factory in Kansai area.

【Textbook】 A textbook will be handed out in class.

【Textbook(supplemental)】 None.

【Prerequisite(s)】 None.

【】

【Web Sites】 None.

【Additional Information】 The class overview will be presented in a guidance class for 2nd year students in Undergraduate Course Program of Mechanical and Systems Engineering in April. Detailed schedule will be given then.

Please be aware -- a large part of this class will be offered during the summer break.

A class guidance will be given typically in July. Its announcement will be posted in the 1st floor of the building of Dept. of Engineering Science. All the students who want to take this class must come to this guidance.

計測学

【Code】 50090 【Course Year】 2nd year 【Term】 【Class day & Period】 【Location】 【Credits】 2

【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 Japanese

【Instructor】 Osamu Tabata, Ryuji Yokokawa, Katsuyuki Kinoshita, Toshiyuki Tsuchiya, Masao Miyake,

【Course Description】 Basics of scientific instrumentation is covered.

【Grading】 Examination. Reports are considered also.

【Course Goals】 Understanding of the basics of scientific instrumentation in engineering physics.

【Course Topics】

Theme	Class number of times	Description
Units and Standards	2	Units and Standards
Measurement uncertainty and its evaluation	3	Measurement uncertainty and its evaluation
Data processing and statistical analysis	3	Data processing and statistical analysis
Electrical and temperature measurement	2	Electrical and temperature measurement
Radiation and material measurement	2	Radiation and material measurement
Mechanical measurement	2	Mechanical measurement
level of attainment	1	level of attainment

Xray Diffraction

結晶回折学

【Code】 52330 【Course Year】 3rd year 【Term】 【Class day & Period】 【Location】 【Credits】 2

【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 Japanese

【Instructor】 Faculty of Engineering, Professor, Matsubara Eiichiro

【Course Description】 Structural analyses by X-ray diffraction method will be given. In the lecture, the properties of X-rays, X-ray diffraction phenomena, crystallography, and diffraction by powder samples will be lectured.

【Grading】 The course will be graded by the scores of about 5 mini tests during classes (40%) and a final test (60%).

【Course Goals】 Students will learn the crystal structure analyses by X-rays through the course works of X-ray properties, crystalline structures, diffraction conditions, and reciprocal lattices.

【Course Topics】

Theme	Class number of times	Description
Basic properties of x-rays	2-3	1.X-rays
		2.Continuous x-rays
		3.Characteristic x-rays
		4.X-ray absorption
		5.X-ray filter
		6.Generation of x-rays
Crystallography	2-3	1.One dimensional crystal symmetry
		2.7 crystal systems and 14 Bravais' lattices
		3. Practical examples of crystals
		4. Body-centered cubic, face-centered cubic and hexagonal close-packed lattices
		6. Crystalline structures of several compounds
Description of crystal planes and directions	1-2	1. Description of lattice planes and directions
		2. Stereo projection
Diffraction by crystals	2	1. Diffraction by crystalline lattice
		2. Bragg conditions and scattering angle
		3. Calculation of structure factors
Diffraction by a powder sample	2	1. Principle of diffractometer
		2. X-ray diffraction by powder sample
Structural analyses of cubic systems	2	1. Determination of a lattice parameter in cubic systems
		2. Determination of Bravais' lattice in cubic systems
Reciprocal lattice and diffraction condition	2-3	1. Definition of reciprocal lattices
		2. Reciprocal lattice and real lattice
		3. Reciprocal lattice and diffraction condition

Basic Nuclear Reactor Exercise and Experiments

原子炉基礎演習・実験

【Code】51070 【Course Year】4th year 【Term】 【Class day & Period】 【Location】 【Credits】2 【Restriction】

【Lecture Form(s)】 【Language】 Japanese 【Instructor】 ,

【Course Description】 Basic reactor physics experiments using Kyoto University Critical Assembly (KUCA) which is a small and low power reactor are carried out. Guidance and lectures before experiments are performed at Yoshida main campus, and experiments are performed at Research Reactor Institute (Osaka Kumatori-cho).

【Grading】 reports before and after experiments

【Course Goals】 Understanding nuclear characteristics and safety system of nuclear reactor through reactor physics experiments

【Course Topics】

Theme	Class number of times	Description
Guidance	6	Guidance and lectures for experiments are performed at Yoshida main campus.
Experiment	1	Experiments are performed at Research Reactor Institute (Kumatori-cho, Osaka) for 1 week. 1) guidance 2) criticality approach experiment 3) control rod calibration experiment 4) neutron flux measurement experiment 5) operation of nuclear reactor

【Textbook】 Download from Web site (Japanese, English and Korean versions are available)

【Textbook(supplemental)】

【Prerequisite(s)】 Basic knowledge about reactor physic

【 】

【Web Sites】

【Additional Information】 1) Registration to workers for radioactive material treatment is required before experiment.

2) English course for this experiment is opened.

【Course Description】 The theory of analytic functions of one complex variable

【Grading】 Evaluation depends mainly on marks of examination, but marks of exercises are taken into account when needed.

【Course Goals】 To understand properties of analytic functions with a skill for evaluation of integrals appearing in applied mathematics and physics

【Course Topics】

Theme	Class number of times	Description
The plane of one complex variable and elementary functions	2	After describing the point-set topology of the plane of one complex variable, elementary functions are introduced with their properties.
Complex integrals and Cauchy's theorem	3	Cauchy's theorem and Cauchy's integral formula are shown along with outstanding properties of analytic functions. An example is given of Cauchy's theorem.
Power series	3	Sequences, series, and series of functions are discussed with the notion of convergence and divergence.
Taylor's expansion and Laurent's expansion	3	The Taylor series of analytic functions and the Laurent series of analytic functions on an annulus are discussed together with some examples.
Singularity and residues	3	The calculus of residues is dealt with. Examples are given of integral evaluations.
Learning achievement test	1	Learning achievement test.

【Instructor】 Nakamura Yoshimasa, Tsujimoto Satoshi

【Course Description】 "Numerical Analysis" is prerequisite to this course. In this course matrix eigenvalue problem and singular value decomposition, iteration methods for nonlinear equations, interpolation methods by polynomials, and numerical integration methods are explained which are important especially in data science and information processing.

【Grading】 mainly evaluated by examination score, but reports of exercises will be taken into account in a case.

【Course Goals】 Understanding both the theory and practical methods for applications through general-purpose softwares and/or programs by each student is a goal of this course.

【Course Topics】

Theme	<small>Class number of times</small>	Description
matrix eigenvalue problem	6	computation of matrix eigenvalues and eigenvectors by the Jacobi method, Gershgorin theorem, the power method and the inverse iteration, the QR method and the divide & conquer method with the Householder transformations for preprocessing, Sturm theorem
matrix singular value decomposition	1	computation of matrix singular value decomposition
iterative methods for nonlinear equations	3	the principle of contractive mapping and the Newton method both of one and multi variables, and convergence acceleration algorithms
interpolation methods	2	the Lagrange interpolation formula and the Hermitian interpolation formula by polynomials, and the spline functions
numerical integration methods	2	Newton-Cotes numerical integration formula, and the Gauss type numerical integration formula
confirmation for student assessment	1	confirmation for each student assessment

【Textbook】 "Introduction of Numerical Analysis" (in Japanese) by T. Yamamoto, SAIENSU-SHA

【Textbook(supplemental)】

【Course Description】 The theory of Fourier analysis

【Grading】 Evaluation depends mainly on marks of examination, but marks of exercises are taken into account when needed.

【Course Goals】 To understand fundamental theory of Fourier and Laplace analysis with a skill for evaluation of specific examples and applications in applied mathematics and physics.

【Course Topics】

Theme	Class number of times	Description
Fourier series	3-4	Introduction of the Fourier series for periodic functions. Best approximation property and the convergence of this series are shown. Discrete Fourier transform is also discussed.
Applications of Fourier series	3-4	Application of Fourier series to differential equations
Fourier transform	2-3	Introduction of the Fourier transform for L^2 functions. Invertibility of this transform and the convolution theorem are shown.
Applications of Fourier transform related	2	Application of Fourier series to differential equations. The relationship with Fourier transform and Laplace transform.
Summary and assessment	1	Summary and supplement of this course. Measure the progress of students in acquiring knowledge and skills.

【Textbook】 S. Nakamura: Fourier analysis, Asakura shoten

【Textbook(supplemental)】 S. Oishi: Fourier analysis, Iwanami shoten

【Prerequisite(s)】 Calculus, Linear algebra

【Credits】2 【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese

【Instructor】Abe (20550), Fukuyama (20551),

【Course Description】Introduction to complex analysis and some applications

【Grading】Regular examination. Also, reports and so on could be considered (Abe), Regular examination and Reports (Fukuyama)

【Course Goals】Understanding the basics of complex analysis and obtaining ability to practice it

【Course Topics】

Theme	Class number of times	Description
Definition of complex and complex plane	1	
Differential of complex functions and Cauchy-Riemann relation	2	
Concept of regular functions	1	
Concept of conformal mapping	1	
Line integral of complex functions	1	
Cauchy's theorem and integral formula	2	
Taylor and Laurent series	1	
Singular points and residue theorem	2	
Application to definite integral	2	
Analytic continuation and expression of functions	1	
Confirmation of learning achievement	1

【Code】 20650 【Course Year】 3rd year 【Term】 【Class day & Period】 【Location】 【Credits】 2

【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 Japanese 【Instructor】 Kano, Otsuka,

【Course Description】 Fourier analysis and its application will be described. The major part consists of Fourier series, Fourier transform, and Laplace transform.

【Grading】 The regular examination, assignments, and attitude in the class will be taken into account.

【Course Goals】 The goal is to understand the basics and applications of Fourier analysis.

【Course Topics】

Theme	Class number of times	Description
Preliminaries	1	The goal and outline of this class are presented. Then, basic knowledge necessary to learn Fourier analysis is briefly reviewed.
Fourier series	2	Fourier series expansion of periodic functions is described.
Characteristics of Fourier series	2	Differential and integral of Fourier series, complex Fourier series, and the best approximation problem are described.
Fourier transform	2	In order to cope with aperiodic functions, Fourier transform is described. Characteristics and applications of Fourier transform is explained together with the Parseval's equation and its applications.
Linear systems	2	
Auto-/Cross-correlation function	1	
Partial differential equations	1-2	Applications to partial differential equations are described.
Laplace transform	1-2	Laplace transform and its characteristics are described along with an application of solving ordinary differential equations.
Discrete Fourier transform	1	
Evaluation of achievement	1	The achievements are evaluated.

【Lecture Form(s)】Lecture 【Language】Japanese 【Instructor】Akira Sakai,

【Course Description】Fourier analysis, Laplace transform and their applications.

【Grading】Each lecture accompanies a half-hour exercise with two problems. The grading is made based on the total score earned in these exercises plus the result of regular examination.

【Course Goals】The final goal of this course is to understand basics of Fourier series expansion, Fourier transform, and Laplace transform, and to learn to make full use of these mathematical tools in analyzing various physical phenomena and solving relevant differential equations. Particular emphasis is placed not on pursuing mathematical rigor but on developing skills to perceive different physical aspects of these tools and select the most appropriate one in practical problem solving.

【Course Topics】

Theme	Class number of times	Description
Fourier analysis, Laplace transform and their applications	15	Complex numbers and complex analysis (1-2 weeks)
		-complex numbers and complex functions
		-complex integrals, residue theorem, and their applications
		Delta function (1 week)
		Fourier series expansion (2-3 weeks)
		-periodic functions and their Fourier series expansion
		-complex Fourier series expansion
		-applications of Fourier series
		Fourier transform (2-3 weeks)
		-basics of Fourier transform
		-convolution and correlation function
		-applications of Fourier transform
		-linear response system
		Laplace transform and its applications (2 weeks)
		-basics of Laplace transform
-applications of Laplace transform to linear systems		
Linear differential equations (1 week)		
-solving linear differential equations using Fourier transform		
-solving linear differential equations using Laplace transform		
Thermal conduction/diffusion equation (2 weeks)		
-thermal conduction/diffusion equation in an infinite/semi-infinite interval		
-thermal conduction/diffusion equation in a finite interval		
-thermal conduction/diffusion equation with time-dependent boundary conditions		
Wave equation (1 week)		
-wave equation in an infinite/semi-infinite interval		
-wave equation in a finite interval		
-equation of forced oscillation		
Exercise		Each lecture accompanies a half-hour exercise with two problems. Sample answers and comments on the students' answers on each exercise will be shown in print and circulated in the next lecture.

【Textbook】Lecture notes are distributed at the class.

【Textbook(supplemental)】Shin-ichi Oh-ishi, "Fourier analysis" (in Japanese), Iwanami, 1989

【Prerequisite(s)】Prerequisite subjects: complex numbers and basic calculus.

Mechanics of Solids

固体力学

【Code】 50510 【Course Year】 3rd year 【Term】 【Class day & Period】 【Location】 【Credits】 2

【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 Japanese

【Instructor】 S. Biwa, Prof., Graduate School of Engineering

【Course Description】 While the methods of stress-strain analysis for elementary structural members are the main topics in "Mechanics of Materials" courses, more general physical laws of the mechanical behavior of solids are dealt with in this course. Namely, fundamental principles of solid mechanics such as three-dimensional expressions of stress and strain, equilibrium equations, Hooke's law and its thermodynamic background are treated together with mathematical analysis of static deformations in elastic bodies.

【Grading】 Grading is made based on examination, possibly with considerations of reports.

【Course Goals】 This course aims to establish understanding of three-dimensional and rigorous expressions of stress and strain and fundamentals of deformation analysis of solids and structures. It is also the aim of this course to re-examine the value of approximate theories given in "Mechanics of Materials" courses from a rigorous viewpoint.

【Course Topics】

Theme	Class number of times	Description
Vectors and tensors	1	Components of vectors and stresses; Basis vectors; Kronecker's delta; Alternating symbol; Summation convention
Stress	2	Notion of stress; Cauchy's relation; Transformation of stress components; Equilibrium equations; Symmetry of stress; Principal stresses and stress invariants
Strain	2	Mathematical expressions of deformation; Green-Lagrange strain; Infinitesimal strain; Transformation of strain components; Principal strains
Thermodynamics of elastic solids	1	Thermodynamics of elastic bodies; Hooke's law; Voigt expression of the stress-strain relation
Fundamental equations of elasticity	2	Navier's equations; Plane stress and plane strain; Compatibility relation for strain
Theoretical analysis of elastic deformations	3	Airy's stress function; Biharmonic equation; Stress function in polar coordinates; Two-dimensional elastostatic problems; Stress concentration around a circular hole
Energy principles	2	Principle of virtual work; Principle of complementary virtual work; Principle of minimum potential energy
Applications of elasticity	2	Anisotropic elastic property of composite materials; In-plane elastic property of laminated plates

【Textbook】 Textbooks are not assigned. The lecture is given in a "blackboard" style.

【Textbook(supplemental)】 T. Kunio, "Fundamentals of Solid Mechanics" (Baihu-kan) ;

S. Kobayashi and K. Kondo, "Elasticity" (Baihu-kan) ;

T. Inoue, "Fundamentals of elasticity" (Nikkan Kogyo)

(all in Japanese) .

For references written in English, students are advised to contact the instructor directly.

【Prerequisite(s)】 The enrolling students are expected to have knowledge in "Mechanics of Materials" courses. Good understanding of calculus, linear algebra and vector analysis is preferable.

材料電気化学

【Code】 51020 【Course Year】 3rd year 【Term】 【Class day & Period】 【Location】 【Credits】 2

【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 Japanese

【Instructor】 Kuniaki MURASE, Kazuhiro FUKAMI

【Course Description】 This course serves the fundamentals related to solution chemistry of electrolytes and electrode reactions, which become the basis of wet processing such as electrolytic refining, electrowinning, corrosion, anticorrosion, and functional electrodeposition.

【Grading】 (1) Class participation, (2) take-home assignments (approx. 30% in (1) and (2)), and (3) exams (approx. 70%). Students will sign a roll sheet every class. Supplementary examination to bail out low-performing students will not be given for any reason.

【Course Goals】 In this course students learn basic technical terms and basic concepts of physical chemistry, which are necessary to study materials science and engineering from the viewpoints of solution chemistry and electrochemistry, to take subsequent advanced courses on materials science and engineering.

【Course Topics】

Theme	Class number of times	Description
Solution chemistry of electrolytes	4	Acid-base and redox reactions; The difference between them.
Introduction of electrode potential	3	Electrode surface; Electrode potential; Nernst's equation.
Electrode reactions	3	Kinetics of electrode reactions; Fundamentals of Electrochemical apparatus, batteries and corrosion
Polarization curves	2	Current density vs. potential curves; Polarization curves; Overpotential; Polarizable and non-polarizable interfaces; Diffusion-limitations.
Transfer of ions	2	Ion transfer in aqueous electrolytes; Diffusion potential and liquid junction potential.
Self-assessment of achievement	1	Review of the course contents.

【Textbook】 A course booklet will be given out at the first lecture.

【Textbook(supplemental)】

【Prerequisite(s)】 Knowledge given in Thermodynamics of Materials 2 (by Prof. Uda) is preferable.

【Course Description】 Quantum spectrochemistry, which is a basis of spectrochemical analysis, will be lectured. Various kinds of spectrometries which are used in materials analysis will also be explained.

【Grading】 Checked only by exam.

【Course Goals】 The goal of the course is to obtain knowledges about quantum chemistry, interaction between photons and electrons, spin, principles of spectrometers, quantum mechanical calculations related to spectroscopy, and so forth, which are necessary for spectrochemical analysis.

【Course Topics】

Theme	Class number of times	Description
1. Quantization	1	Bragg diffraction equation deduced from Bohr-Sommerferd quantization. Compton scattering equation explained from both wave and particle views.
2. Principle of least action	2	Refraction of electron beam. Phase velocity and group velocity. Spin and helicity of photon. Polarization of light. Inertial mass and gravitational mass of photon and its relation to Maessbauer spectroscopy. Zeeman effect.
3. Matrix mechanics	1	Schroedinger equation. Matrix mechanics. Role of harmonic oscillator in atomic spectra.
4. Perturbation theory	2	Time independent perturbation theory applied to ionic crystal.
5. Optical transition	2	Blackbody radiation. Time dependent perturbation. Tsallis entropy. Electric dipole transition.
6. Harmonic oscillator	1	Harmonic oscillator. WKB approximation. Field quantization.
7. Electron spectroscopy	1	Photoelectron spectroscopy of transition metal compounds. Configuration interaction.
8. Symmetry	1	Symmetry of molecules. Group theory. Projection operator.
9. Interaction between electrons and photons	2	IR and Smekal-Raman spectroscopy.
10. Angular momentum and spin	1	Angular momentum and spin. Spin-orbital interaction.
11. Check of achievement	1

【Course Description】The simplified one-dimensional treatments lectured in Mechanics of Materials 1 are extended to include more complex two- or three-dimensional problems. Analytical methods for the deformation and the stresses in various structural members are lectured including the combined stress states.

【Grading】Grading is based on the mid-term and the final examinations, possibly with considerations of class-room tests or reports.

【Course Goals】The emphasis is to understand the fundamental concepts and methods for the stress/strain analysis of various structures or structural members, by advancing the basic principles given in Mechanics of Materials 1.

【Course Topics】

Theme	Class number of times	Description
Beam bending	2	Beam bending; Castigliano's theorem
Advanced problems of beams	3	Statically indeterminate beams; continuous beams; curved beams
Basics of elasticity	4	Combined stress states; Mohr's stress and strain circles; equilibrium equations; displacement-strain relations; stress-strain relations; plane stress or strain states; relation between elastic constants
Torsion	2	Torsion of circular bars; coil springs; Combination of bending and torsion
Axially symmetric problems	1	Buckling of column; instability; effect of support conditions; buckling design
Axially symmetric problems and bending of plates	2	Circular cylinders; spherical shells; rotating circular plates; Cylindrical bending, bending rigidity;
Assessment	1	Academic achievement assessment

【Textbook】Fundamentals of Strength of Materials (Zairyo-Rikigaku no Kiso) (T. Shibata et al.), Baifu-kan .

【Textbook(supplemental)】

【Course Description】 Control Engineering provides a methodology of controlling various systems including mechanical ones in a systematic way. Its major part consists of both Classical Control Theory and Modern Control Theory. This class describes the fundamentals of Classical Control Theory.

【Grading】 Scores of quizzes, reports and the regular examination are taken into account.

【Course Goals】 The course goal is to understand the basic concepts of Classical Control Theory such as transfer functions, frequency responses and stability.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	The basic idea of Control Engineering such as the purpose and methods of control is described through various real world examples.
Representation of dynamical systems	2-3	Mathematical description of systems is developed first. Then, the concept of Transfer functions is introduced based on Laplace Transform, and Block diagram representation is shown.
Responses of dynamical systems	3	Time responses of linear systems are shown. Stability of systems and Stability tests are described.
Properties of feedback systems	2-3	Basic properties such as steady state characteristics of feedback control systems and Root Locus are explained.
Frequency responses	3-4	The concept of Frequency responses, Bode diagrams, Vector locus are introduced. The stability test of feedback systems based on the frequency responses is explained.
Design of control systems	2	Basic components of classical controller design methods such as Phase lead, Phase Lag, and PID compensation are described.

【Textbook】 T. Sugie, M. Fujita: Introduction of Feedback Control. Corona Publishing Co. Ltd.

【Textbook(supplemental)】 none

【Prerequisite(s)】 Elementary knowledge of Laplace Transform is required.

【 】

【Web Sites】 none

【Additional Information】 Some parts of the above contents may be skipped/added depending on the course schedule of the year.

Control Engineering 1

制御工学 1

【Code】 50252 【Course Year】 3rd year 【Term】 【Class day & Period】 【Location】 【Credits】 2

【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 Japanese 【Instructor】 Kenji Fujimoto,

【Course Description】 Control engineering consists of theory and methodology to design control systems. It includes the classical control theory to design feedback control systems based on transfer functions and frequency response.

【Grading】 The evaluation is based on reports (40%) and exam (60%).

【Course Goals】 The goal of this course is to understand the classical control theory and the related methodologies to design feedback control systems based on transfer functions and frequency response.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	History and background of control engineering
Dynamical systems and transfer functions	4	Basic knowledge on dynamical systems, ordinary differential equations, transfer functions and block diagrams
Transit response and stability	3	Stability of dynamical systems, transit response, steady response and Routh-Hurwitz stability criteria
Frequency response	2	Basic knowledge on frequency response using Bode plots and vector locus
Characteristic of feedback control systems	3	Performance criteria of feedback control systems using Nyquist's stability criteria and the root locus method.
Design of feedback control system	2	How to design feedback control system using phase-lead compensation, phase-lead-lag compensation and PID control

【Textbook】 T. Sugie and M. Fujita: Introduction to feedback control (in Japanese), Corona Publisher,

【Course Description】 This course deals with how to construct and operate a manufacturing system of a mechanical product.

【Grading】 The regular examination, in-class examinations and reports are taken into account.

【Course Goals】 The goal is to understand the concept of a manufacturing system, and to become able to handle related basic decision-making problems.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	The overall concept of a manufacturing system is given.
Industrial Economics	2	After introducing the concept of the manufacturing cost and cash flow, how to make decisions using the concept (for example, the DCF method for investment decisions) is addressed.
Production & Operations Management	2	Demand forecasting, production planning, inventory management, MRP, JIT, etc. are covered.
	3	
Production Scheduling	2	Basic approaches for single machine scheduling, flow shop scheduling, job shop scheduling, and project scheduling are introduced.
Plant Layout & Line Blancing	2	Basic approaches for plant layout and line balancing are introduced.
Industrial Engineering	2	After introducing the principles of motion economy, the approaches for process analysis, human-machine analysis, Therblig analysis, standard time setting, etc. are addressed.
	1	
Plant Maintenance	1	The concept of the reliability and maintainability of a manufacturing facility and how to evaluate them are introduced. Typical maintenance policies, how to chose among them, TPM, etc. are also covered.

【Course Description】 The course introduces the fundamentals of the electric circuit. Topics covered include: resistive elements and networks; independent sources; switches and dynamics of first- and second-order networks; phasor analysis; 2-port circuits.

【Grading】 Reports and examinations

【Course Goals】 Students are expected to learn the transient analysis by differential equation and steady state analysis by phasor.

【Course Topics】

Theme	Class number of times	Description
DC circuit	3	We introduce Kirchhoff's current law and Kirchhoff's voltage law, Ohm's law and independent sources.
Differential equation of circuit	5	We introduce inductors and capacitors and explain the differential equation of circuit.
AC circuit	4	We introduce phasor and explain the steady state analysis.
two-port circuit	2	We extend one-port elements to two-port circuits.
academic achievement test	1	The level of understanding on this lecture will be confirmed.

Statistical Thermodynamics

統計熱力学

【Code】 50730 【Course Year】 4th year 【Term】 【Class day & Period】 【Location】 【Credits】 2

【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese 【Instructor】Mitsuhiro Matsumoto,

【Course Description】 Statistical mechanics provides a firm foundation for thermodynamics. I'll give a standard course of statistical mechanics through several basic examples in various fields of science and engineering, including quantum mechanics, solid state physics, heat transfer engineering, and information technology.

【Grading】 - Written examination

- Paper assignment

【Course Goals】 - Understanding the relation between macroscopic variables and microscopic states.

- Scientific view of various phenomena in science and engineering based on statistics.

【Course Topics】

Theme	Class number of times	Description
Concepts of statistical physics	3	- Thermodynamics vs. statistical mechanics - Review of basic statistics - Counting microscopic states
Ensembles and various types of free energy	4	- Microcanonical ensemble: Boltzmann's definition of entropy - Canonical ensemble: temperature, Boltzmann distribution, partition function, and free energy - Various statistical ensemble
Quantal vs. classical	4	- Introduction to many-body quantum mechanics - Fermi-Dirac distribution: free electron model - Bose-Einstein distribution: photons and phonons - Classical limit: ideal gas and real gas
Advanced topics	3	- Introduction to solid state physics: band theory and basic model of semiconductor devices - Introduction to information theory: Shannon's entropy, transinformation - Introduction to transport phenomena: kinetic theory of gases, mass and energy diffusion
Examination	1	

【Textbook】 Lecture notes will be provided.

【Textbook(supplemental)】

【Prerequisite(s)】

【】

【Web Sites】

【Additional Information】 Basic knowledge of thermodynamics, calculus, statistics, analytical mechanics, and quantum physics will be useful.

Statistical Thermodynamics

統計熱力学

【Code】50731 【Course Year】3rd year 【Term】 【Class day & Period】 【Location】 【Credits】2

【Restriction】No Restriction 【Lecture Form(s)】Lecture 【Language】Japanese 【Instructor】Masao Miyake, Horii,

【Course Description】In this lecture, fundamental ideas of Statistical Thermodynamics which is effective to microscopic understanding of macroscopic systems and some typical applications to condensed matter physics are presented.

【Grading】Situation of voluntary submission of some reports and score of exam are totally evaluated.

【Course Goals】The goals of this lecture are both to understand fundamental idea of Statistical Thermodynamics and to study typical applications to condensed matter physics.

【Course Topics】

Theme	Class number of times	Description
Outlines	1	Basic ideas of Statistical Thermodynamics, thermal equilibrium, fundamentals of Statistics, means of measurements, ergodic theory.
Thermodynamic functions	1	Thermodynamic laws, thermodynamic functions, Legendre transform, Maxwell relations, Gibbs-Helmholtz equation, thermodynamic variation, phase equilibrium.
Ideal systems	4	Phase space of movement, Liouville's theorem, micro canonical ensemble, Partition function, relation between Helmholtz free energy and Partition function, Principle of Boltzmann, simple applications of microcanonical ensemble (ideal gas, elastic of gum)
Canonical ensemble	2	Distribution with the maximum probability, Partition function, the 3rd law of thermodynamics, Gibbs's paradox, grand canonical ensemble.
Quantum statistics	2	Grand canonical ensemble of quantum statistics, Fermion and Boson, Bose-Einstein statistics, Fermi-Dirac statistics, ideal Fermi gas, electron specific heat, ideal Bose gas, Bose-Einstein condensation.
Typical applications	4	Systems with two levels, Schottky type specific heat, Statistics of photons, Planck's equation, one dimensional harmonic oscillation, Einstein model and specific heat of solid states.
Evaluation of goals	1	Understanding of typical applications of statistical thermodynamics and submission of homeworks.

【Textbook】The textbook is not appointed. Writing on the blackboard is performed in every lecture.

【Textbook(supplemental)】1 . 原島 鮮 : 「熱力学・統計力学」培風館 ,

【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 Japanese 【Instructor】 J. Kawai ,

【Course Description】 The fundamentals of transport phenomena for the engineers and/or researchers related to physical engineering are given.

【Grading】 Assignment and written examination

【Course Goals】 To be able to apply the fundamental equations of thermal and mass transport studied in the class to real phenomena.

【Course Topics】

Theme	Class number of times	Description
Momentum transport	2	Newton's law of viscosity, Equation of continuity
Non-steady mass transport	2	Systems with more than one variables, Energy equation
Heat conduction	2	Fourier's law, Steady heat conduction
Energy transport	3	Non-steady heat conduction, heat transfer, thermal radiation
Mass transport	2	Fick's law, mass transport in solid and in laminar flow
Complex transport phenomena	3	Non-isothermal mixing, mass transfer coefficient, heat and mass transport across an interface
Achievement check	1	Learning how to solve the problems through practical exercises.

【Course Description】 Fundamentals of thermodynamics are given.

【Grading】 Written examination

【Course Goals】 To understand the idea of the first and second laws of thermodynamics and to calculate the state quantities at the changes in state.

【Course Topics】

Theme	Class number of times	Description
Introduction to thermodynamics	1	History of thermodynamics, introduction of variables and units using in thermodynamics
The first law of thermodynamics	3	Definition of heat, Quasi-static process, specific heat, enthalpy, ideal gas are shown.
The second law of thermodynamics	2	Reversible and irreversible process, Ideal cycle, Carnot cycle by ideal gas, introduction of entropy
Thermal engine	3	Free expansion/compression of gas, Otto cycle, Brayton cycle, Carnot cycle are explained.
Free energy	3	Free energy, Maxwell equations, Joule-Thompson's experiment
Phase transformation	2	Phase, first order phase transformation, metastable equilibrium, critical point, second order phase transportation
Achievement check	1	Leaning how to solve equations In the practical exercises.

【Code】 51330 【Course Year】 2nd year 【Term】 【Class day & Period】 【Location】 【Credits】 2

【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 Japanese 【Instructor】 Kuniaki MURASE

【Course Description】 Based primarily on the solid-state chemistry, this course serves the outline of notation (descriptive method) and analytical techniques for solid substances, which become the basis of materials science and materials engineering.

【Grading】 (1) Class participation, (2) take-home assignments (approx. 50% in total), and (3) exams (approx. 50%). Students will sign a roll sheet every class. Ten written take-home assignments are due throughout the semester. Supplementary examination to bail out low-performing students will not be given for any reason.

【Course Goals】 Basic knowledges of physics, chemistry, mathematics, etc. are requires to learn materials science and materials engineering. In this course students learn basic technical terms and develop fundamental concepts of solid-state materials chemistry, to take subsequent advanced courses on materials science and materials engineering.

【Course Topics】

Theme	Class number of times	Description
Substances and materials	1	Three states of matter; Amorphous and glasses; Liquid crystal; Materials structures and properties in our surrounding living environment.
Fundamentals of crystal structures	3	Close packing and holes; Crystal structure of metals; Point symmetry and space symmetry; Lattice and unit structure; Crystal system and Bravais lattice; Depiction of lattice plane and lattice direction; Fractional coordinates.
Fundamentals of chemical bond theory	2	Electronic configuration and shielding; Size of atoms and ions; Covalency and ionicity; Definition of electronegativity.
Inorganic solid-state materials	3	Structure of important ionic crystals; Stoichiometry and lattice defects; Ionic conduction and solid electrolytes; Crystal field and optical properties of d-block elements.
Fundamentals of diffraction crystallography	5	Generation and properties of X-ray; Fundamentals of X-ray scattering and diffraction (Bragg condition, structure factor, extinction rule); Powder X-ray diffractometry; Laue method
Self-assessment of achievement	1	Review of the course contents

【Textbook】 No textbook is required for this course. A course booklet will be given out at the first lecture.

【Textbook(supplemental)】 B. D. Cullity and S.R. Stock, Elements of X-Ray Diffraction (3rd ed.), Prentice Hall, 2001 (ISBN 978-0201610918)

L. Smart and E. Moore, Solid State Chemistry: An Introduction (3rd ed.), Nelson Thornes, 2005 (ISBN 978-0748775163)

A. R. West, Basic Solid State Chemistry (2nd ed.), Wiley, 1999 (ISBN 978-0471987567)

【Prerequisite(s)】 Knowledge of physics and chemistry for the entrance examination of Kyoto University.

English for Engineering Science

物理工學英語

【Code】 51250 【Course Year】 【Term】 【Class day & Period】 【Location】 【Credits】 2 【Restriction】

【Lecture Form(s)】 【Language】 English 【Instructor】 J. Goodman,

【Course Description】 This class will expose you to a variety of scientific and engineering topics, in English, and motivate you to improve your ability to communicate effectively. We will focus on current as well as historical examples of engineered products and scientific discoveries, and examine the benefits and problems that technological advances create. You will explore subjects that are personally interesting to you and try to clarify your goals as future scientists and engineers. Classes consist of short presentations that each of you (or I) gives, followed by open discussion and debate in English. You can use multimedia (computer files, whiteboard, etc.) in your presentations if you want to. We will also examine how these mini-presentations were successful and how they might be improved. The most important step you can take now is to actively increase your English vocabulary. The more words you know and enjoy using, the better you can understand what you read and experience, and the better you can communicate. Get a good dictionary app for your smartphone and/or computer, one that has an “ export history ” function, and use it often.

【Grading】 This course is graded on a pass/fail basis. If you have more than three unexcused absences during the term, you will probably fail the course.

【Course Goals】

【Course Topics】

Theme	Class number of times	Description
Group seminar	15	Small groups are organized. Classes will be given by a native English speaker.

【Textbook】 The class instructor will arrange its contents.

【Textbook(supplemental)】

【Prerequisite(s)】

【 】

【Additional Information】 - Applicants should attend the guidance.

- The number of registrants for each class is limited (10-15).
- Cancellation is not allowed after classes start.

English for Engineering Science

物理工學英語

【Code】 51251 【Course Year】 4th year 【Term】 【Class day & Period】 【Location】 【Credits】 2

【Restriction】 No Restriction 【Lecture Form(s)】 【Language】 English 【Instructor】 James L. de Witt,

【Course Description】 This course will provide opportunity for practice in oral communication in a variety of fields with emphasis on engineering and sciences. The instructor will provide guidance on supplementary materials for each topic. Students will be expected to prepare materials for discussion related to the topic each week.

【Grading】 Attendance, preparedness, and daily participation will be considered in grade determination. A daily in-class grade based on 0, 1, 2, or 3 points will be given as follows:

0-absent

1-not participating and/or not prepared

2-normal, expected level of participation and preparedness

3-extra participation and preparedness

One in-class grade point will be subtracted for tardiness, speaking too much Japanese in class, breaking basic rules, etc. for each day with incidence.

Demerits: Each 30 minutes of absenteeism will count as 1 demerit. A total of 15 demerits (absent from > 30% of in-class time) will be cause for failure.

【Course Goals】 Emphasis will be on developing skills for oral communication with other scientists and engineers, as well as with laymen. Topics will be discussed at both levels, to develop dual awareness of the importance of speaking in accurate technical terms with logical organization for peers, and in simple but clear terms for laymen.

【Course Topics】

Theme	Class number of times	Description
English for Engineering Science	15	The instructor will provide guidance on supplementary materials for each topic. Students will be expected to prepare materials for discussion related to the topic each week. Students will be encouraged to actively participate in discussions of weekly topics, primarily in small groups or pairs, but also singly to the class, and in light debate. Ample opportunity for practice in description, argumentation, asking questions, and other aspects of discussion will be provided. Students will develop vocabulary naturally through preparation and discussion, with guidance from the instructor.

【Textbook】 You can download a weekly plan of "English for Engineering Science" at <http://www.ms.t.kyoto-u.ac.jp/ja/oncampus/kyomu>.

Introduction to Solid State Physics

量子物性基礎論

【Code】 51480 【Course Year】 3rd year 【Term】 【Class day & Period】 【Location】 【Credits】 2

【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 Japanese 【Instructor】 Matsuo and Seki,

【Course Description】 Gain working understanding of periodicity in solids and how this periodicity and bonding governs solid properties, such as electrically magnetically and mechanically. To describe how quantum mechanics defines solid state properties on a microscopic and macroscopic scale.

【Grading】 Coursework will be evaluated with attendance and report on subjects.

【Course Goals】 To further develop the understanding of interactions between solid state and phonons, electrons and particles on a microscopic scale.

【Course Topics】

Theme	Class number of times	Description
Introduction	1	Revision of crystal type and structure
Free electron model	3	Wave function theory of one dimensional lattice, energy state and Fermi surface
Band structure	3	Bloch ' s theory, Brillouin zone, Laue law, diffraction and structural factor
Defects and dislocations	2	Vacancy, diffusion, color center
Optical property	2	Kramers-Kronig relation, Drude theory, electron gas, Plasmon
Semiconductor	1	Band gap, electrons and holes, Homogeneous semiconductor, doping
Junction theory	1	p-n junctions, metal-semiconductor junction, hetero-junction
Final examination and report	2	Evaluation will be given by the contents of the reports and quizzes of the subjects leaned in this course.

Electronic Structures of Inorganic Materials 1

量子無機材料学 1

【Code】 51650 【Course Year】 3rd year 【Term】 【Class day & Period】 【Location】 【Credits】 2

【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 Japanese 【Instructor】 Isao TANAKA,

【Course Description】 Electron theory is essential for fundamental understanding of the relationship among properties, crystal structure and chemical composition in wide variety of inorganic crystals. This course provides an introduction to the basic electron theory to be used to describe the electronic structures of inorganic materials in general.

【Grading】 Final exam.

Some quiz-sheets are distributed at the lecture whose answers should be submitted on site. Their scores may count as a portion of the cumulative grade.

【Course Goals】 This course provides an introduction to the basic electron theory to be used to describe the electronic structures of inorganic materials in general.

【Course Topics】

Theme	Class number of times	Description
Introduction to quantum theory	3	Description of electrons, Schroedinger equation
Electronic structures of isolated atoms	3	hydrogen-like atoms, quantum numbers, many-electron atoms, self-consistent method, electron spin
Electronic structure of simple molecules	3	molecular orbital method, homo/hetero nuclear diatomic molecules, chemical bondings
Electronic structures of crystals	4	electronic structure of monoatomic crystals and binary compounds, 1D chain of hydrogen atoms, Bloch theorem, band calculations
Application to materials science	1	Density functional theory calculations and their application to materials science
Assessment of mastery of the course content	1	Assessment of mastery of the course content

【Textbook】 A textbook is delivered at the lecture room

Electronic Structures of Inorganic Materials 2

量子無機材料学 2

【Code】 51660 【Course Year】 3rd year 【Term】 【Class day & Period】 【Location】 【Credits】 2

【Restriction】 No Restriction 【Lecture Form(s)】 Lecture 【Language】 Japanese 【Instructor】 Atsuto Seko

【Course Description】 It is important to understand the electronic structure of materials because of its determinantal impacts on material functions. This lecture gives the fundamentals of electronic structure calculations based on quantum chemistry and band theory. The relationship between the electronic structure of inorganic materials and their functions is also discussed.

【Grading】 Evaluations are made based on the examination. The results of quizzes and reports may be considered.

【Course Goals】 Learning the fundamentals of quantum chemistry and band theory, and their applications to the issues in materials science.

【Course Topics】

Theme	Class number of times	Description
Electronic structure theory for materials science	1	The roles of electronic structure theory in materials research and development.
Fundamentals of electronic structure theory	3	The characteristics and physical meanings of wavefunctions, total energy, and one-electron energy.
Theory, approximations, and methods in quantum chemistry (1)	4	Hartree and Hartree-Fock approximations in quantum chemistry.
Theory, approximations, and methods in quantum chemistry (2)	2	Density functional theory and perturbation theory.
Electronic structure of atoms	1	The wavefunctions and eigenvalues of atoms, Pauli principle, and Hund's rule.
Electronic structure and chemical bonding of molecules	1	The electronic structure and chemical bonding of molecules.
Electronic structure and chemical bonding of solids	1	The electronic structure and chemical bonding of solids.
Electronic states of lattice defects	1	The electronic states of point defects, surfaces, and interfaces, and their related material functions.
Assessment of mastery of the course content	1	The mastery of the course content is assessed.

Engineering and Ecology(in English)

工学とエコロジー（英語）

【Code】22110 【Course Year】 【Term】 【Class day & Period】 【Location】 【Credits】2 【Restriction】 【Lecture Form(s)】

【Language】English 【Instructor】,

【Course Description】 The purpose of this course is to teach global ecological and environmental topics from an engineer viewpoint. The course especially contains such global ecological and environmental topics where engineering can provide solutions for sustainability. The course is consisted of lectures and additional exercises, of which the student should complete five (5) written short reports and five (5) 60 minutes laboratory session attendances. The laboratory sessions are held weekly after the lecture, and consist of interactive group work tasks.

【Grading】 Test, reports, laboratory performance.

【Course Goals】 This course will provide tasks for engineering students to become aware of the relationships between engineering and various aspects of environmental issues. Students will also learn how to apply engineering skills to various environmental and ecological issues. The course prepares the students to be able to write engineering related ecological and environmental topics in English as well as verbally express themselves of these subjects.

【Course Topics】

Theme	Class number of times	Description
Student orientation, and Basic issues and critical thinking about the environment	1	
Environment and human population, ecosystems and communities	2	
Succession and restoration	3	
Biogeography	4	
Productivity and energy flow	5	
World food supply	6	
Effects of agriculture	7	
Basics of energy, fossil fuels	8	
Alternative - and nuclear energies and environment	9	
Water supply and use	10	
Water management, pollution and treatment	11	
Air pollution, Environmental economics	12	
Waste management, environmental planning	13	
Final test	14	

【Textbook】

【Textbook(supplemental)】None

【Prerequisite(s)】Note:

- Interactive lessons (discussion), Small group working method
- This course is held in English.

Engineering and Economy(in English)

工学と経済（英語）

【Code】 22210 【Course Year】 【Term】 【Class day & Period】 【Location】 【Credits】 2 【Restriction】 【Lecture Form(s)】

【Language】 English 【Instructor】 ,

【Course Description】 The purpose of this course is to teach economy from an engineer viewpoint. The course especially contains such economic topics which engineer can use to solve practical engineering economy problems. The course is consisted of lectures and additional exercises, of which the student should complete five (5) written short reports and five (5) 60 minutes laboratory session attendances. The laboratory sessions are held weekly after the lecture, and consist of interactive group work tasks. Laboratory sessions are held weekly from 18 to 19 o'clock.// The course is aimed for both Japanese and Foreign nationals.// The course starts on October 6th.

【Grading】 Test, reports, laboratory performance.

【Course Goals】 This course will provide tasks for engineering students to be able to understand relationships between engineering and engineering economy. Students will learn solving economic problems related to engineering project at various levels. The course also prepares the students to write engineering related economic topics in English as well as verbally express themselves of these subjects.

【Course Topics】

Theme	Class number of times	Description
Student orientation, Introduction to engineering economy	1	Course introduction; Principles of engineering economy
Cost concept	1	Cost terminology; Competition; Total revenue function; Breakeven point
Design economics	1	Cost-driven design; Making vs. purchasing; Trade-offs
Cost estimation techniques I	1	Integrated approach and WBS; Index, unit, and factor techniques
Cost estimation techniques II	1	Parametric estimating; Power-sizing technique; Learning curve; Cost estimation, bottom-up, top-down, target costing
The time value of money I	1	Simple interest; Compound interest; Equivalence concept; Cash-flow diagrams
The time value of money II	1	Present and future equivalent values of single cash flows
The time value of money III	1	Uniform series cash flows; Deferred annuities; Uniform gradient cash flows; Nominal and effective interest rates
Evaluation of a single project I	1	Determining minimum attractive rate of return (MARR); The present worth method; Bond value; Capitalized-worth method
Evaluation of a single project II	1	The future worth method; The annual worth method; The internal rate of return method; The external rate of return method
Comparison and selection among alternatives I	1	Basic concepts; The study (analysis) period; Useful lives are equal to the study period
Comparison and selection among alternatives II	1	Useful lives are unequal to the study period; Repeatability; Cotermination; The imputed market value technique
Income taxes and depreciation	1	Concepts and terminology; Depreciation; Straight-line method; Declining-balance method; Income taxes; Marginal tax; Gain or loss on the disposal of an asset; After-tax economic analysis
Final test	1	The test is based on the above topics

【Textbook】 Sullivan, Wicks, Koelling; Engineering Economy, 15th Ed. 2012, Chapters 1-7.

【Textbook(supplemental)】

【Prerequisite(s)】 Note:

- Interactive lessons (discussion), Small group working method
- This course is held in English.

International Internship of Faculty of Engineering 2

工学部国際インターンシップ 2

【Code】 25020 【Course Year】 【Term】 【Class day & Period】 【Location】 【Credits】 2 【Restriction】

【Lecture Form(s)】 Exercise 【Language】 English, et al.

【Instructor】 Faculty of Engineering, Profesor, Hitoshi Mikada, and the related faculty members

【Course Description】 Acquisition of international skills with with the training of foreign language through the participation to the international internship programs held by the Faculty of Engineering or its subsidiary bodies.

【Grading】 Marit rating is done based on the presentation or reports after each internship program. Each D epartment responsible to identify if the credit earned by this subject to be included as mandatory ones or not. If the credit is not included in the department in which the participant belongs to, the credit is granted by the Global Leadership Education Center as a optional credit. The number of credits, either 1 or 2, will be determined depending on the contents and the duration of the program that the participant has participated in.

【Course Goals】 The acquisition of international and foreign language skills through the participation to international programs is expected. Detailed objectives of the participation should be identified by each program.
