

### [Course objectives]

To understand properties of complex functions with a skill for evaluation of integrals appearing in applied nathematics and physics.

### [Course schedule and contents]

- Complex function
- Holomorphic functions
- Elementary functions
- Integrals in the complex plane
- . Cauchy's integral theorem . Power series
- Taylor series
- Isolated singularities
- Laurent series
- Multivalued functions
- 11. Analytic continuation
- Residue
- 13. Integrals including trigonometric functions
- 14. Application to improper integral
  15. Point at infinity and Riemann sphere

### [Course requirements]

Calculus, Linear algebra

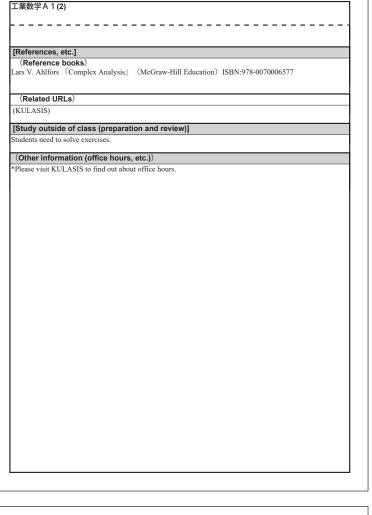

### [Evaluation methods and policy]

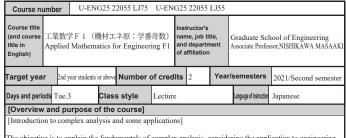

Evaluation depends mainly on marks of examination, but marks of exercises are taken into account when eeded.

### [Textbooks]

Not used

Continue to 工業数学 A 1 (2) ↓ ↓↓

The objective is to explain the fundamentals of complex analysis, considering the application to engineering and science. The differential and integral calculus of complex functions, the relevant basic ideas, and the applications are introduced.

## [Course objectives]

Inderstanding the basics of complex analysis and obtaining ability to practice it

### [Course schedule and contents]

- . Definition of complex and complex plane
  -3. Differential of complex functions and Cauchy-Riemann relation
- 4-5. Concept and examples of regular functions 6. Line integral of complex functions
- -8. Cauchy's theorem and integral formula
- 9-10. Taylor and Laurent series 11-12. Singular points and residue theorem 13. Application to definite integral
- 14. Concept of conformal mapping, other topics 15. Feedback
- Confirmation of learning achievement: Regular examination

### [Course requirements]

undamentals of differential and integral calculus

### [Evaluation methods and policy]

[Evaluation method]

Evaluation will be mainly based on regular examination.

In some cases, evaluation for homework (short reports: about four times) will be also considered. (In these cases, the ratio of the evaluations for regular examination and homework is about 9:1.)

[Evaluation standard]

Evaluation will be based on class registration guideline

[Overview and									

Fourier analysis and its application will be described. The major part consists of Fourier series, Fourier transform, and Laplace transform.

### [Course objectives]

The goal is to understand the basics and applications of Fourier analysis

# [Course schedule and contents]

Preliminaries, 1 time, The goal and outline of this class are presented. Then, basic knowledge necessary to learn ourier analysis is briefly reviewed.

Fourier series, 1 time, Fourier series expansion of periodic functions is described.

Complex Fourier series, 1 time, Complex Fourier series, its differential and integral, and spectrum are

Characteristics of Fourier series, Itime, Characteristics of Fourier series are described. Fourier transform,1time,In order to cope with aperiodic functions, Fourier transform is described.

Characteristics and applications of Fourier transform is explained together with the Parseval#039s equation and its applications. Linear systems, ltime, Linear systems is described. Solutions of linear differential equations are given by

using Fourier series expansion. In addition, impulse responses and transfer functions of linear systems are explained.

mary of the first half,1time,A summary of Fourier series and Fourier transform is provided, and an examination will be given.

Parseval#039s equality and its applications,1time,Parseval#039s equality, the WienermdashKhinchin theorem, and the relationship between impulse responses and cross-correlation functions in linear systems are described.

Introduction to partial differential equations, Itime, Basic notions of partial differential equations are described

Solutions of the wave equation and their physical interpretations, I time, The wave equation, one of important partial differential equations, is solved and physical interpretations of its solutions are discussed. Fourier series for solving the wave equation, Itime, Another expressions of solutions to the wave equation are

derived in the form of Fourier series expansions.

Introduction to Laplace transform ,1time,Laplace transform and its characteristics are described aiming at solving ordinary differential equations

Laplace transform for solving ordinary differential equations,1time,Ordinary differential equations are solved by applying Laplace transform and its inverse transform.

Discrete Fourier transform and fast Fourier transform,1time,Discrete Fourier transform for analyzing

工業数学F2(機:学番奇数)(2)
Evaluation of achievement, I time, The achievements are evaluated.
[Course requirements]
None
[Evaluation methods and policy]
The regular examination, assignments, and attitude in the class will be taken into account.

[Course o	bjec	tives]									

The final goal of this course is to understand basics of Fourier series expansion, Fourier transform, Laplace transform and Linear Algebra, and to learn to make full use of these mathematical tools in analyzing various physical phenomena and solving relevant differential equations. Particular emphasis is placed not on pursuing nathematical rigor but on developing skills to perceive different physical aspects of these tools and select the nost appropriate one in practical problem solving.

### [Course schedule and contents]

Fourier analysis, Laplace transform, Linear Algebra and their applications, 15times, Complex numbers and complex analysis (1-2 weeks) -complex numbers and complex functions -complex integrals, residue theorem, and their applicationsDelta function (1 week) Fourier series expansion (2-3 weeks) -periodic functions and their Fourier series expansion -complex anapplications of Fourier series expansion -applications of Fourier series expansion -applications of Fourier series ourier transform (2-3 weeks) -basics of Fourier transform -convolution and correlation function -applications of Fourier transform -linear response systemLaplace transform and its applications (2 weeks) -basics of Laplace transform -applications of Laplace transform to linear systemsLinear Algebra (3-4 weeks) - Vector space - Map and matrixApplications of Fourier transform and Laplace transform (1-2 weeks)

# [Course requirements]

rerequisite subjects: complex numbers and basic calculus

# [Evaluation methods and policy]

The grading is made based on the regular examination.

Fourier analysis originated in Fourier#039s work on thermal conduction and now becomes very important not only in mathematics but also in engineering, including applications in measurement technology. This couprovides its theories and applications along with Laplace analysis closely related to it.

### [Course objectives]

To understand the fundamental theories of Fourier and Laplace analysis and develop an ability to apply them o concrete problems

### [Course schedule and contents]

Fourier series,2-3times,The definition of Fourier series expansions are given and their fundamental properties Fourier series, 2-3 times, The definition of Fourier series expansions are given and uneir innoamental properties such as computation of Fourier coefficients and convergence of Fourier series are discussed. Properties and applications of Fourier series, 3-4 times, Several properties of Fourier series and their applications to differential and difference equations and signal processing are discussed. One-dimensional Fourier transform, 3-4 times, The definition of one-dimensional Fourier transforms is given,

and their fundamental properties such as the inversion formula and applications to partial differential equations are discussed.

equations are unsessed.

Multi-dimensional Fourier transform,2-3times, The definition of multi-dimensional Fourier transforms is given, and their fundamental properties and applications to partial differential equations are discussed.

Laplace transforms,2-3times,Properties of Laplace transforms and their applications to differential equations are discussed.

mary and learning achievement evaluation, 1 time, A summary and supplements of this course are given and the learning achievement of students is evaluated.

### [Course requirements]

Calculus, Linear Algebra and Differential Equations

### [Evaluation methods and policy]

Evaluation depends mainly on marks of examination, but marks of exercises and homework are taken into account when needed.

[Course so	chedule and c	ontents]						

Lectures on the concept of writing academic papers with ethics.

### 工学倫理(2)

This lecture focus on various ideas in ethics (utilitarianism, deontology, virtue ethics, professional ethics etc.) which will be useful for thinking about particular ethical problems in engineering ethics. This Lecture will be onducted online by using zoom

"Engineering Ethics as a Professional Ethics:

This lecture discusses basic ideas of engineering ethics in comparison with other fields of applied ethics. In particular, it discusses the characteristics of engineering ethics as professional ethics and what engineers as professionals are required to do.

"Ethics for Engineers

Engineers have to go through some ethical issues about research, development, design, manufacturing, and aintenance. In particular, the ethical decisions of engineers need to be considered for society and

(5/20) Press Release is an essential process for introducing the research to our society through various medias In this lecture, issues related to Press Release will be addressed and discussed with several examples including SNS release. Lecture will be conducted by Zoom.

(5/27) "Ethics in Water Supply."

It is a basic right in a society that a person can receive and use safe water in sufficient quantity. In addition, a erson of water supply utility is recognized to be an essential worker. Taking drinking water supply as a topic ethics required for a water supplier and an engineer is discussed. It is given by Zoom. (6/3) "Forensic Analysis"

Forensic repots are sometimes requested by the court in order to clarify the charge of incidents. The nylon rope incident, the Wakayama curry poisoning incident, and the pig iron incident are explained as examples. How to write the forensic report is explained in order to avoid the ethical problems. (Zoom&Youtube) (6/10) "Patents and Ethics (Part 1)"

This course will teach the students about 1) patent systems which protect inventions and research results and 2) ethical issues in patents. The first class, in preparation for the next subject of patent ethics, introduces apan's patent system with comparisons to the patent systems in the world's major countries and international

(6/17) "Patents and Ethics (Part 2)"

Students, equipped with the basic knowledge of patent systems by the previous lecture, will get familier with actual case studies on ethical and legal issues in patents.

(6/24) "Urban Planning and Ethics"

The lecture focuses on the norms regulating the actions of the engineers involved in planning and designing urban areas, as well as on the normative consciousness required to facilitate such planning and design, lemonstrating some examples on urban transport planning. This will be given via Zoom.

7/1) "General research ethics of synthetic chemistry"

Lectures on the concept of writing academic papers and patents of synthetic chemisty with ethics.

(7/8) Architecture has developed by imitating beautiful buildings, but in recent years there has been an increase in the number of cases where copyright disputes have arisen. In addition, the appearance of architecture often causes landscape controversy because of its influence on the surrounding environment. Issues concerning the ethics and sociality of architecture are discussed while introducing overseas lawsuits and design processes.

(7/15) The materials engineer may stand on the side using materials as well as a side supplying materials. ome examples are introduced and, by this lecture, are argued about an ethic found from each situation by laterials engineer. Note that this lecture is going to be carried out in ZOOM, but may be changed to the on demand on account of the speaker.

uclination account of the speakers. (7/29) "Engineer ethics in mechanical design" Engineer ethics is not a passive and passive thinking that issues the action of simply following existing norms, but a more active and creative thinking to decide and design one's own actions. It requires the logical thinking and ethical thinking necessary for engineers. This is explained with past cases in mechanical design

Engineering is to inquire after truth, to develop useful technologies, and to establish ways how to give back development results of technology to the society.

First, we offer special lectures regarding the basic knowledge that students in faculty of engineering are

Then, we offer a series of intensive lectures about how engineering can suggest solutions of current and times, we once a sense or measure rectures about now engineering can suggest solutions of current and future problems of our society, the value of technology, and the responsibilities that researchers and engineer are expected to fulfill.

### [Course objectives]

tudents learn basic matters such as attitudes and responsibilities they are expected to take as a member of social community. They find value in studying engineering and become to consider what they do in future by understanding technology can suggest solutions of problems our society is facing, especially problems about safety and security.

### [Course schedule and contents]

Special lectures, 1 time, About basic knowledge and attitude as students who start to learn engineering, and the role of engineering in society.

Intensive lectures,6times, A series of lectures offered by special lecturers playing on global stages of science and technology. Lectures are for understanding the role that technology is playing in modern society, for reconfirming importance to study engineering and to work as a researcher and engineer in society, and are to be opportunities to consider own future path. Essays are assigned in every lecture to summarize the lecture ontent and opinions of other students. content and opinions of other students.

Schedule of the lectures are announced later.

Acquisition of international skills with the training of foreign language through the internship programs hosted by the University, the Faculty of Engineering, or the undergraduate school the applicant belongs to.

### [Course objectives]

The acquisition of international skills with the training of foreign language through the to internship program hosted by the University is the major expectation to the students.

### [Course schedule and contents]

Overseas Internship, 1 time, The contents to be acquired should be described in the brochure of each internship

Final Presentation, 1 time, A presentation by the student is required followed by discussion among participants

### [Course requirements]

Described in the application booklet for each internship program. The registrant is requested to have enough language skills for the participation.

### [Evaluation methods and policy]

Marit rating is done based on the presentation or reports after each internship program. Each Department responsible to identify if the credit earned by this subject to be included as mandatory ones or not. If the credit is not included in the undergraduate school in which the participant belongs to, the credit is granted by the Global Leadership Education Center as a optional credit. The number of credits, either 1 or 2, will be determined depending on the contents and the duration of the program that the participant has participated in.

[Overview and purpose of the course]

The purpose of this course is to study about how worldwide leading company, institute, etc. make proposals and find solutions for expanding their own technologies to the international market. Throughout hands-on training on their laboratory, students investigate the methodology of team organization, proposal, market prediction and conception ability by group works. After the investigation, students are expected to improve their comprehension and explanation capability. As extended exersice subject of this course, the Global Leadership Seminar II is opened in the second semester.

### [Course objectives]

The goal of this course is to improve student's comprehension and explanation capability for processes of roposal and expansion on the international market invesitigating worldwide leading companies by group

### [Course schedule and contents]

This course is a small-group workshop program where students are supposed to extract or set up challenges by themselves aiming at creating new social values. In concrete, abilities of planning and problem-solving at trained through group works in residential training and skills of presentation and communication are enhanced through oral presentations regarding contents of the proposal at each step of the process from a preliminary draft to its completion.

### [Course objectives]

Ability of planning, from extraction or setting up challenges to proposal of solutions aiming at creating new social values, is trained through group works.

### [Course schedule and contents]

Depending on the situation of COVID-19 pandemic, all lectures will be given online and residential aining will be canceled.

Orientation, Itime, A brief overview and a schedule of the course are explained and working groups are organized.

Lectures,2times,Lectures by experts are given.

Group works,3times,Setting up challenges, extraction of problems, collecting information, and group works

Residential training,7times,Through intensive group works based on discussion, a proposal for solving

problems is planned, a draft report is made, and a few presentations are made.

Preliminary review meeting, ltime, A preliminary review meeting is held and discussions are made.

Report meeting, ltime, Final presentations are made and reports are submitted.

### [Course requirements]

Course number U-ENG25 25003 LJ75 U-ENG25 25003 LJ54 U-ENG25 25003 LJ71

This course deals with computer-based numerical calculation methods. The goal is to learn a programming language in order to develop the ability to use a series of processing methods (such as planning processing nethod), create programs, and analyze results.

### [Course objectives]

Course objective: By the end of the course, students will be able to use a series of processing methods such as planning processing method, create programs, and analyze results.

### [Course schedule and contents]

Orientation and terminal operation, 2 classes

(2) Learn the mechanism of numerical calculation, 2 classes

Understanding the principle of numerical calculation, representation of numbers, errors accompanying calculation.

(3) Basic programming, 3 classes

Acquisition of essential items for programming such as input / output, branch, repeat, variable, array, subprogram and function three times. Task: sum-difference product quotient, sum of sequence, prime number (4) Applicative programming, 4 classes

Roots of the equation (dichotomy, Newton's method), numerical integration (Simpson method), simultaneous linear equation (Gauss elimination method), eigenvalue (Jacobi method), differential equation (Runge-Kutta method) Acquire the basic idea of calculation method and do actual programming.

(5) Constructive programming, 3 classes
Acquire about several development problems and solutions, and work on issues.

(6) Confirmation of learning attainment, 1 class
Post explanation discussion and review of examination questions to KULASIS.

# [Course requirements]

Recommend taking basic information processing and basic information processing exercises.

### [Evaluation methods and policy]

Grading method]

Grade is based on reports (30%) and one written examination (70%).

[Grading criterion]

Must score 60 or above out of 100 on the reports and written examination

60 or above: pass

# [Course schedule and contents]

1-2. Beam bending (Beam bending, Castigliano's theorem) 3-5. Advanced problems of beams

(Statically indeterminate beams, Continuous beams, Curved beams)

(Other information (office hours, etc.)) Please visit KULASIS to find out about office hours.

6-9. Basics of elasticity
(Combined stress states, Mohr's stress and strain circles, Equilibrium equations, Displacement-strain relations, Stress-strain relations, Plane stress or strain states, Relation between elastic constants)

(Torsion of circular bars, Coil springs, Combination of bending and torsion)

12. Buckling
(Buckling of column, Instability, Effect of support conditions, Buckling design)

13-14. Axially symmetric problems and bending of plates

(Circular cylinders, Spherical shells, Rotating circular plates, Cylindrical bending, Bending rigidity)
15. Feedback

Academic achievement assessment: Regular examination

\* The order and the hours (weights) for each item are possibly subject to change.

### [Course requirements]

Mechanics of Materials 1, and other subjects such as calculus, linear algebra, mechanics of particles and rigid odies.

### [Evaluation methods and policy]

[Evaluation method]

Evaluation is based on the mid-term (depending on the situation of the year) and the final examinations, valuation is based on the inter-configuration (25,104E) (2)↓↓↓

Continue to 材料力学 2(機:7,8,9,104E) (2)↓↓↓

### 材料力学 2 (機:7,8,9,10組)(2)

possibly with considerations of short reports (about three times).
(In the cases where the evaluation for short reports are considered, the ratio of the evaluations for regular examination and short reports is about 9:1.)
[Evaluation standard1]

[Evaluation standard]
Evaluation is based on class registration guideline.

### [Textbooks]

T. Shibata et al. Fundamentals of Strength of Materials (Zairyo-Rikigaku no Kiso) 』 (Baifu-kan) ISBN: 4563034657

### [References, etc.]

(Reference books)
To be referred to during the course

### [Study outside of class (preparation and review)]

It is highly recommended to make the preparation and review with the specified textbook. Homework (short reports: about three times) will be assigned.

### (Other information (office hours, etc.))

\*Please visit KULASIS to find out about office hours.

[Overview	and	d purpose o	f the	course]						

In this course, we discuss properties that are important in selecting and using materials, as well as the basic cepts necessary for understanding these properties, focusing on metal.

### [Course objectives]

Course objective: By the end of the course, students will have the basic knowledge they need to pursue further studies in materials science and they will be able to investigate appropriate materials in experimentation and design.

### [Course schedule and contents]

- (1) Structure of matter, 4 classes: Explain the size of the atoms, which are the basis of matter, and their electron configuration, types of bonds between atoms, the positions of electrons in solid matter, density and thermal expansion, and so on.

  (2) Production of materials, 3 classes: Explain redox and the coagulation of melts, phase equilibrium of
- laterials comprised of two or more chemical elements, and other information concerning the composition of
- (3) Mechanical properties, 2 classes: Explain properties related to the structural materials used to support
- loads such as elastic deformation and plastic deformation, yield strength, creep, and so on.

  (4) Change in properties, 2 classes: Explain factors behind the change in the mechanical properties of naterials such as addition of chemical elements, annealing, normalizing, quenching, and so on, as well as the reasons for these factors.

  (5) Functions of materials, 2 classes: Explain the main functional properties of materials such as conduction
- of heat and electricity, specific heat, penetration of light, magnetism, and so on.

  (6) Resources and recycling, 1 class: Discuss information concerning sustainable development such as abundance and reserves of chemical elements, recycling of materials, and so on.
- (7) Confirmation of learning attainment, 1 class: Post explanation discussion and review of examination uestions on KULASIS.

### [Course requirements]

### [Evaluation methods and policy]

[Grading method] Grade is based on one written examination.

[Evaluation standard]

Must score at least 60 out of 100 on the written examination

### 59 or below: fail [Textbooks]

60 or above: pass

材料基礎学1 (エネ原) (2)

Others. In addition, printouts will be distributed in class.

### [References, etc.]

[Overview	and	d purpose o	f the	course]							
C. 1 .	e .			C 1 ' 1	-1		.1 . 1	4	11	C . 1 .	

Students are first given an overview of physical phenomena that lead to the discovery of quantum mechanics. Following this, an introduction to quantum mechanics is given using concrete examples to provide a clear outline of various phenomena in the microscopic world, such as atoms and molecules, and the laws that are derived from them.

### [Course objectives]

Targets include understanding phenomena that cannot be described in classical physics, understanding arious laws in the microscop ic world that relate to atoms and molecules, and acquiring basic knowledge for uantum mechanics.

### [Course schedule and contents]

atomic theories, 1 session: atomic theory of natural philosophy, atomic theory of chemistry, atoms and nuclei structure of nuclei and elementary particles, current image of elementary particles

Kinetic theory of gases, 2 sessions: atomic theory of chemical reactions, basic assumptions of the kinetic eory of gases, pressure and temperature of gases, specific heat of matter, law of the distribution of energy, and velocity of molecules

Heat radiation and energy quantum, 2 sessions: properties of heat radiation, Stefan-Boltzmann law, Wien's displacement law, classical radiation formulas (Rayleigh-Jeans, Wien), Planck's radiation formula and energy guantum

quantum
Photons and electrons, 2 sessions: electrons and their particle properties, the discovery of electrons, beta
particles, photons: light particulates, photoelectric effect, Compton effect
Atomic models and the quantum condition (old quantum theory), 1 session: theory on the structure of
electrons and atoms, Thomson and Nagaoka's atomic models, discovery of the atomic nucleus/Rutherford's
s atomic model, Bohr's atomic model

Wave function and uncertainty principle (introduction to quantum mechanics), 1 session: fluctuation of electrons, de Broglie wave, double-slit experiment, interpretation of wave function

Schrodinger equation and its solution, 2 sessions; operator, expected value, time-independent Schrodinger equation, steady state, eigenvalue equation, square-well potential

Quantum mechanical description of a hydrogen atom, 3 sessions: spherical coordinate system, particle in a

central potential, angular momentum operator, spherical harmonics, wave function, and energy level of a Nydrogen atom
Confirmation of learning achieved, 1 session: the degree of learning achieved so far is confirmed

Days and perio	ods Fi	ri.3	3 Class style Lecti				e Languag			Japanese	
[Overview	and	purpose o	f the	course]							

In this subject, lectures focus on helping students understand the main concepts underlying quantum mechanics and quantum statistical mechanics, as well as deepening their quantum mechanical under of the structure of an atom, structure of a molecule, and the electronic structure of a solid material.

### [Course objectives]

To master the main concepts underlying quantum mechanics and quantum statistical mechanics, and to deepen one's quantum mechanical understanding of the structure of an atom, the structure of a molecule, and the electronic structure of a solid material.

### [Course schedule and contents]

(1) Development of quantum mechanics [1-2 weeks]

Students receive an overview of Rutherford's atomic model and its difficulties. Bohr's atomic model. experimental facts that show light particulates and the fluctuation of electrons, etc. In addition, students develop an understanding of the limits of classical mechanics and the necessity of quantum mechanics.

(2) Principles of quantum mechanics [4 weeks]
Students are introduced to wave functions and the Schrodinger equation. Further, students gain an understanding of differences between classical mechanics and quantum mechanics by studying the interpretation and properties of wave functions, expected values of physical quantities, and the properties of operators that reveal observable physical quantities. By examining the eigenvalues of operators and the roperties of eigenfunctions, students also develop an understanding of the superposition principle of wave

sion [2-3 weeks]

Students are asked to think about the motion of a one-dimensional free particle when there is no external field By examining the motion of particles when potential hills are present, and studying reflection via potential hills and the transmission phenomena of potential hills, students also gain an understanding of the tunneling effect. In addition, the bound state is explained using the square-well potential as an example

(4) Harmonic oscillator [2-3 weeks]
Students review harmonic oscillation in classical mechanics and derive the wave function of a onedimensional harmonic oscillator. Based on this, students are asked to think about the motion of a nultidimensional harmonic oscillator and are given an explanation of the Einstein model of specific heat. (5) Hydrogen atom [4 weeks]

tudents are asked to think about motion in a spherically symmetric field using a hydrogen atom as an xample. Next, polar coordinates are introduced to allow students to separate a wave function into angular and radial parts. Then, an explanation is given on angular momentum in quantum mechanics. Following this, students are asked to obtain the wave function of a hydrogen atom and are given an explanation of the

### 量子物理学1 (機:学番奇数)(2)

spectrum of a hydrogen atom. Based on the outcome of these activities, the wave function of a multi-electron atom is then examined generally, and an explanation is given on atomic analyses performed via atomic spectroscopy and Auger electron spectroscopy. In addition, students also gain an understanding of the origin of covalent bonds using a hydrogen molecule as an example.

### [Course requirements]

### [Evaluation methods and policy]

[Evaluation method]

valuation is conducted through a short-answer test.

[Evaluation criteria]

Students must obtain at least 60 out of 100 marks in the short-answer test

60 marks or above: Pass 59 marks or below: Fail

In addition, up to 30% of the report assignments given during teaching sessions may be added to the above evaluatio

### [Textbooks]

Others; none

### [References, etc.]

### (Reference books)

Others; there are many textbooks, but any basic textbook will suffice.

### [Study outside of class (preparation and review)]

- Students must prepare for and review lecture materials distributed in teaching sessions
- When appropriate, students are asked to submit reports and assignments demonstrating their learning from reparation and review.

### (Other information (office hours, etc.))

Students are divided into two classes, and lectures on the above contents are given in the same time slots.

\*Please visit KULASIS to find out about office hours.

[Overview a	and p	urpose o	f the	course]						

Quantum theory is one of the most successful theories in the modern physics. It explains well a lot of peculiar Qualitation theory is one of the most successful incortes in the influent physics. It explains with a for of pecu-phenomena which can not be understood within the classical theory. The main purpose of this course is to understand the fundamental mathematical structure of the quantum theory. We may use online materials. Check PandA in advance

### [Course objectives]

An important purpose of this course is to understand the fundamental mathematical structure of the quantum theory. In addition one is hoped to become capable to calculate some basic properties of a quantum mechanical particle on one-dimensional space.

### [Course schedule and contents]

- . Introduction. Wave mechanics and matrix mechanics
- Mathematical structure of quantum theory (1) State and observable.

  Mathematical structure of quantum theory (2) Hilbert space and state vectors.
- . Mathematical structure of quantum theory (3) operators and observables
  . Mathematical structure of quantum theory (4) Schroedinger equation and time evolution
  . One particle on one-dimensional space (1) classical theory and its quantization
- . One particle on one-dimensional space (2) CCR and Robertson's uncertainty relation . Potential problem (1) General theory
- 9. Potential problem (2) General theory and its mathematical addendum
- Square well potential
   Box potental
- 12. Scattering theory
- 13. Harmonic oscillator (1) 14. Harmonic oscillator (2)
- 15. Summary

### [Course requirements]

Classical mechanics, Linear algebra

### [Evaluation methods and policy]

[Evaluation method]

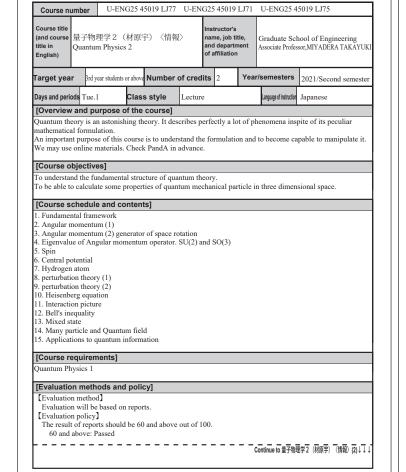

Evaluation will be based on reports

[Evaluation policy]

### [Course objectives]

tudents will be able to understand tensor analysis and continuum mechanics, and to apply them in modeling of living tissues and cells.

### [Course schedule and contents]

1) Introduction to continuum mechanics

2) Mathematical preliminaries

Matrix algebra, Index notation, Summation convention, Eigenvalues and eigenvectors

3, 4) Vectors and tensors

Cartesian tensors, Scalar and vector products, Dyadic product, Coordinate transformation, Invariants, Nabla perator, Divergence theorem

5. 6) Kinematics

Bodies and configurations, Displacement, Strain tensor, Compatibility, Material time derivative

7, 8) Stress and equilibrium

Force and stress, Stress tensor, Traction, Cauchy stress, Principal stresses, Equation of equilibrium

 $9,\ 1\ 0$ ) Conservation Laws and governing equations Mass conservation, Linear and angular momentum, The first law of thermodynamics for continua

1 1 . 1 2 ) Constitutive models

Constitutive equations, Stress-strain relationship, Linear elasticity, Newtonian viscous fluids, Material symmetry, Biological tissues

1 3, 1 4) Boundary value problems

Differential equations with a set of boundary conditions, Navier-Stokes equation, Navier's equation

1 5) Feedbacks

Application of continuum mechanics to the analyses of biological tissues, Introduction to biomechanics

[Overview and purpose of the course]										
systematic w class describ	Control Engineering provides a methodology of controlling various systems including mechanical ones in a systematic way. Its major part consists of both Classical Control Theory and Modern Control Theory. This class describes the fundamentals of Classical Control Theory.									
[Course objectives] The course goal is to understand the basic concepts of Classical Control Theory such as transfer functions, frequency responses and stability.										
[Course schedule and contents]										
[Course schedule and contents] Introduction, Itime, The basic idea of Control Engineering such as the purpose and methods of control is described through various real world examples. Representation of dynamical systems, 2-3times, Mathematical description of systems is developed first. Then, the concept of Transfer Functions is introduced based on Laplace Transform, and Block diagram representation is shown. Responses of dynamical systems, 3times, Time responses of linear systems are shown. Stability of systems and Stability tests are described. Properties of feedback systems, 2-3times, Basic properties such as steady state characteristics of feedback control systems and Root Locus are explained. Frequency responses, 3-4times, The concept of Frequency responses, Bode diagrams, Vector locus are introduced. The stability test of feedback systems based on the frequency responses is explained. Design of control systems, 2times, Basic components of classical controller design methods such as Phase lead, Phase Lag, and PID compensation are described.

### 未更新 Course number U-ENG25 35025 LJ77 U-ENG25 35025 LJ71 name, job title, and department of affiliation 制御工学1 (宇) (and course Graduate School of Engineering title in Control Engineering 1 Associate Professor, MARUTA ICHIROU English) 3rd year students or above Number of credits 2 Year/semesters 2021/First semester Target year Days and periods Mon.3 Class style Lecture anguage of instructi Japanese [Overview and purpose of the course]

Control engineering consists of theory and methodology to design control systems. It includes the classical control theory to design feedback control systems based on transfer functions and frequency response.

### [Course objectives]

The goal of this course is to understand the classical control theory and the related methodologies to design feedback control systems based on transfer functions and frequency response.

### [Course schedule and contents]

Introduction

History and background of control engineering
2-5. Dynamical systems and transfer functions
Basic knowledge on dynamical systems, ordinary differential equations, transfer functions and block No. 3. Transit response and stability
Stability of dynamical systems, transit response, steady response and Routh-Hurwitz stability criteria

9-10. Frequency response Basic knowledge on frequency response using Bode plots and vector locus

11-13. Characteristic of feedback control systems

Performance criteria of feedback control systems using Nyquist's stability criteria and the root locus method. 14-15. Design of feedback control system,

How to design feedback control system using phase-lead compensation, phase-lead-lag compensation and PID control

### [Course requirements]

Complex function theory, Ordinary differential equation theory

### [Evaluation methods and policy]

Evaluation will be based on the final examination which determines the degree of comprehension of the basic concepts and the design theory of feedback systems.

Also, the reports and assignments will be added up to one third of the points lost in the final examination.

[Overview	[Overview and purpose of the course]										

This course deals with how to construct and operate a manufacturing system of a mechanical product.

### [Course objectives]

The goal is to understand the concept of a manufacturing system, and to become able to handle related basic decision-making problems.

### [Course schedule and contents]

Introduction, I time, The overall concept of a manufacturing system is given.

Industrial Economics, 2 times, After introducing the concept of the manufacturing cost and cash flow, how to make decisions using the concept (for example, the DCF method for investment decisions) is addressed. Production amp Operations Management, management, MRP, JIT, etc. are covered. rations Management,2times,Demand forecasting, production planning, inventory .3times

Production Scheduling,2times,Basic approaches for single machine scheduling, flow shop scheduling, job shop scheduling, and project scheduling are introduced.

Plant Layout amp Line Blancing,2times,Basic approaches for plant layout and line balancing are introduced. Industrial Engineering,2times,After introducing the principles of motion economy, the approaches for process analysis, human-machine analysis, Therblig analysis, standard time setting, etc. are addressed.

### [Course requirements]

### [Evaluation methods and policy]

The regular examination, in-class examinations and reports are taken into account.

### [Textbooks]

Not used

### [References, etc.]

### [Study outside of class (preparation and review)]

Homework problems are assigned.

### (Other information (office hours, etc.))

[Overview and purpose of the course]											

Dislocations are the most important lattice defects that strongly affect various propieties, especially mechanical properties of crystalline materials. In this course, fundamental properties of dislocations as well as basics of elasticity will be lectured.

### [Course objectives]

This class aims to help students to acquire fundamental understandings of dislocations and also to acquire ways to understand mechanical properties of crystalline materials based on dislocation theory.

### [Course schedule and contents]

- Introduction to dislocations [1 week]:
- (2) Basics of elasticity theory [5 weeks]
  (3) Elastic properties of dislocations [2 weeks]
  (4) Motion of dislocations [2 weeks]
- (5) Force on dislocations [4 weeks]
- (6) Feedback [1 weeks]

### [Course requirements]

### [Evaluation methods and policy]

Evaluation will be based on one (or two) written examination(s). Attendance and daily reports may be onsidered in grading determination.

Hand out materials will be provided during the lecture.

### [Overview and purpose of the course]

Class style

This course deals with physicochemical information on nuclear energy materials such as production of fuel and soundness of materials, examining their principles and practical examples.

### [Course objectives]

Course objective: By the end of the course, students will have knowledge of fission reactors and nuclear fusion reactors in terms of physical chemistry, for instance, thermodynamics, reaction velocity, and mass ransfer.

### [Course schedule and contents]

(1) Overview of nuclear energy materials, 1 class
Provide an overview of nuclear energy materials and the various steps of the nuclear fuel cycle (mining and refinement of nuclear fuel resources, production and burning of nuclear fuel, storage and reprocessing of ent fuel, treatment and disposal of radioactive waste).

(2) Isotope separation and enrichment, 2 classes

Explain the principles (gaseous diffusion process, centrifugal separation process) and methods (separative

work units, enrichment cascade) of isotopes such as uranium.

(3) Reaction kinetics, 2 classes

Provide an overview of thermodynamics and reaction kinetics and explain order of reaction and rate constant

determination methods, along with the influence of temperature.
(4) Soundness of nuclear reactor materials, 2 classes

Outline the structure of nuclear reactors from the perspectives of materials and cross-sections and explain the influence of radiation damage and corrosion on the soundness of materials, as well as the causes of and strategies for dealing with these phenomena.

(5) Nuclear fusion reactor fuel and materials, 3 classes

Explain the structure of nuclear fusion reactors from the perspectives of materials and cross-sections and explain the production and permeation leakage of the hydrogen isotopes that fuel nuclear fusion reactors, as well as the radioactivation of structural material.

(6) Materials and radiation, 2 classes
Discuss the radiation effect as a problem common to all nuclear energy materials and explain the influence of material properties and radiation.
(7) Oxides and nuclear fuel, 2 classes

Explain the behavior of nuclear fuel and fission products in reactors using oxygen potential and phase

(8) Confirmation of learning attainment, 1 class Post explanation discussion and review of examination questions to KULASIS.

[Overview	and p	urpose o	f the	course]						
This course d	liscuss	es nhysical	chem	istry in rela	tion to	mate	rials an	d raw	materials pro	cessing To do so

lectures focus on thermodynamics, solution chemistry, electrochemistry, the sciences that serve as the basis for material production, functional materials processes, recycling, corrosion and corrosion protection, etc.

### [Course objectives]

from this course, students will become able to do the following:

- Thermodynamically estimate aqueous solution reactions (acid-base reaction, oxygen reduction reaction) tilizing the free energy of ion formation.

  Depict log a-pH diagrams and phase-pH diagrams.

- Read log a-pH diagrams and phase-pH diagrams.

  Express simple reaction rate equations in differential and integral form, and determine the reaction rate onstant from experiment results.
- Determine activation energy in relation to reaction rate temperature dependence from an Arrhenius plot. Consider electrode kinetics using the Butler-Volmer equation.

  Consider corrosion in light of equilibrium theory (Potential-pH diagram).
- 8. Consider corrosion in light of kinetic theory (Evans diagram, mixed potential model).

### [Course schedule and contents]

fundamentals of chemical thermodynamics (2 classes)

Confirmation is made of the basic items of Gibbs energy, chemical potential and activity, etc., all of which will serve as the foundation for this course.

Equilibrium theory of aqueous solution reactions (6 classes)

Lectures discuss acid-base reactions, oxidation-reduction reactions, and equilibrium electrochemistry, which serve as the foundation for materials processes using aqueous solutions and for corrosion and corrosion

Reaction rate fundamentals (3 classes)

Explanation is made of chemical reaction rate, dynamic electrochemistry, and solid surface processes, which serve as the foundation for materials processes using aqueous solutions and for corrosion and corrosion

Corrosion (3 classes)

Lectures will discuss equilibrium theory and kinetics of metal corrosion.

Feedback class (1 class)

Continue to 材料物理化学(エネ)(2)↓↓↓

### 材料物理化学(エネ)(2)

Via questions and answer using the study support service (PandA), students will gain a deeper understanding of the contents of this course.

### [Course requirements]

udents are recommended to have finished the course Energy and Material Thermochemistry I.

### [Evaluation methods and policy]

Grading will be performed in principle using scores on regular tests. Consideration may also be given to exercises, quizzes, and reports assigned in classes.

### [Textbooks]

Materials will be distributed during class or using the student support service (PandA).

### [References, etc.]

### (Reference books)

『アトキンス物理化学』 (東京化学同人)

### [Study outside of class (preparation and review)]

Notification will be made via the study support service (PandA).

For each week's class, class contents and quiz answers will be posted on the study support service (PandA). Students are requested to review and gain a sufficient understanding of these before each next class period.

### (Other information (office hours, etc.))

Problem-solving type assignments will be designated as necessary using practice exercises as well as the study support service (PandA).

This lecture may be changed to the on-demand via PandA on account of the speaker.

Please note also that a portion of course contents may be omitted, or additional content may be added, depending on the progress of the course during each specific academic year.

Dynamics of high speed gas flows is treated on the basis of the fluid dynamics for compressible inviscid fluid. In this course, one-dimensional and quasi one-dimensional flows are mainly discussed, in order to show typical phenomena coming from the fluid compressibility.

### [Course objectives]

To learn/understand fundamental issues specific to compressible fluid flows

### [Course schedule and contents]

- Euler set of equations (2 times)
- Sound propagation (2 times)-- propagation of infinitesimal disturbance
- Quasi one-dimension flow (2 times) -- isentropic flow, Laval nozzle, etc.

  Propagation of finite amplitude disturbance (2 times) -- wave deformation, Riemann invariants, etc.

  Standing Shock wave (1 times) -- Rankine-Hugoniot relation, etc.
- Shock tube problem (3 time) -- Riemann problem, Reflection and deflection of waves
- From one-dimensional to two-dimensional flow (3 times) -- Oblique Shock, Prandtl-Meyer fan, etc.

### [Course requirements]

Fluid dynamics 1, Elemental Calculus (A,B, I,II), Linear Algebra (A,B)

### [Evaluation methods and policy]

By the final exam., in principle.

H. M. Liepmann and A. Roshko 『Elements of Gasdynamics』 (Dover Publications) ISBN:0486419630

[Overview and p	ourpose of the	course]					

This is the continuation of the class "Gasdynamics (50450)." Mainly treated are two-dimensional inviscid compressible fluid flows and aerodynamic forces acting on the bodies in such flows. A modern approach to gas flows based on the kinetic theory of gases is introduced as well.

# [Course objectives]

To learn/ understand the fundamental issues of two-dimensional compressible gas flows related to high speed flight.

### [Course schedule and contents]

- Review of Gasdynamics (2times)— Shock wave, Mach line, Prandtl-Meyer fan
  . Shock—Expansion wave theory and Interaction of oblique shocks (2times)
  . Non-isentropic flow and Mrocco's theorem (1time) Bow shock, Shock—Expansion wave interaction, etc.
  . Small perturbation theory (3times) Potential flow, Similarity rules, etc.
  . Steady two-dimensional flow and the method of characteristics (3times)

- 6. Kinetic theory of gases (4times) -- velocity distribution function, Boltzmann equation, etc.

### [Course requirements]

Fluid dynamics 1,2, Gasdynamics, Elemental Calculus (A,B, I,II), Linear Algebra (A,B)

### [Evaluation methods and policy]

Course nu	ımb	er	U-ENG	25 3	5051 LJ71						
Course title (and course title in English)			(宇) of Solid	ls			Instructor's name, job title, and department of affiliation				nool of Engineering WA SHIROU
Target yea	r	3rd year s	students or	above	Number o	of cred	its	2	Year	/semesters	2021/First semester
Days and periods Mon.1 Class style Lectu						Lecture	e			Language of instruction	Japanese
[Overview	[Overview and purpose of the course]										

While the methods of stress-strain analysis for elementary structural members are the main topics in the 
"Mechanics of Materials" courses, more general physical laws of the mechanical behavior of solids are dealt 
with in this course. Namely, fundamental principles of solid mechanics such as three-dimensional expressions of stress and strain, equilibrium equations, constitutive equations (Hooke's law) are treated together with mathematical analysis of static deformations in elastic bodies. These subjects are important for the understanding of basic principles of large-scale computational analysis of various mechanical/structural systems

### [Course objectives]

This course aims to establish the understanding of rigorous expressions of stress and strain and fundamentals of deformation analysis of solids and structures. It is also the aim of this course to re-examine the values of approximate theories given in the "Mechanics of Materials" courses from a rigorous viewpoint.

### [Course schedule and contents]

The following topics are discussed in the lectures, but subject to possible change according to each year's

stuations.

Week 1 [Preliminaries] Basis vecotrs; Kronecker's delta; Alternating symbol; Summation convention

Weeks 2-3 [Deformation and strain] Description of motion; Material time derivative; Green-Lagrange strain;

Infinitesimal strain; Transformation of strain components; Principal strains

Weeks 4-6 [Stress and laws of motion] Stress vector, Euler's laws of motion; Cauchy's law; Transformation

of stress components; Cauchy's laws of motion; Equilibrium equations; Principal stresses and stress invariants

Week 7-8 [Stress-strain relations] Hooke's law; Elastic moduli; Voigt expression

Weeks 9-10 [Fundamental equations of elasticity] Navier's equations; Plane stress and plane strain; Compatibility relation for strain

Weeks 11-13 [Two-dimensional problems of elastic deformations] Airy's stress function; Biharmonic equation; Stress function in polar coordinates; Stress concentration around a circular hole; Stress function for torsion: Torsion of bars of elliptic cross-sections

Weeks 14 [Principle of virtual work] Virtual displacement; Principle of virtual work; Principle of stationary otential energy

Week 15 [Final examination/learning achievement evaluation]

Week 16 [Feedback]

Continue to 固体力学(宇)(2)↓↓↓

### 固体力学(宇)(2)

### [Course requirements]

The enrolling students are expected to have knowledge in the Mechanics of Materials courses. Good understanding of calculus, linear algebra (eigenvalue problems) and vector analysis is also necessary.

### [Evaluation methods and policy]

Grading is made based on the examination (85%) and the reports (15%). The total score of the examination and the reports is evaluated between 0 and 100 points (the pass mark is 60). Occasional changes of grading criteria will be announced in the class.

### [Textbooks]

extbooks are not assigned. The lecture is given in the blackboard style

### [References, etc.]

T. Inoue, "Fundamentals of elasticity" (Nikkan Kogyo)

S. Kobayashi and K. Kondo, "Elasticity" (Baihu-kan)

For references written in English, students are advised to contact the instructor directly.

### [Study outside of class (preparation and review)]

Contents of "Mechanics of Materials" courses should be fully reviewed. Homeworks (reports) will be assigned to review the lectures.

### (Other information (office hours, etc.))

Lectures are given in a black-board style. Students are expected to take the notes to understand the ideas and athematical derivations, and make questions regarding unclear points

Please visit KULASIS to find out about office hours.

Guidance, 2 times, Guidance on how this class is operated, and how to use computing facility for this class. Basic knowledge on the role of IDS in network security and how machine learning can help the intrusion detection.  Intrusion Detection by Signature-Based IDS, 5 times, Learn the mechanism of intrusion detection by signature-based IDS by studying open source signature-based IDS and attacks, such as correspondence between alarms issued from IDS and communications, and adding signatures to detect attacks.  Intrusion Detection by Machine Learning, 7 times, Learn the method of classifying normal and malicious traffic by machine learning algorithms and public dataset for benchmarking intrusion detection performance. Presentation, I time, Based on the exercise, students presents their methods of intrusion detection using machine learning, and discuss it with other students and instructors.

(3) Details of practical cla	asses delivered based on instructors' practical work experience	

This training consists of the following three.

- Into training consists of the following turce.

  (1) Machine manufacturing training to practice the process of creating parts with various machine tools (2) Lectures by faculty members and mechanical engineers outside the university

(3) Factory tour

Machine manufacturing training will be conducted intensively for about a week from August to September in the machine workshop on the Katsura campus. In particular, we will focus on manufacturing parts for Stirling engines and evaluate performance after assembly. In addition, we will assemble and disassemble commercially available engines to deepen our understanding of actual mechanical elements and systems

In the lecture, in addition to faculty members, mechanical engineers engaged in design, manufacturing, management, etc. at machine makers were invited as lecturers, and examples of machine development, knowledge of machine technology required in the field, engine operating principles, etc. Lecture on safety engineering.

In the factory tour, you will tour the factory of the manufacturer and learn about the actual manufacturing in ociety.

### [Course objectives]

Experience the basics of machining such as turning, milling, and drilling, and acquire basic knowledge about machine tools, machining methods, tools, measurement, machining accuracy, etc. through practical learning. Gain general knowledge about safety and manufacturing.

### [Course schedule and contents]

Machine tool lecture: 1 time (1 hour)

Lecture on basic knowledge for safely using machine tools (lathes, milling machines, drilling machines) used in practical training.

Stirling engine production training: 3 times (18 hours in total)

Practicing the production of round parts (cylinders, bores, etc.) by lathe work, the production of plates Continue to 機械製作実習(機)(2)↓↓↓

# 機械製作実習(機)(2) (pedestals, etc.) by milling work, assembly, finishing, and evaluation of rotation speed, and manufacturing Stirling engines in pairs. Engine operating principle: 1 time (1.5 hours) Learn the basic knowledge of Stirling engine and diesel engine. Engine assembly / disassembly: 1 time (7 hours) Understand the basics of engine mechanism and machine assembly principles through the assembly and Understand the basics of engine mechanism and machidisassembly of commercially available diesel engines. Introduction to Safety Engineering: Once (3 hours) Lectures and discussions will be given on the mechanism of occupational accidents that occur in factories. disaster prevention technology, fall accidents, malfunctions / malfunctions in crane work, system safety in the equipment industry, etc. Lecturer schedule Mr. Kunihito Sato, Sato R & D Manufacturing Seminar: 4 times (1.5 hours each) Machine engineers engaged in design, manufacturing, management, etc. will be invited as lecturers to give lectures on actual examples of machine development and knowledge of machine technology required in the field. [Lecturer schedule] Mr. Atsushi lejo, Okuma Corporation Mr. Shinjiro Yukawa, Office YUKAWA Mr. Takao Kusuura, TechnoProducer Co., Ltd. Mr. Takashi Iwasaki, Kyoto University (formerly Mitsubishi Electric) Factory tour: 1 time (actual time of the tour is about 4 hours) Tour the factories of manufacturers in the Kansai region and learn about the actual manufacturing in society. [Course requirements] [Evaluation methods and policy] For the credit, students are in principle required to participate in all the classes, and to submit all the reports. [Textbooks] A textbook will be handed out in class [References, etc.] (Reference books)

#### [Overview and purpose of the course]

Statistical mechanics provides a firm foundation for thermodynamics. I'll give a standard course of statistical echanics through several basic examples in various fields of science and engineering, including quechanics, solid state physics, heat transfer engineering, and information technology.

#### [Course objectives]

- Understanding the relation between macroscopic variables and microscopic states
- Scientific view of various phenomena in science and engineering based on statistics.

#### [Course schedule and contents]

st week: Concepts of statistical physics and Review of basic statistics

2nd week: Counting microscopic states

3rd week: Microcanonical ensemble 4th-6th weeks: Various ensembles and Free energies

7th-9th weeks: Quantum statistics (Bose-Einstein vs. Fermi-Dirac)

10th-11th weeks: Introduction to solid state physics 12th week: Photons and Phonons

13th week: Application to Informatics 14th week: Examination

15th week: Feedback class

#### [Course requirements]

Basic knowledge of thermodynamics, calculus, statistics, analytical mechanics, and quantum physics will be

#### [Evaluation methods and policy]

- Written examination
- Paper assignment

# [Textbooks]

ecture notes will be provided.

#### [References, etc.]

#### (Reference books)

Introduced during class

Course title									5073 LJ71
(and course		力学(材エネ al Thermodyna							nool of Energy Science fessor,MIYAKE MASAO
Target year Brd year students or above Number of					its	2	Year	/semesters	2021/Second semester
Days and periods Tue.		Clas	Class style Lectur					Language of instruction	Japanese

#### [Overview and purpose of the course]

In this lecture, fundamental ideas of Statistical Thermodynamics which is effective to microscopic understanding of macroscopic systems and some typical applications to condensed matter physics are presentaed.

#### [Course objectives]

The goals of this lecture are both to understand fundamental idead of Statistical Thermodynamics and to tudy typical applications to condensed matter physics.

#### [Course schedule and contents]

Outlines, 1 time, Basic ideas of Statistical Thermodynamics, thermal equilibrium, fundamentals of Statistics, means of measuremnts, regodic theory.

Themodynamic functions, ltime, Thermodynamic laws, thermodynamic functions, Legendre transform,

Maxwell relations, Gibbs-Helmholtz equation, thermodynamic variation, phase equilibrium. Ideal systems,4times,Phase space of movement, Liouville#039s theorem, micro canonical ensemble,Partition function, relation between Helmholtz free energy and Partition function,Principle of Boltzmann, simple applications of microcanonical ensamble (ideal gas, elastic of gum)

Canonical ensemble, 2 times, Distribution with the maximum probability, Partition function, the 3rd law of

thermodynamics, Gibbs#039s paradox, grand canonical ensamble.
Quantum statistics,2times,Grad canonical ensamble of quatum statistics, Fermion and Boson, Bose-Einstein tatistics, Fermi-Dirac statistics, ideal Fermi gas, electron specific heat, ideal Bose gas, Bose-Einstein

Typical applications,4times,Systems with two levels, Schottly type specific heat, Statistics of photon Planck#039s equation, one dimansional harmonic oscillation, Einstein model and specific heat of solid states. Evaluation od goals, I time, Understanging of typical applications of statistic themodynamics and submission of homeworks

#### [Course requirements]

tudents are roughly expected to have mastered basics of mathematics, dynamics, elementary quantum nechanics, thermodynamics and statistics.

Target yea	r	3rd year	students or above	Number	of cred	its	2	Year	r/semesters	2021/First semester

#### [Overview and purpose of the course]

Class style

This course serves the fundamentals related to solution chemistry of electrolytes and electrode reactions, which become the basis of wet processing such as electrolytic refining, electrowinning, corrosion anticorrosion, and functional electrodeposition.

Lecture

#### [Course objectives]

Days and periods Wed.1

In this course students learn basic technical terms and basic concepts of physical chemistry, which are necessary to study materials science and engineering from the viewpoints of solution chemistry and electrochemistry, to take subsequent advanced courses on materials science and engineering.

#### [Course schedule and contents]

Overview 1 time

lution chemistry of electrolytes, 2 times, acid-base reactions, redox reactions, equilibrium of them.

Introduction of electrode potential and its relation to chemical thermodynamics, 4 times, explanation of electrode surface as an interface for exchange the carrier, explanation of the concept of electrode potential and Nernst's equation.

Electrolysis, 1 time, explanation on the importance of three electrode setup (working, counter and reference

Electrode reactions, 4 times, explanation on the fundamentals of electrochemical reaction rate on a electrode surface toward understanding of batteries and corrosion, explanation on the relation between current and otential, overpotential, diffusion-limitation of reactants.

Transfer of ions, 2 times, explanation on the transfer of ions in solution for understanding diffusion potential and liquid junction potential.

#### [Course requirements]

Knowledge given in Thermodynamics of Materials 2 (by Prof. Uda) is preferable

Continue to 材料電気化学(材)(2)↓↓↓

[Course objectives] The course objective is to develop an understanding of the physicochemical properties and reactivity of adioactive materials, and to learn the latest research and engineering applications based on these principles. [Course schedule and contents] The main contents of each class session are as follows: 1) Atoms, nuclei, and isotopes 2) Mass, decay and half-life, radiation equilibrium
3) Nuclides, dating, tracer chemistry
4) Dilution analysis, NAA 5) Cross-section, application (analysis, radiation source) 6) Nuclear fuel cycle 7) Cycle engineering: nuclear fuel, smelting, compounds 8) Overview of geological disposal (advance dispersion, chemical equilibrium) 9) Actinide chemistry 10) Chemical analysis and spectroscopy of actinide and fission products 11) Chemical thermodynamics (complexation, solubility)
12) Electrochemistry (redox, electric double layer) Reprocessing (extraction equilibrium, extractant, countercurrent distribution)
 Waste treatment (ion exchange reaction, membrane equilibrium)
 Feedback; confirmation of learning achievement [Course requirements]

未更新 Course number U-ENG25 35121 LJ75 固体電子論(材) name, job title (and course Graduate School of Engineering title in Electon Theory of Solids and department of affiliation Associate Professor, KUROKAWA SHIYUU English) Year/semesters Target year Brd year students or above Number of credits 2 2021/First semester Days and periods Tue.1 Class style inguage of instruct Lecture Japanese [Overview and purpose of the course] This course focuses on the electron theory of solids and its applications. First, we review the concept of energy bands and the basics of band theory. Next, we discuss the fact that the electronic properties of solids such as metals and semiconductors can be explained by thinking in terms of band structure. Next, we gain an understanding of semiconductor properties based on information about bands. We also discuss the main structural characteristics of actual electronic devices such as p-n junctions. Finally, we explain the electronic states and electronic defect states of surfaces/interfaces with interrupted solid periodic potential.

[Course objectives]

Understand concepts that are important in discussing electrons in solids (refer to syllabus). Understand general information concerning the electronic properties of metal and semiconductors.

[Course schedule and contents]

Energy bands, 4 classes: Review free electron theory, the influence of periodic potential, the occurrence of energy gaps, Bloch's theorem, one-dimensional energy bands, reduced zones, expanded zones, periodic zone schemes, reciprocal lattices and Brillouin zones.

Fermi surfaces and band structure of metal, 3 classes: Three-dimensional lattice Fermi surfaces and energy band diagrams, differences between metal and insulators, band structure of metal, rigid band model, Hume-

Rothery rules.

Semiconductors, 4 classes: Movement of Bloch electrons in electric fields, concept of effective mass, movement of electron holes, Fermi level and carrier density, intrinsic semiconductors, extrinsic

semiconductors, p-n junctions, carrier diffusion, operating principles of transistors.

Surface/interface/defect electronic states, 2 classes: Notation of electron arrangement in crystal surfaces, band structure of surfaces, work functions, surface electronic states.

structure of surfaces, work functions, surface recerronic states.

Latest topics, 1 class: Discuss the latest research and technologies related to the content of the course. Review the course overall and confirm the degree of learning attainment.

[Course requirements]

Students should have completed the solid state physics course offered by the Department of Physical Scienceand Engineering.

[Overview	an an	d purpose	of the	course]						
and	4 .	4.7.7								

The aim of the internship is experiencing on-site activities involved production, manufacturing, development, designing and research of industrial goods at a factory or a research laboratory of Japanese leading companies On-site learning of the importance of teamwork and production processes in manufacturing is also the aim.

#### [Course objectives]

The goal of the internship is to master a general method of thinking and methodology at Mechanical Engineering. Furthermore, by learning the relationship between a human and machines at an industry, motivate oneself to study and think about one's career development.

#### [Course schedule and contents]

As a general rule, the internship should meet the above purpose. The duration should be not less than two weeks. Thus, the following cases are not approved as an internship; a short internship such as a week, a company tour, a company explanation meeting and so on. Longer term more than two weeks and an overseas internship such as IAESTE can be acceptable.

Internship location: Based on recruitment from companies. You can find them at company's web sites and/or the educational affairs office of the Engineering Science office (Butsuri Kyoumu).

#### [Course requirements]

[Overview a	nd purpose o	of the course]						
		idea about a syste					e course, modeling	

Systems engineering is basic idea about a system assembled with some elements. In the course, modeling method of a system, function analysis, economical evaluation, optimization method and reliability analysis are offered. Also, energy system as one of application cases; a thermal and power plant is lectured.

#### [Course objectives]

- To understand a variety of method and characteristics of system analysis.
- To acquire the basic knowledge to optimize the energy systems.

#### [Course schedule and contents]

- 1. Introduction of systems engineering(2): Lectures on definition and structure of a system and basic performance of a system. Also, lecture the basics of systems engineerings.
- Schedule planning method(2): Lectures on the method of a program for work processes. "Program Evaluation and Review Technique" and "Critical Path Method" are lectured.
- 3. Linear programming(5): Lectures on LP method for the optimization of a system. For the application example, analysis of energy system is also offered.
- 4. Decision-making problem(2): Lectures on a modeling of decision-making process and method for
- 5. System reliability analysis(2): Lectures on a system design and reliability analysis method.
- 6. Application for a energy system(2): Systems engineering method is applied to thermal and power plants.

#### [Course requirements]

None

# [Evaluation methods and policy]

Evaluate by report(s) and examination.

[Overview	anc	l pui	pose o	f the	course]						
The properti	ies of	met	als and al	llovs	strongly dei	nend on	thie	er micro	structi	res which ar	e controlled by

The properties of metals and alloys strongly depend on thier microstructures, which are controlled by processing. In this lecture, we talk on formation mechanism on micro- and nano-structures in metals and alloys from the atomistic viewpoints, and on their properties. Through the lecture, how to control or utilize ractical materials are studied.

#### [Course objectives]

To study relationship between microstructures and properties in metals and alloys. To understand formation mechanism of microstructures through each phase transformation and its control

#### [Course schedule and contents]

- (1) Thermodynamics, phase diagram and atomic diffusion [2-3 weeks] (2) Phase transformation through diffusion [4-5 weeks]
- (3) Diffusionless phase transformation [3-4 weeks]
- (4) Recrystallization and recovery [3-4 weeks]
- (5) Feedback [1 week]

#### [Course requirements]

#### [Evaluation methods and policy]

Evaluation will be based on a written examination. In some cases, reports and attend are considered.

#### [Textbooks]

Utilizing resumes provided in the lecture.

#### [Overview and purpose of the course]

To understand structures in solids, mainly metal crystals, from the viewpoint of atomic interaction. Based on the knowledge, to study fundamental characteristics of lattice defects and properties in crystalline solid materials controlled by it, in particular diffusion and mechanical strength.

#### [Course objectives]

The aim of this lecture is to learn a way of considering to understand diffusion and mechanical properties in addition to fundamental studies on crystals and lattice defects.

#### [Course schedule and contents]

- (1) Structure of solids [1 week]
- (2) Lattice defects [1 week] (3) Diffusion in solids [5 weeks]
- (4) Deformation of crystalline materials [2 weeks]
- (5) Plastic deformation of single crystals of metallic materials [2 weeks]
  (6) Plastic deformation of polycrystalline metals [2 weeks]
  (7) Deformation twinning and creep deformation [1 week]

- (8) Feedback [1 week]

#### [Course requirements]

#### [Evaluation methods and policy]

A end-term examination will be a main part of grading determination. Attendance and daily reports may be onsidered in grading determination.

[Overviev	[Overview and purpose of the course]									

Fundamental chemistry such as quantum chemistry, solid state chemistry, physical chemistry will be described in this course for deeper understanding of energy conversion and applications. Especially chemical bonding and structures and their energetics will be discussed in this course.

#### [Course objectives]

Deeper understanding of energy conversion and applications from the viewpoint of chemistry

#### [Course schedule and contents]

Atomic structure, 2 times, Understanding of fundamentals of inorganic chemistry such as atomic orbital, electronic structure of many-electron atoms, atomic radii, ionic radii, lanthanide contraction, ionization potential, electron affinity and electronegativ.

3times, Understanding of fundamentals of inorganic solid state chemistry such as crystal lattice, symmetry of

crystal, close packing structure, metals, alloys, intermetallic compounds, ionic crystals and covalent crystals, 2times, The factors such as ionic radii, coordination number, lattice energy affecting the crystal structure will be described. Thermochemistry of solid compounds will be discussed.

3times, Chemical bonding theory and energetics such as Lewis structure, resonance structure, valence bond theory, molecular geometry and VSEPR theory, hybridization orbital, molecular orbital, bond length, bonding radii, bond energy will be described.

.2times,Symmetry operation and symmetry elements, molecular point groups will be described. Applications to molecular orbitals, molecular vibration, vibrational spectroscopies will be discussed. 3times, Concepts and theory of Bronsted acids and bases, Lewis acids and bases, their reactions, solvent effects will be described. Learning achievement evaluation will be made in the last class

# [Course requirements]

Days and peri	Days and periods Fri.1			s style	Lecture	cture Language of instruction Japane			Japanese	

### [Overview and purpose of the course]

Solid state physics is a discipline that provides an understanding about the properties of matter from a nicroscopic perspective through atoms, molecules, and so forth. The discipline also forms the academ foundation for understanding the properties of important material substances applied in engineering. In order to allow students to study the behavior of lattices and electrons, which form the basis of solid state physics, lectures give explanations based on quantum theory to provide students with an understanding of the basics of solid state physics.

### [Course objectives]

The purpose of lectures is to help students deepen their understanding of how photons, electrons, and articles (the most important components of solid state physics) interact with matter from a microscopic

#### [Course schedule and contents]

Introduction, 1 session: basic components of solid state physics, such as crystal structure and crystal types are reviewed

Crystal structure, 3 sessions: crystal, reciprocal lattice, unit lattice
Free electron theory, 3 sessions: wave function and energy state of a one-dimensional free electron, Fermi surface

Valence theory, 2 sessions: Bloch theorem, Brillouin zone, Laue equations, diffraction, and structural factors Phonons and photons, 2 sessions: Kramers?Kronig relations, Drude theory, electron gas, plasmons Semiconductors, 1 session: bandgap, electrons and holes, intrinsic semiconductors, impurity doping, and electron conduction

Junction theory, 2 sessions: surface electron conduction, P-N junction, M-S junction

Confirmation of learning achieved, 2 sessions: The degree to which students have successfully learned about solid-state physics based on quantum mechanics is confirmed.

#### [Course requirements]

It would be preferable for students to take teaching sessions in solid-state physics in advance.

#### [Evaluation methods and policy]

Evaluation is given based on reports (20 marks) and an examination (80 marks).

#### [Textbooks]

Others; outlines are distributed during teaching sessions

[Overview	and	[Overview and purpose of the course]									

Study of basic concepts necessary for understanding the principles of various nuclear engineering studies from the physicochemical properties of atoms, nuclei, and radiation to the generation and use of energy by fission reactions

#### [Course objectives]

The course objective is to understand the link between basic science and the latest research in the field of nuclear engineering, and to understand the latest advancements made in basic and applied research and future

#### [Course schedule and contents]

ntroduction to Radiation 1

- 1) Discovery of radiation
- History of radiation
   Basics of radiation
- Interaction with substances 5) Detection of radiation
- Generation of radiation
   Industrial uses of radiation

Energy generation and utilization 1

- 8) Energy situation and nuclear power
- Basics of reactor physics
- 10) Reactor control
- 11) Reactor selection-present
- Reactor selection-past
   Reactor selection-next generation reactor
   Viewpoints on nuclear energy utilization and development
- 15) Feedback; confirmation of learning achievement

Course nu	ımbe	er	U-EN	G25 3	5153 LJ71							
Course title (and course title in English)		红学 t Tran					nan	ructor's ne, job til departm ffiliation	tle, nent	Graduate School of Engineering Professor,IWAI HIROSHI Graduate School of Engineering Associate Professor,TATSUMI KAZU		
Target yea	r	3rd year	students o	or above	Number	of cred	its	2	Year	/semesters	2021/Second semester	
Days and perio	ods F	ri.1		Class	s style	Lecture	e			Language of instruction	Japanese	
[Overview	and	d pur	ose o	f the	course]							

This course focuses on the heat transfer phenomena at the foundation of heating, cooling, and insulation echniques, that is heat conduction, convection heat transfer, and thermal radiation. With respect to heat onduction, we will discuss the steady-unsteady phenomenon and the theory of extended surface heat transfer With respect to convective heat transfer, we will discuss single-phase forced convection/natural convection and the boiling and condensation transfer accompanying phase transitions. With respect to thermal radiation, we will discuss the basic theory.

#### [Course objectives]

Provide basic knowledge and deepen understanding of heat transfer phenomena (heat conduction, convective heat transfer, thermal radiation).

#### [Course schedule and contents]

General information: Based on multiple examples of energy conversion requiring heating, cooling, and insulation techniques, and temperature control of equipment, explain the importance of heat transfer engineering and the basic mechanisms of heat transfer phenomena.

Heat conduction: Explain the basics of heat conduction phenomena, specifically heat flux, thermal conductivity and Fourier's law, and the derivation of the equation of heat conduction, with reference to pasic case examples. Explain thermal contact resistance, steady heat conduction, and heat conduction resistance in flat plates, pipes, etc., the theory of extended surfaces (fins), and so on.

Basic information on convective heat transfer: Formularize the governing equations of flow in heat transfer. Explain dimensionless numbers such as Prandtl number, Nusselt number, Stanton number, Grashof number, and Rayleigh number. Derive the momentum and energy equations for the boundary layer flow and heat

(6-9)Convective heat transfer without phase change: Explain specific examples of forced convective heat transfer, as well as general information. As examples of external flow heat transfer, explain laminar and turbulent boundary layer flow over a flat plate accompanying heat transfer. Also, as an example of internal flow heat transfer, explain heat transfer of flows within tubes. Also, explain natural convection along a vertical heated

Convective heat transfer accompanying phase changes: With respect to boiling heat transfer, explain the boiling curve in pool boiling and nucleate boiling, transition boiling, film boiling heat transfer mechanisms, and the effects of various factors that affect nucleate boiling heat transfer and methods to enhance heat

Continue to 伝熱工学(機)(2) ↓ ↓↓

#### 伝熱工学(機)(2)

insfer. With respect to condensation heat transfer, explain the difference between dropwise condensation and film condensation, phenomena in condensation interfaces, and the Nusselt solution in vertical plate film condensation.

Radiation heat transfer: Discuss black bodies and gray bodies, Kirchhoff's law, Planck's law, and Wien's displacement law, Stefan-Boltzmann's law, radiation transfer between black body surfaces and radiation n actual surfaces, and the properties of radiation in gases.

Confirmation of learning attainment.

#### [Course requirements]

Students are required to have completed Thermodynamics 1, Thermodynamics 2, Fluid Dynamics 1, and Fluid Dynamics 2.

# [Evaluation methods and policy]

A final examination will be held. In-class quizzes and reports will be factored in.

#### [Overview and purpose of the course]

Basic knowledge of a wide range of scientific and engineering fields (e.g. physics, chemistry, biology, electrical engineering, mechanical engineering, and materials engineering) that form the basis of nuclear engineering, as well as basic proficiency with standards related to radiation and quantum beam technologies specific to nuclear engineering. In addition, students will study experimental procedures through practical training as well as procedures for the safe handling of radioisotopes and radiation generators, methods for rocessing experimental data, and how to prepare scientific reports.

#### [Course objectives]

- Cultivate familiarity with experimental procedures and a sense of engineering best practices
- Acquire basic knowledge and skills related to science and engineering with a mind towards practical
- · Cultivate the ability to acquire and utilize basic knowledge and technology related to nuclear engineering.
- · Learn how to conduct experiments while considering personal and environmental safety.
- Cultivate the ability to work effectively, independently, and continuously on various tasks.

#### [Course schedule and contents]

Course will cover the following themes. Some of the themes also serve as new instruction and training egarding the handling of radioisotopes

The order of lectures differs for each experimental group, and the content of corresponding exercises may hange.

ecture 1: Overview of experiments: Provide an overview of each experimental task, text distribution, prelearning instructions and precautions, etc. will be given as necessary

Lecture 2: Basics of creating engineering reports: Lecture will focus on creating experimental reports, as well as exercises to learn the basics of creating experimental reports.

ecture 3: Radioactive isotope (RI) safety training seminar: Students will learn safe procedures for handling RIs. Students will study safe procedures for handling nuclear fuel materials.

Lecture 4: Plan drafting: Exercises and lectures on basic aspects of plan drafting.

Continue to 原子核工学実験 1 (2)↓↓↓

#### 原子核工学実験 1 (2)

Lecture 5: Equipment safety training: Students will learn about safety when handling machine tools such as

Lecture 6: Electronic safety training: Students will assemble various circuits and learn safe and reliable circuit manufacturing techniques

Lecture 7:  $\alpha$  -ray absorption: Students will learn about  $\alpha$  -ray identification using semiconductor detectors and energy absorption, range, and straggling using  $\alpha$  -ray-emitting substances.

Lecture 8: Absorption of  $\beta$  and  $\gamma$ -rays; Students will study procedures for the safe handling of RIs through experiments on energy absorption by  $\beta$  and  $\gamma$ -ray-emitting substances.

Lecture 9: X-ray diffraction: Using a powder X-ray diffractometer, students will learn the basic properties of X-rays and gain an understanding of the relationship between diffraction patterns and crystal structures.

Lecture 10: Atmospheric PIXE/PIGE analysis: Students will discharge a proton beam into the atmosphere and observe its range. In addition, the characteristic X-rays and y -rays generated by various irradiating naterials will be measured and trace element analysis will be performed as a study of the properties of ion

Lecture 11: Circuit meter training: Students will learn the operating principles and usage of analog and digital testers

Lecture 12: Study of oscilloscopes and linear circuits: Students will learn how to use an oscilloscope, an essential tool for observing pulse waveforms as well as how to transmit pulses when they enter the network

Lecture 13: Analog/digital circuits: Students will learn about the basics of amplifiers and digital circuits with semiconductor elements by actually creating circuits.

ecture 14: Electron beams/vacuums: Students will focus an electron beam by electric and magnetic fields to learn the functions of electrostatic and magnetic lenses and understand the fundamental principles of vacuum technology.

Lecture 15: Report check: Confirmation of the content of students' submitted reports and provision of guidance regarding resubmission of deficient reports to confirm learning achievement

#### [Course requirements]

# [Evaluation methods and policy]

Students will prepare a report for each task, and performance will be evaluated on a scale of 1 to 3 with respect to the degree of achievement of each learning objective, and the total score is converted into a score out of 100.

Note that completing all assignments and submitting reports is a prerequisite for receiving credit.

Reports submitted late may be penalized, and messy or incomplete reports may require correction and resubmission. Continue to 原子核工学実験 1 (3) ↓ ↓ ↓

#### 原子核工学実験 1 (3)

[Overview	[Overview and purpose of the course]										
							~ .				

Basic knowledge of a wide range of scientific and engineering fields (e.g. physics, chemistry, biology, electrical engineering, mechanical engineering, materials engineering) that form the basis of nuclear engineering, as well as basic proficiency with standards related to radiation and quantum beam technologies specific to nuclear engineering. In addition, students will study practical experimental procedures through practical training as well as procedures for the safe handling of radioisotopes and radiation generators, methods for processing experimental data, and how to prepare scientific reports.

#### [Course objectives]

- Cultivate familiarity with experimental procedures and a sense of engineering best practices.
- Acquire basic knowledge and skills related to science and engineering with a mind towards practical
  application.
- Cultivate the ability to acquire and utilize basic knowledge and technology related to nuclear engineering.
- · Learn how to conduct experiments while considering personal and environmental safety.
- · Cultivate the ability to work effectively, independently, and continuously on various tasks.

#### [Course schedule and contents]

Course will cover the following themes

Course will cover the following memes.

The order of lectures differs for each experimental group, and the content of corresponding exercises may change.

Lecture 1: Overview of experiments: Provide an overview of each experimental task, text distribution, prelearning instructions and precautions, etc. will be given as necessary.

Lecture 2: Basics of creating engineering reports: Lecture will focus on creating experimental reports, as well as exercises to learn the basics of creating experimental reports.

Lecture 3: Slow neutron beams: Students will measure neutrons from radioisotopes using a neutron counter to learn about the properties of neutrons and their interaction with matter.

Lecture 4: Radiochemistry: Students will learn how to handle unsealed radioactive materials using radioisotope (59Fe) and solvent extraction.

Continue to 原子核工学実験 2 (2)↓↓↓↓

# 原子核工学実験 2 (2)

Lecture 5: Ion beam generation and RBS analysis: Students will learn about ion beam technology, vacuum technology, analytical principles, etc. through particle accelerator maneuvering, and will attempt Rutherford backscattering analysis as an applied experiment using ion beams.

Lecture 6: Thermofluid measurement and boiling heat transfer: Students will conduct experiments utilizing boiling to deepen understanding of boiling and critical heat flux, and to learn basic measurement methods used in thermofluid engineering.

Lecture 7: Uranium chemistry: Lectures will focus on the separation of uranium thorium radiative equilibrium solutions (ion exchange, oxidation-reduction reaction) and will perform colorimetric quantitative analysis as study of the handling of nuclear fuel.

Lecture 8: Materials testing/electron microscopy: Students will perform tensile testing on various materials and obtain basic knowledge on the strength of metallic materials by analyzing pulling speed, etc.

Lecture 9: Radiation detection: Students will attempt detection of y-rays emitted from substances existing in nature by using a Ge semiconductor detector as well as the identification and quantification of emitted nuclides. Students will also deepen their understanding of radiation and radioactive materials by measuring contamination using a survey meter and by measuring the decay process of nearby radioisotopes.

Lecture 10: Nonlinear Optical Effect Lasers: Students will perform laser oscillation experiments using an optical cavity and a solid crystal as study of the basic concepts related to stimulated emission. Students will also observe the generation of secondary harmonic waves using a nonlinear optical crystal, learn about phase matching, and study the basics of optical technology.

Lecture 11: Analog/digital measurement: Students will study the characteristics of analog and digital measurements, as well as the principles of impedance matching and sampling, by actually creating circuits in practice.

Lectures 12 and 13: Simulation experiments: Students will study the basics of computer simulations, and perform a simulated experiment on radiation permeation using Excel.

Lectures 14 and 15: Report check: Confirmation of the content of students' submitted reports and provision of guidance regarding resubmission of deficient reports to confirm learning achievement.

#### [Course requirements]

N/A

#### [Evaluation methods and policy]

Students will prepare a report for each task, and performance will be evaluated on a scale of 1 to 3 with respect to the degree of achievement of each learning objective, and the total score is converted into a score out of 100.

Note that completing all assignments and submitting reports is a prerequisite for receiving credit.

Reports submitted late may be penalized, and messy or incomplete reports may require correction and resubmission.

Continue to 原子核工学実験 2(3) ↓ ↓ ↓

原子核工学実験 2 (3)
[Textbooks]
Texts and reference materials will be distributed for each experimental theme.
[References, etc.]
(Reference books) Other materials will be introduced as needed for each experimental theme.
[Study outside of class (preparation and review)]
Submit reports on all experimental themes within the deadline.
In addition, follow the instructions in the experiment outline description for each experiment theme.
(Other information (office hours, etc.))
The method of contacting the faculty in charge of each experimental theme will be given in the instructional material for each experiment.
Taking this course together with Nuclear Engineering Experiment 1 is desirable.
*Please visit KULASIS to find out about office hours.

Overview	and	d purpose o	f the	course]							

In this course, Thermodynamics 1, the basic laws of thermodynamics are introduced. Also discussed are fundamental items including state changes of ideal and real gases, cycles, flow of gases, phase transformation free energy, phase equilibrium and the phase rule, single-component phase diagrams, etc.

#### [Course objectives]

tudents will gain an understanding of the meaning and significance of the first and second laws of thermodynamics, fundamental concepts for thermodynamics. Students will also be able to quantitatively deal with changes in thermodynamic quantity that accompany state changes.

## [Course schedule and contents]

Introduction to thermodynamics (1class)

History of thermodynamics, introduction of variables and units used in thermodynamics.

The first law of thermodynamics (2classes)

Explanation is provided of definition of heat, Quasi-static process, specific heat, enthalpy, ideal gas.

The second law of thermodynamics (2classes)

Explanation is made of reversible and irreversible process, Ideal cycle, Carnot cycle by ideal gas, introduction of entropy.

Thermal engine (3classes)

Discussion in these classes will include the free expansion/compression of gas, Otto cycle, Brayton cycle, Carnot cycle.

Free energy (3classes)
Explanation is made of free energy, Maxwell equations, Joule-Thompson's experiment.

Phase transformation (2classes)

Explanation is made regarding various items, including phase, first order phase transformation, metastable quilibrium, critical point, second order phase transportation.

Confirmation of extent of student learning (1class)

Confirmation is made, via practice problems and exercises, of the extent that students have learned the ntents of this course

Feedback (1class)

[Overview and purpose of the course]

Physical and chemical properties of materials depend on not only lattice structure and composition but also microstructure. In this lecture, the microstructure evolution during phase transformation (i.e. solidification) will be explained by using thermodynamics and kinetics (atomic diffusion, thermal energy transport and momentum transport). Students study the fundamentals of microstructure evolution (nucleation, growth mechanism, solute partition, microstructure selection, dendritic growth, eutectic growth and equilibrium / non quilibrium processes).

#### [Course objectives]

- To understand relationship between microstructure evolution and thermodynamics / kinetics.
   To be able to use thermodynamics and kinetics for understanding microstructure in materials.

#### [Course schedule and contents]

- . Introduction (1): fundamentals of thermodynamics and kinetics, which are required for understanding this
- Nucleation (1): classical nucleation theory and curvature effect
- Interface morphology (1): interface morphology (atomic scale), macroscopic interface shape. Growing interface (3): local equilibrium at interface, solute partition, stability of interface
- 5.Dendritic growth (2): mechanism of dendritic growth, selection mechanism
- 6. Solute partition and segregation (2): solute partition at interface, segregation (non-uniform distribution of lutes)
- 7. Eutectic growth (1): cooperative growth (eutectic growth) of multiple phases, selection of microstructure Non-equilibrium phase transformation (1): rapid solidification, non-equilibrium and metastable phases
   Microstructure evolution (2): relationship between microstructure evolution and phase diagram, selection
- rules in phase transformation
- 10. Learning achievement evaluation, and feedback (1)

Course title (and course title in English)		t線計測学 iation detection	on and	l measurem		nan	tructor's ne, job ti I departn Iffiliation	nent		ool of Engineering or,TSUCHIDA HIDETSUGU
Target yea	r	3rd year students	or above	Number	of cred	its	2	Year	/semesters	2021/First semester
Days and peri	ods V	Ved.2	Clas	s style	Lecture	e			Language of instruction	Japanese
[Overview	and	d purpose o	f the	course]						

放射線(イオンや電子などの荷電粒子線、X線や y線などの光子線、中性子線)の計測法について 放射線と物質との相互作用、計測に用いる各種放射線検出器の動作原理や計測技術等を述べる。本 講義の目的は、様々な分野への放射線利用において放射線計測の重要性を理解することである。

#### [Course objectives]

放射線の性質及び物質との相互作用に関する基本的事項と放射線検出器の基本的な動作原理や測定技術を理解することにより、放射線の安全な取扱い等について学修する。

#### [Course schedule and contents]

(1) 放射線計測の概要【1週】 本講義の全体的な概要を説明する。具体的には、放射線の性質、放射線計測の概要(測定の種類や 計測回路の基本構成)、検出器の概要及び放射線計測で用いる単位などについて説明する。

(2) 光子線の性質【1週】 光子線 (X線・y線) の性質及び物質との相互作用(相互作用過程とその断面積、減衰など)に関連した基本的事項を説明する。

(3) 荷電粒子線の性質【1週】 荷電粒子(イオン、電子)の性質及び物質との相互作用(相互作用過程、エネルギー損失、飛程など)に関連した基本的事項を説明する。

(4)中性子線の性質【1週】 中性子の性質、物質との相互作用(相互作用過程、核反応など)に関連した基本的事項を説明する

(6)放射線計測技術【1週】 放射線計測の基本構成(放射線のエネルギー計測や時間計測をする場合の構成など)、計測回路(

(7) 放射線のスペクトルの測定【2週】

(イ) 放射線のスペクトルの側走 [2回] 荷電粒子線、 y線、中性子線などのエネルギースペクトルの代表的な測定法について説明する。

モジュールの種類とその役割)及び計測回路の信号処理などについて説明する。

Continue to 放射線計測学(2)↓↓↓

#### 放射線計測学(2)

材料組織学(2)

[Evaluation methods and policy]

(8) 放射線計測の定量 【1週】 放射線計測の定量に関わる基本的事項について解説する。具体的には、絶対測定と相対測定との違 い、検出効率、立体角などを説明する。

(9) 放射線計測における統計【2週】

放射線計測に用いる統計学(確率分布及び誤差伝播など)を説明する。

(10)総括【1週】

本講義の全体のまとめを行うとともに、放射線計測を基礎とした放射線の安全な取扱いについて考

担当教員の指導のもと、航空宇宙工学の関連分野(航空宇宙力学、流体力学、流体数理学、推進工学、制御工学、機能構造力学、分子流体力学)に関する研究課題を設定し、その課題解決のための研究活動を主体的に取り組む。この研究活動を通じて課題解決能力を習得する。得られた成果を関連研究と比較し、その意義や重要性等についてまとめる能力を養う.

#### [Course objectives]

課題設定、関連研究の調査,研究計画の立案,実験(シミュレーション含む)と検証を行う.これ らの成果を特別研究としてまとめ,発表することを通じて,研究活動について学ぶ.

#### [Course schedule and contents]

設定課題の新規性,独創性等の再検証

実験の実施、結果の考察、実験計画の修正などにより研究を遂行

11~12回 成果のまとめ、発表のための資料作成

13回~15回

特別研究の発表と報告書の執筆

#### [Course requirements]

・ 物理工学科宇宙基礎工学コースが指定する入学年次の特別研究着手条件を満たし,特別研究 1 (宇 を修得していること.

#### [Evaluation methods and policy]

・ 成績評価は一連の研究活動の実施状況、報告会における発表内容、特別研究報告書の内容に基づいて行う。

#### [Textbooks]

Not used

#### [References, etc.]

Course title (and course title in English)	電気回路基礎論 Fundamentals of Circuit Theory						tructor's ne, job ti l departn iffiliation	nent	Graduate School of Engineering Associate Professor,HISAKADO TAKASHI		
Target year		1st year students o	year students or above Number of			its	2	Year	/semesters	2021/First semester	
Days and periods T		ue.5	Clas	s style	Lecture				Language of instruction	Japanese	
[Overview and purpose of the course]											
The course introduces the fundamentals of the electric circuit. Topics covered include: resitive elemnts and											

networks; independent sources; switches and dynamics of first- and second-order networks; phasor analysis; 2-port circuits.

#### [Course objectives]

Students are expected to learn the transient analysis by differential equation and steady state analysis by

#### [Course schedule and contents]

DC circuit,3times,We introduce Kirchhoff#039s current law and Kirchhoff#039s voltage law, Ohm#039s law and independent sources

Differential equation of circuit,5times,We introduce inductors and capacitors and explain the differential equation of circuit.

equation of circuit.

AC circuit,4times,We introduce phasor and explain the steady state analysis.

two-port circuit,2times,We extend one-port elements to two-port circuits.

academic achievement test,1time,The level of understanding on this lecture will be confirmed.
